Under the title of a trade commission, the bill provides for the creation of a committee or body of three members, which shall have power to investigate the business of any corporation or class of corporations, with certain exceptions. It may require statements by any corporation within its jurisdiction of its financial condition, its trade relations, its business methods, etc., and may enforce the production of its business and other records, and the attendance of its officers, employees, or other witnesses. In general purpose and effect, it is intended to subject all of the business of the country not already under commission supervision to governmental supervision.

It should be noted that this body is not a court or judicial tribunal properly constituted to try and determine alleged infractions of any law or laws, but a body expressly authorized to impose upon the business of the country, or such classes of business as may be designated by it, the duty and burden of reporting annually to it the full record and account of its transactions.

PRINCIPLES OF FREE GOVERNMENT.

The only proper basis, we believe, on which government can, in general, interfere in either individual or business life is in laying down certain general rules or principles of conduct applicable to all, and providing the necessary machinery for their enforcement. A proper tribunal, whether called a court or commission, whose duty it is to hear and determine charges of infractions of the law properly brought before it is an essential part of the machinery for the enforcement of the law. A commission whose duty it is to "smell out" offenders, or to require reports, and generally oversee the details of business life has no place in the machinery of a free government.

Supervision of business merely as supervision is no more necessary to the public welfare, no more desirable, and no more possible than the supervision of the details of individual life. In either case it is indefensible on principle and is justly to be characterized as an objectionable form or characteristic of paternalism.

STATESMANSHIP V. POLITICS.

Accompanying the vast business expansion of the past 25 years there have been discernible certain practices which the sound moral judgment of the community disapproved. They comprised rebates given by public-service corporations (whose semipublic character should require them to treat all alike), willful and malicious attempts to injure competitors (outside the realm of the injury incident to fair competition), and attempts to acquire absolute control of particular industries. In the reaction against these things the public judgment should not be warped, sound principles of government should not be forgotten, and meretricious expedients should not be adopted.

The fact which we seek to emphasize is that every one of these admitted evils has been fully legislated against—the country has adequate courts to enforce the law and officers charged with the duty of prosecution where the offenses are charged. During the last five or six years public opinion has called for the rigid enforcement of the law. The law has been enforced; rebates have stopped; malicious injuries to competition have been punished; and great industries dissolved into small competitive fragments. Whether all of this will inure to the public welfare or not, whether in some respects the existing law may not be too stringent we leave for time to determine. What we confidently assert, however, is that no one who has followed the history of these things can doubt the sweeping and effective character of the existing law to prohibit existing evils or the efficiency of the existing machinery for enforcing the law when that machinery is once set in motion.

Under the circumstances additional legislation will tend to confuse rather than clarify, and is open to the just suspicion of political expediency.

GOVERNMENT BY COMMISSION.

In the reaction which has followed our great period of expansion the States have very generally attempted the experiment of commission rule for all public-service corporations. The Federal Government has adopted the same expedient with respect to the railroads. It would be unfair to so characterize these measures without giving the reasons for our belief that in their present form at least these commissions are experimental and have not yet demonstrated their right to a permanent place in our institutions.

1. THE FUNDAMENTAL DIFFICULTY.

In the first place, then, these commissions (so far as they are empowered to regulate prices) are all founded upon the anomalous principle that persons without any direct responsibility for the consequences, without personal and first-hand knowledge of the requirements, and subject to influences of political expediency, are delegated to determine what this or that public service corporation needs and shall earn. When it is considered that a large part of the savings of the country are invested in these companies, the outcome seems fraught with uncertainty and danger.

2. THE COST.

The commissions, Federal and State, have entailed a heavy burden of expense upon the community, directly upon business and indirectly upon the people, as a whole. This expense is partly due to the cost of maintenance of the commissions themselves, but in much larger part to the requirements imposed by the commissions on the individuals or corporations coming within their jurisdiction. The data collected and furnished by one public-utility company at the request of one commission cost upward of $100,000, irrespective of the services of the officers and employees. If this were a fair average per State for each corporation (as to which we have not sufficient data for judgment), it would mean that the aggregate expense of the experiment of commission supervision of the public utilities alone will come to an enormous total.

An independent public-utility company, doing a small but steady business, was forced, by the additional expense imposed by the commission requirements of its State, to cease doing business, and its only method of saving the value of its assets was by sale to a competitor of sufficient size to bear, without breaking, the additional burden.

Probably most of the public-service corporations are to-day confronted with the concrete fact that if new money is needed to develop the service which they render to the community, it must be raised by bond issues and heavy premiums paid to those who take the risk of disposing of the bonds. This condition is less sound, from the economic standpoint, than one in which the necessary funds can be raised on sales of stock, and the reason for the condition is very simple—if the commissions limit the amounts which the companies may earn, the public have no sufficient inducement to invest in stocks; if the commissions impose on the companies heavy additional expense, the security for the bonds is depreciated. This condition must result unfavorably to the public in the end; it means less efficient service at higher prices.

If the final result of commission supervision over public-service corporations is to make the transaction of the public-service business unduly expensive (the community eventually paying the expense), is to prevent competition by tending to eliminate all but the larger and more powerful units, and is finally to so limit the credit of these companies and curtail the inducements they can offer to investors, that they are unable to finance themselves except at exorbitant rates, the systems of supervision by commisions is bad for the community, and must eventually be modified or abandoned.

3. INDIRECT EFFECTS.

The indirect effects of governmental interference through commissions in business are not to be lightly ignored. While the general depressed condition of business and great shrinkage in values will doubtless be attributed by different persons to different causes—to foreign complications, to tariff charges, to world-wide movements of uncertain character, or other causes—one of the conditions powerfully affecting this country is undoubtedly this: The savings of the people of this country are invested chiefly in the business of the country. The vast sums invested in the railroads are confronted with the restrictive control of railroad earnings by the Interstate Commerce Commission as well as by a mass of legislation in the several States exacting new forms of taxation, requirements of extravagant service, limitations of charges, etc. The almost equally large volume of savings invested in the public utilities is confronted with the same general problems through the operations of the commissions appointed in the various States.

The results of this restrictive legislation is apparent to all in the present difficulty experienced by the railroads and other public utilities in obtaining necessary capital, in the consequent stoppage of normal growth, and in the shrinkage of the value of their securities. However much other causes may intervene to assist in the general depression, the curtailment of the purchasing power of this large portion of the business agents of the country must and does play a large part in the unfavorable conditions which to-day exist.

CONCLUSION.

Under these circumstances we respectfully submit that wisdom and sound judgment require that the effect upon the country of commission supervision of the public-service corporations be carefully noted over a series of years before any attempt should be made to extend that system in any degree beyond its present limits.

If after a full and complete test commission control over railroads and public utilities is modified or developed into a system beneficial to the country, it will be ample time to consider in what form, if at all, Government should intervene to regulate the initiative and activities of individuals or corporations not engaged in public service but in private enterprise. In the meantime both public and private rights are amply guarded by existing law.

For the above reasons among others your memorialist respectfully submits that the interstate trade commission bill should not receive your favorable consideration.

And your memorialist will ever pray.

[SEAL.] WM. M. COATES,
President Philadelphia Board of Trade.

Attest:

W. R. TUCKER, *Secretary.*

EXTENSION OF REMARKS
OF
HON. RICHARD W. AUSTIN,
OF TENNESSEE,
IN THE HOUSE OF REPRESENTATIVES,

Monday, June 1, 1914.

Mr. AUSTIN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following article:

CHAMP CLARK IS LOYAL DEMOCRAT—FORMER MEMBER OF THE HOUSE PRAISES SPEAKER AS MAN OF INTEGRITY—HE SURPRISED EVERYONE—PLAYED POLITICS OF AN HONORABLE KIND, AND ADMITTED IT—DEMONSTRATED HIS FITNESS.

[By John Q. Tilson, New Haven, Conn.]

I served with him on the floor of the House during the Sixty-first Congress. Of course everyone knew him, but I was flattered to find within a few weeks that he knew me, and he did not cease to know me when he became Speaker.

Prior to the Sixty-second Congress his service had been, with the exception of his first term, entirely as a member of the minority. A part of the time he was the minority leader, but it is doubtful whether he had given much or serious study to the rules of the House or to parliamentary law or procedure in general.

To those acquainted with the work of Congress this is no adverse reflection, for many forceful and influential men in the House give their time and their energies to broader matters, and leave such things to the parliamentary and rules experts. When it became apparent that he was to be the next Speaker, many Members on both sides of the Chamber felt and expressed themselves to the effect that it would be hard work for him as Speaker.

MADE EXCELLENT OFFICER.

He surprised everyone. He has, in fact, made an excellent presiding officer and a great Speaker. He did not know it all, and never attempted to give the impression that he did. If he did not know, or was in doubt, he frankly said so, and sought help, either from the books or from other Members, or from both. His broadminded fairness, manifest from the beginning, soon gained for him the confidence and support of the entire House, so far as his work as Speaker was concerned. Not only did FITZGERALD, SHERLEY, GARRETT, and other parliamentarians on the majority side of the Chamber freely assist him, but also those in the minority, and no one more generously or more acceptably to the Speaker than the very astute and resourceful minority leader, popularly known as JIM MANN.

In his closing speech at the end of the Sixty-second Congress the Speaker said of Mr. MANN: "I have overruled him more frequently and sustained him more frequently than all the other Members of the House put together." In the interest of accuracy he might have added that he had sustained him far more frequently than he had overruled him; for one of the most frequent speeches by the Speaker, as shown by the RECORD, is, "The gentleman from Illinois [Mr. MANN] is right."

HIS PRESIDENTIAL AMBITION.

At the opening of the preliminary campaign for 1912 the Speaker became an open and avowed candidate for the Democratic nomination for the Presidency. He made no effort to conceal the fact that he had the honorable ambition to be President of the United States, and he went out to seek the nomination in an honorable and practical fashion. Presidential ambition is a severe test of character. How many men in our history it has destroyed or spoiled. How many of those who have been stung by the presidential bee have done things they otherwise would not have done. How many have dodged issues they were called upon to face, or espoused causes in which they did not believe as a result of this particular toxin. How many lives of really great men in our country's history have been soured by the failure to reach this lofty goal.

CHAMP CLARK was ambitious, naturally and properly so. The presidential bee buzzed about his ears and alighted upon his broad shoulders; nor did anyone suggest that he was not of sufficient magnitude to attract the bee. He grew bigger from the time his name was mentioned in connection with the Presidency. He was open, candid, frank. He dodged no issues and espoused no new causes for election purposes. He had been, was, and still is a partisan, a politician, if you please, the type of which is a credit to our country.

He had even played politics—of an honorable kind, of course—and admitted it. The effect of his presidential aspirations was not only to make him known in all parts of the country but to make him a truly national character, with broader views and more comprehensive ideas.

DEMONSTRATED HIS FITNESS.

The effect of his candidacy upon him was to demonstrate his fitness for the office. He went after the office with spirit and skill. Where primaries were held they were generally favorable to him. A majority of the delegates in convention assembled were not only for him, but, what is a very different matter, they voted for him. Outside of a Democratic national convention the nomination would have been conceded to him in all courtesy and fairness; but he was very much in such a convention where it was not conceded. The nomination was bestowed upon another. How or why it was done is another story.

The very reasons alleged for depriving him of this great honor should have entitled him to receive it. He was accused of the great crime of having some support from men of large affairs, otherwise known as "big business." This was undoubtedly true, for many men of large affairs had probably looked the field over very carefully and come to the conclusion that CLARK was the best man available. It is greatly to his credit that they so decided. No one, great or small, big business or little business, thought for a moment that CHAMP CLARK would or could be influenced by any dishonorable or sinister motive.

He came back from Baltimore a defeated man. He was not insincere enough to say it did not hurt. It did hurt. He returned to Washington and took up his duties as Speaker for the remainder of the Sixty-second Congress. Without opposition or hesitation in his own party he was reelected Speaker at the opening of the Sixty-third Congress.

WAS LOYAL DEMOCRAT.

A new administration had assumed control of the Government. The man who had been preferred over him in the party's national convention was in the White House. At his right hand sat Mr. Bryan, who had done so much to turn the tide in that convention. What would be the Speaker's attitude toward them and the new administration? There was never a moment's serious doubt as to what his course would be. A sincere patriot first, he was also a loyal Democrat. He entered again upon his duties as Speaker without resentment toward any who had opposed him for the presidential nomination, and, under circumstances which have been exceedingly trying at times, has performed his part faithfully and well, loyally supporting the administration of his party.

When the question of the repeal of the Panama tolls bill came up he felt it to be his duty to stand by the promises of the platform of his party and the declarations of his party's candidate for the Presidency, and in so doing came into opposition to the changed views of the President. All sorts of predictions were made as to what would be the character of his opposition, as well as to the effect of it. Those who knew the Speaker best believed he would not lessen his reputation, and they were not disappointed. His speech against the repeal was truly characteristic of the man and one of the great speeches of the debate. He felt deeply on the subject and expressed his feelings forcefully, but not a word that could be tortured into an attack upon the President or the administration.

What of the future of the Speaker? That is not a question for one Republican or many Republicans to answer.

National Prohibition and Temperance—Bosworth's Record—Good Roads—Things I Have Done in Congress.

SPEECH

OF

HON. CALEB POWERS,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, May 27, 1914,

On the bill (H. R. 15578) to codify, revise, and amend the laws relating to the judiciary.

Mr. POWERS. Mr. Speaker, the Antisaloon League of America, in national convention assembled, appointed a committee of 1,000 men to go to Washington, D. C., and present to Members of Congress a joint resolution, looking to national constitutional prohibition. Senator SHEPPARD introduced these resolutions in the Senate, while Congressman RICHMOND PEARSON HOBSON introduced them in the House of Representatives. He did this on December 10, 1913. On May 9, 1914, they were referred to the House Calendar and ordered to be printed. The text of this resolution is as follows:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled (two-thirds of each House concurring therein), That the following amendment to the Constitution be, and hereby is, proposed to the States, to become valid as a part of the Constitution when ratified by the legislatures of the several States as provided by the Constitution:

ARTICLE —.

SECTION 1. The sale, manufacture for sale, transportation for sale, importation for sale, and exportation for sale of intoxicating liquors for beverage purpose in the United States and all territory subject to the jurisdiction thereof are forever prohibited.

SEC. 2. Congress shall have power to provide for the manufacture, sale, importation, and transportation of intoxicating liquors for sacramental, medicinal, mechanical, pharmaceutical, or scientific purposes, or for use in the arts, and shall have power to enforce this article by all needful legislation.

Section 2 of this resolution has been changed by its friends, and will probably, in final form, read as follows:

SEC. 2. The Congress or the States, within their respective jurisdictions, shall have power to enforce this article by all needful legislation.

A casual reading of this resolution will disclose the fact that it only deals with the question of sale, and therefore does not invade the precinct of the home or the liberties of the individual. The question of use, not being delegated, is left entirely with the several States. The resolution, too, only applies to or touches the question of intoxicating liquors for beverage purposes. It leaves entirely to the States the control of intoxicating liquors for all other purposes.

The changed form of the resolution as it will finally be presented, it will be observed, places the question of enforcement in the hands of the Federal Government and the several States, giving to both the Federal Government and the States equal power and authority. This means the cooperation of the two governments, and will insure effective enforcement.

The House committee to which the Hobson resolution was referred, fearing to "pigeonhole," and some of its members apparently not daring to take a position on it, reported it to the House "without expression of opinion" as to whether it should or should not become a law. A Democratic caucus was called. There was "wailing and gnashing of teeth." To vote or not to vote for national constitutional prohibition—that was the question. To do so meant political death to many of "the patriots." Not to do so meant damnation to others. Under all the circumstances it was considered "expedient to shelve the nasty question" and not let it come to a vote until all the congressional nominations were surely made and the November election safely over. So this question was "shelved," in so far as a vote in Congress before the November election is concerned. But the question will not stay "shelved." It is coming.

Congressman RICHMOND PEARSON HOBSON, speaking for the organized moral forces of the Nation, says that they—

have decided unanimously that until Congress does transfer the question to the several States it is to be made the paramount issue in congressional and senatorial campaigns, primary and general.

The whisky people high in authority say:

We propose to control the next Congress. We have the means to elect Representatives friendly to us, and we propose to do it.

Already 4,000,000 petitioners have petitioned Congress for national constitutional prohibition. The moral forces of the Nation feel that Members of Congress, whether they agree or disagree as to the merits of national constitutional prohibition, should nevertheless be willing to vote for the Hobson resolution, and thereby permit the States to settle this question for themselves. The liquor interest will fight this at every turn of the road and over every inch of the ground.

According to the census of 1910, the malting and brewing interests alone of this country have over $700,000,000 of capital invested in this business. God alone knows what the whisky people have got; but they have got it and they will spend it.

I look for the whisky interests to spend freely both money and whisky in the eleventh congressional district and other congressional districts to elect Congressmen favorable to the liquor interests.

The whisky people fight and they fight hard. The struggle between the "wet" and "dry" forces of this Nation is on. The temperance people must get ready for the fray.

The United States has 2,973,890 square miles of territory, and of this 2,132,746 is dry, or no-license territory. There are but nine, however, absolutely prohibition States. There are to-day in this country more temperance people than there are liquor people. They could control the situation, if they would. But the temperance people have been inactive; the liquor people have been active—ever active. That is largely true to-day, but not so much as formerly. The temperance people are waking up. They are realizing as never before that if they want friendly legislation they must put their friends in office. In order to put friends of temperance in office, they must get active politically. They are realizing that. From bitter past experience they know that they can not expect temperance legislation from whisky representatives. If the temperance people in every congressional district in the land would rise up in their might and demand temperance nominees for Congress and then vote and work for them when nominated, national constitutional prohibition would be among the achievements of the immediate future. But let the temperance people be sure to nominate temperance men and those that will stand by temperance when nominated and elected. "By thy fruits ye shall know them." St. Matthew never said a wiser or truer thing.

There are now two candidates seeking the Republican nomination for Congress in the eleventh district of Kentucky.

BY THEIR FRUITS YE SHALL KNOW THEM.

Both have had legislative experience. Both have put themselves down on record on the whisky and temperance question. One has consistently stood for temperance; the other has just as consistently stood for whisky. One has consistently voted for temperance; the other has just as consistently voted for whisky.

I have never cast a whisky vote in my life, in Congress or out; Senator Bosworth has never cast a temperance one where temperance really needed it.

The Webb-Kenyon bill is the most important, except the national-prohibition resolution, of any temperance measure coming before Congress for many years. It provides, in substance, that no spirituous, vinous, malted, fermented, or other intoxicating liquors, including wine, ale, and beer, shall be shipped from one State to another to be possessed or sold in violation of any law of such State. In other words, if the State or any subdivision thereof has voted dry, the United States can not make it wet by shipping liquor into it or permitting it to be done. *I helped to make that bill a law by voting for it in the third session of the Sixty-second Congress.* My vote is recorded on page 2866 of the CONGRESSIONAL RECORD for that session. Hon. P. A. Baker, general superintendent of the Antisaloon League of America, in speaking of the passage of the Webb-Kenyon bill, said:

The greatest triumph of the temperance forces of the Nation was the passage of the Webb-Kenyon bill.

The women of the Woman's Christian Temperance Union of Marion County, among others, passed a resolution commending my vote. They said:

Resolved, That we return you our thanks and approval that your vote was cast in behalf of the Webb-Kenyon bill to protect the home and the women of your State and Nation against the withering, blighting influence of the liquor traffic. You are an honor to your State, and your vote will cause your name to pass into history loved and revered.

I have lived a temperate life, and I have voted as I have lived. I shall vote for national prohibition if the question is presented while I am a Member of Congress, and which is most certain to be done before my term expires if I am renominated and elected.

Only this year, during the last session of the Kentucky Legislature, *Senator Bosworth voted against State-wide prohibition, and of course is against national prohibition.*

Since not much reliance can ordinarily be placed in campaign charges and statements, I want to place before the voters of the entire country the whisky record of Senator Bosworth. I will quote the records, and these records can be found in the county or circuit court clerk's office in every county-seat town in the State of Kentucky. Any voter can verify for himself the statements I make.

Senator Bosworth was elected a member of the Kentucky Legislature and served during the session of 1906.

On March 1 of that year, and on page 1124 of the house journal, Senator Bosworth is recorded as voting against raising from $200 to $225 the license of persons engaged in the retail sale of spirituous, vinous, and malt liquors.

On March 7, 1906, page 1340, house journal, records Bosworth as failing to vote for house bill 252, being "An act to regulate the carrying, moving, delivering, transferring, or distributing of intoxicating liquors into local-option districts." But it became a law, and reads in part as follows:

SECTION 1. It shall be unlawful for any person or persons, individual or corporation, public or private carrier, to bring into, transfer, or distribute in any county, district, precinct, town, or city where the sale of intoxicating liquors has been prohibited, or may be prohibited, any spirituous, vinous, malt, or other intoxicating liquors, regardless of the name by which it may be called.

On March 8, 1906, on page 1410 of the house journal, Bosworth is recorded as having voted against a local-option bill providing a means whereby a local-option election could be called in any county containing a city of the first, second, third, fourth, or fifth class upon petition of 25 per cent of the voters of said county. Section 1 of the bill reads in part:

The sense of the qualified voters of the several counties, cities, towns, districts, and precincts of this Commonwealth as to whether or not spirituous, vinous, or malt liquors may be sold, bartered, or loaned therein shall be taken in the following way:

a. Upon application by written petition, filed with the county judge of any county containing a city or cities of either the first, second, third, fourth, or fifth class, signed by a number of the legal voters residing in said county outside of either of said cities, which territory shall constitute a district for the purposes of this act.

March 13, 1906, on page 1689, house journal, Bosworth is recorded as voting to make the rectified whisky license one-half of 1 cent per wine gallon, instead of three-fourths of 1 cent per wine gallon.

March 26, 1906, on page 1777, house journal, Bosworth is recorded as voting to make the license tax on compounded, rectified, and distilled spirits 1¼ instead of 1½ cents upon every wine gallon.

This looks to me like a fairly good whisky record for a beginner.

Senator Bosworth was elected to a seat in the Kentucky Senate, and sat as a member of that body during the 1908 session of the legislature.

He was elected at the same time Hon. Augustus E. Willson, the Republican nominee, was elected governor on a Republican platform pledged to the county-unit law.

Gov. Willson said in his message to the Kentucky Legislature:

I have pledged the people to favor, and I do favor, the enactment and enforcement of a uniform local option law, with the county as the governing unit.

I will let the record disclose how Senator Bosworth, apparently with contempt, but at least with vigor and consistency, violated every temperance pledge of the Republican platform on which he was elected.

On March 4 and 5, 1908, on pages 793, 799, and 800, senate journal, Senator Bosworth is recorded as voting three times against the temperance people and with the whisky interests on senate bill 56. It was a bill to amend the law for selling intoxicating liquors; and on page 808, senate journal, Senator Bosworth is recorded as voting against the passage of the bill.

On March 16, 1908, on page 1179, senate journal, Senator Bosworth is recorded as voting against calling up the county-unit bill for passage. He cast another vote the same day against the temperance people.

During the 1910 session of the Kentucky Legislature Senator Bosworth was made a member of the committee on rules, the committee on mines and mining, the committee on penitentiaries and houses of reform, and the committee on religion and morals. The whisky interests, realizing what an ardent and valuable friend they had found in Senator Bosworth, exerted their influence in having Senator Bosworth put on committees where he could be of service to them. How smoothly it was all worked the following recital will show:

On January 4, 1910, page 11, senate journal, Conn Linn, a Democrat, was elected president pro tempore of the senate. Lieut. Gov. Cox, a Republican, was by law, president of the senate.

On January 4, 1910, the following resolution was adopted:

Be it resolved by the Senate of Kentucky, That the chairman of the senate Democratic caucus and the president pro tempore of the senate are hereby authorized and directed to select and appoint a committee on rules, of which they shall be members. They shall also prepare and adopt a set of rules under which the senate shall operate and transact business until the next succeeding regular session of the senate, in 1912.

They are further authorized and directed to appoint such standing committees as the rules may provide for, which said committees shall continue until the next regular session of the senate, in 1912.

This gave a Democratic president pro tempore of the senate and the chairman of the senate Democratic caucus the power to select and appoint a committee on rules. This committee on rules had the power to prepare and adopt a set of rules under which the senate was to do business.

Senator Bosworth was made a member of this committee on rules.

This rules committee of which Senator Bosworth was a member prepared a set of rules by which the senate was to be governed in the transaction of its business. These rules took from a Republican lieutenant governor, Gov. Cox, the presiding officer of the senate, the power to appoint all standing committees.

Rule 14, prepared by the committee on rules, and found on page 96, senate journal, reads as follows:

The following standing committees, each to be composed of five or more senators, shall be appointed by the committee on rules heretofore provided for by resolution at the commencement of the session; and no standing committee shall be changed unless in compliance with a resolution introduced by the committee on rules.

Rule 50 of the said rules, found on page 111, senate journal, reads in part as follows:

Provided, That the rules committee shall have power at any time to call from the orders of the day any bill or resolution and propose the same to the senate for consideration; and should the senate decide by a vote to consider it, it shall be immediately put upon its passage.

The rules committee is further authorized and shall have the right, at any time, to call from any other committee or committees any bill or resolution in their hands and have the same advanced to the reading to which the same may be entitled. Action upon all bills which are reported to the senate without either a favorable or unfavorable recommendation shall be held to be indefinitely postponed.

This gave the rules committee power "at any time to call from the orders of the day any bill or resolution and propose the same for consideration," as well as "the right at any time to call from the other committee or committees any bill or resolution in its hands, and have the same advanced to the reading to which the same may be entitled."

In other words, the rules committee became the masters of the senate, with power to say what legislation should or should not be considered by that body.

These rules, among other things as I have said, took from a Republican lieutenant governor, the presiding officer of the senate, the power to appoint all the standing committees of the senate, and among others the committee on rules.

When Conn Linn, president pro tempore of the senate, and a Democrat, together with Thomas A. Combs, chairman of the senate Democratic caucus, made their famous report embodying the rules of which I have spoken, and among them the one taking from a Republican lieutenant governor his power, Senator Bosworth voted to adopt the rules, although it is said no other Republican senator voted as did Senator Bosworth upon that occasion. *Senator Bosworth voted with the Democrats more often than any Republican in the legislature.* As I have said, the Republican Party in its platform upon which Gov. Willson and Lieut. Gov. Cox, both Republicans, were elected declared in favor of the county-unit bill. Gov. Willson, in his message to the house and senate, page 46, senate journal, recommended the passage of the county-unit bill.

Lieut. Gov. Cox was pledged to it. *Senator Bosworth voted to take from Lieut. Gov. Cox the power to appoint the committee on rules and place that power in the hands of Democrats, and, in this instance, enemies to temperance.* This, however, tells but a part of the story. Senate bill No. 1 was introduced. This was a county-unit bill intended to regulate the whisky traffic in Kentucky. If enacted into law, it would have carried out the pledges of the Republican Party to the temperance people of the State and its citizens generally. It would have given the voters of each county the right to say whether whisky and other intoxicating liquors should be sold anywhere in the county.

The committee on rules, of which Senator Bosworth was a member (see p. 140, senate journal), appointed a committee on religion and morals. Senator Bosworth, strange as it may appear, was, as I have said, made a member of the committee on religion and morals (see p. 146, senate journal).

When senate bill No. 1, the county-unit bill was introduced, the Democratic president pro tempore of the senate, who Senator Bosworth voted to clothe with power, referred the county-unit bill to the committee on religion and morals, of which Senator Bosworth was a member. The author of the bill, Senator John L. Vice, and other friends of temperance, knowing that Senator Bosworth and other whisky men were on the committee on religion and morals, objected to the county-unit bill being referred to that committee for consideration, and appealed from the decision of the Chair so referring it.

Senator Bosworth voted to sustain the decision of the Democratic president pro tempore of the Senate in referring the county-unit bill to the religion and morals committee—a committee of which Senator Bosworth was himself a member. (See p. 223, senate journal.) I think Senator Bosworth was the only

Republican senator that so voted. The ruling of the Chair was sustained, and the county-unit bill was referred to the famous religion and morals committee. Senator Bosworth was delighted. And on January 17, 1910, page 180 of the senate journal, the following pairs were announced in the senate:

Mr. Hilliard Smith with Mr. Bosworth. Mr. Bosworth, if present, would vote against the advancement and passage of senate bill No. 1—the county unit bill—which Mr. Smith, if present, would vote for.

On February 17, see page 723, senate journal, the county unit bill (senate bill No. 1) was by the religious and morals committee reported to the senate without any expression of opinion as to whether or not it should become a law. This was Senator Bosworth's committee. And under the rules of the senate he helped to frame, "further action on the county unit bill (senate bill No. 1) was indefinitely postponed." But on February 12, senate journal, page 724, Mr. Thomas moved that the county unit bill (senate bill No. 1) be advanced to the orders of the day, which, if done, would put the bill on its passage. Senator Bosworth and 15 others voted against advancing the bill and placing it in the orders of the day for passage, while 14 others voted the other way.

Those voting for whisky and with Bosworth were:

Joe F. Bosworth, J. R. Catlett, N. B. Chipman, Thomas A. Combs, W. E. Dowling, W. V. Eaton, E. E. Hogg, R. L. Hubble, Conn Linn, Charles W. Nagle, H. D. Newcomb, Mark Ryan, E. M. Taylor, G. A. Taylor, J. W. Wright, and G. T. Wyatt—16.

Those voting against Bosworth and for temperance were:

P. J. Beard, E. Bertram, Gus Brown, A. R. Burnam, R. B. Brown, Nat C. Cureton, J. A. Donaldson, J. C. Graham, A. J. Oliver, B. C. Grigsby, J. T. Pritchard, J. T. Smith, Claude M. Thomas, and John L. Vice—14.

If Senator Bosworth had voted for the bill and not against it, the vote would have stood 15 to 15, with a Republican lieutenant governor—Mr. Cox—favorable to temperance, to cast the deciding vote. The senate would have passed the bill, if it had been permitted to vote on it.

Senator Bosworth by his vote on February 12, 1910, killed that county unit bill, at that time senate bill No. 1.

Nor does this by any means tell all the story. The temperance people realizing that senate bill No. 1, which had been referred to the famous religious and morals committee, of which Senator Bosworth was a member, was in the hands of its enemies, introduced through Senator Mathers another county unit bill (senate bill No. 44), which was identical with senate bill No. 1.

Lieut. Gov. Cox, president of the senate (see p. 398, senate journal), referred senate bill 44 to the committee on Kentucky statutes. The whisky men objected to this, and, through Mr. Dowling, moved that senate bill 44 be referred to the Bosworth religion and morals committee. This was done. Mr. Thomas and the friends of temperance were not satisfied with this. Later on Mr. Thomas was sustained by Lieut. Gov. Cox, president of the senate, in calling senate bill 44 out of the hands of the religious and morals committee on the ground that it had been in the hands of the committee an unreasonable length of time. The president of the senate, Lieut. Gov. Cox, ruled that bill 44 should be placed upon the orders of the day for passage. The whisky men, through Mr. Combs and others, appealed from the decision.

P. J. Beard and 15 others, making 16, voted to sustain the Republican lieutenant governor. Senator Joe F. Bosworth and 17 others voted against it. The effort of the Republican lieutenant governor to place the county unit bill 44 in the orders of the day was defeated. Senator Bosworth helped to defeat it. On February 23, page 783, senate journal, Mr. Thomas moved that senate bill 44, the county unit bill, "be read the third time and placed upon its passage." Senator Joe F. Bosworth was the first man to vote against this proposition (see senate journal, p. 783).

Mrs. J. H. Shy, president of the Woman's Christian Temperance Union, had this to say about Senator Bosworth's vote in defeating the county unit bill:

Mr. Bosworth, claiming to be a Republican, voted against the county-unit plank in the Republican platform. All the while he voted in the interest of the whisky people

All the story is not yet told. Bosworth's famous committee on religion and morals reported to the senate without expression of opinion, another temperance bill which had been referred to it, and under the rules of the senate, which Senator Bosworth, as a member of the rules committee, had helped to frame, was indefinitely postponed (see p. 1023, senate journal).

But fearing that some of these temperance bills might get in the way of passage, or that some of their own pet measures might be kept from passage, the rules committee reported and had adopted the following:

We, your committee on rules, hereby recommend that the rules be amended, altered, and changed only so as to read: "That said rules committee is authorized to exercise the exclusive right and privilege of calling up bills and resolutions and propose same for final passage during the last 12 days of the session. Nothing in this rule shall be construed as an abridgement or curtailment of any senate rule now in effect."

CONN LINN, *Chairman*,
THOS. A. COMBS.
MARK RYAN.
G. T. WYATT.
L. A. ARNOLD.
JOE F. BOSWORTH.

This made the rules committee the absolute masters of the situation. This meant that no temperance measures would be passed. It meant, too, that some whisky legislation might be.

Senator Joe Bosworth introduced senate bill 177 (see p. 238, senate journal) to change the classification of certain cities and towns in Kentucky. House bill No. 30, to the same tenor and effect, came up for passage.

I will let Mrs. J. H. Shy, president of the Woman's Christian Temperance Union in Kentucky, tell about this bill. She says:

Senator Bosworth voted for the bill, helped to pass it, and thereby extended and widened the territory in which the county unit did not apply. Under the law as it stood then, the county unit did not apply to cities having the fourth class. By this bill the cities reclassified were removed from the effect of the county-unit bill.

On March 5, 1910, page 1045, senate journal, Senator Joe F. Bosworth and 6 others are recorded as voting against while 21 other senators voted for senate bill 192, which was an "act defining public drunkenness and fixing punishment therefor."

What a record for one session of the legislature. No wonder the temperance people are up in arms against Senator Bosworth. But this does not complete the story. During the 1912 session of the Kentucky Legislature he continued his activities in behalf of the whisky interests.

On January 25, 1912, page 417, senate journal, Senator Bosworth is recorded as voting against a bill providing for an extension of local option.

On March 5, 1912, page 1451, senate journal, Senator Joe F. Bosworth failed to vote for senate bill 120, which was an act making it "unlawful to purchase, procure, or deliver spirituous, vinous, and malt liquors in local option territory."

On March 6, 1912, page 1501, senate journal, Senator Joe F. Bosworth failed to vote for senate bill 260, which was an "act prohibiting the sale of intoxicating liquor within 400 yards of normal schools and State colleges."

On March 7, 1912, page 1546, senate journal, Senator Bosworth is recorded as voting for senate bill 12, which was an "act to provide for taking the sense of the legal voters as to whether bona fide distillers may be granted a limited license to retail spirituous liquors of their own manufacture at or near the distillery and not to be used on the premises."

In other words, to make every distiller in the land a saloon keeper. Not only has Senator Bosworth voted wrong on the whisky question, but he has voted wrong on a good many other questions.

On February 14, 1906, on page 583, house journal, Senator Bosworth is recorded as voting against a bill making it unlawful to operate pool rooms.

Seventy-three voted for the bill; Bosworth and six others voted against it.

On March 4, 1908, page 791, senate journal, Senator Bosworth is recorded as voting for a proposition to make it an offense punishable with only $200 fine to bet on the result of a horse race, and against the proposition to make the punishment a fine of not less than $1,000 nor more than $5,000, and confinement in the county jail from 6 to 12 months.

On February 25, 1908, page 620, senate journal, Senator Joe Bosworth is recorded as voting against taking up for consideration senate bill 41, which was "An act to prevent the operation of pool rooms in the Commonwealth of Kentucky."

On March 1, 1912, page 1258, senate journal, Senator Bosworth failed to vote for the consideration of senate bill 16, which was "An act to prevent bribery and other corrupt practices in elections."

On March 11, 1912, page 1772, senate journal, Senator Bosworth is recorded as voting against house bill 77, which was "An act to regulate lobbying," and so forth.

Later on in this speech, when I come to speak of my attitude toward the miner and the laboring man, I shall show how Senator Bosworth voted for the dog law; free railroad passes for himself and other officials; how he voted against the miner's interests, and yet voted to protect the employer; how he failed to vote for the child-labor law; how he voted for an act to prohibit the use of public drinking cups; how he voted against the antitipping bill and other measures. I shall also take up and discuss at length Senator Bosworth's State-aid road bill, and, before closing my argument on that subject, I expect to point out something of the senator's political alliances, and how

he has voted to appropriate the people's money to build monuments to Jefferson Davis, the president of the Southern Confederacy, and other rebel generals. And when I come to discuss pensions, I shall show how Senator Bosworth voted to pension the rebel soldiers, as well as his position on other important matters. But I can not go into those things at this point, as I want to continue the senator's whisky record.

The house and senate journals of the last session of the Kentucky Legislature have not been printed yet; but it is a known fact that Senator Bosworth voted against State-wide prohibition.

He spoke against, but voted for, a bill amending the county unit law whereby 25 per cent of the voters of the whole county may call a local-option election. In the antisaloon yearbook for 1914 it is estimated that from "20 to 25 of the 38 senators" in the last Kentucky Legislature was dry, so that Senator Bosworth, seeing that the temperance forces had the victory won, voted with them.

Rev. N. A. Palmer, State superintendent of the Kentucky Antisaloon League, speaking of this, said:

Senator Bosworth, being a candidate for Congress in a large temperance district, tried in the last Kentucky Legislature to put up a few breakers by voting for an amendment to the county unit law, which was sure of passage whether he voted for or against it. Senator Bosworth's vote on the measure, while intended to deceive, can not and will not deceive anybody. His whisky record is too well known. He has been for many years an active and willing tool of the whisky interests, an avowed and partisan foe of the temperance cause.

The antisaloon yearbook for 1914 says:

Kentucky is doing her best to get ready for the last stand for State prohibition and to join hands with other States for the last and final struggle for national constitutional prohibition.

Now, what does the eleventh district propose to do about it? Does she want a whisky man or a temperance man to represent her? I have nothing against the unfortunate man who is addicted to drink. He is often a whole-souled and noble fellow, but I would save him from himself by putting whisky and other intoxicants out of his reach. I would save him to his wife and his children by protecting him from the demon drink.

I am not against the saloon keeper personally, but I am against the business in which he is engaged. I would save him the shame, humiliation, and disgrace of his bad calling. He deserves better. Liquor contaminates everything that it touches. It invites famine and courts disaster. It threatens the future integrity as well as the very life of the proudest Nation in the world. It is the friend of everything that is bad; the enemy of everything that is good.

In speaking of Senator Bosworth killing the county-unit bill, ex-Mayor of Richmond, C. E. Woods, said:

I was present. I saw the deed done. I saw Bosworth cast the vote that killed it. Men of the mountains, will you allow such political and moral perfidy to go longer unrebuked? Talk not to me of Bosworth as a good-roads champion. The whisky ring call him that to fool and flatter the ignorant and the indifferent. The roads he has helped to make thus far are already paved by the skulls of men and boys ruined by the saloons of his city.

GOOD ROADS—FEDERAL AND STATE AID.

Senator J. F. Bosworth, of Middlesboro, Ky., who says he is a candidate for Congress from the eleventh district of Kentucky, is laying a great stress upon his advocacy of State aid to good roads while a member of the Kentucky State Senate. He is pointing with pride to his record in helping to secure State aid to good roads as an evidence of what he would do in helping to secure Federal aid should he be nominated and elected to Congress from the eleventh district. If Senator Bosworth is really in earnest in wanting to secure Federal aid for the cause of good roads in southeastern Kentucky, and really feels that he has the ability to make things happen if sent to Washington, he should by all means become a candidate for the United States Senate from Kentucky. It is in the Senate of the United States, and not in the House of Representatives, where the real opposition to Federal aid has arisen. *It is in the Senate of the United States, and not in the House of Representatives, where Senator Bosworth can be of service, if he can be of service anywhere, to the cause of Federal aid to road construction and road improvement.*

The question of Federal aid to good roads has really never come before the House of Representatives but twice in its history, and both of those times have been since I have been a Member of that body. The first time was in April and May, 1912, and the second time was in February, 1914. Nearly 100 years ago, before the advent of railroads, there was a little post-road legislation. The first real Federal-aid bill, however, was before the House in 1912. It differs radically from the Federal-aid bill before the House in 1914, which was but a few months ago. The bill in 1912 was, in my judgment, by far the better bill. On April 27, 1912, I made an extended speech in favor of the passage of the first bill. I helped to pass it by my vote. The bill, as amended, finally passed the House on May 2, 1912, by a vote of 227 in favor of it, with only 5 against it. The bill as it passed the House was sent over to the Senate of the United States, and there it has remained undisturbed and unmolested, unvoted on.

On February 10 of this year the House of Representatives voted upon and passed another bill providing Federal aid to road construction and road improvement. This bill was not as good a bill as the first one, but it passed the House of Representatives by a vote of 284 for it to 42 against it. I was paired with Judge SABATH, a Democratic Member, who is a friend of mine and with whom I served as a member of the Immigration Committee. This bill was immediately sent over to the Senate of the United States, and there it has slept ever since. *There is no trouble in passing Federal-aid road bills through the House of Representatives. Senator Bosworth's aid is not needed there. The trouble lies with the Senate. If Senator Bosworth wants to help the cause along, he should, by all means, seek a seat in the United States Senate.* Both a United States Senator for the State of Kentucky and a Member of Congress for the eleventh congressional district are to be nominated on August 1 of this year. If Senator Bosworth is not really trying to be elected a Member of Congress on his good-roads hobby, but is really wanting to serve the people of the eleventh district, as he claims he is, by all means let him seek a seat in the Senate, where Federal-aid help is really needed, and not in the House, where nearly everybody is already for it.

The thing Senator Bosworth is really after is a seat in the House of Representatives, and he is willing to ride the "good-roads hobbyhorse" or any other "hobbyhorse" that will carry him in that direction.

WHAT HAS BOSWORTH DONE?

And what, after all, are his claims to distinction as a good-roads champion and advocate? He was elected to the Kentucky Legislature in the fall of 1906. He was elected a member of the State senate in 1907 and reelected in 1911; so he has had, or will have when his term as State senator expires in January, 1916, 10 years' service in the General Assembly of Kentucky as a lawmaker. In that length of time he helped to father and pass an act at the last session of the Kentucky Legislature entitled "An act to create and establish a system of public State roads, and to provide for the construction and maintenance thereof." It will be observed that this bill applies only to "public State roads." Section 2 of the bill reads:

That there is hereby created a system of public State highways, which shall be composed and be all the roads to which State aid is furnished.

Public State highways are the only roads "to which State aid is furnished," according to section 2 of the bill.

The Bosworth bill does not itself define or explain what public State roads or State highways are as applied to Kentucky, but there is another bill which received Senator Bosworth's support and which became a law on March 24, 1914, and on the same day the Bosworth bill became a law and which does explain just what roads are to receive State aid from the Bosworth bill. Section 1 of that bill reads:

There is hereby created a system of public State highways, which shall consist of roads connecting the county seat of each county of the Commonwealth with the county seats of the adjoining counties by the most direct and practical route. * * * These roads shall be the first to receive State aid; and after such roads are constructed in any county of the Commonwealth, then all other roads to which State aid is furnished thereafter may be deemed public State highways—

and receive State aid.

So it is plain to be seen that no county is to receive any State aid for any of its public roads until State highways have been built connecting the county-seat town of the county with the county seats of the adjoining counties of the State by the most direct and practical route as well as (quoting the law)—

the county seats of the border counties of the Commonwealth with the State line on the most direct and practical route leading from said county seat to the county seats of the adjoining counties in the adjacent States.

In other words, no public road in any county in the eleventh district, or elsewhere in the State, is to receive any State aid until all the county-seat towns of the adjoining counties have been connected with one another with State highways. Nor can any of the public roads of the counties of Monroe, Cumberland, Clinton, Wayne, McCreary, Whitley, Bell, or Harlan—all counties of the eleventh district and all bordering on an adjacent State—be constructed until public State highways have been constructed not only connecting all the adjacent county-seat towns in Kentucky, but to the adjacent county-seat towns in the other States as well—at least to the State line, in the direction of those towns. Before the public roads of Bell County,

for example, can get any State aid the people of Bell County would have to help to construct public State highways to Williamsburg, Ky., the county seat of Whitley County; Barbourville, Ky., the county seat of Knox County; Hyden, Ky., the county seat of Leslie County; Harlan, Ky., the county seat of Harlan County; and last, but not least, to Tazewell, Tenn., the county seat of Claiborne County, Tenn., and Jonesville, Va., the county seat of Lee County, Va., and so on with the rest of the counties. When the people of the eleventh district study and understand the Bosworth bill, it would be really worth while to go a long distance to hear them express their honest opinion about it. And yet he poses as their friend and champion.

Section 4 of the State-aid road bill which Senator Bosworth claims the distinction of having helped to pass reads in part as follows:

There shall be levied and collected and paid into the Treasury of the State in the same manner prescribed by law for the levying, collecting, and paying into the State treasury of other State taxes a special tax to be known as the State road tax. * * * The State road taxes on all real, personal, franchises, and all intangible property not exempt from taxation shall be for the year 1915 and every year thereafter 5 cents on every $100 valuation thereof.

In other words, every person in the eleventh district and the State of Kentucky is to be taxed 5 cents on every $100 worth of taxable property he owns for the purpose of the construction and maintenance not of all the public roads in the eleventh district and the State of Kentucky, but only of those roads known as "public State roads," as expressed in the title of the bill, and "public State highways," as expressed in section 2 thereof, and which, as I have said, only connect the county-seat towns not only in Kentucky but Tennessee and Virginia as well. Why tax all the people of the eleventh district, as part of the State of Kentucky, to help build and maintain only a certain class of public highways? If all the people are to be taxed, why should not the road fund, when raised, be applied to all the public roads in which the people are interested and not merely to a certain class of public roads? There are plenty of public roads in the eleventh congressional district of Kentucky, but how many public State roads or public State highways are there? None. How many people in the eleventh congressional district are there who live on a public State road or a public State highway? None. What per cent of the people in each county will live on the public State highways, when constructed, connecting the county-seat towns? Admittedly but a very small per cent. What it will finally cost these for the privilege, time alone can tell. What it will cost all the other taxpayers of the county to confer this privilege on the limited few, none, so far as I know, are rash enough to estimate. It must not be forgotten that a public State road or a public State highway is one thing, while a public road or a public county road is quite another.

The authors of the State-aid roads bill that recently passed the Kentucky Legislature admit that there are but few, if any, "public State roads" or "public State highways" now in the State of Kentucky, for in section 2 of the bill they say "that there is hereby created a system of public State highways, which shall be all the roads to which State aid is furnished." The other bill says, "State highways are only those roads connecting county-seat towns." There is no way to create "public State highways" by legislative enactment. It takes money and labor and work to do that.

If the Kentucky Legislature had passed a law making this State aid apply to all the public roads, public highways, county roads, and so forth, which are now in existence or which may hereafter be constructed, it would have reached the public roads and highways of the country, where help is most needed.

When you see laws passed by a Democratic Legislature of Kentucky, whether its members are outspoken Democrats or otherwise, professing to rain "showers of blessing" on the people of the eleventh congressional district, you can always look out for a "nigger in the woodpile." We have now no public "State" roads or public "State" highways in the eleventh congressional district. The State highways are the roads yet to be constructed connecting the county-seat towns. It will be fine for the fellows owning automobiles. Senator Bosworth must have a machine. Nor does what I have said tell the whole story.

ALL MUST PAY THE STATE ROAD TAX—THE FEW WILL GET THE BENEFITS.

While every taxpayer in the whole State is compelled to pay, in addition to his other taxes, a State road tax of 5 cents on every $100 worth of taxable property owned by him, this does not mean at all that every citizen who pays the tax is to be benefited thereby, except possibly in an indirect and remote manner, if at all.

Section 5 of Bosworth's boasted State-aid road bill provides what counties shall receive any part of the State road fund and on what conditions they shall receive it. All shall help to pay it, but only those counties complying with certain conditions shall help to receive it. And what are those conditions? The Bosworth bill says (see p. 443, Acts 1914, Kentucky Legislature):

The money hereby set apart in the State treasury to the credit of the State road fund shall be apportioned among the several counties applying for State aid in the manner hereinafter provided, and the amount so apportioned shall be based upon the amount of taxes levied and collected therein * * * until such county shall have received from the State road fund an amount equal to one-half of the moneys appropriated for building roads by said county, whether the sum thus appropriated be from the sale of bonds or from direct taxation: *Provided*, That said sum shall be expended in constructing or reconstructing public roads under the direction of the commissioner of public roads.

And does that mean that all the counties of the State shall have set apart to their credit or for their use a certain portion of this State road fund? By no means. It means only those counties "applying for State aid in the manner hereafter provided." And what is the manner hereafter provided? The manner hereafter provided is that each county in the State shall raise by direct taxation or through the sale of its own county bonds at least as much money, if not twice as much money, for the building and improvement of its roads as that put up by the State. And when that is done the entire sum "shall be expended * * * under the direction of the commissioner of public roads." Should any county desire to apply for State aid it will be its duty to raise its part of the money which is as much, if not twice as much, as that to be put up by the State. The bill is not very clear on that point.

Section 5 provides, as I have said, that each county shall receive an "amount equal to one-half of the moneys appropriated for building roads by said county." If each county is to get from the State only one-half as much money as it puts up itself, then for every dollar it puts up it will receive a half a dollar from the State. Section 18 of the bill, however, provides that "the State shall pay one half and the county one half of the construction of all roads in which State funds are used.

Taking the two sections together it is not clear what is meant. After the money is raised the county will then make plans, profiles, and specifications of what particular road or roads it wants improved or constructed. It will then submit these plans, and so forth, to the fiscal court of the county for its approval or rejection. If the fiscal court approves same—

they shall then be submitted to the State commissioner of public roads for his approval or rejection, and it shall be his duty, before approving said plans, profiles, and specifications, to ascertain by personal inspection or otherwise the natural character of the soil upon which said road is proposed to be constructed and any and all other facts that may be deemed important.

If * * * he shall be satisfied as to the advisability of the improvement of the road as contemplated * * * he shall approve the said plans, profiles, and specifications; otherwise he shall reject the same. (See sec. 10 of the Bosworth law.)

And who is this all-powerful State commissioner of public roads and who creates him? His name is Robert C. Terrill. He was appointed by Gov. McCreary, a Democratic governor, and Terrill is a Democrat and holds office for four years. It is hardly necessary to add that he does not live in the mountains of Kentucky. So after all, unless administrations change, it will be a Democratic State commissioner of public roads who shall for all time decide "as to the advisability of the improvement" of any road or roads contemplated by any county. How many roads the people of the eleventh district might want to build that would really be "advisable" in the judgment of a Blue Grass or Pennyrile Democratic State commissioner of public roads no one can foretell. It is not left to the taxpayer's discretion as to whether or not he shall be taxed 5 cents on each $100 worth of his taxable property in addition to his other taxes—poll, school, city, county, and State—in order to raise a State road fund to be used in constructing certain State highways, but it is left to the discretion of the State commissioner of public roads to withhold State aid from any road he deem inadvisable to improve or construct. When a contract is let for the construction of any public road—

the contract, before any work is done thereunder, must be submitted to the State commissioner of public roads for his approval in writing thereon, and said commissioner of public roads is hereby authorized, whenever in his judgment the best interest of the State requires him to do so, to reject the same.

So says part of section 11 of the Bosworth State aid bill. But suppose this State commissioner of public roads would do his duty and not discriminate against any meritorious State highway project that might be presented to him by any county in the eleventh congressional district or elsewhere, what would be the standing then of the counties, particularly in the eleventh congressional district?

1. Each county would have to tax itself one, if not two, dollars to every one put up by the State and then let the entire sum be expended "under the direction of the Commissioner of Public Roads."

2. "The public State highways shall consist of roads connecting the county seat of each county of the Commonwealth with the county seats of the adjoining counties by the most direct and practical route." Also county-seat towns in adjacent border counties of other States. "These roads shall be the first to receive State aid."

WHAT WOULD BECOME OF THE PEOPLE'S MONEY?

Suppose the counties in the eleventh congressional district, or any one of them, should feel unable to tax itself to build its part of any State highway; or suppose its citizens should take the position that they would be willing to tax themselves to have the public roads of the entire county improved, but would not be willing to do it to have but one State highway connecting the county seats constructed; or suppose they should take the position, since the county is to put up at least one dollar for every one put up by the State, that they would be unwilling to put the entire control and management of the construction of such highways in the hands of the State commissioner of public roads; or suppose the people of the various counties would not want to tax themselves to build State highways connecting the county-seat towns, but would only be willing to tax themselves to improve all the public roads of the county, in so far as possible, and thereby letting each taxpayer get some benefits from the money he is out; or suppose the people in counties bordering on other States, as do the counties of Monroe, Cumberland, Clinton, Wayne, McCreary, Whitley, Bell, and Harlan, should be unwilling to tax themselves to build State highways into other States before improving their own public roads; *or suppose for any other reason the people of any county were either unable or unwilling to meet the conditions of the State aid, as prepared in the Bosworth bill, what would become of the money of the taxpayers*, which they are compelled to pay in each year to help create this State-road fund, whether they want to or not? Would the county that had been thus taxed, and which for any reason was unable or unwilling to take part in the State-aid plan, as proposed in the Bosworth bill, later recover or have used for its benefit the taxes it had paid?

Let no poor county or any county in the eleventh district or elsewhere delude itself with the belief that it would ever get its money back, or that it would ever be used for its benefit. The Democracy of the State, through its representatives and senators at Frankfort and their "allies," were both too selfish and too wise to permit such a thing to happen.

THE DIFFICULTY OF BUILDING STATE HIGHWAYS IN THE MOUNTAINS.

They knew that many, if not all, of the poor Republican mountain counties of the State could not or would not for years, if ever, meet the requirements to secure the State aid as provided in the Bosworth bill. They knew it would take barrels of money to construct across hills, streams, and mountains, from one mountain county-seat town to another, and then into other States, such State highways as would meet the approval of and be deemed advisable by a Democratic State commissioner of public roads, appointed by a Democratic governor. They knew in the central and western part of the State, where Democracy lives and thrives, that there are no such mountain barriers and difficulties in constructing State highways from one county-seat town to another, where the country is comparatively level and the roads easy of construction, as is met with in the mountain counties. They knew that the people there, as a rule, were more able to tax themselves for such a purpose than the mountain people. They knew, and Senator Bosworth, supposedly representing a large mountain senatorial district, ought to have known all these things, and, knowing them, ought not to have fathered and indorsed a bill that would tax the mountain counties to help build State highways between blue-grass county seats without the mountain counties at least getting some benefit from their own taxation. And I make the statement boldly that no county in the State will receive any direct benefit from the State aid to State highways, as provided for in the Bosworth bill and the road measure he indorsed and supported, unless the county itself, in addition to the State road tax it is bound to pay whether it gets any benefit from it or not, also imposes upon itself another road tax at least the size of that put up by the State.

WHAT BECOMES OF THE MONEY PAID BY MOUNTAIN TAXPAYERS?

Failing in this, what becomes of the State road tax of 5 cents on each $100 worth of taxable property owned by its citizens and which they are bound to pay each year? We turn to section 6 of the Bosworth bill for explanation and answer. It reads as follows:

If any county shall not avail itself of the aid from the State apportionment under the provisions of this act, then and in that case the amount so apportioned shall remain in the treasury of the State to the credit of the State fund to be again apportioned among the counties at the next annual apportionment.

In other words, if any county in the State for any reason fails to meet the requirements of the Bosworth law in applying for State aid, or fails to apply at all, then the State road tax it is each year bound to pay does not remain in the State treasury to its use and benefit to be called for and applied to the improvement and construction of its own county roads when it shall apply for State aid, but the State road taxes it pays each year is apportioned among the various counties of the State at the next annual apportionment; and only those counties that are then able to or do apply for State aid, meeting the conditions and requirements of the Bosworth law, will get any part of the money or any advantage from it. I am just wondering how long the counties of Leslie, Clay, Wayne, Russell, Clinton, Cumberland, and Monroe, without a foot of taxable railroad property or other big industries to help meet the taxes, will be compelled to pay this State road tax for the benefit of the blue grass and other sections of the State before they will be able to or do tax themselves sufficiently to get any State aid as provided for in the Bosworth bill. I am just wondering how many years will pass by and how many years' State road taxes the people of Harlan, Bell, Knox, Whitley, Laurel, Rockcastle, McCreary, and Pulaski will pay for the benefit of other sections of the State before they will tax themselves at least one, if not two, dollars to every one put up by the State in order to build State highways from one to the other of their various county seat towns, and from many of the counties into county seat towns of other States, or at least to the State line in that direction; but it is up to them to get busy about it, or let all the State road taxes they are forced annually to pay, go to the improvement of the roads in other sections of the State.

ALL COUNTIES IN ELEVENTH DISTRICT MUST MEET THE REQUIREMENTS OF BOSWORTH LAW OR LOSE THEIR MONEY.

In fact, it is up to all the counties in the eleventh district, rich and poor, to raise the money to help build these State highways connecting the county seat towns of adjoining counties in this and the other States in the way I have mentioned or lose each year all they pay as a State road tax, which is over $25,000. Failing to raise the second tax, other sections of the State get the first, which each year amounts to over $25,000. The following table shows the counties in the eleventh congressional district, together with the assessed value of the real, personal, and railroad property in them for the year 1912, and what each county will have to pay each year as a State road tax.

Counties in eleventh congressional district.	Value of real property.	Value of personal property.	Value of railroad property.	Total.	Amount of yearly State road tax of 5 cents on each $100 of taxable property.
Bell	$4,301,245	$1,807,836	$534,210	$6,643,291	$3,321.64
Clay	1,796,045	616,416	.....	2,412,461	1,206.23
Clinton	938,633	361,801	.....	1,300,434	650.21
Cumberland	1,477,241	438,610	.....	1,915,851	957.42
Harlan	3,453,709	543,035	217,280	4,214,024	2,107.01
Knox	2,841,862	957,686	353,865	4,153,413	2,076.70
Laurel	2,032,405	817,988	584,880	3,435,273	1,718.13
Leslie	1,945,308	278,104	.....	2,323,412	1,161.70
McCreary [1]	.....	.....	674,475	674,475	337.23
Monroe	1,685,890	735,179	.....	2,421,069	1,210.53
Pulaski	4,387,980	1,616,084	1,086,505	7,490,579	3,745.28
Rockcastle	1,270,166	492,889	606,340	2,459,395	1,229.70
Russell	1,205,929	586,756	.....	1,792,684	896.34
Wayne	2,701,261	1,424,902	.....	4,126,163	2,063.08
Whitley	3,835,936	2,131,798	1,380,715	7,348,449	3,674.22
Total	.....	.....	.....	52,710,973	26,345.42

[1] Its property, except railroads to value indicated, is credited to counties out of which it was created.

This does not include the value of railroad franchises and other franchises in the eleventh district, so the State-road tax, which the eleventh district has to pay each year whether it wants to or not and which will amount to over $25,000 annually, not counting the franchise taxes, will be entirely lost to the eleventh district each year and go to build roads in other sections of the State, unless the eleventh district, in addition to the State-road tax of over $25,000 it is bound to pay, puts up another tax to construct these State highways at least equal in amount to that put up by the State..

Bell County, for example, will have to pay next year a State road tax of $3,321.50, and more each year thereafter as the value of her property increases; and all of which will be lost to the county until such time as her citizens impose upon themselves another road tax at least equal in amount to that put up by the State with which to build these State highways connecting the county-seat towns as I have described them. Over $3,545.28 of the tax money paid every year by the taxpayers of Pulaski

County will be used in building State highways in other counties and other sections of the State unless they meet the requirements of the Bosworth law and impose upon themselves a second tax to construct and rebuild, not the various public roads of the county but the state highways connecting the county seat of Pulaski County with the county-seat towns of the counties of Russell, Wayne, McCreary, Laurel, Rockcastle, Casey, and Lincoln. Over $2,063 05 each year of the taxes of the taxpayers of Wayne County will go the same way unless she meets the requirements of the Bosworth law. Over $2,000 of Knox County tax money will go the same way each year. The same is true of Harlan County. Clay, Laurel, Leslie, Monroe, and Rockcastle Counties will each lose every year over $1,000 tax money until they agree to put up at least half of the money to build State highways connecting the county-seat town of each county with the county-seat towns of all the counties that touch or border on them, and so on, with all the rest of the counties. It is nothing short of a calamity that over $25,000 of the hard-earned tax money of the eleventh district should go to build highways in other sections of the State. In the nature of things it will do this for years to come. Such an arrangement is good for the blue grass but bad for the mountains.

Senator Bosworth's law says, in substance, to the taxpayers of the eleventh district:

I will make you pay each year, whether you want to or not, a State road tax of over $25,000. Now, unless you voluntarily impose upon yourselves a second road tax at least equal in amount to that put up by the State to build State highways from the county-seat towns of every county in the eleventh district to the county-seat town of every other adjacent county in it, I will not let you get any benefit from my State-aid road law, but will use the $25,000 State road tax I make you pay each year toward the building of State highways between the county-seat towns in the blue grass and other sections of the State.

When the senator says he has "secured legislation in the Kentucky Legislature that will make the State pay half the cost of road building in the mountains of Kentucky" he shoots wide of the mark. Bosworth's law provides that not a dollar of State money shall be used on any of the ordinary county or public roads in any of the counties until these State highways are all built, connecting not merely one but all the county-seat towns of the various adjacent counties.

I see nothing left for the people in the various counties to do but impose upon themselves this second road tax. They will either have to do it or lose under the Bosworth law over $25,000 of their hard-earned tax money each year. To be exact, over $26,345.42 annually.

Senator Bosworth, the reputed author of this law, was himself born in the famed blue-grass county of Fayette on October 1, 1867. He was himself a Democrat, reared by Democratic parents, and brought up amid Democratic surroundings. His brother, Henry Bosworth, was the Democratic sheriff of Fayette County, who, after arresting me on the Goebel charge, permitted his hoodlums and henchmen to beat me up and knock me senseless, after they had taken me to the county jail. I was doing nothing at the time except protesting against handing over what money I had to a band of lawless and brutal men masquerading as diligent and law-enforcing peace officers. This same Henry Bosworth, a full brother to Senator Joe, who wants to succeed me in Congress, a few nights after he had let me be beat up by a band of outlaws, with others, came to my cell in the Lexington jail at 2 o'clock at night, and bade me "get up." I asked for what purpose I was wanted, and I was told that they "had come for me." I asked where I was to be taken, but the only answer received was to "get up"; that they were going to take me a little distance. Capt. Davis and I were handcuffed together and driven out into the country through the darkness of night. Was a mob to end further legal controversy? It looked that way. They finally landed us in the Louisville Jail. Later on this same Henry Bosworth became a candidate for the Democratic nomination for State treasurer, basing his claims for the Democratic nomination largely on his service (?) to the Democratic Party in arresting me and in testifying against me. He testified for the prosecution in all my trials on the Goebel charge. In his race he had cards printed showing that he was the Democratic sheriff that arrested me. He was nominated by the Democracy of the State for State treasurer, and later elected to that office. He was later nominated and elected by the Democracy of the State for the position of auditor of public accounts, at least partly on his claim, if not largely on his claim, that he, as the Democratic sheriff of Fayette County, had arrested me on the charge of alleged complicity in the murder of William Goebel, and that he had aided the prosecution when on trial for my life.

The News-Democrat, a Democratic paper published at Paducah, Ky., in its issue of June 11, 1911, speaking of the visit of Henry Bosworth, Joe's brother, when he was a candidate for State auditor, said:

The Hon. Henry Bosworth, of Lexington, Ky., candidate for the nomination for State auditor before the Democratic primary July 1, was in the city yesterday. Mr. Bosworth probably is best remembered as the man who arrested CALEB POWERS after the murder of Gov. Goebel.

There you have it in a nutshell. Mr. Bosworth is still holding the office of State auditor. He is now a Democratic candidate for the office of governor. All the Bosworths I know are Democrats, except Senator Joe, who says he became a Republican when he moved up in the eleventh district. It was personally profitable to Joe to say he was a Republican after he got up into the eleventh district. He has been holding office at the hands of the Republican Party much of the time since 1891. He has been city councilman, city attorney, city judge, State representative, and State senator. He now wants the Republican Party to send him to Congress. His brother Henry wants the Democratic Party to elect him governor. Henry remained in the blue grass and remained a Democrat. Joe came to the mountains, and says he is a Republican. Most of the people believe that Henry really and truly is a Democrat; but he has not got any the advantage of Joe in that respect. Most of the people believe that he (Senator Joe) is as much of a Democrat as he has ever been. He is very popular with them. It is said when Joe gets down to Frankfort and begins to mix with the Democratic brethren from other sections of the State that no one would ever suspect that Joe was a Republican. It can not be denied that the Democratic "brethren" have been pretty friendly to Joe in helping him pass his bills through an overwhelmingly Democratic general assembly. By a faint stretch of the imagination one can see them putting their arms around Joe and in whispered conversation saying: "Joe, you are a daisy. You are certainly putting one over on those mountain Republicans in making them believe that you are one of them. If we could send enough Democrats like you up in the mountains and the other Republican sections, and if they could put it over on them like you have, we would have the thing all our way. Keep it up, Joe." Joe is now a candidate for Congress.

You will find the Democrats generally all talking for Joe and saying that he is going to win. He has selected Hon. Charles I. Dawson, a former Democrat, to manage his campaign for Congress in a primary, where Senator Joe is seeking the Republican nomination for Congress. There is being circulated in the eleventh district in the interest of Senator Bosworth's candidacy a letter written by Representative McCormack, M. D., of Bowling Green, Ky., in which he expresses "the earnest hope" that Senator Bosworth and other men like him "may be kept in public life as long as they will consent to serve." Senator Joe, to say the least of it, is an ex-Democrat. His campaign manager is an ex-Democrat; part, if not all, of his partners in business are ex-Democrats. Democrats out of the district are recommending him. I take it that most Democrats in the district are for him. Democratic papers are trying to nominate him. That is enough to defeat him. Henry, a blue-grass Democrat, asks to be nominated for governor over his fellow blue-grass Democrats. Joe, a blue-grass man, to say the least of it, asks to be nominated for Congress over a mountain man and a mountain Republican, and he asks the mountain people and the mountain Republicans to do this. Joe says he ought to be elected to Congress because he is the "blessed" father of a State-aid road law, which in its actual operation will tax the poor people up in the mountains unless they comply with the requirements of Joe's law to the tune of over $25,000 each year to build State highways for the boasted aristocracy of the blue-grass and other blue-blooded scions of Democracy's hosts. But Senator Bosworth was born and reared in the blue grass. His people are there, and if his heart goes out to them and that section of the State rather than to the people and the section of the State of his adoption, the world will not wonder at him or at his attitude of mind and heart.

He has often shown how he feels. His public records speak for themselves.

On March 11, 1908, page 1030, senate journal, Senator Bosworth is recorded as being the first man to vote for senate bill No. 173, which was:

An act to appropriate $2,500 to assist in marking the birthplace of Jefferson Davis.

The bill as Senator Bosworth helped to pass through the senate was as follows:

Be it enacted by the General Assembly of the Commonwealth of Kentucky, That the sum of $2,500 be, and the same is hereby, appropriated to assist in erecting a memorial tablet on said ground.

President Davis, as everybody knows, was the President of the Southern Confederacy.

On March 17, 1912, page 1284, senate journal, Senator Bosworth is recorded as being the first man to vote for an appropriation to remove the remains of Hon. Thomas F. Marshall from Versailles, Ky., to Frankfort, Ky. Mr. Marshall was once a Democratic Member of Congress from the Ashland district, and was famous as an orator.

On March 15, 1910, page 1871, senate journal, Senator Joe Bosworth is recorded as voting for senate bill 257, which was an act

to appropriate $5,000 to help build a monument at Fairview, Ky., to the memory of Jefferson Davis.

Section 1 of the bill reads:

That the sum of $5,000 is hereby appropriated, out of any money in the State treasury not otherwise appropriated, to be expended in erecting, in the town of Fairview, in the counties of Todd and Christian, a memorial building or monument to the memory of Jefferson Davis.

On March 5, 1910, page 1034, senate journal, Senator Bosworth is recorded as voting for senate bill 250, which was "An act granting pensions to disabled, indigent Confederate soldiers." He voted to have this done four years before this.

On March 4, 1910, page 1001, senate journal, Senator Bosworth is recorded as voting for a bill appropriating $7,500 with which to build a monument to John H. Morgan, the noted rebel general, who did more to bring death and disaster to the Union soldiers and their cause than any other man in Kentucky.

This record speaks for itself. But I am wandering away from my subject—Bosworth's State-aid road tax. I must get back to that.

WHY SHOULD THE ROAD TAX BE LAID DIFFERENTLY FROM WHAT THE SCHOOL TAX IS?

When the State of Kentucky got ready to provide for an efficient system of public schools throughout the boundaries of the Commonwealth it proceeded, through its general assembly, to issue the bond of the Commonwealth in favor of the board of education for the sum of $1,377,000, which, together with other proceeds, "shall be held inviolate for the purpose of sustaining the system of common schools." That, together with certain annual school taxes each taxpayer and property holder in the State has to pay, constitutes the school fund that supports our public schools. The road tax of 5 cents on the $100 worth of taxable property, which we are to pay every year, constitutes the State road fund. Is the State road fund to be used and distributed along the same broad lines and in the same fair and generous manner that the school fund is used and distributed? By no means. The school fund is distributed impartially throughout the entire Commonwealth. Here is what the law says as to that:

Each county in the Commonwealth shall be entitled to its proportion of the school fund on its census of pupil children for each school year.

Every child of school age in the State, whether he resides in a mountain or a blue-grass county, whether his father is rich or poor, whether he pays much or no school tax, gets as much of this school fund set aside for his education as any other child in the Commonwealth. Not so with this State road fund. This State road fund is not prorated out among the various counties of the State according to their area. No mountain county can get any part of this road fund until it raises by direct taxation or otherwise at least half as much money as is needed to construct the State highway desired.

WHEN STATE HIGHWAY IS CONSTRUCTED, COUNTY KEEPS IT UP.

And after it is once constructed, under the direction of the State commissioner of public roads, the State of Kentucky thereafter washes its hands of the project and turns it back over to the county for its further improvement, maintenance, and upkeep. Section 21 of the Bosworth State-aid bill reads as follows:

Any road constructed or reconstructed under the provisions of this act shall forever hereafter be a county road, and the duty of keeping the same in repair devolves upon the fiscal court of the county, to be maintained out of the general county fund as provided by law.

So, after the road is once constructed, it ever afterwards devolves upon the county itself to maintain it and keep it in repair.

The children of the mountain people reap the benefit of blue-grass taxation in getting their education, but the construction of mountain roads must depend upon mountain taxes taken from the pockets of a needy people. It is a good thing Senator Bosworth was not in the State senate at the time school-tax legislation was being framed. Senator Bosworth asks to be sent to Congress on account of the laws he has helped to pass. He would stand a much better chance to get the Republican nomination in the primary which comes up on August 1 if he had helped to pass no laws at all. It is not the number of laws that a man has helped to pass that commends him to a sensible electorate, but it is the number of good laws that count. Better have no laws than to have bad laws. Senator Bosworth expects his bad laws to benefit him, but they will ruin him.

BOONEWAY TRAIL AND FEDERAL AID TO GOOD ROADS.

In the speech I delivered on the floor of the House of Representatives on April 27, 1912, in favor of Federal aid to good roads I said:

There is but one other question—the liquor question—before the American people to-day that affects so vitally so many homes and so many firesides. There is no other question for solution before the American people to-day in which the constituents I have the honor to represent are so intensely interested and so vitally concerned.

These are my sentiments to-day. I yield second place to no man in my advocacy of good roads. Since coming to Congress I have introduced a bill asking an appropriation of $600,000 for the purpose of rebuilding the Old Wilderness Road from Cumberland Gap to Crab Orchard, to be known as the Booneway, and to pass through Pineville, Barbourville, London, Mount Vernon, and on to Crab Orchard and Boonesboro; but since the Democratic Party came into power pledging economy, and since this road will pass through a Republican section of the State, the chances to get such legislation through will not be very bright as long as the Democrats remain in power. I believe in both Federal and State aid. I favor the enactment of wise, fair, safe, and sane legislation, both State and Federal, looking to that end; but I want the legislation to be fair and wise. I want justice done the people of the mountains of Kentucky in the enactment of such laws. I do not want them taxed to the tune of $25,000 a year to build roads in any other section of the State, or in no other State of the Union, without they themselves getting at least some benefit from such taxation. We need good roads. Heaven knows we need them. Our people are willing to go their limit in building them on fair terms and equitable conditions. For 100 years or more our development has been hampered, our growth retarded, because of lack of transportation facilities and unfair redistricting and other laws. We hail with delight the day—even of the prospect—of the Federal Government becoming interested to the point of assistance in the betterment of our road conditions.

CONGRESSMAN D. C. EDWARDS SERVED SIX YEARS IN CONGRESS—I HAVE SERVED THREE.—WHY SHOULD I SERVE LESS THAN EDWARDS?—SOME OF THE THINGS I HAVE DONE IN CONGRESS.

And while Senator Bosworth is pointing to his State-aid bill—he says nothing about his whisky record—as reasons for political preferment, it may not be amiss for me to remind the country of a few of the things I have done. Most of a man's work in Congress the public never hears of. I have received on an average of 40 to 50 letters every day since I have been a Member of Congress, many of which required, in addition to an answer, a visit to some of the departments to look after the interest or wishes of the writer. Just to properly look after the correspondence alone is a tremendous job. The public never hears of this and therefore gives no credit for it. Then, again, the shaping of legislation is really done in the committees. Since becoming a Member of Congress I have been always on two important committees. I am now the ranking Republican, who is a candidate for reelection, on the Committee on Education; and in the event the next House is Republican and I am reelected, I will be chairman of that important committee.

MEN NOT KEPT IN CONGRESS LONG ENOUGH.

The trouble with the Republicans in the eleventh district is that they have never kept their men in Congress long enough for them to become important factors in the shaping of legislation. The leaders in Congress here, both on the Republican and Democratic side, are men who have been kept in Congress from 10 to 40 years. Men can not become statesmen in a day.

My enemies say I can not do anything in Congress because the House is Democratic and because the Democrats hate me so, especially the Kentucky Democrats. All the Democrats I came in contact with except the Kentucky fellows treat me with courtesy and respect. I have many friends among the Democrats here. The Representatives from Kentucky have nothing to do with me, and I have nothing to do with them. They have not opposed any legislation I have tried to get through. And, while no Republican Member of Congress is expected to get much legislation through a Democratic House, I congratulate myself and the district I have the honor to represent upon the things I have been able to accomplish.

I HAVE BEEN A FRIEND OF THE SOLDIERS, THEIR WIDOWS AND ORPHANS.

Since becoming a Member of Congress I have voted in their interest and made speeches in their behalf. Soon after coming to Congress I introduced a dollar-a-day pension bill, and on December 11, 1911, I made a speech in behalf of the Sherwood bill. In that speech I said, in part:

I hope that those who feel that way on this subject will not forget the fact that the old soldier did help to save this Union. That much can neither be doubted nor denied. That much, at least, of his life and motives are secure from truthful attack. That he displayed valor and patriotism, fortitude and courage no honest man conversant with the facts will ever dispute.

As a result of his privations and hardships, lofty patriotism and Spartan-like valor, we have one flag and one country, which is a marvel to all the world in its wonderful achievements and an inspiration to all mankind in its love of liberty, lofty ideals, and high resolves.

The war is over. Its passions and its bitterness should be buried with its dead.

I voted for the Sherwood bill; and as a result of its passage thousands of helpless old soldiers have been made to rejoice

that they faced the horrors of war that the country might live. Nor have I forgotten the Spanish-American War soldiers, their widows and orphans. I have spoken and voted for them. Bosworth spoke and voted for the Confederate soldiers.

While 90 per cent or more of the meritorious pension claims of the country have been already allowed—it has been 50 years since the Civil War—and while but a few men, comparatively, were engaged in the Spanish-American War, still in three years time I have gotten 138 pensions either granted outright or increased.

This makes in three years 22 special acts I have gotten passed. Twenty-five pensions granted for the first time by the Pension Department to those who had never before drawn a pension, and 75 increases in pensions, each of them being a helpful increase to those standing in need of it. Including 16 children for whom I have gotten pensions, this makes a record of 138 pensions I have procured outright or materially increased in three years, and that, too, in a Democratic House, and that, too, without being a member of either of the Pension Committees, which is a big advantage. I have every reason to be proud of the record I have made. I have a number of other good cases, with the proof complete, now pending before the proper committees and Pension Department, many of which, I feel sure, will be eventually allowed.

WAR CLAIMS.

I have passed through the House the following war claims:

Valentine I. Brewer	$469.90
Thomas P. Caldwell	89.83
N. S. Denny, heir of the estate of Thomas D. Denny	102.00
Sarah Ann Dobbs, widow of N. B. Dobbs	162.25
Robert Hardwick	980.00
Patrick Henry Bridgewater	220.00
William B. Kelly	50.00
Harriet N. Lair	350.00
Ella J. Vermillion and others, children and heirs at law of Zachariah A. Morgan	52.60
Mary Speaks, widow of Jesse C. Speaks	36.60
Trustees of the Baptist Church of Somerset, Ky	1,560.00
Trustees of the Presbyterian Church at Somerset, Ky	550.00

All of these have been justly due for 50 years.

I have introduced, and there has been referred to the War Claims Committee, 74 war claims, amounting to $70,408.50.

Some of these bills have been introduced for the heirs of the people I have mentioned. All of these bills will be out of my hands when they are referred to the Court of Claims until that court passes upon them and refers them back to the House for an appropriation, if the Court of Claims passes favorably upon them. A certain affidavit must be filed with the War Claims Committee before it will refer the claim to the Court of Claims. In some cases those asking the appropriation have filed the proper affidavit. In others they have not. Getting war claims passed is a slow process. This is evidenced by the fact that no omnibus war-claim bill has passed both the House and the Senate and become a law in over nine years. I cite merely as an example these war-claims cases to show that I have not been idle as a Member of Congress, although the public never hears of such work.

MIDDLESBORO APPROPRIATION.

I have secured an appropriation for $30,000 to help complete a public building at Middlesboro. I also had Middlesboro designated as a place at which to hold civil-service examinations in order to keep our mountain people from having to pay their expenses to Danville or Lexington and return, the nearest places to them before Middlesboro was designated as a place at which these examinations could be held. Middlesboro apparently has never been very appreciative of my efforts in her behalf.

BARBOURVILLE APPROPRIATION.

I had a law passed appropriating $5,000 with which to purchase a site for a public building at Barbourville, Ky.

There was no omnibus public-building bill allowed this year, but the chairman of the Committee on Public Buildings and Grounds informs me that he expects to pass one at the next session of Congress, which begins in December and ends March 4, 1915. I have every assurance that between December and March I will get an appropriation of $60,000 more to build a public building at Barbourville, Ky. I have already laid the foundation for it and got the worst part done by getting the Government committed to it in the purchase of a site.

HOW I HAVE STOOD BY THE LABORING MAN AND THE MINER AND HOW SENATOR BOSWORTH HAS STOOD AGAINST THEM.

I have all my life been the friend of the laboring man and have consistently stood by his interests. I have been with him on the immigration question and twice have I addressed the House in his behalf when that question was pending and always voted for his interests. On the passage of the anti-injunction bill on May 14, 1911, I voted for his interests. In recognition of my services as a friend of labor the Trades Unionist, the great labor paper published in Washington, had the following editorial about me:

CALEB POWERS A FRIEND TO LABOR.

It is very important that a great Commonwealth like Kentucky shall be represented in Congress by a man of ability and influence, and it is particularly so to the interest of labor that such a man shall be friendly to labor. Congressman POWERS represents the eleventh district, and he has always manifested a most friendly interest in the labor cause and is entitled to the support and cooperation of all who have the best interest of labor at heart.

In public and social circles he is prominent and popular, his name being regarded as the guaranty of the success of any undertaking with which he may be identified, and we truly hope he will be returned to the Sixty-third Congress. He is, fortunately, a member of one of the powerful and important committees of the House of Representatives—the Committee on Immigration and Naturalization. This committee has more to do with legislation affecting labor than any other committee in the House of Representatives. Mr. POWERS is an influential, faithful, and active member of that committee; and his record in behalf of labor is, indeed, gratifying to the great army of laborers in this country. In respect to labor Mr. POWERS practices in Washington what he preaches in his district. Would that there were more such.

We are glad to note that Congressman POWERS is standing flat-footedly by the cause of labor. His own hard experience certainly ought to make him a friend to the under dog.

Explaining my attitude toward immigration and the laboring man, I quote from a speech I recently made on the subject:

There come to this country annually about 250,000 immigrants from the Old World. It is not fair to the laboring men of this country to have dumped among them annually such an influx of competitors, many of whom have heretofore been pauper-paid and know nothing about the high standards of wage and living our own laboring men have the right to expect. When the immigration bill was up before the House the last time the people of my district were charged with illiteracy. I defended them warmly, if not strongly, and among other things said: "I desire to say that no section of the Union has braver or better people than live and dwell in the mountains of Kentucky. In homely virtues they have no peers. In strength of manhood and purity of womanhood they have no equals."

MINING RESCUE HEADQUARTERS AT PINEVILLE OR HARLAN—THE MINERS AND LABORING MEN.

I have introduced two bills asking an appropriation of $53,000 with which to properly provide for and equip two mining rescue headquarters, one for Pineville and one for Harlan.

THE MINERS.

I have, as I have heretofore said, been a consistent friend of the laboring man. When a bill was before the House in 1912 affecting the interest of the miners, I made a speech in their behalf, and, among other things, said:

It will be remembered that some years ago there followed in this country one terrific and appalling mine accident after another in which hundreds and thousands of the lives of our brothers working beneath the soil were snuffed out. It was under these conditions and by reason of this necessity that the Bureau of Mines of the United States Government was established.

BOSWORTH AGAINST LABORING MAN.

While I have been consistently the friend of labor, Senator Bosworth by his record has shown just where he stands.

On March 5, 1906, house journal, page 236, Senator Bosworth voted to lay on the table house bill 266, making it a misdemeanor for any person, company, or corporation operating a coal mine to let anyone work in the mine who has not had two years' experience with or as a practical miner, unless accompanied by some other person who has had two years' experience.

This motion of Mr. Bosworth was defeated by a vote of 44 to 32. (See page 1233, house journal.)

Senator Bosworth then voted against the passage of the bill, but it passed the senate notwithstanding his vote.

On March 7, 1906, page 1355, house journal, shows that Bosworth failed to vote for a bill to protect the miners.

THE FELLOW-SERVANT LAW.

The fellow-servant law in Kentucky is this in substance:

Gross negligence of a fellow servant, resulting in injury to another servant of the same grade, engaged in the same field of labor, does not render the master liable.

This is shown in the case of Volz *v.* C. & O. R. R. Co. (95 Ky. 188) and divers other cases.

The Federal Congress has, in so far as its jurisdiction applies, abolished the fellow-servant rule in justice to the employee—the laborer.

The question was up before the Kentucky Legislature in 1906, and on February 20 of that year and on page 689, house journal, Senator Bosworth is recorded as voting to table and kill house bill 325, a bill designed to abolish and make inoperative the fellow-servant rule in Kentucky. He voted squarely for the railroad and coal mine and other corporations and squarely against the laboring man—the employee.

On March 16, 1908, page 1190, senate journal, Bosworth failed to vote for a bill making it unlawful for any child under 14 years of age to be employed or permitted or suffered to work in any factory, workshop, mine, and so forth.

On March 6, 1910, page 1314, house journal, Senator Bosworth is recorded as having failed to vote for house bill 92,

which was an act to make it unlawful to employ a child less than 14 years of age in workshops, mines, mills, and factories.

In other words, he did not vote for the child-labor law. He employs labor. He is a coal operator.

On March 1, 1912, page 1270, senate journal, Senator Joe F. Bosworth is recorded as voting for senate bill 107, which was: "An act prohibiting the use of public drinking cups." Section 1 of the bill reads, in part:

The use of the common drinking cup on railroad trains and in railroad stations, public hotels, boarding houses, restaurants, stores, or other publicly frequented places in Kentucky, is hereby prohibited.

The fine is from $1 to $10 for every offense.

On March 4, 1912, senate journal, page 1335, Senator J. F. Bosworth voted to kill by tabling it, senate bill 195—which was an act compelling railroad companies—

to equip all locomotive engines used in the transportion of trains over said railroad with electric headlights of not less than 1,500 candlepower, or other headlights of not less than 1,500 candlepower.

On February 7, 1906, page 462 of the house journal, Senator Bosworth is recorded as voting against house bill 97, a bill providing a punishment for railroads for granting free passes and punishing State, district, or county officers for accepting them.

February 26, 1908, page 686, senate journal, Bosworth voted to allow $10 a day and 15 cents per mile for senators going to and returning from the sessions of the senate.

On March 13, 1906, page 1656, house journal, records Bosworth as voting for a bill preventing a man from setting a steel trap ouside of his house.

On January 30, 1906, page 359, house journal, Bosworth voted for Mr. Croan's dog law.

It was signed by the governor, and it is now a law, and reads in part as follows:

Be it enacted by the General Assembly of the Commonwealth of Kentucky, Each year every dog over four months old shall be listed for taxation as herein provided.

SEC. 2. The owner of every dog over four months of age shall pay a license tax thereon of $1.

I have just simply quoted the record as it stands. It is more eloquent than any words of mine can be.

While Senator Bosworth was voting to give the State senators their passes, and in addition thereto to give them $10 per day and "15 cents per mile in going to and returning from the sessions of the senate," he was voting to keep the poor man from having his dogs or using public drinking cups, or even from setting a steel trap outside of his house. While Senator Bosworth was making no efforts to keep children under 14 years of age from being employed in workshop, factory, and mine; while Senator Bosworth was voting to let the coal-mining companies employ and expose to danger and death inexperienced and unaccompanied coal miners; while Senator Bosworth was voting to protect the corporations by keeping the fellow-servant law on the statute books; while Senator Bosworth was voting to kill a bill designed to make the railroad companies equip their locomotive engines with proper headlights, he was voting for free railroad passes for the favored few and voting to keep the coal-mining company in which he was interested from paying a license tax of 1 cent a ton on all the coal mined therein. He did this on March 6, 1912. (See p. 1484, senate journal.) He must have felt that his services for the corporations and companies and his injuries to the man who labors and toils was not complete without voting to make the high cost of living more high by voting to make the traveler "tip" for what he has already paid and paid dearly for.

Let the record speak:

On March 11, 1912, page 1877, senate journal, Senator Bosworth and 8 others are recorded as voting against while 20 others voted for the antitipping bill, which was House bill 115 and being "An act prohibiting waiters and servants from accepting tips in hotels, restaurants, barber shops, Pullman cars, and other places, and prohibiting persons from offering or giving tips and prescribing punishment therefor."

It is the duty of the management to pay their help and not force the traveling public to pay for the same thing twice.

DIRECT ELECTION OF UNITED STATES SENATORS.

I supported and voted for the proposition to give the people the right to elect by their votes their United States Senators. I believe the people should rule. I have not always had the support of the politicians, but I have always had the support of the people.

PUBLICITY OF CAMPAIGN FUNDS.

I voted for the publicity of campaign funds. The people have a right to know what interests are supporting a man's candidacy and to what extent he is receiving such support.

$5,000 NOW THE LIMIT IN A CONGRESSIONAL RACE.

I have every reason to believe, in fact I think I know, that the whisky interests of the country are prepared to back, and back generously, with both money and whisky the candidacy of Senator Bosworth for Congress. The people may expect this.

A FRIEND TO COLORED MAN.

I have always been a friend to the colored man. I have not been afraid or ashamed to say so.

When we were considering the last immigration bill before the House there were those who attacked the negro on account of his alleged illiteracy. In his defense in a speech before the House I then said:

It comes with bad grace from these gentlemen to prate about the illiteracy of the colored people in Kentucky or elsewhere. Ground down with the chains of slavery for 250 years, denied, aye, forbidden to read a printed page, no wonder there exists some illiteracy among them now. But few races in the world have made more progress than the colored people since the master's lash was taken from their bare backs and they given an opportunity to make some strides along educational and other lines.

In recognition of my friendship for the colored people, and in appreciation of my efforts to keep the stigma of disgrace from falling upon their race by hanging a colored woman here in the Capital of the Nation, which I prevented, the leading colored people here in Washington, speaking for their race, passed a resolution praising me.

I HAVE NOT FORGOTTEN THE FARMER.

I think the records will bear me out in the statement that I am the first man to advocate in a speech on the floor of the House the carrying of the farmers' products through the mails by means of parcel post. The House did not at the time agree with my suggestions, but when the bill we were considering got to the Senate of the United States the things I had contended for were put in the bill, and the bill as amended finally passed the House. As a result of it the farmers of the eleventh district and the entire country are reaping the reward of such legislation. Their butter, their eggs, their chickens, and divers other farm products can now be sent at a small cost by Uncle Sam's messengers. The speech I made on April 27, 1912, in behalf of the farmer attracted a good deal of attention. The New York Tribune, the Wilkes-Barre Record, and other papers gave it much space and, among other things, said:

URGES PARCEL POST TO STRIKE AT MIDDLEMAN—REPRESENTATIVE POWERS TELLS HOUSE FARM PRODUCTS SHOULD GO DIRECTLY TO CONSUMER.

The farm products of the country last year had an estimated aggregate value of $9,000,000,000. The farmers used perhaps one-third of these products; the remaining $6,000,000,000 worth cost the ultimate consumer $13,000,000,000. In other words, the price of the farm product was more than doubled from the time it left the farm until it reached the mouth of the consumer through the medium of the middleman.

I have tried to help the farmer and all our people.

I have made a number of speeches on the tariff since I have been a Member of the House. The Democratic Party has professed friendship for the farmer, but in the Underwood tariff bill put on the free list nearly all his products. In one speech I said:

Is it fair and just and right to remove protection from the farmers' corn and barley and wheat and rye and oats and tomatoes and vegetables and protect the manufactures of these products into articles prepared for the farmers' consumption?

MY SPEECH ON GERRYMANDERING.

For years the Democratic Party in Kentucky have outrageously gerrymandered the congressional, judicial, legislative, and other districts in Kentucky. The first opportunity I had after coming to Congress I made a speech on the way it was done, which caused a good deal of comment by the press of the Nation.

CUMBERLAND RIVER APPROPRIATION.

The Board of Engineers for Rivers and Harbors, in a report made on the 27th of February, 1906, put the upper Cumberland River on the "bum," except the completion of Lock 21, which already had had much money expended on it. They recommended that no more locks and dams be built. I did not become a Member of Congress till March 4, 1911. After I became a Member of Congress I succeeded in getting to be a member of the Rivers and Harbors Committee. The upper Cumberland from Burnside to Nashville has been put back on the map, and the complete canalization of the whole of it recommended. I helped put through both the Rivers and Harbors Committee as well as the House of Representatives this year an appropriation of $340,000 to purchase the necessary sites for all the necessary locks and dams on the entire upper Cumberland. I expect to get $350,000 before March 4 next to construct a new lock and dam at the proper distance below Lock 21; and each year thereafter, if I am reelected to Congress, I expect to get enough money to build at least one new lock and dam until the whole river is canalized.

MY VOTING RECORD.

In my last campaign for Congress much was said about the number of times I had failed to vote since becoming a Member of Congress. Like every other Member here, I have failed to

vote on a good many matters that did not concern my constituents. A Member's failure to vote on a lot of stuff coming before Congress in which his constituents are in no way concerned is no proof that he is not a good and faithful Member of Congress. My constituents come first with me, and if I can better serve their interest at the time than voting on something that does not affect them and in which they have no interest, I feel not only at liberty to do it, but in duty bound to do it.

Hon. JOHN LANGLEY, our efficient Republican Member of Congress from the tenth district of Kentucky, had this to say the other day on this subject:

An efficient Congressman has a great deal to do besides sitting around here in this Hall, and loitering in the cloak rooms waiting to go on record, pestering his fellow Members, and blindly answering roll calls. I have missed a number of roll calls, even while here in Washington, on matters that were not important to my district, because I was looking after matters in committees or in the departments that were important to it.

I am perfectly willing that my voting record in Congress be compared with other Members of the House. It is not fair to stand a Member's record out by himself and say that he failed to vote so many times during a session of Congress; but it is fair to compare his voting record with other Members of Congress. I have looked up the voting record of a few Members who are known to my constituents for purposes of comparison.

Congressman JOHN LANGLEY's district joins and lies just north of mine. He has been a Member of Congress since March 4, 1907, making eight years when his present term expires. He now has no opposition for the Republican nomination. His district is satisfied with his record as a faithful and efficient Member of Congress, and the fact remains that during the little over three years I have been in Congress, from March 4, 1911, to May 23, 1914, *I have voted more times than Mr. Langley has voted.*

Hon. C. B. SLEMP, the Republican Member of Congress from Virginia, whose district borders on mine, has been a Member of Congress for the last eight years. His constituents know his worth by nominating him over his protest and by refusing to let him retire from politics and electing him in a district that is really Democratic, *and yet I have voted a good many more times in the three years and three months I have been a Member of the House than Mr. Slemp.*

A. O. STANLEY has been a Member of Congress since March 4, 1903—12 years when his present term expires. He now wants the Democrats of Kentucky to nominate and elect him as their candidate for the United States Senate. He has been having no opposition in his party for Congress for years; and yet from March 4, 1911, to May 23, 1914, *I cast 298 votes in Congress, while Congressman Stanley cast only 219 votes. Mr. Stanley missed voting 306 times, while I only missed 228 times.*

Take the case of ex-Congressman D. C. Edwards. *For three years, from March 4, 1908, to March 4, 1911, when I succeeded him, he cast only 220 votes on the floor of the House, while for the next three years and a little over I cast 298 votes. Mr. Edwards missed voting 334 times.* I only missed 228 times. So it can readily be seen that I have not been derelict in my duty along the voting line.

Take the case of Hon. OSCAR UNDERWOOD, the majority leader, who has charge of the Democratic ship of state on the floor of the House and who is expected to always be present, voted 48 times during the first session of the Sixty-third Congress and missed voting 24 times. That was my record exactly. I voted 48 times and missed 24 times during that session. Everybody knows that Congressman UNDERWOOD is an able and efficient Member of Congress, and yet the fact remains that both Congressman UNDERWOOD and Congressman STANLEY now belong to the majority party in Congress. It is up to the Democrats now to shape legislation. It is incumbent upon them to be at their post of duty. The same thing was true of Edwards when he was a Member. The Republicans were in the majority then and had the shaping of legislation. *I voted more times than Stanley and Edwards and missed far less votes than either. I have voted more times than Langley or Slemp and have missed less votes than either.*

POWERS CHANGES MIND.

If I had not become a candidate for Congress with a half dozen or more men friendly to me seeking the place, Senator Bosworth would have been nominated and elected. That meant, he would have been reelected in 1916, when it is expected the Republican Party of the Nation will come back in power. Bosworth has been against me and would be against my friends. When I became convinced of this fact, and became convinced that the eleventh district would be represented by a whisky man for four years, I decided after the solicitation of many leading Republicans and other friends to change my mind and become a candidate.

The Late Representative Roddenbery, of Georgia.

MEMORIAL ADDRESS
OF
HON. CHARLES R. CRISP,
OF GEORGIA,
IN THE HOUSE OF REPRESENTATIVES,
Sunday, February 8, 1914,

On House resolution 407, paying tribute to the memory of Hon. S. A. RODDENBERY, late a Representative from the State of Georgia.

Mr. CRISP. Mr. Speaker, the worth of a life is measured by its moral value. We deem that life well lived which can satisfactorily answer the question:

What hast thou wrought for right and truth,
For God and man,
From the golden hours of bright-eyed youth
To life's mid span?

Judged by this standard, the life of ANDERSON RODDENBERY has not been in vain, but has been a benefaction to the world. As we follow him from boyhood to youth, from youth to manhood, we find him ever standing for the right. He learned early that the man who does not look up will look down, and the spirit which does not dare to soar is destined perhaps to grovel. He begun life and spent his youth on the farm, where he early learned that nobility of purpose, sincerity of action, faithfulness to duty, love of God and fellow man are the only things worth while; and ANDERSON RODDENBERY practiced in his daily life these virtues. During his youth, while engaged in the pursuits of agriculture, he learned the burdens, trials, and vicissitudes that confront the toiling masses of the people, and to the day of his death he truly sought to ameliorate and better their condition. Mr. RODDENBERY took full advantage of the opportunities given him in the common schools and at Mercer University, and was a leader among his comrades both on account of his marked ability and his lovable disposition. After leaving school he taught for a while, and later took up the practice of law. He soon came to be recognized as a man of rare, undoubted might, and at the age of 21 was chosen to represent his county in the legislature. Though one of the youngest members, he was soon regarded as one of the strong men of the general assembly. Upon retiring from the legislature the people again called him to their service, and he served with marked ability as judge of Thomas County court and mayor of Thomasville.

The tireless energy and great ability of ANDERSON RODDENBERY was always to be found battling valiantly on the moral side of every question. He believed in prohibition and was one of the most sought after prohibition orators in Georgia. At his own expense he traveled over our beloved State espousing this great cause, and his voice did as much toward creating the public sentiment which crystallized into legislative enactment making Georgia a prohibition State as any other factor in the State.

In 1910, upon the death of Hon. James M. Griggs, the people of the second congressional district, with practical unanimity, elected Mr. RODDENBERY their Congressman, and he served them with fidelity and ability until the Great Reaper of the universe called him to his reward on high. As parliamentarian of the House, I was constant in my attendance upon its sessions, and it was with great pride that I followed the services of Mr. RODDENBERY. Though one of the youngest men in point of service, he was rapidly becoming one of its ablest parliamentarians. He was fearless and forceful in debate and was soon regarded by the entire membership of the House as "a foeman worthy of any man's steel." He was earnest by nature, and when espousing any cause he threw his whole physical and mental being into it. Mr. RODDENBERY had a weak heart, and he knew that any great effort on his part was fraught with danger to his life. Two Members of the House, physicians, who had examined him, cautioned him against speaking, saying it was liable to cause his instant death. But when conviction and duty called, he could not and would not remain silent, but followed the call to battle, never thinking or caring what the consequences might be to himself.

Cowards die many times before their death;
The valiant never taste of death but once.

As a Representative he was truly a tribune of the people, and by his untimely end the masses of humanity lost a true friend and valiant champion. Mr. Speaker, while the public services of our friend were worthy of all emulation, what endeared him most to me was his love of friends, home, and family. He was a sincere friend, affectionate and loving father, and a faithful, loyal, and devoted husband. I had the

privilege of living six months in the same house with him, and I never knew a brighter, happier, nor more contented family. Just before the great soul of our friend went home to God, who gave it, he stated to his wife: "I have lived my convictions. I only wish I could live longer to provide better for my family." Mr. Speaker, I believe in the immortality of the soul and have perfect faith there is a life beyond the grave. If friends on the heavenly shore can know what is transpiring here below, I am confident our departed friend was given joy by the generous and unsolicited act of his sucessor, the able, chivalric, and golden-hearted gentleman, Judge FRANK PARK, in having his widow, Mrs. Roddenbery, appointed postmaster of their beautiful home town, Thomasville.

In conclusion, it can be truthfully be said ANDERSON RODDENBERY did not live in vain. He left the world richer, brighter, and better for having lived in it.

I do not think a braver gentleman,
More active-valiant, or more valiant-young,
More daring, or more bold, is now alive
To grace this latter age with noble deeds.

Reasons and Remedies for Our Business Troubles.

EXTENSION OF REMARKS
OF
HON. WILLIAM GORDON,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 4, 1914.

Mr. GORDON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address delivered before the Commercial Club and the Pittsburgh Industrial Development Commission, at Pittsburgh, May 22, 1914.

The address is as follows:

REASONS AND REMEDIES FOR OUR BUSINESS TROUBLES.

[An address delivered before the Commercial Club and the Pittsburgh Industrial Development Commission, at Pittsburgh, May 22, 1914, by Samuel Untermyer, of New York.]

It is useless to blink the fact that we are in serious trouble. At the end of a long series of years of bountiful crops and with a record-breaking harvest for the present year assured, when optimism should be rampant, we are confronted everywhere by business contraction and depression. The New York banks are overflowing, call money on stock-exchange collateral is a drug in the market, as is always the case when business is languishing, and yet it is impossible to secure loans on improved unencumbered real estate or investment funds for new enterprises on any terms. Capital is everywhere hoarding its resources for some emergency and the small investor seems to have disappeared.

Why? Until we have diagnosed the disease it would be dangerous to attempt to apply the remedy. There are doubtless contributing world causes, but they are so remote as to be almost negligible. There are such things as world cycles of business and financial depression due to destructive wars, widespread famine, panics brought about by overstraining the world's capital resources and by overspeculation, but no such conditions confront us at the moment.

True, the Balkan War and the demands upon European centers for funds with which to refinance the Balkan States are and will for some time continue to be a severe drain and will divert European capital from us, as do the attractions of the vast new enterprises in Russia, South America, and the Far East.

But we have accumulated wealth so rapidly that we are year by year less dependent on the investment of new foreign capital in our country, although it is still very important to us that existing investments shall not be withdrawn as they have been recently.

Our troubles do not, however, lie primarily in that direction.

Nor is the tariff bill to any appreciable extent responsible for our plight. A downward revision was demanded by the people and recognized as necessary by all parties. The change has been from an average of about 43 per cent to an average of about 26 per cent, and has been on the whole wisely distributed. It is the first tariff bill enacted in our history that was unselfish and uninfluenced by the demands of special interests, which have heretofore dictated this class of legislation. If with that percentage of protection we are unable to meet foreign competition in our own country and stimulate our export business, we may as well count ourselves "out of the game" in the world's markets.

The statistics for the first eight months of the operation of the new law show far less disturbance in the currents of trade than was fairly to be expected. We have been a shiftless, prodigal, and unscientific people in our methods of manufacturing and marketing our goods. The undue shelter of the tariff and the elimination of home competition through the trusts and trade agreements have weakened our business virility, encouraged extravagance, substituted bureaucracy for individuality in our trust-controlled industries, and have thereby crippled our competitive power. With our superior labor and vast natural resources we should be leading the world as an export manufacturing Nation, instead of which we are in imminent peril of ceasing to be a factor.

If, as I believe, time shall demonstrate that with the return to individuality in business and the practice of skill and economy and with the resourcefulness that are ours we are able to meet foreign competition with the aid of the generous protection we now enjoy, the struggle will have been wholesome and stimulating. There is no basis for charging our present conditions to the tariff.

What then are the reasons assigned and where lies the truth?

First and foremost, it is insisted in certain influential quarters that the policies of the administration are responsible. Its economic program is simple—to destroy the trusts and curb existing corporate abuses—which is said to be unsettling business. Our newspapers are feeling the effects of business contraction and financial stagnation in their advertising columns. In casting about for an explanation they have adopted the views of the supposed financial experts, whose interest it is to divert blame from themselves, especially when it offers them the opportunity at the same time to fasten it upon an administration that is pledged to correct their excesses. And so we have the great power of the press honestly, but I think mistakenly, generally supporting the cry that the demoralization is due to impending legislation.

If this is an erroneous view, it is doing incalculable harm. Like every treatment based upon a false diagnosis, the real disease continues to develop and progress through neglect, whilst the healthy organs are weakened by the irritation resulting from mistaken treatment.

It is therefore of the highest importance that we get at the actual facts. Our national prosperity is involved in reaching the right answer. Party spirit and party advantage should play no part in such an inquiry. In the interest of the country, as well as for our own sakes, let us be absolutely fair in seeking the solution. Nothing is to be gained and much will be lost if we are diverted to false leads.

I am an ardent admirer of our Chief Magistrate, but not a blind worshipper or follower of his or any other man's policies. Like all of us, his judgment is fallible; but he has shown himself exceptionally responsive to the public will and has made surprisingly few, if any, mistakes in dealing with the stupendous problems that have been thrust upon him and in carrying out the program that he was commissioned to execute.

In 14 months of power the party has been confronted with more grave and sudden international and national emergencies than have come to previous administrations in as many years. The President has met the situations as they arose with candor, courage, and splendid judgment, and has grown day by day in the confidence and affections of the country. I believe in his high ideals of public duty and in his intense patriotism; but he has no monopoly of those virtues. They have characterized every President in the history of our Nation. That is our proud boast, and the fact that it is true is the best proof of the success of Republican institutions.

Let us briefly analyze what the administration has thus far done and what it is proposing, so that we may determine whether there is any basis for the charge that it is to any extent accountable for the present distressing business unrest and uncertainty.

Its critics claim that our Mexican policy has been wavering and provocative of war; that we should either have recognized Huerta at the outset and thus assisted him to restore order in his country or have intervened in short order to that end, with the prospect of a long and bloody conflict that would have confirmed and concentrated upon us the suspicion and hatred of our South American neighbors whose confidence and friendship we are anxious to secure.

When the history of the events that preceded the present administration is written and the story of wholesale assassination, treachery, and chicanery by which Huerta secured and maintained power and his savage disregard of the decencies necessary to diplomatic intercourse in his dealings not only with us but with the representatives of all the powers is told it will be seen that quite apart from the fact that we were

asked to encourage on our borders a government founded on assassination it would have been for many other reasons impossible to have diplomatic relations with that sort of dictatorship.

Posterity will, in my judgment, give high praise for the splendid evidence furnished by this incident of the depth of sincerity of our desire for world peace, as evidenced by our rare patience and self-abnegation. We have at last made our neighbors realize that we shall never wage a war of conquest. The lesson we have taught by our attitude under intolerable provocation that a giant nation need not use its strength as a giant is well worth the price. We are about to witness the triumph of a new diplomacy on this continent that will render war hereafter well-nigh impossible and will advance the cause of humanity by centuries. No greater service was ever performed. Our Nation will head the roll of honor in the cause of universal peace.

The situation was in any event unavoidable. It was a legacy to the present administration from its predecessor. There is nothing in it to account for the troubles we are now discussing. They were with us before the Mexican crisis arose, and have not been altered by it. War would stimulate rather than depress business, temporarily at least. So we may dismiss that consideration and take up in order the domestic causes that are assigned, all of which are based on the past accomplishments and present proposals of the administration by way of legislation.

Apart from the tariff bill, and yet a part of it, there has been enacted the income-tax law. Surely none will deny the wisdom of that legislation or contend that it has tended to impair confidence or unsettle business. It was a cruelly long-delayed act of justice to the toiling masses upon whom all the burdens of government had been laid. Let us hope that the present law is only an entering wedge. I believe the time is not far distant when the revenues of the Government from that source will develop our vast natural resources, convert our deserts into rich agricultural gardens, widen and deepen our rivers and harbors, maintain an army and navy that will make for universal peace, furnish prosperous employment for hundreds of thousands of our people and inaugurate, with the cooperation of employers of labor, a vast system of social reforms that shall include old-age pensions and insurance against sickness and unemployment. The enactment of this program will be the answer of capitalism to the impracticable theories of socialism.

The passage of the currency law is the other momentous accomplishment of the administration within its brief life. Nothing more distinctively constructive and reassuring to business and nothing more necessary to its safety, stability, and independence has ever been accomplished. Its detractors have been forced to recognize its value and have been converted into unwilling champions in the face of their dire prophecies of disaster. The rich harvests of the privileged few and the sufferings of the many from financial panics are things of the past, thanks to the courage and wisdom of this legislation.

Yet it is only a few months since our troubles were being charged to the pendency of the currency bill and a formidable movement was under way to postpone action upon it for the same reason that is now being urged for delaying the settlement of the trust question. Would it have made for the betterment of conditions if currency legislation had been left "hanging in the air" for another year? The same reasoning applies in favor of now ending the agitation and uncertainty over the problem now under consideration.

There is nothing revolutionary or unsettling in the proposals embodied in the pending trust bills. The only just criticism is that in their present form they are too largely made up of compromises—weak, superficial, ineffective, and innocuous. They will not as they stand eradicate the intolerable evils against which they are supposed to be directed. The subcommittee by which they were drafted and which has been for months faithfully and industriously struggling with its complicated problems has mistaken the boisterous activity of a small, selfish, powerful group, working their now familiar publicity campaign for the voice of the business world and has timidly surrendered to the outcry. The objections that appear to come from the business community are genuine only to the extent to which they, too, have been misled by this campaign in which they have been cleverly thrust forward as pawns in the game that the big interests are playing under cover of legitimate business. The protesting resolutions of chambers of commerce against this, that, and the other feature of the bill with which Congress is being inundated are old acquaintances. We now know how they are engineered. They have lost their terrors unless supported by reason. The article they furnish is now recognized as the purchaseable commodity of a new but already well-organized industry that has been happily christened by one of its chief practitioners as the "acceleration of public opinion."

Comprehensive regulative laws covering this entire field are essential to the continued existence of small business and to restore its independence. We are constantly being deluded by the cry that we have too many laws and that what we need is a proper enforcement of those we have. This is not true in the field under discussion. Our corporate form of business has developed so rapidly and on such a vast scale that the laws to regulate it have not kept pace with the growth and development of corporate government. The absence of these restrictions is largely responsible for the corporate corruption from which we are suffering, the evidences of which are gradually coming to light.

The public has been for years warned of its existence and of the necessity for relief by those who are familiar with the facts and who have had the courage and public spirit to speak out, but their voices have been drowned by the power of the intrenched interests and they have been rewarded chiefly with inspired abuse and misrepresentation of their motives. Nothing has been disclosed within the past year that was not plainly foreshadowed by the testimony and report of the Pujo Committee. The time has at last come when legitimate business and the community that have so long been victimized are beginning to recognize the peril. Substantially all the pending legislation is outlined in the recommendations of the report.

We need laws—

1. Prohibiting all forms of interlocking control of big competitive businesses, of which interlocking directors is but one of its many manifestations, but it is not necessary to interfere with small business or to bring it under Federal regulation.

2. Prohibiting holding companies that are in restraint of competition. Here, again, small companies should be excluded from the operation of the act.

3. Regulating competition with a view of preventing the practice of unfair business methods by big business to the injury of small competitors.

4. Prohibiting the "dummy" director and all other forms of secret control, so that the responsibility for corporate action shall be fixed upon those who in fact dominate and guide the corporate policy and benefit by its lawless acts.

5. For the protection and proper representation of minority stockholders.

6. Rigidly regulating and supervising the issue of corporate securities through the agency of Federal commissions, and requiring complete publicity of the purposes to which the proceeds are to be applied and of the profits of the bankers, promoters, and intermediaries.

7. Abolishing the "graft" of constituting private bankers as the sole fiscal agents and depositaries of the funds of the corporations whose policies they dictate, and requiring that their funds be placed in banks where they will be subject to supervision.

8. Placing the operations of the stock exchange under Federal supervision, so as to put an end to the long era of shameless manipulation of security prices through the use of the machinery of the exchange and to which dishonest practice many of our vast fortunes may be traced.

9 Releasing the grip of the handful of men constituting the Money Trust over our great interstate railway and industrial systems by abolishing voting trusts, reforming our methods of appointing receivers of insolvent corporations, and by placing reorganizations under the control of the courts and of Federal commissions.

10. For a systematic and impartial enforcement of the anti-trust law, which has never been and is not now being generally enforced.

11. Taking out of the hands of the Attorney General and furnishing the necessary legal and executive machinery for the enforcement of the decrees of the courts for the dissolution of combinations that have been adjudged to be unlawful, and for actually disintegrating and keeping segregated such corporations, and thus ending the farce in which our Attorneys General have been engaged and that is bringing the administration of justice into deserved contempt.

12. Giving to every party who is injured by the existence of an unlawful combination the independent remedy to enjoin the illegal acts or suing to dissolve the combination without awaiting the slow, uncertain, and spasmodic processes of the Department of Justice. This right should, however, be safeguarded against abuse by allowing the Government to assume control of any such action at its pleasure and by preventing any settlement or other disposition of the action between the parties without its consent.

These are the more urgent of the many subjects that it is hoped to include in the pending program when perfected as it should be, and as I have every reason to believe it will be.

It is not so formidable a program as would appear at first glance, but the entire field is so highly technical and specialized that the opportunities to mislead are endless. There is nothing in any feature of the program that should disturb or unsettle legitimate business or finance; nothing that is not distinctly wholesome and constructive. Its enactment will protect and reassure honest investment and should give a new impetus to independent enterprise.

In order to determine whether the pendency of this legislation is in fact injuriously affecting business, it might be worth while to analyze briefly the objections that have been urged against it. They are directed mainly against the prohibition of interlocking directors and holding companies, and they come apparently from many sections of the country.

The necessity for this legislation was developed as the result of the investigation of the Pujo committee, from which it was demonstrated that these were the most formidable instrumentalities through which the Money Trust obtained its grip upon the finances of the country. Through the medium of interlocking control many of the great banks, railway systems, and industrial combinations were welded together into a single "community of interest," against which independent enterprise found it impossible to contend and which still remains undisturbed. We shall never achieve industrial independence or peace until it has been destroyed, root and branch.

It was through the agency of the holding company and the supineness of the Department of Justice that the organization of the great trusts became possible. The idea of any corporation being controlled by another corporation—a puppet moved at the direction of a power other than of its own governing body—is repugnant to all conceptions of justice. It was not intended that a corporation should ever be governed by another corporation. That form of management involves on its face a breach of trust toward the outstanding stockholders, who are entitled to have the benefit of the undivided judgment of their managing trustees in the sole interest of their own corporation and without regard to the interests of any other agency. Under this system of government the management of the controlled company is necessarily conducted primarily for the benefit of the controlling or holding company, which may be and often is opposed to the welfare of the controlled company.

The claimed embarrassment to business that will result from unlocking these interlocking interests is more fancied than real, provided the operation of the law is confined, as it should be, to the larger corporations. A reduction in the number of directors will answer the important purpose of concentrating responsibility. The large corporations are managed mainly by their executive committees. The boards, consisting of from 20 to 40 directors, are unwieldy and a distinct impediment to effective administration. They are mere registering machines for the executive committee. Their names are advertised to the public as a guaranty of management, which is in fact misleading and intended so to be. In financial institutions they are meant to attract business without attending to it. With the reduction of boards to a workable body the interest and activities of each man will be centered in his own institution and we shall have a consequent resumption of competition.

The disintegration of the holding company can be accomplished with still less friction or disturbance by merely distributing the shares so held among the shareholders of the holding company. The only "disturbance" to business that would thus be involved would be to restore the competition that has been thus restrained. If the stock holdings involve no restraint of competitive conditions, the pending Senate bill offers complete relief through application to the trade commission, or, in the case of common carriers, to the Interstate Commerce Commission, which has power to permit holdings of that character.

I agree, however, and have earnestly urged that these prohibitions against interlocking directors and holding companies should be limited to cases in which the interlocking of directors or stock holdings would substantially affect the public interest and that the smaller corporations be accordingly eliminated from the provisions of the bill. There is no reason for hampering small business. None of the perils sought to be avoided lurk within its borders. The operations of the small corporations are not charged with a public use and do not affect the public welfare in the sense that applies to the larger ones.

The suggestion for restricting the jurisdiction of the trade commission in these respects has been embodied in the form of proposed amendments, limiting the bill to interstate corporations having $1,000,000 capital or $2,000,000 of gross assets or $3,000,000 of gross annual business. Such an amendment will confine the operations of the bill to a comparatively few cases. It will eliminate at least 90 per cent of the corporations that do an interstate business.

I can not conceive why any business readjustment, embarrassment, or inconvenience would be involved in enacting any of the other reforms that are now under consideration. The dummy director and the secret and indirect control can not be justified. No defense of these practices has ever been attempted. No one has the right to accept the benefits and attempt to escape the responsibilities of corporate management through such devices.

Nor has there ever yet been any justification attempted of the failure to enforce minority representation in corporations through cumulative voting. Some of the State constitutions, of which those of Missouri and Pennsylvania are ready illustrations, make it compulsory to provide such representation, as it should be in every State. If, for instance, a board of directors is composed of nine members, there is no reason why the owners of each one-ninth of the stock should not be represented by one director, which is automatically accomplished through what is known as cumulative voting. The majority would still control, but the minority would have the privilege of knowing what is being done, of protecting itself against unlawful acts and of having its voice heard on questions of business policy, in which it is vitally interested.

The supervision of the issue of bonds and stocks of interstate corporations by Federal authority, which is now proposed, is still another of the recommendations of the Pujo committee. It is a tardy recognition of the right of the public to be protected against exploitation through banking control or by the sale of worthless and inflated securities to secure an accounting of corporate expenditures and to prevent the use of corporate funds in the corruption of public officers and legislative bodies. If these safeguards had been in existence in past years, we should have been saved the national scandals that are being from time to time unearthed to the destruction of our credit and reputation abroad and at home.

The bill to require the incorporation of stock exchanges and to place them under Federal supervision is an essential part of any comprehensive program for corporate reform. No legislation will be thoroughly constructive that omits to take this factor into account. Its overshadowing importance is unfortunately little understood by Congress. The manipulation of securities through the machinery of the exchange and their wide distribution under cover of such manipulation has been the most prolific incentive for the organization of trusts. It has cost the public more hundreds of millions than they have suffered through any other of the many devices through which they have been plundered.

The remaining provisions that are intended to secure the general and impartial enforcement of the antitrust act, the effective execution of the judgments of the court, and the remedies to individuals who are injured by violations of law can hardly be claimed as disturbing elements. If the act as originally framed had secured to individuals aggrieved by its violation, as it should have done, the right to prevent the organization of unlawful combinations or to enjoin their operations, the country would have escaped this vexatious problem. Few, if any, of the trusts would have been permitted to come into existence. Threatened private interests would have realized their peril and would have been alert to protect themselves. The Government stood idly by and by its silence lent consent and encouragement. The sole remedy allowed by the seventh section of the antitrust act to private interests, to recover treble damages for such injury, has proven inadequate, as might have been expected. The burden of conducting such litigation is in itself prohibitive, and the necessity of proving the damages under our rules of evidence requiring that it must be the proximate cause of the injury renders relief impossible.

The only reason that has ever been assigned for not permitting an aggrieved party to sue in equity to enjoin or dissolve the combination, that it would give rise to blackmailing suits, has never seemed to me a sufficient answer. Anybody can be sued without cause and must defend himself. Corporations as well as individuals are now subject to suit on every other conceivable ground. Why should the courts have been so solicitous to protect them against attack on this particular ground in which the public is so vitally interested, when it is notorious that the Department of Justice has never attempted to enforce the law except in a comparatively few spasmodic cases of conspicuous corporations out of the thousands of known open violations. It would be physically impossible for the department to enter upon any general enforcement of the law even if it were disposed to do so, and it has never shown any such disposition.

It must have been manifest from the beginning that if the enforcement of the law was really desired the only way to secure it would be to permit it to be done by private individuals who are affected by its violation.

The proposed amendment meets the objection that has been made, in that it requires any individual who sues in equity to join the Government as a party, so that the suit can not be discontinued or dismissed by agreement between the parties without the consent of the Government. The latter is given the right also to assume the prosecution of the case at any stage of the proceedings or to withdraw from the suit, and is not to be bound by the judgment unless it assumes the prosecution and continues in it to the end.

Is there anything in these provisions that should be disturbing to business, or in the further requirement that the new trade commission shall be consulted and its approval obtained in determining the manner of dissolving unlawful combinations and the due form of the decree, and that it shall see to the proper execution of that decree? These requirements will doubtless be very disturbing to certain classes of business, especially to the trusts that have been declared unlawful, have been decreed to be dissolved, and that are still flourishing, as though nothing had happened. It may also prove somewhat disconcerting to the public officials who have frittered away the practical results of hard-earned Government victories through meaningless decrees of dissolution. It is high time that we did away with these performances. I venture to predict that if this amendment is passed the trade commission will find a way of securing an actual dissolution of the Standard Oil Co. and of numerous other violations that have been dissolved in form but not in fact.

If, then, it be true that the pending legislation involves no disturbance of legitimate business, we return to the inquiry as to the reason for the existing unsettlement and depression.

There has never been any doubt in my mind as to the true reason.

It is due to the lawlessness and corruption in the management of our great corporations and to the destruction of the confidence of our home and foreign investors following the exposures of a few of the many instances that have characterized the conduct of our corporate affairs in the past. There is nothing exceptional or that should be considered surprising about the disclosures with respect to the management of the New Haven road that have recently been engaging public attention. In this particular instance the investigation thus far has barely scratched the surface. It relates mainly to a single phase of the New Haven road and involves the diversion of only about $11,000,000 out of a total of over $200,000,000 that will have to be accounted for some day, provided the comatose shareholders will ever awaken and have the sense or can summon the courage to assert their rights. If the investigation of the Interstate Commerce Commission is extended into the other transactions, so as to include the vast purchases of comparatively worthless competing properties at fabulous prices for the purpose of destroying competition, the dimensions of the offenses committed against the stockholders of that company will be of a character to render the exposures incident to the French Panama Canal scandal as a moonlight silhouette compares to a volcanic eruption.

I do not mean to suggest that the bankers or the body of dummy directors have been guilty of or actively privy to any actual dishonesty or that they have personally profited by the transactions in any illegitimate way. I do not believe that they have. But in the final analysis the reckless waste of corporate funds for unlawful purposes has brought about the same result so far as concerns the shareholders.

I believe also it will be found that if the affairs of a number of other equally or still more prominent railway systems that might be mentioned ever come under the scrutiny of an executive or legislative investigation or of a court of justice we shall find facts far more startling than anything that has been or will be exposed in the investigation of the New Haven road.

It is, however, to be hoped that the Government will not embark upon any such general crusade. Our credit and reputation have already suffered sufficiently from the mere suggestion of the general corruption that lies underneath the surface of past corporate management. These are things of the past that should be prevented for the future. The country seems sufficiently aroused to the realization of its disgrace to offset the machinations of the interests that would ordinarily be able to prevent reformatory legislation, and it is not worth while to further disturb confidence by turning up any more of the horrible facts. We know in a general way enough of the evils to be able to apply the remedy.

None of these things could have happened under proper Federal supervision, nor if we had laws, as in other civilized countries, prohibiting directors from dealing with themselves or lining their pockets at the expense of their shareholders or "rigging" the stock markets in their own securities or gambling on inside information.

These mentors of the business and financial world sternly admonish us that every attempt to expose or correct these evils is "disturbing" business. Until that kind of business was disturbed and destroyed by exposure and by the legislation that is needed to punish it as it deserves, we would not have and have no right to expect the return of public confidence. There is one aspect in which the shareholders of these corporations and the public deserve just the kind of treatment they have been receiving at the hands of the men who dominate these corporations solely by reason of the supineness of the real owners. If they know how to protect their rights, they have never given any indication of it.

Here again the case of the New Haven is only one of a hundred striking illustrations of the criminal inertia of stockholders. When the trouble first arose they sat aimlessly by and saw a highly respectable decoy "protective" committee organized apparently in protection of the management to ward off real investigation.

What has become of that committee? If there was any member upon it who really represented the true interest of the stockholders, why was nothing ever done to uncover the recklessness of the management? If they made an examination of the accounts, why did they not report the existing conditions to the stockholders? Why did they permit the investing public to go on buying the shares in ignorance of the facts? Why have the stockholders never organized and elected their own representatives to protect their rights and to secure restitution? What is the matter with these people who have had the intelligence and frugality to amass these interests that they lack the common instinct of self-preservation? They have been told that over $60,000,000 in unearned dividends have been paid; that a huge corruption fund has been used to procure franchises for a worthless property; and that there has been more corrupt politics than there has been of railroading; that a large part of $200,000,000 that has been expended has been devoted to the buying of competing properties at fabulous prices in violation of law; and that almost every crime in the calendar against corporate management has been perpetrated under the very eyes of their trustees. Thousands of these stockholders acquired their interests in recent years upon the faith of the inducement of the dividends that were being paid and of the representations contained in the annual statements to the effect that the earnings were in excess of these dividends. What right have these men and women who are idly standing by with knowledge of these facts to expect sympathy or consideration? If they have no regard for their own investments, they have at least a public duty to perform, which none of them seem willing to undertake.

For years past our leaders in the financial world have been educating the public to the belief that every attempt to uncover corporate rottenness or enforce accountability for the sacred trusts reposed in the officers and directors of these corporations was a "strike" or an attempt at blackmail. No stone has been left unturned to crush and disgrace the few men of courageous spirit who have tried to protect the shareholders and the public. When Mr. Louis D. Brandeis led the assault upon the New Haven management and tried to open the eyes of the stockholders to the situation, when he told them that they were being deceived, that the dividends were not being earned, he was denounced and traduced as an enemy to society. Almost every Representative from his State in Congress and prominent men in public life from adjoining States banded together, largely through the influence of the New Haven road, to prevent him from securing an entrance into public life in the position in which he would have been of inestimable aid to the Nation and which he would have graced and honored by his acceptance. It has been notorious that for decades the New Haven road has practically owned the legislatures of certain of the New England States. It regarded these exhibitions of its power to punish enemies and reward its friends with high public office as essential, and it has never hesitated to give such object lessons whenever occasion presented itself.

I repeat that we are getting just the kind of corporate management we deserve, and that so long as this spirit is permitted to pervade the public mind we shall continue to get that sort of management and none other.

And yet we continue to permit ourselves to be beguiled as to the cause of our present troubles. Is it any wonder that the investors of other nations have been throwing our securi-

ties back upon us at any price they can get for them, glad to be rid of us on any terms? Or that we are unable to sell any more securities abroad? Or that our markets are depressed and we find difficulty in financing the requirements of the maturing obligations of our public-service corporations? Why should the small investor intrust his hard-earned savings to the men who have mercilessly exploited and betrayed him whilst moralizing in public upon the importance of character as the essential to success, to the chorus of a worshiping press led by their chosen press bureaus?

This only begins to tell the story of the callousness and stupidity of our people. Not even when their eyes have been opened against their wills and in the face of their resentment at the exposure of the faithlessness of their chosen trustees, do they begin to see or act. They go on permitting and encouraging these same men to manage the trusts they have betrayed. The power behind the throne that has named the presidents and trustees of the looted corporation proceeds to discipline its tools by removing the chief scapegoat and selecting another man—always of previous untarnished reputation, but always pliant to his will—in his place, not even taking the trouble to change the minor puppets. At the next election of shareholders the proxies are gathered with the same ease by the same people and the old order of things is continued without even a semblance of change, except in the nominal directing head, but subject to the same mysterious control.

We had a like disheartening experience following the exposure of life insurance corruption in 1906. The nominal heads were deposed but the power behind the throne and the old disciples remain. Yet none of these men had or has had a single dollar of actual investment in the companies.

As indicating the close relations of the operations of the various departments of the Money Trust to one another, I call your attention in this connection to a few significant facts. Prior to the insurance upheaval Mr. George F. Baker was the chairman of the finance committee and the dominating spirit in the Mutual Life Insurance Co. He is now more firmly than ever in control. Mr. Baker is and has been for many years a partner of Mr. Morgan in all of the great enterprises. They together dominate or control the Equitable Life Assurance Society, the First National Bank, the National Bank of Commerce, the Bankers' Trust Co., the Guaranty Trust Co., and numerous other great financial institutions. When Mr. McCurdy was forced to resign as the result of the life insurance exposures, there was placed in the presidency of that company with $500,000,000 and more of assets the law partner of Mr. Baker's uncle, who was incidentally Mr. Baker's private counsel and the counsel for his bank. The Mutual Life held 35,640 shares of New Haven stock. The law passed in 1906 as the result of the scandal required them to dispose of all their stocks within five years, which they subsequently had extended for a further term of five years, to the disgrace of our legislature. The New Haven stock, which is now selling at $68 per share, could readily have been marketed during those years at $200 or thereabouts. The company has not parted with a share. The difference in price means a loss of over $4,000,000 to the policyholders of the Mutual Life Insurance Co., but this large block of stock is important to Messrs. Baker and Morgan in their control of the New Haven road, and it is steadily voted from year to year as they direct.

But I have digressed.

With a few exceptions the presidents of these roads and great industrial organizations and all the directors are named by the same authority. The shareholders have no real voice in their selection.

The Interstate Commerce Commission is doing the right thing in ripping the lid from this nest of corruption to the extent necessary to guide Congress in legislating to correct these evils, even though it involves immunity to the chief puppet of the men who guided the destinies of the company. I am not so sure that it is necessary or advisable to extend the immunity further, or that any valuable results will come from so doing, but the inaction of the Department of Justice has been so exasperating and its purposes so unfathomable that everyone has despaired of results in that direction.

With such conditions surrounding us we ought not be surprised to find these men "advising" us that if we seek to correct the evils for which they are responsible and which have destroyed public confidence the administration will be chastised by the "business" community for which they assume to speak. The proposition that we continue to permit ourselves to be guided by them is so staggering in its temerity that one is at a loss for words to characterize it.

The remedy is simple. Public confidence in corporate management must be restored. The existing legal machinery does not assure responsibility and punishment for the misdeeds of big business. The enactment of the pending bills, properly strengthened, will help accomplish that result. Ours is a rich country. Our wealth is fairly well distributed, notwithstanding the many hundreds of millions that have been confiscated by these men in one way or another by way of tribute or through gross neglect. A fraction of it can still be recovered by the shareholders if they will stand together in each of these great corporations to enforce restitution and protection for the future.

If the lessons of the past have taught them to manage their own affairs hereafter, it will have been worth the fearful cost. When they are able to do that as in former years, when these great properties were built up and operated by their real owners, and not until then, the investing public here and abroad will again interest itself in our enterprises. Meantime we can do our share toward reassuring the civilized world that we are not a Nation of freebooters and that we have sufficient of the capacity for self-government left to end the recklessness and lawlessness of high finance so that capital will hereafter be as safe with us as in other countries.

The Doctrine of Equal Rights.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 4, 1914.

Mr. MOORE. Mr. Speaker, under leave to extend I present herewith a letter from the president of the American Bar Association, Mr. Everett P. Wheeler, of New York, pertaining to the exemption clauses of the so-called antitrust bill, which was under consideration on Monday last. It seems to me an exposition of the doctrine of equal rights from so eminent an authority should have the careful consideration of this body.

THE AMERICAN BAR ASSOCIATION,
27 William Street, New York, June 3, 1914.

Hon. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

MY DEAR SIR: It is with great satisfaction that I read in the morning Times the report of your speech in the House yesterday. The very foundation of American liberty lies in our doctrine of equal rights. To give special privileges to any class of men is opposed not only to the Declaration of Independence, but to the whole theory of our Government. In the Democratic platforms of 1908 and 1912 I find the following paragraph:

> Questions of judicial practice have arisen especially in connection with industrial disputes. We believe that the parties to all judicial proceedings should be treated with rigid impartiality and that injunctions should not be issued in any case in which an injunction would not issue if no industrial dispute were involved.

Yet to my amazement I see a Democratic majority adopting amendments to a bill which does not treat the parties to judicial proceedings with "rigid impartiality," but compels favoritism. For example, we condemn the Standard Oil manufacturers for endeavoring in the early days of their organization to drive competitors out of business. What is this but a boycott? This was considered so criminal by the Senate that Senators declared that they would rather have their cotton destroyed by the weevil than use any Rockefeller money to prevent the plague. Yet here we have a proposed act which makes it legal for a labor union to persuade persons to cease to patronize or to employ any party to a dispute. This is a boycott. We all know that in all labor disputes, both in Ireland and America, the boycott has been used in the most cruel manner, so as to deprive the sick of medicine, the hungry of food, etc. Yet here is a proposition to legalize it when employed by a labor union, although it would be illegal if used by a corporation.

Such legislation is neither American nor Democratic, and the time will come when the sentiment of the American people will condemn it. In my opinion the great majority of our people do condemn it now. Allow me to express the hope that you will stand to your guns in this matter and expose the character of this legislation when it comes to a final vote. This seems to me especially appropriate for you who are a Republican and therefore committed by your platform to "devotion to the cause of Republican institutions established by the fathers."

In another paragraph that platform declares:

> It is important that the right of every individual to the freest possible development of his own powers and resources and to the control

of his own justly acquired property, so far as those are compatible with the rights of others, shall not be interfered with or destroyed.

The Democratic Party in the first paragraph of its platform "reaffirm our devotion to the principles of Democratic Government formulated by Thomas Jefferson." This doubtless refers to the Declaration of Independence. This declaration states it "to be self-evident that all men are created equal," yet here we have a proposed act of Congress which gives the labor unions special privileges of exemption from the administration of the law. George III was condemned "because he had obstructed the administration of justice," and yet this act prohibits the judges from restraining unlawful acts by labor unions.

Can it have occurred to the gentlemen who proposed this legislation that if the courts can not decide these controversies peaceably they will be decided by force? The shocking results of the latter method we see plainly in Colorado. Would it not have been better to have had the questions which have given rise to bloodshed there decided in an orderly manner by the Colorado courts?

Permit me to send you with this letter a copy of the last report of a committee of the American Bar Association, which was adopted unanimously by that association at its meeting in Montreal last August. On pages 10–16 you will find a statement with reference to injunctions. It may be of service to you in any subsequent discussion.

Thanking you again for your manly stand on this matter, I am,

Yours, faithfully,

EVERETT P. WHEELER.

Address Delivered by Congressman Patrick H. Kelley at the Republican Conference Held in Detroit, Tuesday, May 26, 1914.

EXTENSION OF REMARKS

OF

HON. LOUIS C. CRAMTON,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 5, 1914.

Mr. CRAMTON. Mr. Speaker, under the unanimous consent granted to me to extend my remarks in the RECORD, I include an address delivered by Congressman PATRICK H. KELLEY at the Republican conference held in Detroit, Tuesday, May 26, 1914.

The address is as follows:

"Gentlemen of the convention, the Republican Party has been out of power but a little more than a year—long enough, however, to demonstrate that the sooner it is restored to power the better it will be for our domestic affairs and also for our standing among the nations of the world. In a single year the business of the country has been halted and domestic production has seriously fallen off. The most favorable thing that can be said of our present industrial situation is that the business men of the country, emulating the example set by the President himself, are pursuing a policy of "watchful waiting." And, so far as our foreign relations are concerned, all the world realizes the difference between the colorless diplomacy of Bryan and the red-blooded statesmanship of Knox and Root and Sherman and Blaine and Seward.

"In his great speech in reply to Hayne, Webster said that when the mariner has been tossed for many days in thick weather and on an unknown sea he naturally avails himself of the first pause in the storm, the earliest glance of the sun, to take his latitude and ascertain how far the elements have driven him from his true course. It will be well for the American people to emulate the prudence of the mariner and take stock of our present domestic situation and determine also, if we can, whither we are drifting in our relations with the world.

"The Republican Party went out of power a year ago last March, and President Wilson called Congress together in special session almost immediately thereafter. The first act of the new administration was directed against the doctrine of protection to American labor and American capital—a doctrine which has lead our country in the last 50 years up out of the lowlands to a position of commercial supremacy among the nations of the earth. To me the doctrine of protection is so simple, so natural, so just, and so wise for a nation that desires to maintain itself upon the very highest plane of civilization that I have always marveled at the opposition it has encountered. Plainly stated, protection is the simple doctrine of patronizing our own stores, buying from our own merchants, preferring the products of our own fields, giving employment to our own people—in short, it is the simple homely doctrine of taking care of our own folks first as against all the balance of the world. We could almost build a church as well as a party on that kind of a doctrine.

"When the Democratic Party came into power a year ago conditions could not have been better for trying out its economic policies and putting to the test its theories of government. The business of the country was standing firmly on its feet. Our factories were all running full time. Labor was fully employed and receiving the highest wages paid in all the history of the Republic. The farmer had a ready market for everything he had to sell at prices higher than he had ever received before in times of peace. The savings banks were full of money laid aside by the people for a rainy day. Our merchants had gone out beyond the seas in quest of markets for their surplus until our exports had grown to nearly two and one-half billion dollars per annum, an increase of more than a billion dollars per annum over our exports of 10 years ago. Our imports amounted to a little more than one billion eight hundred millions per annum, leaving a balance of trade in our favor of approximately $700,000,000 per annum, or about $60,000,000 per month. And our domestic commerce, grown to a point beyond the power of the human mind to comprehend it, reached the staggering total of $35,000,000,000 per annum. That was the condition in which the Republican Party left the country a year ago.

"But some people complained that the cost of living was too high. Our Democratic friends, always quick to promise, agreed that they would reduce the cost of living. They promised the consumer that the prices which he had to pay would be lower. They then turned around and promised the producer that his prices would be maintained. Unmindful of the fact that labor is the chief element in the cost of any article, they promised to maintain the price of labor and at the same time reduce the cost of the output of labor. In short, they promised higher prices for everything the people had to sell and lower prices for everything they had to buy. This was all to be accomplished through the medium of a Democratic tariff.

"At the opening of the special session Mr. UNDERWOOD and his committee brought in the Underwood tariff bill. It was discussed for a month in the House of Representatives. I sat in the House and listened to every speech that was made on the tariff for a month. So you can see that I am a long-suffering person. The speech that particularly interested me was that made by Mr. UNDERWOOD, chairman of the Committee on Ways and Means and the Democratic leader of the House. I was anxious to hear what he had to say about the new tariff bill. I wanted to get the viewpoint of the Democratic Party. I wanted to find out just how the conditions of the American people were to be made better. In his address to the House Mr. UNDERWOOD explained the theory upon which the bill was drawn. He frankly stated that it was not drawn with any idea of building up or fostering or protecting or encouraging any American industry. He said that a tariff built along such lines would be a protective tariff and in harmony with Republican doctrine. He said that the authority for levying a tariff lies wholly in the needs of the Government for revenue, and that if the Government did not need to raise any revenue from this source Congress would have no power to levy any duties whatsoever. This, of course, is the time-honored policy of the Democratic Party.

"Mr. UNDERWOOD further said that in making the new tariff bill that he did not try to ascertain the difference between the cost of production in this country and abroad. That did not concern them at all. If they fixed the duty equal to the difference in the cost of production at home and abroad, that would be a protective tariff. That would be such a tariff as Congress has no power to levy according to Democratic doctrine.

"Mr. UNDERWOOD then went on to explain just how the rates were determined in the new tariff bill. He said they obtained from the Treasury Department a statement showing the average amount and value of every article imported into this country for a period of 10 years. He said that they then had the experts calculate the total consumption in the United States of every article listed in the tariff. From this data a table was prepared showing the percentage of imports of each article as compared with the total consumption. Whenever they found from this table that there were no importations of any article, or whenever they found that the importations were light, they assumed that the tariff was too high and that it had kept out of our market the foreign product. Mr. UNDERWOOD said that they then proceeded to lower the duties in every such case to a point where, in their judgment, the foreign competitor could sell in the American market at a profit.

"If this law accomplishes the purpose for which it was framed, it means that the circle of competition has been widened so as to bring the products of every country in the world within reach of the American market. It means that an invitation has been extended to all our competitors, wherever located and regardless of the conditions under which they may be doing business, to organize selling agencies in the United States and come in here and scramble for the American trade.

"How is such a policy going to help the people of the United States? How is it going to help the workingmen of America to have a part of the work formerly done under our flag transferred to other lands to be performed by laboring men elsewhere? How is it going to make more jobs for American labor to surrender some of those we now have? How is it going to increase wages and shorten hours and improve conditions of employment to be forced into competition with labor receiving lower wages for longer hours under less favorable conditions of employment? I can understand how such a policy will help France and Germany and England and Japan, because we have given them access to a great market which they could not enter before. I can understand how this new tariff law is popular in foreign countries. I can understand how the press of England and France and Germany and Japan sing its praises, for it is the lowest tariff law that has been in operation in the United States since 1824.

"Already our magnificent balance of trade of $60,000,000 per month has been completely wiped out, and during the month of April just passed there is a balance of trade against us of $10,171,000. This tariff law was passed by the Congress of the United States and presumably in the interest of the people of the United States. But in my judgment it will operate to improve conditions and increase business in every other country in the world at the expense of the people of the United States.

"Even the Democrats in Congress are beginning to feel uneasy over the unfair competition to which the American workingman is subjected under the new tariff law. A few weeks ago the Committee on Labor of the House brought in a bill to prohibit the importation of goods made by convict labor in foreign countries. As far as it went, it was a good bill, because it had for its purpose the protection of American labor from cheap convict labor of the Old World. I offered an amendment to this bill, which, if adopted, would also prohibit the importation of goods made by children under 14 years of age. But the Democrats voted my amendment down. I pointed out to the House that the cheapest labor in all the world is the labor of children under 14 years of age in foreign countries. I pointed out that in Italy there are over 50,000 children under 14 years of age working in factories 10 hours a day at an average daily wage of less than 10 cents. I pointed out that in Japan there are 60,000 children under 14 years of age working 12 hours a day in the textile industry for an average daily wage of less than 7 cents. I pointed out that in India there are 60,000 children under 14 years of age making carpets and other textiles, working 14 hours a day at an average daily wage of 5 cents. I want to say to you men of Michigan, representing the best homes and the highest civilization in the world, that it is little short of a crime for the workingmen of the United States to be forced into competition with children receiving but 5 cents a day in the benighted countries of the world.

"In all the years that the Republican Party has been in power there has been a steady improvement in wages and conditions of employment. It has been our proud boast that conditions for the man who toils are better here, and that the bow of promise for his children is brighter here than anywhere else in the world. Let us at all hazards maintain our high standard of living for the American workingmen. Let us not be caught by the cry for cheap goods, for it means a cheap civilization. Let us set our faces forever against all competition which would tend to degrade American labor and drag it down to the level prevailing in foreign lands.

"While this new tariff bill has struck a heavy blow at the cities of the country, the American farmer has been made the goat completely. If they could find with a telescope or a microscope anything that a farmer produced, they put it on the free list. A couple of years ago our farmers were terribly exercised and very indignant about the proposed reciprocity with Canada negotiated by President Taft. That arrangement was to be in the nature of a trade. We were going to let Canadian farm products into the United States free, and in exchange they were going to let our farm products into Canada free; but under the new tariff law Canadian farmers can sell in our markets, but we can not sell in theirs. Not only that, but we have invited every other country in the world to dump its farm surplus onto the American market to be sold in competition with the products of our own fields. Let me give the farmers of Michigan a couple of cheerful examples showing how this new tariff law is likely to affect them. During the last four months of President Taft's administration we imported less than 10,000 bushels of corn into the United States. During the corresponding four months under the Underwood tariff we imported 6,722,280 bushels of corn. During the last six months under President Taft we imported 56,000 bushels of oats. During the corresponding six months under the Underwood tariff we imported 18,563,264 bushels of oats. I wonder how this sort of thing suits our Democratic farmers? Democratic farmers were just as ugly as Republican farmers about reciprocity with Canada. They did not like the idea of free trade even with little Canada, a country with only 9,000,000 folk, coming from the same stock as ourselves and with the same high standards of living. If we had to have free trade with any country in the world, it would be better to have it with Canada than any other. Reciprocity with Canada would have been the smallest taste of free trade that could possibly be administered to the American farmer. All he was asked to do was to touch the tip of his tongue against free trade. He seemed to know without trying that he would not like the taste of it. I am wondering how he is enjoying three full meals a day of the same stuff.

"Instead of discouraging agriculture in the United States by exposing it to unfair competition from Argentina, Cuba, Australia, and Canada, we ought to be doing everything in our power to stimulate production and to encourage the extension of farm operations in our own country. With millions of acres yet undeveloped, why should we adopt a policy which will make our people partially dependent on the outside world for our food supply? Such a policy is as harmful to the city as to the country. The man who lives in the city must not forget that there are 50,000,000 people living on farms of the United States, and that the American farmer is the best customer of the American city, just as the American city is the best customer of the American farmer. If the city needlessly buys a part of its food supply abroad, and thereby reduces the income of the farm, it has by so much decreased the purchasing power of its own best customer, just as any policy which lessens the income of the city will be reflected in the reduced income of the farm.

"But what of our foreign affairs during the past year under Democratic rule? Since the Democratic Party came into power a year ago we have embarked upon dangerous waters in our foreign affairs. During the past few weeks Congress and the country have been aroused over what may prove to be the surrender of important rights in the Panama Canal. As a purely economic matter it is a debatable question whether any ships, foreign or domestic, should pass through the Panama Canal without paying tolls. The final settlement of this question may well be left to the verdict of experience. Should free tolls for our coastwise ships fail to bring to transportation the benefits claimed, we can change this policy at any time. But if we do change, the change should be made for economic and domestic reasons, and not for the reason given by the President.

"The President came before Congress and asked for the repeal of the free-tolls provision in a four-minute speech. Congress had passed on this question once before. Elaborate arguments had been made in both Houses two years ago. Nothing new has transpired since. Our treaty obligations were fully considered at that time. President Roosevelt, President Taft, Secretary Knox, Secretary Olney, and the majority of both branches of Congress all agreed that we had a right to favor our own coastwise shipping under the terms of our treaty with Great Britain. In his four-minute speech President Wilson asked Congress to reverse its deliberate action of two years ago not for domestic or economic reasons, but because, as he said:

"Everywhere else the language of the treaty is given but one interpretation, and that interpretation precludes the exemption I am asking you to repeal."

"The President advised Congress to reverse its action of two years ago out of deference to the opinion of other nations. But other nations are interested parties and would profit by the English construction of the treaty. Experience has taught us that while we should value highly the opinion of the world, we can not always be guided by it. There are many vital American policies which we could not afford to submit to a vote of the other nations of the world. I am afraid that the Monroe doctrine might be voted down if submitted to such a test as that. About the only American policy that I know of which could be submitted to a vote of all the other nations of the world with absolute certainty of approval is the new Democratic tariff law.

"But listen to what the President said in this same speech a little further on. You can hardly imagine such a sentiment coming from the President of the United States. He said:

"We ought to reverse our action without raising the question whether we were right or wrong, and so once more deserve our reputation for generosity."

"Can any red-blooded citizen of Michigan give any reason why an imperial country like ours should reverse a former domestic policy of our Government at the instance of a foreign power without considering whether we were right or wrong? I tell you, men of Michigan, what we need in the White House to-day and in the Department of State is more of the American spirit of the peerless Blaine.

"The President then went on to say:

"I ask this of you in support of the foreign policy of the administration.

"What is the foreign policy of the administration for which the President asks support? The Speaker of the House, in discussing this matter, said he did not know. The Democratic leader of the House declared he did not know. The Foreign Relations Committee of the House does not know. I have come to the conclusion that if the President and Secretary Bryan know, they are the only two men on the footstool of God who do know.

"The President then finished this remarkable speech with the following words:

"I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure.

"What is this awful crisis that the President does not know how to deal with unless we reverse ourselves at the instance of a foreign Government in a matter of purely domestic concern? What is this matter of greater delicacy and nearer consequence which he will not know how to handle unless we reverse our former action, without stopping to inquire whether we were right or wrong? It has been suggested that the President has taken this position in order to secure the friendship of Great Britain in our dealings with Mexico. I can not believe that this is true. But if it is, it is the first time in the history of this mighty Republic when we have ever been willing to buy the friendship of any nation on earth. Friendship that must be bought is not worth purchasing.

"The policy of the administration in Mexico has undoubtedly brought its embarrassments. We are involved in difficulties there from which we will not soon escape. The President has chosen our course in Mexico, and whether it is wise or unwise the country must stand by and see him safely through whatever difficulties must be encountered. Many people are of the opinion, however, that much of our trouble in Mexico has come through our demand that President Huerta must go. For many months the two dominant figures in war-torn Mexico have been Gen. Huerta and Gen. Villa. Gen. Huerta is said to have betrayed former President Madero and then ordered, or, at least, permitted, his execution. On this account President Wilson refused to recognize the government of which Gen. Huerta became the head. Gen. Villa has been for 15 years or more an outlaw and highwayman, operating much after the fashion of Jesse James. A list of his crimes covers nearly a page of the CONGRESSIONAL RECORD, and they run all the way from cattle stealing to murder in all its degrees. Whether it was wise for us to insist that President Huerta must be eliminated from the situation in Mexico, I do not know—time alone can tell—but of one thing I am convinced, and that is this, that in the process of eliminating President Huerta this proud Republic can not afford for a single day to become the ally of Mexican outlaws and highwaymen. That would be an unholy alliance and entirely out of keeping with the character of the American people. To refuse to recognize President Huerta on moral grounds and then to turn about and put the stamp of our approval on Villa can in the end bring nothing but trouble to us and further disorder to Mexico.

"There is one other disquieting thing about this situation in Mexico growing out of our policy there. I greatly fear that American citizenship may have lost some of its prestige and that because of the failure of our Government to protect Americans in Mexico, American life and American property in other parts of the world may be less secure. A few days ago 500 American refugees arrived at New Orleans from Tampico. As they sailed into the harbor these 500 American citizens cheered again and again the Union Jack flying from the masthead of a passing British steamer. They cheered the British flag because in Tampico it had afforded them protection which our own Department of State had failed to provide.

"American citizenship has never been regarded as a one-sided affair. On the one hand, it means protection to the Government by the citizen. On the other hand, it means protection to the citizen by the Government. Whenever the Government has been assailed American citizenship has always been quick to respond to the Nation's call. The thing that most impresses the thoughtful visitor at the Capital of the Nation is the evidence on all sides of the devotion of our people to the country. Directly across the Potomac, at Arlington, is the silent camping ground of 25,000 soldiers who gave their lives for the Republic. In another part of the city is the great Pension Department of the Government, distributing $180,000,000 a year in pensions to the scattered remnant of the once Grand Army of the Republic. In the public parks everywhere throughout the city are monuments erected to American valor. The old Ford Theater, enveloped in tragedy, still stands, and across the street from it is the low room with its slanting ceiling to which tender hands carried Abraham Lincoln and from which he was called to his eternal home. There it was that Secretary Stanton said, as he watched the light die out of the eyes of the great Emancipator, 'Now he belongs to the ages.'

"A few days ago I visited the Naval Academy at Annapolis. Preserved in cases along the sides of the auditorium and festooned beneath glass on the ceiling are 172 trophy flags of the United States Navy—priceless symbols of heroic victories on the high seas. There was the flag that Capt. Isaac Hull, in command of *Old Ironsides*, tore from the masthead of the British frigate *Guerriere*. There was the only British Royal Standard ever captured in the history of the British Empire. There were six British flags taken by Perry on Lake Erie. There was the faded battle flag of Commodore Perry, upon which were inscribed the immortal words of Capt. Lawrence, 'Don't give up the ship.' There were British flags captured by the *Hornet*, the *Constitution*, and the *Wasp*. There was the flag of the Algerian pirates, captured by Commodore Stephen Decatur in Mediterranean waters, whither he had been sent by this young Republic to teach the world that this country has 'millions for defense, but not one cent for tribute.'

"And as I saw all these captured flags of other nations I felt a new thrill of patriotism when I recalled that in all the battles upon the sea in which our country has ever been engaged the Stars and Stripes have never been hauled down in defeat. Such a record of fidelity in behalf of the Government by the citizen should inspire reciprocal fidelity in behalf of the citizen by the Government.

"Now, gentlemen of the convention, I want to say just one thing more before I close. In 1912, for the second time in more than half a century, our party was retired from power. It was not because the American people preferred Democratic policies to Republican policies. It was not because there were more Democrats than Republicans in the country. The trouble in 1912 was that we Republicans tried to elect two Presidents at once. While our party was strong, it could hardly be expected to successfully perform so remarkable a feat as that. By dividing our forces we let the Democrats in. By uniting our forces we will drive them out. This great convention is in itself a prophecy that the Republican Party will be speedily returned to power. Fifty years of achievement without a parallel in the history of mankind is our party's guaranty for the future.

"In view of all that there is at stake for us and for our children and for all mankind, to be charged with the destinies of this mighty Republic is a sublime trust. Fully alive to the responsibilities which go with the leadership of a great people, let us here and now dedicate our party anew to all the high and holy purposes symbolized by the flag of the Republic. Our flag stands for liberty under the law. It stands for the rights of persons and the rights of property. It stands for popular rule, and in this it is our destiny to lead the way. It stands for the school. It stands for a Christian civilization. It stands for the home and all the virtues which thrive and cluster around the hearthstone. Standing for all these things, may the God of our fathers protect it and defend it, and may it never be hauled down in defeat."

Address of Josephus Daniels, Secretary of the Navy, at the Navy League Banquet, Waldorf-Astoria Hotel, New York, Thursday, April 16, 1914.

EXTENSION OF REMARKS

OF

HON. LEMUEL P. PADGETT,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 8, 1914.

Mr. PADGETT. Mr. Chairman, under the unanimous consent granted to me to extend my remarks in the RECORD I include an address of Josephus Daniels, Secretary of the Navy, at the Navy League Banquet, Waldorf-Astoria Hotel, New York City, Thursday, April 16, 1914.

The address is as follows:

ADDRESS OF JOSEPHUS DANIELS, SECRETARY OF THE NAVY, AT THE NAVY LEAGUE BANQUET, WALDORF-ASTORIA HOTEL, NEW YORK CITY, THURSDAY, APRIL 16, 1914.

It is a hard matter for a Secretary of the Navy to determine upon what subject he will speak in addressing the members of the Navy League. It is obviously useless to dilate on the necessity of bringing up our naval force to a standard which will insure peace by the very assurance of our strength. Carrying coals to Newcastle would be a profitable and economical proposition compared with any attempt on my part to instruct you as to the needs or the character of our Navy.

There is, however, one thing that I would like to talk over with you fully and frankly to-night. You gentlemen are formed together in an organization for the purpose of increasing and maintaining our Navy. You have called upon the Secretary of the Navy, both as individuals and as a body, to support you in obtaining a really adequate navy for our country. This support, gentlemen, has been given, because I believe, as you believe, that an adequate navy is an absolute necessity to our country.

Now, I, as Secretary of the Navy, both as an individual and as head of the Navy Department, call upon you to support me in the carrying out of some of the practical details of the work that lies before us. We work for a common end, and there should be a sympathetic understanding of each other's purposes. It is my firm belief that no definite program of naval construction—by that I mean a program that will not be in jeopardy every time Congress assembles—can be laid down until an overwhelming majority of our people become friends of the Navy, as you are friends of the Navy, and give somewhat more than a passive support to the Navy's proper development. It is upon my shoulders and your shoulders that the burden falls of winning this public support.

I said at the beginning of my speech that when you gentlemen asked for my support I had given it. Let me remind you that this support was not perfunctory. You must remember that the Navy League was under fire during the recent hearings before Congress, and I will be glad to read you a few of my questions and answers on that occasion. I quote from page 617, hearings of the Secretary of the Navy before the House Naval Committee this year. I had mentioned meeting Gen. Porter at the Navy League meeting last spring. This prompted the following question from Congressman HENSLEY:

You do not realize the fact that that institution is organized for the very purpose of disseminating the sentiment in the country for bringing about a larger Navy?

To which I answered, "Undoubtedly."

Mr. HENSLEY. They insist all the time that they are actuated wholly and solely from patriotic and noble purposes as against fellows like Judge WITHERSPOON and myself and others who have not the good of our country at heart.

Secretary DANIELS. I think the bulk of them are patriotic men who advocate a large Navy, because they think that it is a safeguard to the Nation, and that we should have it. I do not think that they doubt the patriotism of anybody else.

Mr. HENSLEY. These men are charging $2 and sending out printed petitions into my district to the men in the mines, the machine shops, and along the railroads asking them to sign these blank petitions and then fire them back to me.

Secretary DANIELS. Do you not know that that is true of all sorts of legislation—the Red Cross, the good roads, and everything? Everything that comes before Congress, every policy that is proposed, has its advocates, and they send out these printed petitions all about the country to the men in the mines and in the shops, and many thousands of them, if they never heard of this petition, believe in an adequate Navy.

I will not read the whole dialogue, but I want to call your attention to the remark later on by Congressman HENSLEY:

Mr. HENSLEY. These people who are making that character of campaign are the ones who are being materially benefited—the fellows who expect to get something direct out of it. That is what I complain of.

Secretary DANIELS. If they do, I complain of it as much as you do. I think that if they expect to get much out of it with the competitive bidding we have and the securing of lower prices and the fight against monopoly which the Navy Department is carrying on, they will be mistaken.

These extracts from the hearing before Congress should be proof to you of my support publicly given at a time when words are carefully weighed by Secretaries of the Navy, and this is one of the reasons I feel at liberty to ask your support rather than criticism if you can justly give it. Do not think I am objecting to criticism founded upon clear knowledge of conditions, nor for that matter do I believe in suppressing criticism anywhere. I am not speaking of criticism in the press and everywhere else of public action. This is necessary and salutary. Every public action comes into the calcium light. I welcome it. I want it, and I have profited by it and so must you. Decent respect to the opinions of all mankind calls upon us to give reasons for our actions. And your league must make answer to critics by devotion to your ideals untouched by a semblance of selfishness and far removed from a suspicion of interest in the manufacture and sale of munitions of war. "Pitiless publicity" must be encountered by your league and by the Secretary, and those who preach to others the necessity of contributing in the shape of taxes out of their own pockets to the support of an adequate Navy on the part of their citizens must be singularly free from any suspicion that in the preaching of monetary sacrifice on the ground of patriotism they are not advocating monetary advantage to themselves.

I believe in your league, I believe in its purposes, I believe that leagues of this kind can do a tremendous amount of good in educating the country to the necessity of an adequate Navy, and it is because I believe in your work, because I want to see not 7,000 but 7,000,000 members enrolled that I speak thus frankly, and warn you, as you have rightly warned me at times, of pitfalls that lie in your way. Some of you have criticized me frankly, and I am this night recognizing that right to criticism, and, instead of endeavoring to stifle that criticism, I am seeking to change it into approval by a frank explanation of the motives which underlie my public acts. This is what we must do when we are criticized. Search first our own hearts to see if the criticism be just, and if we believe that our actions are founded on sound principles make public replies to those who complain, leaving it to the people to decide who is in the wrong.

I have during the year of my occupancy of the office of the Secretary of the Navy made certain changes in policy, changes which, in my judgment, would help to bring about a better feeling in the country at large toward the service. There has been in some quarters serious misunderstanding, both as to what these changes in policy were and of the motives underlying them, and I am afraid that some of the critics have been members of this league. I can not believe that the league would seek to destroy with one hand that which they seek to build up with the other, and I am convinced that if they could but get a clear view of what the Secretary of the Navy is trying to do critics would help instead of hinder the work in hand.

Before taking up some of these matters in detail, let me first make two things clear to you gentlemen. Let me more than make them clear. Let me forever set at rest any possible misunderstanding as to my beliefs and attitude on these questions.

First, as to discipline in the Navy, I have been somewhat astounded to see repeated statements that the Secretary of the Navy did not believe in discipline; that he did not approve of the regulations requiring instant and respectful obedience on the part of the men of lower rank to the man above him. It has been claimed that my policy of educating the seaman is an entering wedge to the breaking down of his respect for his superior. The most absurd rumors have been circulated as to what I intended to do to destroy discipline in the Navy. Doubtless some of the gentlemen sitting here have had it whispered to you as an actual fact that the Secretary of the Navy had determined to abolish the salute as tending to degrade the seaman and make an artificial class distinction. I want to declare now, once and for all, that no man believes more in discipline than I do; that no man is more fully convinced of the absolute necessity in all military service of instant and implicit obedience to a superior; that no Secretary of the Navy will deal with a firmer hand in the cases of insolence or insubordination on the part of any man in the Navy, be it from the seaman to his petty officer or the junior lieutenant to his captain, than will this Secretary deal. I also hold that a man whose intellect has been broadened by education so that he understands why he must obey makes a better sailor, a better officer, and a more willing and obedient member of the service than the ignorant man who obeys blindly from fear of punishment. To claim that making our sailors better educated will result in their being insubordinate is an insult to the intelligence of our people, which I resent. If this were true, it must follow that the better educated a man is the less amenable to discipline and regulations will he be.

Now, there are few men in our country better educated than the officers of the United States Navy. Therefore, if this were true, we should see amongst our officers an almost total disregard for discipline. We should find the junior officers contemptuously ignoring the orders of their seniors, and in general a total breakdown of the rules and regulations. How far this is from the truth you gentlemen know as well as I.

There is no finer body of men in the world than our naval officers. There are no men more willing to sacrifice more than their beliefs—more than their comfort—to sacrifice their very lives at any time on but an order from their superior officers without question and without a thought of protest. I challenge the world to show more perfect discipline than that shown by the officers of the United States Navy. Such being the facts, how absurd, how puerile, is any argument that education undermines discipline.

As I have come into close and closer contact with the officers and men in the Navy, I have come more and more to be proud of the privilege and honor of the association, which gives my office its best asset. It is a service that illustrates the highest virtues and graces of American manhood. The officers have been blessed with the best training, and do honor to the institution of which they are the best product. It has been my good fortune to be thrown into intimate touch with elect people of other professions, but I must declare here that, taken as a whole, I have known no like body of men who were their equals in sincerity, frankness, loyalty, and love of truth and its incarnation in their lives. They are not better than other men, they have the faults that inhere in our common humanity, but they rise above the rest of us in frank truthfulness, fidelity to duty, and in an idealized love of the flag that makes them worthy exemplars to those of us of other callings. My own pride and admiration, which has grown day by day since called to the high office in which I am trying to measure up to the high standard set by the men who man our ships, was stirred and strengthened a few days ago by hearing what John Lind said upon his return to the United States. For weary months this grim and patriotic Norse philosopher has lived in Mexico, most of the time being in close touch with Admiral Fletcher and the splendid men with him. Upon the day of his return he called at the Navy Department to express his pleasure of being well cared for on his trip up on the *Mayflower*. "I have never before," he said to me, "had the opportunity of seeing much of the Navy. In my Minnesota home your ships and sailors do not come, but during my stay in Mexico it was my happiness to see much of Admiral Fletcher, the officers, and the sailors, and I want to tell you, Mr. Secretary, that they are the finest body of men I have known." He grew more enthusiastic in his praise, and I remarked that America had few men as wise as Admiral Fletcher. "Yes; he is a wise man of sound judgment, and, better than that, he is a patriot, loyal to the core to his country." Now, John Lind is the sort of American who pays no compliments. He would not privately give this warm praise if he had not taken the quality of our sailors and found them sturdy and sound.

The whole history of our Navy is back of Mr. Lind's estimate and tribute. There is nothing finer in the naval annals of the world than Paul Jones's defiant cry to the commander of the *Scrapis*, before he had snatched victory from defeat, as he shouted, "Surrender! I have just begun to fight." Capt. Lawrence, in the hour of defeat and death, cried, "Don't give up the ship." But though his ship was given up, his last words were the inspiration of Perry and his men at Lake Erie when he defeated Nelson's veteran sailors, and was able to write his Government, "We have met the enemy and they are ours." "Damn the torpedoes; go ahead!" shouted Farragut as he entered the mine-endangered mouth of the Mississippi. There was a volume of meaning in the quiet command of Commodore Dewey at Manila, "You may fire when you are ready, Gridley," and I have the honor of first making public a new epigram to add to the splendid words which have been spoken by American naval heroes: "We do not know what we will be called upon to do, but we are ready," was the brief and only statement made by Commander in Chief Badger, in command of the ships ordered to Mexico, as his magnificent fleet steamed out of Hampton Roads. The brevity and comprehensiveness of that statement deserves to rank with Dewey's at Manila, and John Paul Jones's in the battle of the *Bon Homme Richard* and the *Scrapis*.

There is nothing the matter with our Navy; there is nothing the matter with our discipline; there is nothing the matter with our splendid personnel; there is a great deal the matter with the public viewpoint; there is a great deal the matter with the lack of information on the part of a great portion of our citizens as to the Navy. When a Senator stands before his colleagues in a public session of our supreme lawmaking body and declares his belief that the Navy is a gentlemen's club for highly paid officers to loaf in, something is wrong. What is wrong is not with the Navy, but with the erroneous ideas of the Navy which get into some people's heads. I am sure even those who think that education will interfere with discipline will agree with me that, in this case at least, keeping the public in ignorance of the real Navy will not result in their blindly following the orders of the Navy League to demand more warships. To educate the people is my task and your task, and we must work together. So much for discipline and personnel.

Now, let me take you into my confidence a moment in regard to two matters about which I referred some moments ago.

First. Why have I said so much about the education of the enlisted men? The answer is very simple. There are many people to-day who remember the glorious traditions of our Navy in the past; who know all about John Paul Jones and how he humbled the pride of the strongest navy in the world; who honestly believe that all our Navy needs is a few more John Paul Joneses to-day to be able to sweep the seas at a moment's notice, ships or no ships, and who therefore hold that money spent on the Navy is wasted money, because it is merely a matter of men. You can not reach these people with figures, arguments, and data. It is a belief, an unreasoning belief, which will not bother to examine the evidence on either side. It will do no good to point out to them that John Paul Jones could take a rotten-planked East Indian and by the force of his personality sweep the decks of a man-of-war and leave his sinking hulk to continue a glorious career on his newly captured prize, but that the modern officer must take what ships there are at the beginning of a war or wait two years before a vessel can be prepared for him. It is impossible to tell this class of people I have in mind any of the 101 arguments which prove irresistibly the need of an adequate navy, even though it never fires a gun.

It is possible, however, to win their consent to a proper establishment if we can show them that the Navy can be made an asset in times of peace: if we can prove that there is a great work for the Navy besides the duties of a police force or a guardian of our shores, and, gentlemen, it is my firm conviction that there is this opportunity and that this can be shown to these people.

The Navy is a collection of 60,000 young men. It has under its almost paternal control many times 60,000 young men when we consider the number growing out of and entering the service every year. There comes to the Navy this crowd of young men, many of whom have been obliged to curtail their education from the necessity of earning their daily bread, and many others who seek to enter the service from a natural disinclination to suffer the restraint of home or factory discipline and a desire to see the world. As any student of economics can tell you, both the two last-named classes of young men are, if not an absolute detriment, at least of little economic value to the country.

In a sense we are engaged in war. Every nation is at war, a fierce, silent, merciless struggle for industrial supremacy. That nation will win whose young men are best educated not only to use their brains but to use their hands skillfully in the mechanical arts. I propose to make our Navy more than a great school, to make it a great technical college where literally hundreds of thousands of young men will be trained in habits of discipline, will be taught the necessity of obedience if they would afterwards themselves rule, will be brought to the highest state of physical condition and fitness, and who in addition will be given training in almost all the trades there are, which they could not receive anywhere else except through a long and expensive college course. Disregarding entirely the military need of our Navy, considered from this one standpoint alone, I hope to prove that the country would suffer a loss which all the money spent upon the Navy could not begin to recompense should it be allowed to decay. The Navy now has its full quota. For the first time it has a waiting list. The Navy does not desire recruits who lack ambition. This Congress will authorize the appointment of 25 enlisted men every year to the Naval Academy. Other avenues of promotion are opening. In Napoleon's day it was said in France, "Every soldier carries a marshal's baton in his knapsack." It must be truly said in the Navy, "Every enlisted man carries the making of an admiral's flag in his ditty box." I ask your support, gentlemen, now that I have told you the why of these policies. As to its effect upon discipline, no one will ever convince me that the education of the men or opening doors of promotion will result in a laxness in discipline.

I have recently issued an order abolishing the wine mess. With singular lack of logic critics who see fit to represent me as a foe to discipline on the one hand twist this into a case of discipline run mad on the other. Far greater questions than that of discipline lie back of this. There is no body of more temperate, clear-headed men in the world than our officers, but let me for a moment put the shoe on the other foot and bring the question home in another form to you gentlemen to-night. Of all trades there is probably no finer or more sober or more intelligent, more self-controlled men than our railroad engineers. Upon their sobriety, upon their clearheadedness, upon their capacity to govern themselves, depend daily the lives of millions of our citizens. Your life to-day, to-morrow, whenever you leave this city, will for a greater or less time lie in the hollow of the engineer's hand. Many of the railroads have established clubhouses for these engineers, where they may read, meet, and pass away time between their runs. What say you, gentlemen, you with your railroad tickets in your pockets, to a proposition that the railroads should issue an order that the engineers off duty at these clubhouses should be allowed to establish a wine mess of their own. Would the fact that 90

per cent or 999 out of 1,000 of these men would take no advantage of such an order and would go to their work the next morning with eyes just as clear and hands just as steady as they were the night before; would that fact do away with the possibility of the one hundredth man or the one thousandth man moving the wrong lever at a critical moment or sleepily overlooking the danger signal? Would you not demand an order abolishing such an arrangement? Yet this is precisely a fair comparison. The wreck of a great battleship, the loss of a critical battle, and the honor of our country may easily hinge upon one of many men in the varied and complex duties which these great masses of intricate machinery called battleships have created. Would you take any chances with the engineer of your train? Why, then, should you seriously ask me to take chances with those who direct the movements of our ships?

The order issued was based upon the recommendation of the Surgeon General of the United States Navy, Dr. W. C. Braisted, who came to his present office fresh from the position of fleet surgeon of the Atlantic Fleet. His report is as follows:

In accordance with your request, based, in part, upon a perusal of the inclosed copy of an article by Col. L. M. Maus, Medical Corps, United States Army, on "Alcohol and racial degeneracy," I present herewith certain information relative to the alcohol problem—for it is still a problem—in the Navy.

The use of alcoholic stimulants in our service was inherited, with many outgrown customs, at the very birth of the American Navy, and was, until comparatively recent years, recognized officially, to the extent of issuing a daily allowance of spirits on shipboard. An appreciation of the evils, directly and indirectly attendant upon the use of intoxicants, even in moderate degree, has, however, grown steadily in strength within the service itself, fostered, no doubt, by an awakening of public sentiment distinctly unfavorable to intemperance. This is shown by a progressive diminution in the number of admissions to the sick list for alcoholism and by the enactment of legislation tending to restrict the use of intoxicating liquors by all persons in the naval and military services of the United States.

The Articles for the Government of the Navy, which are based on law, state (art. 13) that "distilled spirits shall be admitted on board vessels of war only upon the order and under the control of the medical officers of such vessels, and to be used only for medicinal purposes." As further showing the trend of legislation, the following extract is quoted from section 38 of the act to increase the efficiency of the permanent military establishment, approved February 2, 1901: "The sale of, or dealing in, beer, wine, or any intoxicating liquors by any person in any post exchange or canteen or Army transport or upon any premises used for military purposes by the United States is hereby prohibited."

From the above it must be clear that Congress has plainly set the stamp of disapproval upon the use of intoxicants by persons in the naval and military services. It is therefore of interest to inquire how far the Navy Department, through official orders and regulations, has participated in this movement in the way of reform. Reference to article 827, Naval Instructions, 1913, seems particularly informing, and attention is invited to paragraph 1, which reads as follows:

"Wardroom officers may form a wine mess, of which all commissioned and warrant officers attached to the ship may become members upon the payment of mess entrance fee, but no officer shall be required to become a member thereof. Suitable locker room for wine-mess stores shall be provided when fitting a ship for sea."

No doubt this paragraph conforms to the letter of the laws, but it may be an open question as to how far it fulfills these laws in spirit. As matters stand to-day, an enlisted man is, very properly, subjected to severe disciplinary measures if wine or beer be found in his possession on shipboard, yet the same man is constantly aware of the free use of alcoholic liquors on board ship, which is officially permitted to officers, and of the too frequent derelictions which occur among them in consequence. The prohibition of alcohol to the men has rendered alcoholism among them almost a negligible quantity. Surely, the officers should be in all respects models for the enlisted men in duty, habits, and deportment, and the example of officers drinking aboard ship, as fostered by the wine mess, and the numerous courts-martial of officers for drunkenness and the effects of alcohol, are destructive of discipline and morale, bad for the enlisted men, and detrimental to the reputation and good name of the service. The Navy is comparable in many respects to a great business organization, but no efficient corporation in civil life would tolerate such a condition of affairs.

The restrictive measures which are now enforced, so far as they go, accord with legislative action, are supported by public opinion and a steadily increasing service sentiment, and are based on sound moral and physiological principles. Why, then, are they effective for a part of the personnel only, instead of applying with equal force to the whole? It is difficult to find a satisfactory answer, especially in view of the youth of some of our officers, who may now be commissioned at 22 years of age, and the proposed reduction of the minimum to 20. To assume that even the moderate use of alcohol will better equip them physically for 40 years of active service, or mentally to meet responsibilities of the gravest import, or intellectually to solve problems which may involve our national existence, or morally to represent this country at home or abroad, is against all reason. It may be stated as a fact that, except as a temporary expedient in certain cases of illness, the use of alcohol is harmful and its abuse disastrous alike to the individual and to the human race. Its use in the service is based only upon outworn customs, and there is no authority, by law or otherwise, for its continuance, except as contained in the naval instructions.

You have asked my opinion on this matter and I have expressed it frankly, uninfluenced by prejudice or traditions of the past. In view of the foregoing I find it my plain duty to make the following recommendations:

1. That a general order be issued, in substance as follows:

"On and after July 1, 1914, the use or introduction, for drinking purposes, of alcoholic liquors on board any naval vessel, or within any navy yard or station, is strictly prohibited, and commanding officers will be held directly responsible for the enforcement of this order."

2. That article 827, Naval Instructions, 1913, be revoked or modified in accordance with the general order specified above.

It is probable that upon certain special occasions international courtesy might render it advisable to temporarily modify such a regulation; this could readily be done by departmental order. At the same time efforts might be made to obtain an appropriation for the entertainment of our foreign guests in a manner which would avoid the possible appearance of criticizing their own customs and regulations.

In announcing the new order to the press I made this statement:

I have issued an order abolishing the wine mess on board all ships and stations in the United States Navy. The order puts into effect the same rule with reference to intoxicants in the Navy which the laws of Congress have imposed on the Army. The Secretary issues this order upon the recommendation of the Surgeon General of the Navy. The order, which goes into effect on the 1st of July, is in these words:

"The use or introduction for drinking purposes of alcoholic liquors on board any naval vessel, or within any navy yard or station, is strictly prohibited, and commanding officers will be held directly responsible for the enforcement of this order."

I am in hearty agreement with the views expressed by the Surgeon General in his paper accompanying the recommendation. There should not be on shipboard, with reference to intoxicants, one rule for officers and another and a different rule for the enlisted personnel. The saddest hour in my official life is when an officer or enlisted man must be punished for intoxication. During the past week it has been my painful duty to approve a court-martial for dismissal from the service of an officer for intoxication. He told me that he had never tasted intoxicating drink until he did so in the wine mess on his cruises. Others who have been disciplined for drinking to excess have made similar statements to me. Officers are now commissioned at the early age of 22 years. Has the Government a right to permit this temptation, which too often destroys the highest usefulness of young officers? I think not. If there is one profession more than any other that calls for a clear head and a steady hand it is the naval profession. Experience has shown the wisdom of having no intoxicants on our ships for the young men who enlist. I believe experience has demonstrated that a uniform rule should prevail in the Navy for all who enlist in the service, from the highest rank to the youngest enlisted man or officer who comes into the service, and that the abolition of the wine mess will be justified.

It seems impossible that those who criticize this order are aware of what is going on in the other navies of the world. Surely the action of the German Navy is not to be disregarded nor the views of Germany's great war lord. For the education of such critics as speak from ignorance I can not refrain from reading to you a few extracts from Emperor William's speech to the naval cadets at Murwick. There the German Emperor said:

I know very well that the pleasure of drinking is an old heritage of the Germans. We must henceforth, however, through self-discipline, free ourselves from this evil in every connection.

In earlier times it passed for extraordinary cleverness in the youth for him to imbibe a large quantity of alcohol and bear it. I as a young officer had occasion to see such examples, but never myself to participate. These are views that suited the 30-year war; but now, no more.

Entirely apart from the consequences which I need not further portray, I desire to apprise you on one point for your future career in the first line. As you yourselves will observe during the course of your term of service on board, the service in my navy has reached such a height of strenuousness as you can hardly surpass.

To endure these enormous peace exertions without exhaustion and to be fresh in the event of real seriousness depends upon you. The next war and the next sea battle demand sound nerves of you. Nerves will decide. These become undermined through alcohol, and from youth up by the use of alcohol endangered.

You will later have opportunity to see the target ships and the action of the modern projectiles upon the ships, and therefrom you can picture the conditions during battle. You will see horrible destruction when you are upon these.

Here it calls: "Steady nerves and a cool head!"

That nation which consumes the least quantity of alcohol wins; and that you should be, my gentlemen. And through you an example should be given the crews

And in consequence of this I expect of you that even now at the naval academy and on board ship in all comradeship and friendliness in no way disturbed among yourselves you take heed thereto and provide that the indulgence in alcohol be not counted as belonging to your privileges.

Nor do we have to look to Germany alone for support of this new policy. Surely no man will criticize Admiral Lord Charles Beresford, C. B., as being a man without knowledge or respect of navy customs and traditions nor as one who has not had opportunity to study carefully this question as he has seen it presented in the greatest navy in the world. Yet here is what Sir Charles Beresford said in his speech at Gibraltar in 1904:

"When I was a young man I was an athlete. I used to box a great deal, ride steeplechases and races, play football, and go through a number of competitive sports and pastimes. When I put myself into training, which was a continual occurrence, I never drank any wine, spirits, or beer at all, for the simple reason that I felt I could get fit quicker without taking any stimulants. Now, I am an older man and have a position of great responsibility, often entailing quick thought and determination and instant decision; I drink no wine, spirits, and beer, not because they do me harm, not because I think it wrong to drink, but simply because I am more ready for any work imposed upon me, day or night; always fresh, cheery, and in good temper."

Surely, with this evidence of the attitude of the German Emperor and the German Navy and the great English admiral and the 20,000 or more officers and men of the English Navy, it can not be said that my order is either revolutionary or out of line with the spirit of the greatest navies of the world.

This order has been widely commended. Hon. John D. Long, Secretary of the Navy under McKinley, in a recent statement said:

Secretary Daniels's order is the natural sequence of my own prohibiting liquors for enlisted men in the Navy. (General Order No. 508,

issued Feb. 3, 1899.) That was as far as we could go at that time, but in due season it became apparent that enlisted men could not be prohibited from the use of intoxicating liquors and at the same time the officers, associated with them and in command of them, permitted their use. While some officers may demur at this new order, I suspect that very many will really be glad of it, as was the case with my previous order. To the credit of our naval officers it must be borne in mind that they are for the most part temperate men of high character, and, while some of them may use liquors moderately, most of them are entirely exemplary in conduct and life.

Then, too, it can not be denied that this action of the Secretary is making for the cause of temperance at large, especially in Government spheres. With such a serious evil as intemperance, the Government should lead in its suppression. If any complication with foreign officials is involved, the Navy Department will undoubtedly make provision for it. But it is more than likely that foreign vessels will be led by this example to consider and imitate it, so that the drink evil in foreign navies may be put in process of elimination as well as in our own.

The following is a copy of the order to which Secretary Long referred:

GENERAL ORDER NO. 508.

NAVY DEPARTMENT,
Washington, February 3, 1899.

After mature deliberation the department has decided that it is for the best interest of the service that the sale or issue to enlisted men of malt or other alcoholic liquors on board ships of the Navy, or within the limits of naval stations, be prohibited.

Therefore, after the receipt of this order, commanding officers and commandants are forbidden to allow any malt or other alcoholic liquor to be sold to, or issued to, enlisted men, either on board ship or within the limits of navy yards, naval stations, or marine barracks, except in the medical department.

JOHN D. LONG, *Secretary.*

From medical sources the commendation has been most gratifying. The Journal of the American Medical Association of April 11, 1914, says:

ALCOHOL BARRED FROM THE NAVY.

Alcohol as a beverage has been barred out of the United States Navy. Following the recommendation of Surg. Gen. Braisted, Secretary of the Navy Josephus Daniels has issued an executive order abolishing all alcoholic liquors from every ship and station of the Navy. The order reads:

"The use or introduction, for drinking purposes, of alcoholic liquors on board any naval vessel, or within any navy yard or station, is strictly prohibited, and commanding officers will be held directly responsible for the enforcement of this order."

The significance and extent of the change which has taken place in popular views regarding alcohol, as indicated by this sweeping order of the Secretary, can be appreciated only when one recalls the stories of naval experiences of past generations, when rum, brandy, and whisky formed a part of the official regular rations; when liquor of some kind was served, as a routine procedure, to officers and men before going into action; and when one of the chief characteristics of sailors, whether officers or seamen, was their ability to dispose of an amazing quantity of intoxicants. The development of scientific methods and the use of instruments of precision in warfare have made alcohol absolutely detrimental to the modern navy man. Sea fights in the past were won by brute hardihood and physical endurance, which could perhaps be stimulated, temporarily at least, by large doses of alcohol. The modern warship is a floating laboratory of delicate and accurate machines. The gun pointer who directs a 14-inch rifle on the modern man-of-war needs not only personal courage, but also absolute steadiness of nerve, clearness of vision, and fine muscular coordination. All these things modern physiology has shown to be impaired by even small amounts of alcohol. The engineer who superintends the machinery at the heart of the modern battleship, the man at the wheel, who directs its course, and the captain or executive officer on the bridge, as well as the most humble member of the crew, need at all times to be in a condition of maximum physical and mental efficiency. Intoxication in the naval officer to-day might easily be as disastrous as cowardice and treason. Surg. Gen. Braisted's recommendations and Secretary Daniels's order are simply in line with our growing knowledge. The Nation needs on its battleships to-day the most capable, clear-headed, cool-brained, and steady-handed men, and these men are not found among the habitual or occasional users of alcohol in any form. Entirely aside from the moral or sentimental reasons, and considered simply as a scientific regulation in the interest of efficiency, this order will recommend itself to the vast majority of the American people.

Although it is my intention to speak to-night principally of those acts which have been criticized in some quarters, I can not refrain, incidentally, from calling your attention to other matters which seem to have met with popular approval. I am referring now to the very substantial and practical economies that have been brought about in the expenditures for the Navy. The appropriation bill now before Congress is less than that of last year, yet last year's appropriation included only one battleship. This year, with less money, we propose to build two. I would like to go into detail as to how this economy has been effected, but time will not permit. It has been done by saving at the spigot as well as at the bunghole, by the cutting off of countless little unnecessary expenses, as well as by the saving of practically a million dollars in the purchase of material for battleship *No. 39*. None of these economies, so my chiefs of bureaus tell me, has resulted in detriment to the service in any way. True, in certain interested quarters, where competition has resulted in a cutting off of profits, attempts have been made to convince the public that the Navy has suffered or would suffer in the future from these more businesslike methods of spending the people's money. The source of these criticisms has generally been anonymous, and I trust no member of this league has taken this attitude. There is no better way for the league to gain the general public support needed than to spread the knowledge of these economies broadcast, for amongst the people at large there is no idea more permanently fixed than that the Navy has spent its money recklessly in unbusinesslike ways and without a proper regard for the economies which would be practiced by any successful manufacturing concern.

I have exceeded the proper time for an after-dinner speech. There will come up, doubtless, other matters, and there will be future chances for misunderstandings, so I ask you, gentlemen of the Navy League, as you have asked me for my support, that you credit your Secretary of the Navy with the desire to bring our Navy to the highest possible state of efficiency, both as to ships and men, and that you carefully find out the underlying motives of such steps as may be taken before you sit in judgment.

Pensions.

SPEECH
OF
HON. MARTIN DIES,
OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, May 9, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill H. R. 15280, the pension appropriation bill.

Mr. DIES. Mr. Chairman, before I begin my remarks I want to drop one or two observations by way of preface. I want to say that if I believed I could expedite the adjournment of this Congress by holding my peace I would remain as dumb as an oyster [applause], because if there is anything in the whole realm of political economy which I think the people of these United States want and ought to have now it is a period of legislative rest. [Applause.] For one I am for passing the appropriation bills and adjourning the Congress. I believe in surgery. I know there are eminent surgeons in the land, but I do not care how badly a patient needs to be operated upon, or how skillful the surgeon is who is doing the job, there ought to be some little rest between the operations. [Applause and laughter.] I believe the patient American people are entitled—if not now, at least at a very early date—to have the legislative mill cease grinding, in order that they may go about their daily affairs with a knowledge that the laws will remain at least as they are until they can pitch another crop or gather the one that they already have in process of cultivation. That is one of the remarks I want to drop by way of introduction.

Another is this: No living man appreciates or would appreciate the good will and good opinion of his colleagues more than I. I want to offer you all an apology. I probably owe it to you to have whipped my remarks into better order, to at least have prepared subheads for them, and to have given you a succinct and concentrated discussion of the questions about which I am going to talk; but I have observed that you will not listen to these written essays. I find myself prone to drift into the cloakroom when gentlemen begin to read these essays on governmental questions, because in the cold, dull, calculating seclusion of a Congressman's room, writing in the constant fear of his constituents and in the constant dread of his critics, his remarks ofttimes become as stale, flat, and unprofitable as condensed skimmed milk. [Laughter and applause.] And so, while I can not promise you rounded sentences, glistening with beautiful rhetoric, I am going to try to give you some few crumbs of pure Democracy, hot and fresh right off the griddle. [Applause.]

I have heard socialistic speeches here, and I have heard treasonable and seditious speeches, almost. I hear a Bull Moose effusion almost every day, but it has been a long time since I heard anyone preach old-fashioned Republicanism, and still a longer time since I have heard a voice raised in this assembly proclaiming the Democracy that we were brought up to believe in. Scarcely a day goes by that some gentleman does not take a fling at this great Republic in which we live; but before I get to that I want to say that I am not going to make a long speech about anything, but am going to make a short speech about a great many things. During the course of my remarks I want to take up the war in Mexico. I want to also touch on the war in Colorado. If I have time, I am going to touch first on the war that is being waged against the best and freest Government that ever did exist or ever will exist on this earth, the Government founded by our fathers in this free Republic; and after I get through with that, if I have any time left, I may discuss

woman suffrage or infant suffrage or national or international prohibition. [Applause and laughter.]

Mr. MURDOCK. Why leave that to the last?

Mr. DIES. But I want to say to you that because I am going to depart from the usual routine congressional speech, which is always or generally bombproof, or intended so to be, I am not altogether without misgivings as to personal safety in making this Democratic speech myself. [Applause and laughter.] I have got to whistle a whole lot to keep my courage up, because there are very few friends of representative Democracy and the old-fashioned Democracy that our fathers left in this Congress, and this is the best barometer of public opinion that I know anything about.

Just yesterday evening we were treated to a very learned discussion by the gentleman from Illinois [Mr. HINEBAUGH]. I have great respect for his patriotism. I have great respect for his intelligence, and the most unspeakable disgust for his political economy. Among other things he talked about was the recall of judicial decisions. That would not only drive a Republican or a Democrat to vomit, but it is more idiotic, and I say it without disrespect, than any of the fulminations of Santa Anna during the darkest days of Mexican revolution and anarchy. [Applause.] He used this language:

> It is common knowledge that the people have nothing to do with the appointment of a Federal judge or his retention in office, and it is just as generally understood that most Federal judges are nominated and appointed through the influence of special interests.

If Congressmen speak thus in the temple of our liberties, what must we expect the people to believe who are not in the position to understand the truth as we are? I thank Almighty God, Mr. Chairman, that I have an unshakable faith in the judiciary of this country. [Applause.] The present Executive of the Nation has had but slight occasion to use the appointive power in filling vacancies on the bench, but I want to say that his predecessor rendered this country as high a service as any patriot has ever rendered it in giving to it worthy occupants of the bench, clean, manly, intellectual, and courageous judges of our courts. [Applause.] And let me say in this offhand fashion that if the time ever comes when the people of this Republic lose faith in the Supreme Court or in the integrity of its members and the honesty and wisdom of its decisions you may cry for the mountains to fall upon you, but your Republic will crumble and perish. Of course I know no Congressman doubts the integrity of our Supreme Court. Congressmen here, with all the light of day flooded upon them, with all the avenues of information open to them, know that one of the brightest pages in the history of this great Republic is the honesty, the courage, and the integrity of our judiciary. [Applause.] I hope not many Congressmen will feel the political necessity of uttering words which tend to break down the confidence of the people of the country in the justice and the wisdom of our courts. [Applause.] You know, I have had a few "joint" discussions in my time with Socialists. It is very entertaining. I once indulged in an amusement of this kind with a Socialist and I wrote out a question and asked him to answer it in his remarks. I wish some misguided Bull Mooser or Democrat or Republican quasi Socialist would also answer the question which I now propose to repeat:

> Do you know of any Government that ever existed upon this earth or that now exists upon this earth where its citizens have so much of liberty, so much of security, so much of happiness that flows from a good Government as these people and this Republic? [Applause.] No; that would stump the rankest, rawest Socialist and the boldest Bull Mooser who ever trod the earth. [Applause.] They all wind up by saying this is the best Government that ever existed or does exist, and yet they want to try to experiment and change it and reverse this great representative democracy which has given so much security to life and liberty, so much of human happiness and human grandeur and glory.

Mr. HULINGS. Mr. Chairman, will the gentleman yield?

Mr. DIES. Not for a moment. I want to lay out my foundation and erect my superstructure, and after that, when I begin to nail the planks, if some good carpenter will tell me a better way to put them together, I will be glad to stop for a moment with my hammer and saw in my hand and accept the suggestion. [Laughter and applause.] Now, are we agreed so far that ours is the best and wisest Government that ever existed or does exist? And if any gentleman will challenge that and point to the facts of history, ancient or modern, or in the middle of the two, where a Government from the first beginning, from the Governments of ancient Greece to the present hour, has excelled our Republic, why, I will be delighted to entertain him with a joint discussion. I mean you can not find a Bull Mooser or a Socialist—not even an I. W. W. or an I. R. R.—who is able to point to a period of time where human liberty was as safe and human government had reached as high a state of perfection as the present hour. What do they want to do about it? They want to change it. That brings me to a story, a true story, the scene of which was in my congressional district in eastern Texas.

I can speak about this man, because he is my friend, unless appointing him postmaster has changed him. [Laughter and applause.] He had been born and lived all the days of his life over in east Texas, which I know you will pardon me for saying is the best place on earth to be born and the best place on earth to live. He had beheld its beautiful trees of magnolias and pines and oaks and had fished in its limpid streams, had plenty of wood and water, and he had grown to manhood; but he became dissatisfied with east Texan environments. He had heard about western Texas, and especially about its fertile lands, and he said to the good wife, "We will haul out of here and we will go over to west Texas, where we can secure more and better land and where there are not as many ticks and everything is better than it is here." One fortunate thing occurred to my old friend, Giles Bowers, in that he did not find a purchaser for his place; but he left it and went out on the plains of Texas. He stayed out there and made a couple of crop failures, one of his mules died of the botts [laughter], the alkali dust blew into his children's eyes, and when he could stand it no longer he said to the good wife that he thought he would like to rig up some sort of a team and head back to God's country. He did so, and when he began to get back into the timber section they tell me he hugged the trees and kissed them and was exceedingly glad; and, praying, said, "Lord, if you will just let me do it. I will live among these streams and wooded dales of east Texas until time for me is no more." And he is living there now. [Applause.]

Mr. THOMAS. Mr. Chairman——

The CHAIRMAN. Will the gentleman from Texas yield to the gentleman from Kentucky?

Mr. DIES. I would prefer not to do so just at this moment.

Mr. THOMAS. Just a second.

Mr. DIES. Well, I will yield to the gentleman.

Mr. THOMAS. I wish to inquire if it was not Mr. GARNER'S district to which this man went? [Laughter.]

Mr. DIES. Mr. Chairman, if it were possible to turn this great Government, which we have secured through the sacrifices and the intelligence and the patriotism, and the learning of our fathers—if it were possible, I say, to turn it over to the Socialists and the socialistic Democrats and socialistic Republicans and the queer Bull Moosers, and they could make a little experimental excursion into the realm of experiment—the initiative, referendum, and recall, and imperative mandate and recall of judicial decisions, Government ownership of everything from a railroad to a hencoop—if we could turn it over to them with the belief and the assurance that they could do like my friend Giles Bowers, go out into this unknown experiment and bring this good Government back to the Constitution, to regulated democracy and law and order, I might be willing to let them try their hands upon it.

But knowing, Mr. Chairman, that Governments do not operate upon that principle, knowing that once you destroy a stable Government under a written constitution, that turmoil and anarchy is sure to follow, and that despotism follows anarchy everywhere in the world where anarchy ensues, I am unwilling that they should try the experiment. What would you think if all of your families were on an excursion trip and the engineer was about to open the throttle and you were to start on a grand holiday picnic with your families, your wives and your children, and somebody got up and said, "I do not like the way this engineer operates. I do not like the views of the fireman. Let us elect one of our citizens here to run the train." Somebody would ask, "Are there engineers in the coach?" "No; but I have absolute faith in the people. They can elect us an engineer." And up pops some fellow who never ran a train in his life and says, "I can run it." "Did you ever run a train?" "Oh, no; I never ran a train, but I have seen them run, and I know that I can run it. Let me run it." How many of you would be willing for a man to pull open the throttle of a train bearing this precious burden of your loved ones who had not had any experience?

Now, I say to you Socialist, to my Bull Moose friends, and my socialistic Democratic friends, if you want to change this great and good Government, this Constitution and this Democracy, I want you to at least demonstrate some ability to run the train. At least, I think you ought to read the history of the abominable failures of pure democracy. Your fathers had read it; your fathers knew that too much liberty became anarchy; that to attempt too much power in the way of direct legislation and administration resulted in turmoil and anarchy, and was followed by despotism.

You know I love to flatter the people just as well as you do. I love to tell the people that they are wise and good. And they are wise and good. But I do not want to tell them that they are capable of the direct exercise of powers that they are not capable of exercising. You know, in my growing up, my father gave me a little spotted yearling heifer. She grew to be a tall, long-legged calf with a good deal of spirit. Upon one occasion, when my father and mother were away attending church—it was the Sabbath day I am sorry to say—my elder brother and two or three boys of the neighborhood started out to convince me that I could ride this heifer. Well, you know, I had my doubts about it to start with. "Oh," they said, "you are a fine rider, Martin. This is a gentle heifer. You can ride her. She may buck a little bit, as heifers are want to do, but you can stick to her and hold on. It is safe and all right." And they flattered me to believe that I could ride the heifer. Well, it is safe to say that I did not succeed. But the heifer did. [Laughter.] I got "busted open" in the cow lot. And when a man tells me now that I can do something that I know I have not the power to do, I do not feel that he is flattering me. I think he is mistaking me for a person of very poor information. And when you tell the people that they can run this Government as an orderly democracy, by direct legislation, by your I. R. R., you invite them to certain failure and you entice them to certain ruin.

Another thing, gentlemen, I do not believe it is necessary to thus mislead the people. I have never found a farmer or an intelligent laboring man who when he came to understand the question would not sit down on a log and tell you that he did not want the job of making and unmaking laws, that he did not have time to put his mind on the business, but that it was enough for him to pick out a good man and a learned man and send him to Congress or the legislature to make the laws; and if he did not make them to suit him he would recall him in an orderly election under the laws of his country.

I see I am devoting more time to that phase of the question than I had intended to do. I did want to say a word or two about my friend's argument as to the recall of judicial decisions. He does not want the Supreme Court to interpret the Constitution. He does not want the Supreme Court of New York to interpret the Constitution. In the name of conscience, Mr. Chairman, if your Supreme Court is not to decide the disputed points that arise under this contract between the people and the Government, who is to be the umpire? If the Supreme Court of the State of New York is not to umpire the Constitution in the State and declare the intention of the givers of the power when they gave it, and the extent of the power given, who is to do it? They say, "Refer it to the people." I should hate to say, Mr. Chairman, just all that that meant, for instance, in the State of New York. If my good socialistic friends are correct in their statement, it would start by reference to the people, and in a good many places the reference would next be to the local bosses, and the reference would finally wind up to one man.

No, Mr. Chairman; this is the best system that has ever been evolved.

De Toqueville, in his Democracy in America, makes this observation about our Constitution:

> In examining the Constitution of the United States, which is the most perfect constitution that ever existed, one is startled, on the other hand, at the variety of information and the excellence of discretion which it presupposes in the people whom it is meant to govern.
>
> * * * * * * *
>
> The whole structure of the Government is artificial and conventional, and it would be ill-adapted to a people which has not been long accustomed to conduct its own affairs or to one in which the science of politics has not descended to the humblest classes of society.
>
> * * * * * * *
>
> The Constitution of the United States is like those exquisite productions of human industry which insure wealth and renown to their inventors but which are profitless in any other hands. This truth is exemplified by the condition of Mexico at the present time. The Mexicans were desirous of establishing a federal system.

This book was written in 1845—

> The Mexicans were desirous of establishing a federal system, and they took the Federal Constitution of their neighbors, the Anglo-Americans, as their model and copied it with considerable accuracy. But, though they had borrowed the letter of the law, they were unable to create or introduce the spirit and the sense which gave it life. They were involved in ceaseless embarrassments between the mechanism of their double government—the sovereignty of the States and that of the Union perpetually exceeded their respective privileges and entered into collision—and to the present day Mexico is alternately the victim of anarchy and the slave of military despotism.

Mexico in her constitution of 1824 practically reenacted the Constitution of the United States. Growing out of the adoption of the constitution of 1824 was the settlement of the territory now known as the State of Texas. Following the constitution of 1824 Mexico, further following the example of the United States, enacted a liberal colonization law. She invited foreigners—American citizens—to come into Mexico and settle; and believing that after the adoption of their free constitution they could enjoy the liberty or a part of the liberty there that they had enjoyed at home, a great many of the citizens of the United States migrated to Mexico.

But the Mexican people were incapable then, as now, of self-government. There grew up a party known as the centralist party and a party known as the republican party. The centralists wanted to take all the power away from the Mexican States, and the republican party wanted to enforce this written constitution, which divided the powers between the States and the federal Government. Naturally, those citizens of the United States who had migrated to Mexico took sides with the republican party in favor of the rights of the States as against the centralization of the Government.

It is needless for me to say that the constitution of 1824 was disregarded and anarchy ensued. Despotism inevitably followed, as it always follows, anarchy. Now, having said this much, I want to say a pertinent thing or two about the present situation in Mexico. No man among you has greater confidence in the President of the United States than I have. I have great confidence in the goodness and patriotism of the Secretary of State. I am following them in what they are doing in Mexico. I do not know just what that is, but whatever it is, I am following it. [Laughter.] But I will tell you what our forefathers down in Texas did after they had been invited down there under the colonization law and constitution of 1824. When anarchy and despotism ensued, they declared their independence of Mexico. They said:

> The Mexican Government, by its colonization laws, invited and induced the Anglo-American population of Texas to colonize its wilderness under the pledged faith of a written constitution, and that they should continue to enjoy that constitutional liberty and republican government to which they had been habituated in the land of their birth, the United States of America.
>
> In this expectation they have been cruelly disappointed, inasmuch as the Mexican nation has acquiesced in the late changes made in the Government by Gen. Antonio Lopez de Santa Anna, who, having overturned the constitution of his country, now offers to us the cruel alternatives either to abandon our homes, acquired by so many privations, or submit to the most intolerable of all tyranny—the combined despotism of the sword and the priesthood.

Then they set out in this declaration the ills that they had suffered at the hands of Mexico. They said:

> It has suffered the military commandants stationed among us to exercise arbitrary acts of oppression and tyranny, thus trampling upon the most sacred rights of the citizen and rendering the military superior to the civil power.
>
> It has dissolved by force of arms the State Congress of Coahuila and Texas and obliged our representatives to fly for their lives from the seat of government, thus depriving us of the fundamental political right of representation.
>
> It has demanded the surrender of a number of our citizens and ordered military detachments to seize and carry them into the interior for trial, in contempt of the civil authorities and in defiance of the laws and the constitution.
>
> It has made political attacks upon our commerce by commissioning foreign desperadoes and authorizing them to seize our vessels and convey the property of our citizens to far-distant parts for confiscation.
>
> It denies us the right of worshiping the Almighty according to the dictates of our own conscience by the support of a national religion calculated to promote the temporal interest of its human functionaries rather than the glory of the true and living God.
>
> It has demanded us to deliver up our arms, which are essential to our defense—the rightful property of freemen and formidable only to tyrannical governments.
>
> It has invaded our country both by sea and by land, with the intent to lay waste our territory and drive us from our homes, and has now a large mercenary army advancing to carry on against us a war of extermination.
>
> It has, through its emissaries, incited the merciless savage, with the tomahawk and scalping knife, to massacre the inhabitants of our defenseless frontiers.
>
> It has been, during the whole time of our connection with it, the contemptible sport and victim of successive military revolutions, and hath continually exhibited every characteristic of a weak, corrupt, and tyrannical government.

I shall include in the RECORD certain other statements in this declaration of independence. Suffice it now to say that those people of the United States who moved to Mexico under her promise of a stable government, when anarchy and despotism ensued, refused to leave their homes. They said, "You have invited us here. We are within our rights, and we will stay here." And they did stay, as you may find from the immortal pages of the history of Goliad and the Alamo and the glorious victory of San Jacinto. In the Battle of San Jacinto the Texans, with an army of about 600, overcame an army of 1,400 Mexicans. Our loss was 6 killed and 23 wounded. The Mexican loss was 630 killed and 208 wounded.

In those days, when Mexicans sought to drive back American citizens who had been invited into Mexico, their brothers from Pennsylvania and from Tennessee and Georgia and Louisiana buckled on their swords and shouldered their rifles and said, "We take the part of our brothers who have gone to Mexico in response to the invitation of Mexico."

For many years thereafter few Americans migrated to Mexico. Why? Because under that Government, where the people did not have intelligence enough to uphold a written constitution and self-respect enough to sustain orderly liberty, no American was safe to go. But along in 1870 some time Gen. Diaz set up a despotism—the only kind of a government in the world that can exist among a people incapable of self-government—and under the despotism of that great general who knew his people and their limitations American citizens were invited into Mexico. Some were invited to come and take up farms, some were invited to dig in mines, and some were invited to engage in this business and that business. They went there under a promise of protection for their lives and their property. They had as much right to go to Mexico when she had invited them to go as they had when they were invited by Santa Anna under the constitution of 1824.

Mr. GORDON. Mr. Chairman, will the gentleman yield?

The CHAIRMAN. Does the gentleman from Texas yield to the gentleman from Ohio?

Mr. DIES. Yes.

Mr. GORDON. If they went to Mexico after Gen. Diaz had set up his despotism, after he had abrogated the written constitution, why did they not take the chances on some other despotism succeeding it?

Mr. DIES. They went there, Mr. Chairman, under the promise of protection for their lives, for their liberty, and for their property—for as much protection to life and liberty and property as can be expected under a despotism.

You may say that the hardy pioneers of Texas who went down there from 1821 to 1835, when Santa Anna and his roving band of Mexican murderers and vendetta burned their homes, that they ought to have migrated back to the United States and have given up their homes and property. But that is not the Anglo-Saxon way, and that is not the way our Pilgrim Fathers did when they touched this soil upon which we live. We had the finest excuse in the world to turn back when we first came to this new world, because we found it ocupied by Indian tribes. But we did not turn back, because this great Anglo-Saxon race, working out their own destiny and shaping the destiny of the world, are not given to turning their backs when their rights are invaded. [Applause.]

Now, there are two or three things we can do in Mexico. We have been invited down there, and we have invested more money in its industries than the Mexicans themselves have invested. Farms and mines have been opened; railroads and industries have been established by the capital and the labor of the American people. We can turn our backs upon it, and we can allow their roving bands of desperadoes to dynamite the railroads and the mines, to murder the American men and women and children who live in Mexico by their invitation, and tell them, "Come, leave your property; leave your homes; fly from the Mexican bandits and murderers and the Mexican Army. Leave it; come away. You have no rights there that the American flag and the American Nation will sustain."

That is one way. Another way is to say, "You went there upon the invitation of the Mexican Government. You had a right to go, and you have a right to stay, and you have got a right to your life and your property while you stay."

Mr. Chairman, there is no man in this Congress who abhors war more than I do. I know of the scenes of carnage and desolation that follow. I know of the black smoke of burning homes and the red blood of dying heroes that come with war. I also know the long pension roll that follows and the tremendous burdens upon the taxpayers of the country; but I am in favor of sustaining the Americans in Mexico as you sustained your brothers in Texas in 1836. [Applause.]

Mr. FESS. Will the gentleman yield there?

Mr. DIES. Certainly.

Mr. FESS. What, in your opinion, would be the position of Texas now, had she not gotten her independence in 1836 and if she had remained a part of Mexico?

Mr. DIES. If the brothers of the Texans who lived in the United States had not sustained them in their struggles for liberty in the early days, they would have been exterminated by roving Mexican bands, and to-day Texas and all of that territory that was then under the Mexican flag would be what many of the Mexican States are to-day—the scene of murder and pillage. No man would sow, because before he had time to reap some bandit would come to despoil him of his labor. No man would build a house, because before he could occupy it a roving general would burn it to the earth.

Mr. GORDON. Will the gentleman yield?

Mr. DIES. Yes.

Mr. GORDON. Of course you understand that the people of the United States did not interfere with Texas until after she had declared and achieved her independence. Is there anything to-day that prevents an American citizen, you and me, from shouldering a rifle and going down there to help those unfortunate people in Mexico? The Government of the United States did not interfere then under circumstances similar to those existing to-day.

Mr. DIES That is a big question. At that time we organized companies in the United States. We organized one in New Orleans called the Greys. We organized one in Alabama—Dr. Shackleford's company. We organized armies—not large ones, it is true—and sent them to the aid of our brothers in Texas, to help them stand by their homes and firesides, built upon Mexican soil at the invitation of the Mexican Government. I do not care how you go about it. I do say that this red-blooded Anglo-American Nation can not forsake her citizens in Mexico who have gone there in obedience to Mexican invitation. [Applause.] Suppose we should do it. Suppose we should take every American citizen out of Mexico and tell him to turn his house, his garden, his farm, or his mine over to the Villas and Carranzas and Huertas and let them pillage his property and devour the fruits of his labor; what would be the result? There are Germans in Mexico; there are Frenchmen; there are Japanese in Mexico. They are probably not so complacent as we are. They demand that their citizens shall not be murdered; that the property of their citizens shall not be destroyed. You who want to forsake your brothers in Mexico, are you willing to go to war to make every other nation on the earth forsake her citizens in Mexico? They will not forsake their citizens, even if we forsake ours. Under the Monroe doctrine, under the American doctrine, under the history and traditions of this race, you are not going to allow the settlement of Mexico by immigration from Japan, China, Asia, or any other place, to take charge of that territory at your door. [Applause.]

Talk to me about establishing a stable government in Mexico by placing Villa in the presidency! If I were compelled to choose between murderers I would take that bullheaded old Huerta in preference to that rapacious, pitiless, bloodthirsty, roving bandit and plunderer of men's homes and villages and towns, known by the name of Villa. [Applause.] What kind of a government will ensue in Mexico if we bring about the downfall of the present dictator and set up another in his place? You will have the same old story that has been the history of Mexico since Cortez landed his 600 there. Since then one revolution has followed another. Anarchy, plunder, and murder have been the order of the days and nights in Mexico, except during such brief periods as a powerful general with sword in hand has maintained himself in a despotism. So what must follow?

If we depose one despot in Mexico we have the alternative of setting up another despot, or of witnessing a continuation in greater volume and fury than ever before of revolution and murder, of the burning of homes, of rape, and lawlessness in poor old Mexico. Of the seventeen or eighteen million people down there I daresay 80 or 90 per cent would be glad to have a stable government. Many of them would be glad to take the money with which they are now compelled to buy rifles and ammunition to protect their homes in a meager way and invest that money in plows and hoes to go out and till the earth and make it blossom like the rose. But those 80 or 90 per cent of the Mexicans in Mexico who want to work and not shoot, who want to farm and not rove, who want to build houses and not have them destroyed, are not able to do so if your Villas, your Huertas, your sashed and epauletted so-called generals who want to fight are permitted to revolt day in and day out. For myself I will say it now—it has been in my system some time, and I am glad to get it out—I am not for deserting Americans who have been invited into Mexico with their wives and their children and whose lives and property are needing protection there. I am for taking the guns out of the hands of the ignorant murderers, who would kill our people, and gently placing into their hands the implements of husbandry. [Applause.] And then I am in favor of protecting them while they till the soil instead of killing the citizens.

Mr. FESS. Will the gentleman yield?

Mr. DIES. With pleasure.

Mr. FESS. I know the Members would like to have the gentleman's opinion, and I would like to have the gentleman's opinion, as to the possibilities of the States just across the Rio Grande—Coahuila, Chihuahua, and Sonora. Would it be possible in that country just across the river to see what we see in Texas in the way of improvement in national spirit, and so on? Is it possible, or are there conditions there that would make it impossible?

Mr. DIES. I will say to the gentleman that I am not in favor of more than one trip into Mexico the next time we go. [Ap-

plause.] And I want to say, and that brings the thought to my mind, and I am in earnest about it—I try never to say anything that I am not sincere in—I have faith in that square-jawed gentleman up at the other end of the Avenue, the President of the United States. You know Brag is a good dog, but Holdfast is better, and I prophesy that if he ever closes down those square jaws upon the Mexican situation it will have to thunder several times before he lets go. [Applause.]

That is all I want to say. I do not say it in criticism of the administration.

Mr. FESS. I think the gentleman misunderstood the inference of my question.

Mr. DIES. I think I did understand it.

Mr. FESS. I did not ask whether we ought to go down and annex territory in Mexico. I asked if the gentleman thought a proper form of government could be established in that section of the country and be as prosperous as Texas.

Mr. DIES. I am not talking about annexing Mexico to gratify any love of conquest. Now, I am not so awfully ripe in wisdom, but I would march an army to Mexico City, and I would cause the people to set up a stable government and protect the lives and property of the people, and I think Mexico would pay the bill [applause], because I am weary with this doctrine that the people of the United States—the farmers and the laborers who have to pay for all of these excursions of armies and navies, for these seesaw gyrations and mediations—I want the people of the United States to have no more than justice, and if we have got to act as policemen down in Mexico, the people for whose benefit we are acting ought to pay the policemen's salary. [Laughter and applause.]

Mr. J. M. C. SMITH. Will the gentleman yield?

Mr. DIES. Yes.

Mr. J. M. C. SMITH. Would not that be a violation of the Monroe doctrine?

Mr. DIES. I have not started to discuss the Monroe doctrine. I do not know that I understand it. If it means that we are to turn our backs on our brothers in Mexico and allow the red devastation of anarchy to ensue until some foreign government comes along and does what we ought to do, I am not for the Monroe doctrine. But the Monroe doctrine does not mean that.

Mr. SHARP. Will the gentleman yield?

Mr. DIES. I will.

Mr. SHARP. In view of the interesting history of a century of revolution which the gentleman has given, how long does the gentleman think a government down there would remain stable?

Mr. DIES. As long as we kept farming implements in the hands of the revolutionists and good guns with plenty of lead and powder in the hands of the American soldiers that we would be sure to leave down there. [Laughter and applause.]

Mr. SHARP. That would mean permanent occupation?

Mr. DIES. Yes; we will permanently occupy Mexico for years to come, as we did this country of the Indians, just as we occupied Texas, and as our brothers were occupying Mexico before we went down there.

Mr. SHARP. That would be a war for the annexation of territory.

Mr. DIES. No; it would not. Eighty per cent of the people of Mexico, living in adobe houses, who can not plant corn because it will be stolen before it ripens, would be glad and praise God Almighty to have a government that would allow them to plant a crop and gather the crop, that would allow them to build a house and be sure that no revolutionist would tear the roof off before morning.

Mr. SHARP. Would not that result in the occupation of the country permanently? If you are going to station soldiers there, you are going to occupy the country.

Mr. DIES. I will let my mediative friend work that out in his leisure moments.

Mr. QUIN. Will the gentleman yield?

Mr. DIES. Yes.

Mr. QUIN. In regard to putting useful tools in the hands of Mexicans, would it not be necessary first to cut off Huerta's head and put Villa in jail? [Laughter.]

Mr. DIES. No; I think the great body of the Mexican people would be glad to be rid of three centuries of revolution. I have no doubt that most of the fathers and mothers who go to bed at night in Mexico, knowing that their homes may be burned and their families murdered before daylight, would welcome a stable government in that troublesome land. And so far as occupying Mexico permanently, I have no doubt that if we would unfurl Old Glory for the purpose of establishing a stable government, that American citizens would avail themselves of their right to return to their homes, and many other American citizens would promptly emigrate into that fair land.

Mr. MURDOCK. And there would be a better land distribution.

Mr. DIES. Yes; that is the trouble in Mexico. God's green footstool is owned by a few people who will not and can not cultivate it themselves, but who will not suffer the poor Mexican people to have a homestead or a place to build a house to live. You stated the truth. There can never be a free government exist on the earth by tenants, by homeless men, by roving bands. We have got some little jobs in the States comprising the United States to attend to on the land question. Nothing in the whole category of evils is so prolific of evil as land monopoly. That is true in Mexico and it is true in Texas.

The CHAIRMAN. The time of the gentleman from Texas has expired.

Mr. DIES. Mr. Chairman, I ask unanimous consent to extend my remarks in the RECORD.

The CHAIRMAN. The gentleman from Texas asks unanimous consent to extend his remarks in the RECORD. Is there objection?

There was no objection.

Mr. BARTLETT. Mr. Chairman, I will yield the gentleman 10 minutes more.

Mr. BUCHANAN of Illinois. Will the gentleman from Texas yield?

Mr. DIES. Yes.

Mr. BUCHANAN of Illinois. The gentleman has not yet touched on the Colorado situation.

Mr. DIES. Lawlessness and anarchy in Colorado are just as hateful and dangerous as lawlessness and anarchy in Mexico.

Mr. BRYAN. And the gentleman has omitted the question of prohibition.

Mr. DIES. If the gentleman will come around to my office I will enlighten him. [Laughter and applause.] Mr. Chairman, if it will do the gentleman any good, I will give him in one or two words my views on the question of national prohibition. I had just as soon die here as lower down the creek. [Laughter and applause.] One of the first votes that I ever cast was for local option in the town I lived in. I have said that in a State-wide prohibition election I would vote for State-wide prohibition, although with many misgivings as to whether it would be a better remedy for intemperance than local option. I never have believed, and never will, that the State of Texas, no matter how dry it got to be, will ever be able to tell the people of New York how wet they should not be. [Laughter and applause.] If I had been in Mexico I would have been a republican as against the centralist. Living in the United States, I am for the rights of these States on woman suffrage and prohibition and every other question. [Applause.]

Just another word, because I am going to revise this speech in the RECORD, and if I am not clear now, I will be when I get through with the speech. [Laughter.] There are two forces in this Government that are working for socialism. One is the clan way up in the multimillionaire class, your Rockefellers, your men who sit lonesome and miserable upon the apex of great piles of wealth.

They are doing more, I will say, to breed discontent and destroy the confidence of the people in their Government than any other class of people. Then down at the other end of the scale is your ignorant miner in Colorado, your foreigner, who has come over to this country, cast his lot with us, and who has been told by a lot of flannel-mouthed politicians that he has the right to quit his job and then shoot the man who tries to take the job. [Applause.] I am sorry for those people in Colorado. I am sorry for Rockefeller. Poor man, with his hundreds of millions of dollars, he must be miserable. He must be miserable to see the effect—the industrial war that flows out of his great aggregation of wealth. I do not blame the foreigners, the foreign born who are in Colorado—and I am told they speak 32 languages there, and that does not embrace the English language. They came over to this country from foreign lands to seek their fortune in free America. They were probably getting 50 cents a day over there, and they were getting from $3 to $7 a day before they struck in the mines in Colorado. They have some false ideas in their minds, that they have got to get out. [Applause.] Somebody has told those ignorant foreigners that they have a right to come to this country, go to work for some man, and if they get tired of the job they have the right to quit the job and then stand by the property and shoot the man that offers to take the job in their place or shoot the men who decline to quit at the same time that they quit. Let me tell you, I do not blame those poor ignorant fellows, but I would as soon tell a child 3 or 4 years old that he can safely play with a shotgun as to tell those foreigners that they have the right to drill armies, to buy arms, and go into civil warfare over those industrial conditions.

Mr. BUCHANAN of Illinois. Mr. Chairman, will the gentleman yield?

Mr. DIES. Only briefly.

Mr. BUCHANAN of Illinois. Do not the facts show that the strikers who are protesting are the ones that are getting shot at this time in place of taking the gun and shooting somebody else?

Mr. DIES. I know what the newspapers say, and that is that both sides there are armed with guns, and that they are drilling for war. I saw in an Associated Press dispatch that there were Greeks there who were drilling Greek soldiers in the mines, teaching them how to shoot. I say that liberty means that a man has the right to work wherever he pleases. [Applause.] He has the right to quit his job when he gets ready to quit it, but under a free government no man has the right to quit his job and then kill the man who comes along to take the place. If you are teaching that kind of doctrine to the laboring men of this country, to these ignorant foreigners who can not speak our language, these ignorant foreigners who speak 32 tongues in Colorado—if you are teaching them that they have any such right as this, then you are luring them to their destruction. It is not in the Constitution, it is not in the statutes of the States, it is not in the heart of a patriot, that a man has the right to kill another man if he offers to engage in employment where that other man has ceased to want the job. [Applause.]

I am afraid of your Rockefellers and I am afraid of your selfish multimillionaires who want to build fortunes mountain high. I am for a graduated land tax in my own State and I am against monopoly, but of all the things on this earth that I fear, I am most afraid of lawlessness and anarchy. I am afraid of the country where, when a man goes to bed at night, the murderer and the thief will come. I am afraid of a country where a man's life and liberty, his right to work and raise and educate his family, are disturbed. I am afraid of the multimillionaires, and I am afraid of your Greek soldiers, who are being drilled in Colorado. I know not which class is doing the most to destroy this great Republic. I know not which class is doing the most to break down the confidence of the middle class of this country in their great and good Republic, your Rockefellers or your bomb-throwing miners. I want to say to my friend from Illinois [Mr. BUCHANAN] that the merchants, the bankers, the lawyers, and the doctors, the farmers and the laborers, the mothers and the fathers of this goodly land shall yet rise and say to the Rockefellers and to the lawless anarchists at the other end of the ladder, "Thou shalt not despoil this good land in your war over the wealth of the earth in the mines." [Applause.] "You have a right to labor; you have a right to organize labor; you have a right to quit as one man or as an organization, but we challenge the right of any man to say that after you quit you have the right to go and get your shotgun and shoot down your brother who refused to quit when you did, or another man who was willing to contract to do the labor that you declined to do." [Applause.]

Mr. Chairman, I love this great Republic. It is the safest and the dearest place upon this earth in which to live. I am not in favor of allowing the multimillionaires, the industrial hogs, if you please, nor am I in favor of allowing the ignorant anarchists with gun and bomb, either or both, to destroy the liberties of this great people and this great Government. [Prolonged applause.]

Ripening Fruits of Democracy.

EXTENSION OF REMARKS

OF

HON. B. P. HARRISON,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 8, 1914,

On the bill (H. R. 17041) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. HARRISON. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by inserting an editorial, written by Mr. Larry Gantt, one of the best editorial writers of my State, that appeared in a recent issue of the Jones County News.

The editorial portrays in a very succinct but in a most excellent way the accomplishments of the Democratic administration since coming into control of this Government.

The editorial is as follows:

"RIPENING FRUITS OF DEMOCRACY.

"To save a patient's life it is sometimes necessary for the surgeon to perform a dangerous and fearful operation, from which the victim is long a sufferer and his or her situation is critical.

"It was thus with our Republic when Woodrow Wilson and a Democratic House and Senate were given the reins of government. For nearly half a century the people of this country have been groaning under such oppressive and unequal laws as characterized France under the Bourbon Kings and before the reign of terror and the Republic, only this political tyranny was disguised and softened under the guise of popular government.

"Instead of a monarchy of men, a monarchy of money dominated and absolutely ruled this great Republic. Under our robber protective tariff laws the entire manufacturing industries of the country were controlled by certain interests that fixed prices of their products at extortionate figures while forcing the farmer and producer to sell raw material often for less than actual cost of production. Gigantic trusts were organized to control every commodity used by the people. First, competition was crushed and the most usurious prices demanded. And these trusts had grown so greedy and insolent that they were reaching forth and grasping every possible utility. It matters not what a person purchased, from a wooden toothpick to a steam locomotive, he must pay tribute to a trust. These plutocrats set in to secure possession of all the natural resources of our land—oil deposits, timber, coal mines, water powers, and so forth—and then reached forth to grasp every artery of commerce and vehicle of public communication. Railways, when their control could not be secured otherwise, were systematically and deliberately wrecked, and the innocent and helpless stockholders, whose money built these lines—including widows, orphans, and charitable organizations—robbed and plundered. The cost of living had so increased that many articles of food once looked upon as necessities of life were placed beyond reach of the masses. And the honest yeoman who produced these commodities was not the beneficiary of these extortionate prices, but the men who manipulated the markets, and through their enormous and ill-gotten wealth had it in their power to control the commercial laws of supply and demand. In this great Nation of ours there was not an individual outside of these special and favored interests but was a victim, and deliberately robbed daily—yea, hourly.

"And, through the enormous wealth thus accumulated, a few men dominated and controlled the finances of our Republic. It was in their power at any time to contract the currency to promote their selfish greed or as a menace to our lawmakers, and thus bring about a panic, paralyzing every line of business, bankrupting thousands of legitimate enterprises, closing the doors of mills and factories, and throwing vast armies of honest and industrious workingmen out of employment, entailing destitution and suffering on poor and helpless women and children.

"Such was the situation in our Republic when Woodrow Wilson and a Democratic House and Senate were placed in power.

"And that political change did not come a day too soon were our Republic to be rescued from these plutocratic tyrants. Four more years of Republican rule would probably have seen the people so firmly shackled by the money kings that it would have required a second revolution to save the country, even could the people then have triumphed over the resources that such enormous wealth could command. It would not have been many years, as things were going, before a few alien landlords would have controlled the farming lands of the country, and the same condition would have prevailed here as in Ireland up to a few years ago. The masses were not only being robbed but enslaved by those plutocrats, with all the resources and money of our country in their hands. Ends that kings and tyrants in the Old World accomplished with fire and sword were being fast brought about in this Republic of ours by the Republican Party and its iniquitous and outrageously unjust and unequal laws.

"We do not suppose the head of any nation found such intricate and delicate problems to solve or greater and more complex work to do than President Wilson when he assumed office 15 months ago. Perhaps ninety-nine men out of an hundred would have gone to work with great caution and circumspection, lest they disturb business and frighten capital, and proceeded to administer homeopathic doses of reform.

"But in Woodrow Wilson it appears that God, like unto in the days of old, has raised up a man to save our great Republic and its people. He at once saw the need of an immediate and revolutionizing change in the entire economic system of our Government. With undaunted courage and a firmness without paral-

lel, he at once applied the knife of reform and proceeded without an instant of hesitancy or delay to remove one by one the cankers from which our country had so long suffered. He closed his ears to the threats and wails of plutocrats and many all-powerful and favored interests, and with one eye fixed upon the Baltimore platform and the other eye upon the oppressed and long-suffering masses, proceeded to his task. He neither hesitated nor delayed, and the eternal hills were no firmer settled than was Woodrow Wilson in his determination to carry out every pledge made in the Democratic platform, with each 'i' dotted and 't' crossed. He cast precedent to the winds. With nothing to conceal, the President went in person before Congress and stated what should be done. When once he took a stand on a great public matter his decision was as irrevocable as the laws of the Medes and Persians.

"It was indeed gratifying to see the unanimity with which our Democratic Senators and Congressmen rallied around their leader, recognizing his statesmanship, ability, determination, and honesty.

"Never in the political history of any nation was such important and revolutionizing work executed with such dispatch. Within little more than 12 months has every pledge made in that Baltimore platform been enacted into a law or will soon be carried out to the very letter.

"The grip that the tariff monster had upon the throats of the people has been torn loose; the cost of living has been reduced; the control of money taken from those plutocrats is now in the hands of the people, and the days of panics are over; the power to dictate prices to the country and force the producer to submit to the buyer, naming what he will receive for the fruits of his labor, is destroyed; the gigantic and once all-powerful trusts are curbed and legitimate competition restored; and the income tax will require the rich to bear a share of the support of government.

"And these great reforms were brought about without disturbing the business of the country or affecting its finances. The large interests realized that we had a man in the White House with will and backbone, and it was the part of wisdom and discretion that they be on their good behavior.

"And too much praise can not be accorded those Democratic Members of the House and Senate who loyally stood by the President. They are heroes all and richly merit the gratitude and indorsement of a grateful people and rescued country.

"We never knew such courageous devotion to duty as shown by these Members. They stood at their post of duty during the long hot summer and all the winter, without vacation or rest, bravely and unflinchingly fighting the battles of their people without regard to discomfort or their own political futures.

"We feel like lifting our hat when we pass a Member of that great Congress. Their each and every name will be inscribed upon the roll of fame."

Method of Appointing Postmasters and the Handling of the Business of Post Offices.

EXTENSION OF REMARKS

OF

HON. SAMUEL W. BEAKES,

OF MICHIGAN,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 8, 1914.

Mr. BEAKES. Mr. Speaker, I desire this afternoon to take up a few moments of your time to call your attention to a proposed change in the method of appointing postmasters and of handling the business of the post offices, which, it strikes me, would add much to the efficiency of that branch of the governmental service which comes closest to the people and would afford much relief to the Members of this House by diverting less of their time from the real legislative work for which Congress was formed. I do not expect that anything can be done at this session of Congress along the line I propose, but I wish to call the matter to your attention, so that when it comes up later it will not be an entirely new idea, but one on which you will have formed some opinion.

The proposition I lay before you is a plan to take the Post Office Department entirely out of politics and to make it what it should be—a purely business proposition—to give the very best possible service to the people. Briefly stated, I would put every postmaster in the United States under the civil service. I would make the county the post-office unit, and I would have the Postmaster General appoint the county postmaster by promotion from the ranks of the post-office employees of the county. I would have the county postmaster appoint all the other postmasters in the county from the civil-service list, precisely as clerks or carriers are appointed, subject, of course, to the approval of the Post Office Department. The county postmaster would have personal charge of the principal post office in the county and supervisory charge of all the other post offices in his county.

There are many advantages to this plan, and among them is that of economy and, it strikes me, also of more efficiency. There is no reason why a Congressman should have the appointment of the postmasters in his district, or, to be more precise, should have the recommendation of the postmasters. This is not a legisaltive function. It is purely executive. It is not even a political asset to a Congressman. For every friend he pleases by an appointment he is obliged to disappoint half a dozen other friends, who blame him for their disappointment. I have heard some Congressmen state it this way: "Every appointment makes half a dozen bitter enemies and one lukewarm friend." There is not one of us, however, as long as the present system is in force, but what would fight for the man of his choice for postmaster; but if all this work could be taken away from us, what a burden it would lift from our shoulders and how much more energy and time we would have for our real legislative work. But we are not the only ones who would be relieved. Nearly all the time of the Postmaster General and the First Assistant Postmaster General is taken up with these appointments, time which should more largely be given to the study of the service and the devising of improvements. Then, too, the very valuable time of the President is encroached upon and many annoying situations must necessarily arise, owing to conflicting claims, all of which, if possible, should be spared him. Then, too, the confirmation of these political appointments occupies much of the time of the Senate. All of this would be saved under the proposed plan. Possibly, if all this time were saved, we could so push business that our sessions would no longer be practically continuous and we could occasionally get home to our constituents and get their viewpoints.

There are 58,020 post offices in this country. The Postmaster General and the First Assistant Postmaster General have now to fill all these offices. Necessarily there are very few of these appointees of whom they can have any personal knowledge. That is why so much of their time and energy is taken up with determining who shall fill these offices. Do you think the head of a big private corporation would work under a system in which his time should be practically wholly given up to determining who his employees should be? Then these postmasters when appointed are inexperienced. They have to learn their duties, and in the smaller offices, especially, they are rarely, if ever, visited by post-office inspectors. Some of them, I am sorry to say, never do really learn their duties.

The supervision now exercised is too remote and must be by correspondence, and necessarily many of the postmasters are not ready letter writers. If the supervision were more immediate better results would be obtained. What kind of an organization would an army of 58,000 men have scattered all over the United States, with no officers nearer than the general in Washington, and each man reporting by mail to that general? And yet this is the present organization of the Post Office Department. True, we have a small force of post-office inspectors going around, occasionally checking up an office, and always looking for delinquencies to report to Washington; but I would not call this effective supervision.

Each of these 58,000 post offices gets its supplies direct from Washington on requisitions made by them. Conditions are widely different at different offices and many supplies are ordered and shipped which are valueless at the offices to which sent, and the Government is out the cost of these supplies. Other offices do not have needed supplies, and the efficiency of the service to the people is injured by this fact. With so many accounts a small army of clerks must be maintained in Washington. Then, too, the expense of shipment from Washington separately to each office is much larger than would be the expense of one shipment to each county. The county postmaster should furnish each office in the county with needed supplies. He is on the ground. He should know better what they need.

Under this plan I propose I would not lessen the number of post offices. I would have them get their mail as now; but while leaving each post office as at present, with its name intact and with nothing done that would affront its local pride, I would make all the postmasters of the county subordinates of the county postmaster. They should furnish bonds to him, report to him, be under his direction; and he should have the right to recommend their removal for cause. He should, as I have said, with the approval of the department, fill all vacancies under civil-service regulations. In other words, instead of

making each city, village, hamlet, or crossroads a post-office unit, I would have each county or equivalent subdivision the post-office unit. There are 2,953 counties in the United States, and hence I would have the department at Washington with about 3,000 accounts instead of 58,000 acounts.

In giving over the selection of postmasters in a county either by promotion or from civil-service lists to the county postmaster, I think an improvement would be effected, for the reason that the county postmaster is more likely to know the appointees than the department at Washington, and as in any event he would be responsible for their work he would be the proper one to choose them.

The object I seek to accomplish by having the county postmaster chosen by promotion is not alone that he should have had experience in the Post Office Department. I would put an incentive before the post-office employees of the whole county for better and more intelligent service. One great fault I find in the civil service is the lack of promotion for extra efficient service. The employee of the private corporation has always before him the chance to rise if he can show extra efficiency. After the post-office employee gets up a little way at present there is a blank wall ahead of him, which says, "Thus far canst thou go, and no farther." I would have each post-office employee in the whole county with the goal ahead of him of county postmaster, with its privileges for service, its added emoluments, and also the protection of the civil service. I would have him know that if he could so do his work that he could show extra fitness, that the office was within his grasp.

The realization of the necessity for some such change as I have outlined for administration with the county as the unit is not entirely a matter of theory with me. I gave four years of service to the Government as postmaster, two years under Cleveland's second administration and two years under the McKinley administration, and it was my personal observations during that period which convinced me of the necessity of a change in order to insure local efficiency of administration.

It is a big business, is the post-office business of the United States. It costs $306,000,000 a year. The heads of this big business have many problems coming before them for determination. They should come to them fresh and not be bothered with the selection of so many employees whom they have never seen. Give these men at the head a chance and you will see better methods devised, greater service rendered, and more economy in administration. Make the work a purely business one and you will please the people, besides saving them money, and you will save the time and energy of the President, the heads of the Post Office Department, the Senators, the Congressmen, and you will have a more uniform and better administration of the local post offices.

Woolen Mill Industry.

EXTENSION OF REMARKS

OF

HON. WILLIAM A. CULLOP,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 8, 1914,

On the bill (H. R. 17041) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. CULLOP. Mr. Speaker, in reply to the great howlers of calamity on the Republican side of the House it is only necessity to refute their daily clamors to publish the facts as they exist all over the country. I submit a few of these as they occur in the press in different localities. These completely answer their charges and absolutely refute them. We know these calamity howlers regret to hear these; they try to disparage them, and have the country believe conditions are deplorable, but in this they will fail. The people are aware of the true conditions and are satisfied with them, and this is what displeases this little coterie of would-be panic makers on the Republican side of this Chamber.

The calamity howlers are dying hard. Their disappointment is so intense that their agonizing groans are daily heard as the great wave of prosperity looms up before them, penetrating every field of our industrial system, and supporting the claims of the Democratic Party as it enacts Democratic policies into law and our financial and industrial institutions adjust themselves to the new conditions for the inauguration of the most marvelous era of prosperity ever known in the history of the Republic.

It seems no one is alarmed about conditions except the calamity howlers, who see rapidly vanishing all hopes of standpatism and Republican success.

The articles are as follows, and I commend their careful reading to our friends who are howling calamity daily on this floor:

[From the Louisville Times, June 5, 1914.]

THE SURPRISING FACT.

The following was first printed as an editorial in the American Wool and Cotton Reporter:

"A careful study of the woolen industry brings to light the fact that conditions are much better than some would have us believe. Conversations with several prominent factors confirms our previously expressed belief that the outlook is brighter than at any time in the recent past and that business is well past the low point, with indications that the improvement shown is to be permanent and of a steady growth. Duplicates are coming forward in fair volume, with the result that more than one mill has been forced to secure outside machinery in order to take care of business now in hand.

"Mills in this condition are very anxious to avoid betraying the fact, lest their competitors encroach on their preserves, and to this attitude may be attributed, to a considerable extent, the prevalence of the idea that the woolen business is abnormally depressed. Up to the present time there has been no indication on the part of the manufacturing clothier of any intention to divert his purchases from the regular channels of trade toward foreign fabrics, nor do we think there need be fear of such action in the future."

In short, the American manufacturer is discovering that the efficiency of which he boasted so loudly before the Underwood tariff bill was thought of, and of the existence of which he was beset by so many fears when that same bill was drafted and passed, exists after all. Under the Underwood tariff only a lack of efficiency can prevent the American manufacturer, with the added advantage of free raw material, from having the best of it in his home market in competition with the foreign manufacturer, who has to reckon with the handicaps of transportation charges and the cost of revenue duties.

Under all the circumstances, however, it is not so surprising that the discovery should have been so long in coming, but that it should have come so soon. It is not to be forgot that the American manufacturer has had the gospel that his only salvation lay in a prohibitive tariff preached to him for 50 years. He has had less than a twelvemonth of actual experience in which to convince himself that the truth is just the opposite.

[From the Portland Oregonian, March 28, 1914.]

WOOL SALES LARGE—ACTIVE MARKET FOR NEW CLIP IN WASHINGTON—KOSHLAND HEAVY BUYER—TRANSFERS TO DATE AMOUNT TO ABOUT 1,250,000 POUNDS—PRICES RANGE FROM 12 TO 18 CENTS—NO OREGON CONTRACTING.

The most active wool market in the Northwest is in Washington, particularly in the Yakima section, where growers have been selling freely during the past week. In eastern Oregon trading is at a standstill. Buyers are anxious to contract wool, but growers are firm and holding out. Shearing in the eastern counties will not begin before the middle of April, and it is not likely there will be much doing in the way of buying before that time.

Isidore Koshland, who has just returned to this city from Yakima, where he was a heavy buyer, said:

"The only shearing in the Northwest has been in the Yakima Valley. The wool is selling as fast as shorn, and buyers are even making contracts for wool on the sheep's back where the clip is known to be good. Sales have been made at North Yakima, Kiona, Toppenish, Kennewick, Prosser, Mabton, Sunnyside, and other points.

"Altogether about 1,250,000 pounds of Washington wools have been sold to date. The prices, which ranged from 12 to 18 cents, were about the same as last year, in some instances a little more and in others a little less. The growers are well satisfied with the prices they received. The clip is by far the best for several years in point of quality, condition, and length of staple.

"There has also been some shearing along the Columbia River, but on the S. P. & S. shearing will not be general until the middle of April. One of the largest deals in Washington wool was the sale of the Hartley clip of about 125,000 pounds at Kahlotus."

Mr. Koshland, who is going back to Washington in a few days to make further purchases, has secured the following clips:

	Pounds.
H. Stanley Coffin, Kennewick	6,000
S. O. Stewart, Kiona	2,500
George Prior & Son, Kiona	9,000
George Chambers, Kiona	2,500
Hubbard & Co., Kiona	2,500
Ellis Regan, Kiona	2,500
P. Ager, Kiona	8,000
R. Rennie, Kiona	3,500
Kays Bros., Mabton	2,500
Kersey, Mabton	2,500
Coleman, Mabton	2,500
Yakima Sheep Co., Prosser	10,000
U. F. Dightman, Monte	10,000
Olney Bros., Wapato	10,000
J. Prohl, Toppenish	4,000
McGee & McGuffy, Toppenish	4,000
H. L. Jensen, Toppenish	3,500
Toppenish Live Stock Co., Toppenish	3,500
T. H. Smith, North Yakima	2,500
Mrs. Besse, North Yakima	4,500
P. Yakabe, North Yakima	3,500
Coffin Bros., North Yakima	1,500
W. M. Wilson, North Yakima	3,500
E. Butler, Sunnyside	6,000
P. Oliver, Sunnyside	2,500
Anderson & Rothrock, Sunnyside	5,000
Mercer & Roberts, Prosser	2,500

WOOL HIGHER THAN FOR MANY YEARS—IN SOME INSTANCES PRICES HAVE NOT BEEN EXCEEDED SINCE 1897.

The high prices being paid by wool contractors in parts of the West are said to be the top level since 1897, on the average. Appreciation of this may be had, according to a mail report from Boston yesterday, when it is considered that former prices were under a duty of 11 cents

per pound on foreign wool. Without this protection, growers are said recently to have secured the highest prices for 17 years. In fact, the case is cited of a clip being sold this year at 17 cents upon which an offer of 14½ cents was withdrawn in 1913 at shearing time. Other bids of that year for this clip were around 12¼ cents, and it ultimately was consigned to the market for selling by a dealer. An eastern wool writer says: "All this brings us back to the fact that nothing but continued firmness abroad can justify the situation. Dealers will not be able to turn over these later-bought wools except by advancing prices even beyond the recent local increases, which would bring them up against a snag in the event of any weakening in foreign wools. As it is, manufacturers are in danger of foreign competition, and must practice economy in some direction, so they will naturally hang back as far as possible from paying more for their raw material."

WOOL PRICES ARE HIGH—FIGURES EQUALED ONLY TWICE BEFORE IN 25 YEARS—TOTAL OF 500,000 POUNDS OF UMATILLA COUNTY'S CLIPS CHANGES HANDS—EVERY CLIP OFFERED IS SOLD.

PENDLETON, OREG., *May 21.*

Only twice before in 25 years has Umatilla County wool sold for prices equal to those secured by Pilot Rock growers at the public sale held in that place to-day.

This was the first public sealed-bid sale held in Oregon this year. More than 500,000 pounds changed hands. Every clip offered was sold.

The prices received ranged as much as 5½ cents in advance of the prices paid for the same clips last year.

An unusual feature of the sale was the fact that the "fine wool" clip of the J. E. Smith Co. topped the market at 19⅝ cents. As a rule the "coarse" wool brings the higher price.

The following is the list of the growers, with the amounts sold and prices received:

Cunningham Co., 110,000 pounds, at 18 cents; Pat Doherty, 40,000 pounds (coarse), at 19 cents; Pat Doherty, 10,000 pounds (fine), at 17⅝; S. G. Jones, 18,000 pounds, at 16¾; A. P. Warner, 9,000 pounds, at 17½; C. W. Matthews, 15,000 pounds, at 18½; Rugg Bros., 9,000 pounds, at 19½; K. G. Warner, 60,000 pounds, at 18⅝; A. A. Cole, 49,000 pounds, at 18⅞; Andy Rust, 28,000 pounds, at 18½; Morgan Edwards, 12,000 pounds, at 18; Joe Pedro, 40,000 pounds, at 18½; Charles Johnson, 36,000 pounds, at 18½; J. E. Smith Co., 65,000 pounds, at 19⅝ (this is 5½ cents higher than the price bid for this clip last year).

The Cunningham clip, the largest sold, brought 4 cents more than last year.

IMPOVERISHING THE SHEEPMEN.

At the Pilot Rock wool sale yesterday the J. E. Smith Live Stock Co. sold their fine wool at 19⅝ cents per pound. The price was 5½ cents more than the price offered for the same wool a year ago, when the high tariff law was still in effect. The price was 2½ cents higher than the price paid for the same wool in May, 1912, before the presidential election had occurred and before anyone knew the tariff would be revised.

The Cunningham Sheep & Land Co., of which company Senator J. N. Burgess is manager, sold its fine wool yesterday at 18 cents per pound. That price was 4 cents more than the price paid for the same wool a year ago and 1½ cents more than the price paid in May, 1912.

There could not be a more striking refutation of the old campaign chestnut that to remove the tariff on wool would bring ruin and poverty upon the sheepmen. Last September the tariff was absolutely removed, and the country now has free trade in wool. Yet, instead of ruin, our sheepmen get the highest prices they have had in years. The Smith Co. gets 5½ cents more for wool than a year ago, when the tariff was in force, and the Cunningham Co. sold its fine wool at 4 cents more than the 1913 price. The wool buyers have been more feverish to get wool this spring than for many seasons past. The sheep market is likewise stronger than in several years. In other words, the sheepmen of eastern Oregon are actually in clover, when they were led to believe they would be facing the poorhouse.

Where now are the calamity howlers? Where are the newspapers that prophesied ruin and bankruptcy for the sheepmen when Schedule K was amputated? Now is the time for them to come to the front and explain wherein our sheepmen are being impoverished by being paid 4 and 5 cents a pound more for their wool than they received when the high tariff was in force.

What has become of the earthquake?

Panama Canal Tolls.

SPEECH

OF

HON. CLAUDE WEAVER,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 31, 1914.

The House had under consideration the bill (H. R. 14385) to amend section 5 of an act to provide for the opening, maintenance, protection, and operation of the Panama Canal and the sanitation of the Canal Zone, approved August 24, 1912.

Mr. WEAVER. Mr. Speaker, the thousands of American citizens who hear my voice on this ever-memorable day, the thousands who crowd the galleries of this great historic Hall of the House of Representatives, the thousands who fill the doorways and throng outside, denied admittance, are but animated by the same heart-burning emotions, the same deep anxiety felt by the millions of their fellow countrymen throughout this land and to its farthest borders. Wherever the sun lights the surface of this revolving planet, wherever in his course his rays fall on the faces of civilized men, there, with intense interest, our verdict is awaited, because to-day the honor of our Nation is on trial, and this Capitol is the cynosure of the eyes of the civilized world.

I shall vote for this bill, Mr. Speaker, because it is a bill to repeal a subsidy to the coastwise shipping trust monopoly. Subsidies I hate, and monopolies are indefensible and intolerable. I shall vote for this bill because I believe that treaties ought to be kept, not repudiated, and that agreements among nations ought to be just as binding, just as sacredly observed, as agreements between individuals. I shall vote for this bill because I have a faith unfaltering in the foreign policy, the world-peace policy of the President of the United States. I know what that policy is, and by my vote I will help to maintain it.

THE QUESTION BEFORE THE HOUSE STATED.

Let me state clearly the question before the House. On August 24, 1912, the Sixty-second Congress passed a bill that in due time received the signature of President Taft and became a law—a bill to provide for the opening, maintenance, protection, and operation of the Panama Canal and for the sanitation and government of the Panama Canal Zone. It is now proposed by the bill before the House to repeal a part of the fifth section of that act, namely, these words:

Provided, That no tolls shall be levied upon the vessels engaged in the coastwise trade of the United States.

Under the law as it now stands all American ships and all foreign ships engaged in foreign trade are required to pay $1.20 per vessel ton through the canal. The ships engaged in the coastwise trade go through the canal for nothing. The bill before us proposes to repeal the exemption from tolls of the coastwise ships.

THE PRESIDENT'S MESSAGE.

In the exercise of the duty and the prerogative imposed by the Constitution upon the President to recommend to Congress such measures as he shall judge necessary and expedient President Wilson on the 5th day of March, 1914, read to both Houses in joint session assembled a message so brief, direct, significant, and clear that it is well worth hearing again. He said:

Gentlemen of the Congress, I have come to you upon an errand which can be very briefly performed, but I beg that you will not measure its importance by the number of sentences in which I state it. No communication I have addressed to the Congress carried with it graver or more far-reaching implications as to the interest of the country, and I come now to speak upon a matter with regard to which I am charged in a peculiar degree by the Constitution itself with personal responsibility.

I have come to ask you for the repeal of that provision of the Panama Canal act of August 24, 1912, which exempts vessels engaged in the coastwise trade of the United States from payment of tolls and to urge upon you the justice, the wisdom, and the large policy of such a repeal with the utmost earnestness of which I am capable.

In my own judgment, very fully considered and maturely formed, that exemption constitutes a mistaken economic policy from every point of view, and is, moreover, in plain contravention of the treaty with Great Britain concerning the canal concluded on November 18, 1901. But I have not come to urge upon you my personal views. I have come to state to you a fact and a situation. Whatever may be our own differences of opinion concerning this much-debated measure, its meaning is not debated outside the United States. Everywhere else the language of the treaty is given but one interpretation, and that interpretation precludes the exemption I am asking you to repeal. We consented to the treaty; its language we accepted, if we did not originate it; and we are too big, too powerful, too self-respecting a Nation to interpret with a too strained or refined reading the words of our own promises just because we have power enough to give us leave to read them as we please. The large thing to do is the only thing we can afford to do—a voluntary withdrawal from a position everywhere questioned and misunderstood. We ought to reverse our action without raising the question whether we were right or wrong, and so once more deserve our reputation for generosity and for the redemption of every obligation without quibble or hesitation.

I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure.

In this message the Executive urges upon the Congress immediate and unconditional repeal of that provision of the Panama Canal act which exempts vessels engaged in the coastwise trade of the United States from the payment of tolls upon the grounds of the justice, the wisdom, and the large policy of such a repeal and because said exemption is in plain contravention of the treaty with Great Britain of date November 18, 1901, known as the Hay-Pauncefote treaty. The President courageously, without hesitation or reservation, recommends to the Congress legislation that he deems to be for the honor of our country and for the well-being of our people. The responsibility has passed from the President to the Congress, and I am glad to find myself on this great issue, as I have on many—on nearly all—of the great issues of the time, in harmony with the views of the President of the United States.

There are three propositions quite clear to my mind.

First proposition: The exemption from tolls of vessels engaged in the coastwise trade of the United States is an indirect ship subsidy, unjust to the American taxpayers and opposed to the sound rational and national historic policy of the Democratic Party.

Second proposition: The exemption of the coastwise ships from the payment of tolls is a violation of our treaty with England, a treaty existing and unrepealed.

Third proposition: The foreign policy of the President of the United States, which I help to maintain when I vote for this bill—the world-peace policy—is a policy helpful to good government and to the well-being of our own Nation and the peoples of the world.

FREE TOLLS A SUBSIDY.

Now, gentlemen, I claim, in the first place, that to let these coastwise ships go through our canal—the Panama Canal—without paying tolls is a subsidy; that it is a special bounty or benefit to the few at the cost of the many; that it is a special privilege to the corporations that own the coastwise ships, and that the burden is borne by the hewers of wood and drawers of water, the great masses of the American people who get no benefits whatever in return.

The Panama Canal will have cost our Nation when completed, in round numbers, $400,000,000. We borrowed the money to build it. We issued interest-bearing bonds and sold them. At 3 per cent interest we pay $12,000,000 a year on borrowed capital for this investment. It has been estimated by Government experts that when the canal is completed it will cost $4,000,000 annually to operate and maintain the canal. What might be called wear and tear, the gradual destruction wrought by time, would probably be $4,000,000 more. We pay $250,000 a year ground rent for the Canal Zone to the Republic of Panama, from which sovereignty we obtained such title as we have. So that, besides the original $400,000,000, more than $20,000,000 a year is the cost of ownership of this magnificent world waterway—the greatest engineering accomplishment of the brain and the hand of man. To compensate the Government of the United States for this vast, this tremendous expenditure the Panama Canal act provides for the payment of tolls on vessels going through the canal. President Taft fixed the charges at $1.20 a vessel ton. The special commissioner on Panama traffic and tolls whom Taft appointed, Prof. Emory R. Johnson, of the University of Pennsylvania, has estimated that during the year 1915 vessels engaged in the foreign trade will carry 9,500,000 net tons, producing a gross revenue of $11,400,000, only a little more than half the revenue needed to pay the Government the annual cost of maintenance. Prof. Johnson estimated that for the year 1915 the coastwise vessels will carry through the canal 1,000,000 tons. Other eminent authorities make a much higher estimate. Let us say 1,000,000 tons. If these ships paid tolls, they would pay into the Treasury of the United States $1,200,000 every year. They are exempted from tolls; that is, they are exempted from the payment of $1,200,000 a year that they ought to pay. That is a subsidy. You may call it indirect, but it is a subsidy and nothing else. If it were proposed to take $1,200,000 in gold coin every year out of the Treasury and give it to these shipowners for nothing, how many on this side of the House with a record of Democratic battles against ship subsidies till now unbroken—how many on this side of the House would vote for it? Where, then, would be the gentleman from Alabama, of whose leadership all Democrats are proud, who made the tariff pledges of the Democratic Party become the tariff laws of the Nation—what would be the vote of OSCAR UNDERWOOD on that question? Where, then, would be the Speaker of this House, whose intellectual integrity we all delight to honor, who so much reminds us of the days when there were giants on the earth—what would be the vote of CHAMP CLARK if it were proposed to take this money, $1,200,000 every year, direct out of the Federal Treasury and give it to the shipowners? Neither of them would vote the direct subsidy, and yet I challenge either of the two matchless leaders of our party, either or both, to explain to this House the difference. There is no difference. I have always been opposed to subsidies in any form, whether by tariff discrimination or by free tolls; but if I favored subsidies at all I would vote for subsidies direct out of the Treasury, in the daylight, in the open, in the sunshine, without evasion, deceit, or subterfuge.

COASTWISE SHIPS A TRUST AND MONOPOLY.

Moreover, the coastwise shipping interests of the United States constitute a trust and by law are given an unjust trade monopoly. The ships of no foreign nation are allowed to engage in this trade. Our own American ships engaged in the foreign trade are denied the privilege and the profits of the coastwise trade. But whoever knew the beneficiaries of special privilege to be satisfied? Like the daughters of the horse leech their cry is always: More, more, more. Not satisfied with a monopoly of the trade the owners of the coastwise ships demand a monopoly of the subsidy also.

On the Pacific coast 8 steamship lines are engaged in the coastwise trade, and on the Atlantic coast 28 steamship lines are engaged in the coastwise trade. They do not compete in freight rates with the railroads for the reason that the owners of the ships have a large financial interest; that is, they are heavy stockholders in and part owners of the railroads. These steamship lines do not compete with each other for the reason that they are a trust. It follows, then, that this $1,200,000 which, under the present law, will be be poured in an annual golden stream into the coffers of this monopoly will stay there. The American people will make a gift of this sum to the few, the highly favored, but freight rates will not be reduced a dollar. Now, if there were real competition between the railroads and the coastwise ships these ships could carry the freight from ocean to ocean through the canal and pay the tolls at a less charge than the transcontinental railroads can carry the freight. Already the railroads are burdened to their capacity with more business than their facilities are adequate to care for. It is confidently believed that the transcontinental freight problem will be solved in a way fair to the railroads and fair to the shippers when the Democratic program of trust legislation shall be enacted into law and the Interstate Commerce Commission shall make effective the fundamental principle that the railroads are entitled to freight charges that will net them a fair return upon actual capital and actual value of the investment, that much and no more. Whenever in the past the transcontinental railroads have been compelled to reduce the long-haul rate the short-haul charges have been increased and the burden shifted to the local shipper. The railroads will charge the highest rate the traffic will bear. The coastwise ships will charge all they can get. The remedy from their extortion is effective regulation and control by the United States Government under the interstate commerce clause of the Constitution.

From the point of view of our domestic and economic policy to my mind it is plain that this free-toll subsidy to the coastwise ships is unwise, unsound, unjust, and I invite your attention to the words spoken in the Senate a few days ago by the great Senator from my State, ROBERT L. OWEN:

> Ninety millions of Americans have been exceedingly patriotic in building this canal needed by the Nation, and now less than 9,000 shipowners on the Atlantic and Pacific coast lines are demanding as a right the use of this canal without paying for the cost of keeping it in order or interest on the prime cost. It is true these shipowners speak of their boats as "American boats," as if they were owned by 90,000,000 Americans instead of being owned by one ten-thousandth part of 90,000,000 Americans. One ten-thousandth part of the people—an insignificant fraction—rise up and say, "Our American boats must have free passage; our American rights are invaded. Senators and Congressmen and the President of the United States who oppose us are un-American, pro-British, and are traitors to the 'American people.'" Yes: there is a conflict from an economic standpoint between the pocketbook of 1 American and the pocketbooks of 10,000 other Americans, who furnished the money to build the canal. The 1 American, with the coastwise-trade monopoly granted by law, giving him the exclusive right of controlling the coastwise ships, forbidding foreign ships to take any part in the coastwise traffic, has by law a monopoly, is not content with this great advantage—an advantage which I believe is used to his profit and to the injury of all those who pay the freight, which means everybody in the United States. Having a monopoly, he insists upon using the money, sacrifice, and labor of 10,000 other Americans without charge, and denounces the President, who seeks economic justice for the 10,000 whose pockets are to be picked by law, when he asks that the unwise, unjust law be repealed.

THE BALTIMORE PLATFORM DECLARATION FOR FREE TOLLS.

The Democrats of this House who vote against this proposed repeal justify themselves by saying that they are bound by the latest declaration of the Democratic Party in national convention assembled. They say they are bound by the Baltimore platform. That a Democrat ought to follow the well-considered declaration of his party upon a great issue is undeniable, and I admit that if he violates such a declaration he is guilty of party treason and ought to be lashed from the party councils with whips of scorpions. I admit that the Baltimore platform, without ambiguity, declares in favor of the exemption from tolls of American ships engaged in coastwise trade passing through the canal, but I deny that this declaration was either well considered or upon a great issue before the people. The question had received no discussion in the mass meetings, primaries, county conventions, or State conventions that elected the delegates. Upon this subject not a single delegate had instructions from the sovereign Democrats who made him their representative to speak for them at the convention. The delegates themselves, broadly speaking, were without information upon which to base an opinion. They had given to the subject neither thought nor study. The enemies of good government work while the friends of good government sleep, and that is the cause of so much bad government. There is not always a dragon watch with unenchanted eye to guard the golden treasury of Democratic principles, like the fabled sentinel of the Hesperian gardens. I fear that some insidious secret agent of the shipping trust—of the coastwise ship monopoly—was not far away when that paragraph of the platform was written, for certain it is that in the Baltimore convention, when the free-tolls plank was

written, the vulture of monopoly had perched in the nest of the eagle.

This isolated declaration of the Baltimore platform is directly contradicted by other declarations of the same platform. I read in that platform that a private monopoly is indefensible and intolerable and that the Democratic Party demands the enactment of such additional legislation as may be necessary to make it impossible for a private monopoly to exist in the United States. The Baltimore platform contains the following plank on merchant marine:

We believe in fostering, by constitutional regulation of commerce, the growth of a merchant marine, which shall develop and strengthen the commercial ties which bind us to our sister Republics of the South, but without imposing additional burdens upon the people and without bounties or subsidies from the Public Treasury.

This exemption from tolls for the benefit of the merchant marine imposes additional burdens upon the people and takes a bounty, a subsidy, from the Public Treasury. Again and again the platforms of our party, State and National, have declared against subsidies to ships. The living, the immortal principle of the Democratic Party is the sublime maxim of its illustrious founder, who declared for "equal and exact justice to all men of whatever state or persuasion, religious or political."

True it is that the letter of the Baltimore platform declares for free tolls; but the spirit of the platform, with a clear high note, declares against free tolls. The letter killeth, but the spirit giveth life. Whenever there comes a conflict between a declaration of my party and the true interests of the American people, as a Representative in this Congress of the American people I shall decide the conflict in favor of the true interests of my people. I will not vote to leave upon the statute books a law that takes $1,200,000 a year out of the Federal Treasury, money belonging to all the people, to give it to a few shipowners for nothing.

THE HOBGOBLIN OF CONSISTENCY.

There are Democrats here to-day in this House who as Members of the Sixty-second Congress voted for this toll exemption who will now vote to repeal that exemption. After fresh investigations and studies of the subject, upon maturer thought, they have changed their minds and they have the courage to vote their changed convictions.

All honor to such men! They bring the past for judgment into the thousand-eyed present and live ever in a new day. That was the exalted ideal of Abraham Lincoln, who said:

I am not bound to win, but I am bound to be true. I am not bound to succeed, but I am bound to live up to what light I have. I must stand with anybody that stands right—stand with him while he is right and part with him when he is wrong.

I will answer the sneers of those who taunt these Members with their inconsistency by reminding them of what the greatest of American thinkers wrote:

A foolish consistency is the hobgoblin of little minds, adored by little statesmen and philosophers and divines. With consistency a great soul has simply nothing to do. He may as well concern himself with his shadow on the wall. Speak what you think now in hard words, and to-morrow speak what to-morrow thinks in hard words again, though it contradict everything you said to-day. "Ah, so you shall be sure to be misunderstood." Is it so bad, then, to be misunderstood? Pythagoras was misunderstood, and Socrates and Jesus and Luther and Copernicus and Galileo and Newton and every pure and wise spirit that ever took flesh. To be great is to be misunderstood.

EXEMPTION OF THE COASTWISE SHIPS IS A VIOLATION OF THE HAY-PAUNCEFOTE TREATY.

My second proposition is that the exemption of the coastwise ships from the payment of tolls is a violation of our treaty with England, a treaty existing and unrepealed. Far be it from me to question the motives of the Members of this House who oppose this bill. Not for a moment do I doubt the sincerity of their appeals to patriotism when they talk of the surrender of American sovereignty over the Panama Canal Zone, but such appeals to patriotism are often resorted to by men with a bad cause who can not answer arguments. And as for those editorials, appearing in the metropolitan press, inspired and paid for by the coastwise shipping interests to poison the public mind, I will say that the holy horror they express, the frenzied fear they manifest over our "cowardly truckling to England and base surrender of sovereignty" remind me of the observation of old Dr. Samuel Johnson that "patriotism is the last refuge of a scoundrel."

THE TITLE OF THE UNITED STATES TO THE PANAMA CANAL ZONE.

Now, in the consideration of this proposition so much debated—the proposition that the proposed repeal is a surrender of the sovereignty of the United States in and to the Panama Canal Zone—it is well, I think, for us to ascertain just what sovereignty we have.

I have had experience as a practicing lawyer in the trial of cases involving the title to land. Title is the means whereby an estate in land is held. The chain of title begins with the ownership of the sovereign State and goes down by conveyances of all sorts, often through many possessors and claimants, for generations. Each successive grantee takes the land—eliminating the doctrine of innocent purchaser and the statute of limitations—subject to incumbrances, restrictions, prescriptions, easements, warranties, covenants of former ow- -rs dead and gone.

Precisely so the United States holds title to the Panama Canal Zone. This 10-mile-wide tract of land on which we have dug this great canal lies far beyond the borders of our country, in a foreign soil, under tropic skies, where the people have an alien speech. The Panama Canal Zone is no part of the Territorial United States. We did not acquire sovereignty there, as we did in Alaska, by purchase; as we did in the Hawaiian Islands, by acquisition and assimilation; as we did in Porto Rico and the Philippine Islands, by the sword.

What rights have we got there? It is not difficult to find out, for our rights, whatever they be, are measured by words of covenant and grant in treaties with other nations.

HISTORY OF THE ACQUISITION OF THE PANAMA CANAL ZONE.

Before we analyze these treaties it will perhaps be instructive to give some account of the events connected with their negotiation as well as the story of our acquisition of the Canal Zone from Panama.

The great world powers almost from the time of the discovery of America have contemplated the building of a canal across the narrow isthmus of Central America that divides the waters of the Pacific Ocean from the Caribbean Sea. In 1550 the Portuguese navigator, Antonio Galvao, published a book to demonstrate that a canal could be cut at Tehuantepec, Nicaragua, Panama, or Darien, and in 1551 the Spanish historian, Gomara, submitted a memorial to Phillip II urging that the work be undertaken without delay.

In 1771 the Spanish Government caused surveys for the canal to be made at Tehuantepec and in 1779 at Nicaragua. The great Humboldt in 1808 explored the Isthmus and pointed out the lines which he considered worthy of study.

In 1823 the Republics of Central America threw off the yoke of the despotism of Spain and achieved their independence, and from this time on the European powers, as well as the United States, gave consideration to the project of the isthmian canal.

In 1845 the Republic of Texas became part of the United States. In 1848 gold was discovered in California, and the hardy argonauts, the Forty-niners, crossed the great plains by the thousands to settle on the golden coast. Much of the travel from San Francisco to the Atlantic coast was ocean travel by way of the Isthmus. The war with Mexico resulted in the acquisition by the United States of the great southwestern territories, making this country a continent-wide Republic. In 1846 the United States had entered into a canal treaty with New Granada, and in 1850 we entered into the treaty with Great Britain known as the Clayton-Bulwer treaty. At the date of that treaty the United States and Great Britain were the two world powers having the chief interest in the canal project. Great Britain, besides its vast possession stretching from our northern boundary to the Arctic, was the controlling power in the Caribbean Sea. And so these two great nations entered into the Clayton-Bulwer convention, the purpose of which was to build a canal across the Central American isthmus for the use of all mankind on just and equal terms, no special advantage being suggested by that treaty to either of the high contracting powers.

The Clayton-Bulwer treaty on November 18, 1901, was superseded by the present Hay-Pauncefote treaty with Great Britain, by the terms of which it became possible for the United States alone to build and control an interoceanic canal. The Hay-Herran treaty between the United States of America and the United States of Colombia, in January, 1903, was drawn for the purpose of giving the United States the right of way or title to the Panama Canal Zone. But the Colombian Congress rejected the treaty. The Colombian Congress adjourned on October 21, 1903, and on the 3d day of November, 1903, the newborn Republic of Panama emerged from its shell, incubated in the White House.

The secession of Panama from Colombia in November, 1903, was successfully carried out by a wretchedly small number of adventurers and conspirators, professional revolutionists, of the Panama State of Colombia, aided by Theodore Roosevelt, at that time President of the United States of America and Commander of its Army and Navy. By a singular coincidence Commander John S. Hubbard, with his ship, the U. S. gunboat *Nashville*, was in the harbor of Colon at the time of the secession. He forbade the transportation of Colombian troops across the Isthmus and landed the marines to prevent the occupation of Colon by the Colombian forces. The American flag

that floated from the masthead of that ship of the United States in the harbor of Colon ought to have been torn down and in its place floated to the winds the black flag of the pirate. Panama was as much a part of Colombia as my State, Oklahoma, is a part of this Union. The secession of Panama, accomplished by the armed forces of the United States, was an act of national injustice, violence, pillage, and plunder, inspired by the motto of Rob Roy McGregor:

> The good old rule, the simple plan,
> That they may take who have the power,
> And they may keep who can.

On the 7th of November Panama was recognized by the United States in effect by receiving her diplomatic representative, and on the 18th day of November the treaty was signed between the United States and Panama, by the terms of which the United States promised to pay $10,000,000 immediately and $250,000 annually as rental, the first payment to be made nine years after the ratification of the treaty. The bogus Panama Republic was fathered, nurtured, sent on its way rejoicing, for the sole purpose of conferring title to the Panama Canal Zone on the United States, because Colombia, the owner, refused to give to the United States the Panama Canal concession.

THE THREE PANAMA CANAL TREATIES.

Now, the title that the United States has to the Panama Canal Zone depends upon the interpretation and construction of the three treaties:

First. The convention between the United States and the Republic of Panama for the construction of a ship canal to connect the waters of the Atlantic and Pacific Oceans, which convention was signed at Washington November 18, 1903, and proclaimed by the President of the United States February 26, 1904.

Second. The treaty between the United States and Great Britain, signed at Washington November 18, 1901, and proclaimed by the President of the United States February 22, 1902, known as the Hay-Pauncefote treaty.

Third. The convention as to a ship canal connecting the Atlantic and the Pacific Oceans, concluded April 19, 1850, proclaimed by the President of the United States July 5, 1850, known as the Clayton-Bulwer treaty.

Article 18 of the treaty with the Republic of Panama reads:

> The canal, when constructed, and the entrances thereto shall be neutral in perpetuity, and shall be opened upon the terms provided by section 1 of article 3 of and in conformity with all the stipulations of the treaty entered into by the Governments of the United States and Great Britain on November 18, 1901.

The treaty with Panama, then, provides that the canal when constructed shall be opened in conformity with all the stipulations of the Hay-Pauncefote treaty and shall be neutral in perpetuity.

The third article of the Hay-Pauncefote treaty, embodying the substance of that convention, reads:

> The United States adopts, as the basis of the neutralization of such ship canal, the following rules, substantially as embodied in the convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal, that is to say:
>
> 1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there will be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.
>
> 2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.
>
> 3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service.
>
> Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.
>
> 4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.
>
> 5. The provisions of this article shall apply to waters adjacent to the canal within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.
>
> 6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal, shall be deemed to be part thereof for the purposes of this treaty, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents and from acts calculated to impair their usefulness as part of the canal.

The Hay-Pauncefote treaty, in specific terms, adopts the general principle of neutrality of the Clayton-Bulwer treaty expressed in the eighth article of that treaty, which is as follows:

> The Governments of the United States and Great Britain having not only desired in entering into this convention to accomplish a particular object, but also to establish a general principle, they hereby agree to extend their protection, by treaty stipulations, to any other practicable communications whether by canal or railway across the isthmus which connects North and South America, and especially to the interoceanic communications—should the same prove to be practicable, whether by canal or railway—which are now proposed to be established by the way of Tehuantepec or Panama. In granting, however, their joint protection to any such canals or railways as are by this article specified it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable; and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

I come now to the identical paragraph of the Hay-Pauncefote treaty that the exemption of the coastwise ships from the payment of tolls violates. Let the treaty speak for itself, for the language is so clear, the meaning so plain, that the wayfaring man, though a fool, need not err therein. Paragraph 1 of article 3 of the Hay-Pauncefote treaty reads as follows:

> The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

If the phrase "all nations observing these rules" includes the United States, then the tolls exemption violates the Hay-Pauncefote treaty. The rules referred to, set forth in full in said article 3, are the rules agreed on by the great European powers for the use of the Suez Canal. The United States intended to be bound by these rules. Is the United States a nation? If it is a nation, the term "all nations" includes the United States, for the word "all" includes each and every individual unit comprising the whole.

If it had been intended to exclude the United States or its coastwise shipping from the operation of the treaty, why not say so in plain language? The United States wrote the treaty. The newborn Republic of Panama, in swaddling clothes, had no more voice in drafting the Panama treaty than a cattle shipper in Oklahoma has in making a shipping contract with a railroad when he delivers his cattle for shipment. He is compelled to sign the contract that the railroad company offers him or not ship the cattle at all. Why was it, then, that when the United States Government wrote the treaty it did not contain this exemption and exception for the coastwise shipping? It was because the United States Government knew what its treaty obligations with England were from the days of the Clayton-Bulwer treaty on down to the Hay-Pauncefote treaty, which in express terms ratified the general principles of neutralization and of equality contained in the Clayton-Bulwer treaty. All the great powers of the world understood that the canal was to be free and open on terms of entire equality to all nations of the world, their citizens and subjects, in respect of the conditions or charges of traffic.

CHARACTER OF AMERICAN OWNERSHIP OF THE CANAL ZONE.

What, then, is the character of the ownership by which the United States holds the Panama Canal Zone? Is it a fee simple title, such as a farmer in my State, Oklahoma, who homesteaded on the public land, holds to his 160 acres—an ownership unrestricted of the whole land, with all its incidents, from the center of the earth to the peaks of the morning? Who ever heard of the owner paying rent on his own land? Yet the United States pays an annual rental of $250,000 to the Republic of Panama.

The United States built the canal with its own money on a tract of land 10 miles wide, where it holds a perpetual lease for the specific purposes set forth in the treaty. We have the possession and control of the zone for all time. We have the right to occupy it, to send our soldiers there, to fortify the Canal Zone and to defend it. That right is admitted by England, stipulated for in the Panama treaty, denied by nobody. The contention that the United States, if we repeal the tolls exemption, will have to pay tolls for its warships is idiotic, because all tolls go into the United States Treasury, and such a proposition would involve the senseless thing of taking the tolls money out of the Treasury and putting it right back again. The right to pass our Government ships through the canal is the incident of our possession and ownership. We have the right to demand and to receive just and equitable charges of traffic through the canal from the ships of all nations of the world. This bill does not contemplate the surrender of our rights, nor of our sovereignty so far as we have sovereignty. No American contemplates for a single moment the surrender of American rights, and all the powers of the world combined are not strong enough to take such rights from us.

We are the trustees of the canal for the benefit of all mankind, just as the great world powers of Europe by the conven-

tion of Constantinople became the trustees of the Suez Canal for the benefit of all mankind.

And what will be the benefits of building the canal? The production of wealth in our country from mines, manufactures, agriculture, will be multiplied a thousandfold. The waters of the two great oceans will flow together, saving 8,000 miles of travel around Cape Horn, and American ships will have many thousand of miles advantage in distance in their competition with Old World commerce. Our commerce with all the nations of the world will thereby be given marvelous impetus, and the forces of steam and electricity will unite with the energy, the toil, the genius of our people as never before. And infinitely higher than these material advantages will be the influence of American thought, American ideals, American institutions, Christian civilization spread wide and far as the ashes of Wycliffe over continents beyond the seas.

THE PRESIDENT'S FOREIGN POLICY.

Now, Mr. Speaker, in conclusion, let me say that I have unfaltering faith—yea, an abiding moral conviction—that the foreign policy of the President of the United States is wise and patriotic, and I rejoice that my vote for this bill will help to maintain that foreign policy. The foreign policy of this country is given largely to the hands of the Executive by the Constitution. The President appoints the great Cabinet officers who sit with him in counsel; he appoints ambassadors, other public ministers, and consuls to foreign lands; and, by and with the consent of the Senate, two-thirds of the Senators present concurring, the treaty-making power for weal or woe is in the President's hands. He has a knowledge of our foreign relations which no other public official can have, and I am willing to trust him.

I know what the President's foreign policy is, and I believe in that policy. In his speech before the Southern Congress, at Mobile, he set the Monroe doctrine upon the high plane of unselfish devotion to the moral and material welfare of the Latin-American Republics by adding to the Monroe doctrine the declaration that "never hereafter will the United States acquire one foot of additional soil upon the American continent."

In his message to Congress in December, 1913, the President said:

> There is only one possible standard by which to determine controversies between the United States and other nations, and that is compounded of these two elements—our own honor and our obligations to the peace of the world. A test so compounded ought easily to be made to govern both the establishment of new treaty obligations and the interpretation of those already assumed.

In his message asking the Congress to grant in ungrudging measure the repeal of the tolls exemption, the President said:

> But I have not come to urge upon you my personal views. I have come to state to you a fact and a situation. Whatever may be our own differences of opinion concerning this much-debated measure, its meaning is not debated outside the United States. Everywhere else the language of the treaty is given but one interpretation, and that interpretation precludes the exemption I am asking you to repeal. We consented to the treaty; its language we accepted, if we did not originate it; and we are too big, too powerful, too self-respecting a nation to interpret with a too strained or refined reading the words of our own promises just because we have power enough to give us leave to read them as we please.

Let us stand by the President on this proposition. Let us say to all the world that the word of the United States of America is as good as gold. I have always maintained that a state ought to be bound by the same moral principles, by the same vital forces of Christian civilization that bind the conscience of the individual. I have read somewhere in the writings of Horace Mann—I think in one of his speeches on education—where he describes the influence and the moral duty of the individual. He says:

> Look at him not as a being coming we know not whence, alighting for a brief residence upon this earth, and then making his exit through the door of the tomb, to be seen and heard of no more and leaving no more impression upon society of his ways or works than the sea bird leaves upon the surface of the deep when she stoops from the upper air, dips her breast for a moment in the wave, and then rises again to a viewless height; but look at him in his relations to posterity, as the father of a family, as a member of a generation which sows those seeds of virtue or vice, that centuries hence shall bear fruit or poison; look at him as a citizen in a free government, throwing his influence and his vote into one or the other of the scales where peace and war, glory and infamy, are weighed.

What is the state except a collection of many individuals, where each puts his person and all his powers under the supreme direction of the general will to become an indivisible part of the whole? That collection of individuals constitutes the state, having a common identity, a public will, capable and free to do right or to do wrong. The state, in a sense, is possessed of immortality, because it lives for generation after generation, while the individual members perish from the world.

To violate a solemn compact with another nation, whether that nation be the weakest or the strongest, will shock the moral sense of the American people. It is true that there is no power to compel a nation to preserve its treaty pact inviolate except the power of the sword; but the American people stand ready to conform to that international, that world-wide, public opinion which is the mind, the heart, and the conscience of the Christian civilization of the twentieth century:

> Even so doth God protect us if we be
> Virtuous and wise. Winds blow and waters roll
> Strength to the brave, and power and deity,
> Yet in themselves are nothing. One decree
> Spake laws to them, and said that by the soul
> Only the nations shall be great and free.

EXHIBIT A.

[Copy of convention between the United States and the Republic of Panama for the construction of a ship canal to connect the waters of the Atlantic and Pacific Oceans.]

PANAMA—SHIP CANAL.

CONVENTION BETWEEN THE UNITED STATES AND THE REPUBLIC OF PANAMA FOR THE CONSTRUCTION OF A SHIP CANAL TO CONNECT THE WATERS OF THE ATLANTIC AND PACIFIC OCEANS.

Signed at Washington, November 18, 1903.
Ratification advised by the Senate, February 23, 1904.
Ratified by the President, February 25, 1904.
Ratified by Panama, December 2, 1903.
Ratifications exchanged at Washington, February 26, 1904.
Proclaimed, February 26, 1904.

A PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.

Whereas a convention between the United States of America and the Republic of Panama to insure the construction of a ship canal across the Isthmus of Panama to connect the Atlantic and Pacific Oceans was concluded and signed by their respective plenipotentiaries at Washington on the 18th day of November, 1903, the original of which convention, being in the English language, is word for word as follows:

ISTHMIAN CANAL CONVENTION.

The United States of America and the Republic of Panama being desirous to insure the construction of a ship canal across the Isthmus of Panama to connect the Atlantic and Pacific Oceans, and the Congress of the United States of America having passed an act approved June 28, 1902, in furtherance of that object, by which the President of the United States is authorized to acquire within a reasonable time the control of the necessary territory of the Republic of Colombia, and the sovereignty of such territory being actually vested in the Republic of Panama, the high contracting parties have resolved for that purpose to conclude a convention and have accordingly appointed as their plenipotentiaries—

The President of the United States of America, John Hay, Secretary of State, and

The Government of the Republic of Panama, Philippe Bunau-Varilla, envoy extraordinary and minister plenipotentiary of the Republic of Panama, thereunto specially empowered by said Government, who after communicating with each other their respective full powers, found to be in good and due form, have agreed upon and concluded the following articles:

ARTICLE 1.

The United States guarantees and will maintain the independence of the Republic of Panama.

ARTICLE 2.

The Republic of Panama grants to the United States in perpetuity the use, occupation, and control of a zone of land and land under water for the construction, maintenance, operation, sanitation, and protection of said canal of the width of 10 miles extending to the distance of 5 miles on each side of the center line of the route of the canal to be constructed; the said zone beginning in the Caribbean Sea 3 marine miles from mean low-water mark and extending to and across the Isthmus of Panama into the Pacific Ocean to a distance of 3 marine miles from mean low-water mark with the proviso that the cities of Panama and Colon and the harbors adjacent to said cities, which are included within the boundaries of the zone above described, shall not be included within this grant. The Republic of Panama further grants to the United States in perpetuity the use, occupation, and control of any other lands and waters outside of the zone above described which may be necessary and convenient for the construction, maintenance, operation, sanitation, and protection of the said canal or of any auxiliary canals or other works necessary and convenient for the construction, maintenance, operation, sanitation, and protection of said enterprise.

The Republic of Panama further grants in like manner to the United States in perpetuity all islands within the limits of the zone above described, and in addition thereto the group of small islands in the Bay of Panama, named Perico, Naos, Culebra, and Flamenco.

ARTICLE 3.

The Republic of Panama grants to the United States all the rights, power, and authority within the zone mentioned and described in article 2 of this agreement and within the limits of all auxiliary lands and waters mentioned and described in said article 2 which the United States would possess and exercise if it were the sovereign of the territory within which said lands and waters are located, to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power, or authority.

ARTICLE 4.

As rights subsidiary to the above grants the Republic of Panama grants in perpetuity to the United States the right to use the rivers, streams, lakes, and other bodies of water within its limits for navigation, the supply of water or water power or other purposes, so far as the use of said rivers, streams, lakes, and bodies of water and the waters thereof may be necessary and convenient for the construction, maintenance, operation, sanitation, and protection of the said canal.

ARTICLE 5.

The Republic of Panama grants to the United States in perpetuity a monopoly for the construction, maintenance, and operation of any system of communication by means of canal or railroad across its territory between the Caribbean Sea and the Pacific Ocean.

ARTICLE 6.

The grants herein contained shall in no manner invalidate the titles or rights of private landholders or owners of private property in the said zone, or in or to any of the lands or waters granted to the United States by the provisions of any article of this treaty, nor shall they interfere with the rights of way over the public roads passing through

the said zone or over any of the said lands or waters, unless said rights of way or private rights shall conflict with rights herein granted to the United States, in which case the rights of the United States shall be superior. All damages caused to the owners of private lands or private property of any kind by reason of the grants contained in this treaty or by reason of the operations of the United States, its agents or employees, or by reason of the construction, maintenance, operation, sanitation, and protection of the said canal or of the works of sanitation and protection herein provided for, shall be appraised and settled by a joint commission appointed by the Governments of the United States and the Republic of Panama, whose decisions as to such damages shall be final and whose awards as to such damages shall be paid solely by the United States. No part of the work on said canal or the Panama Railroad, or on any auxiliary works relating thereto and authorized by the terms of this treaty, shall be prevented, delayed, or impeded by or pending such proceedings to ascertain such damages. The appraisal of said private lands and private property and the assessment of damages to them shall be based upon their value before the date of this convention.

ARTICLE 7.

The Republic of Panama grants to the United States within the limits of the cities of Panama and Colon and their adjacent harbors and within the territory adjacent thereto the right to acquire by purchase, or by the exercise of the right of eminent domain, any lands, buildings, water rights, or other properties necessary and convenient for the construction, maintenance, operation, and protection of the canal and of any works of sanitation, such as the collection and disposition of sewage and the distribution of water in the said cities of Panama and Colon, which, in the discretion of the United States, may be necessary and convenient for the construction, maintenance, operation, sanitation, and protection of the said canal and railroad. All such works of sanitation, collection, and disposition of sewage, and distribution of water in the cities of Panama and Colon shall be made at the expense of the United States; and the Government of the United States, its agents or nominees, shall be authorized to impose and collect water rates and sewerage rates, which shall be sufficient to provide for the payment of interest and the amortization of the principal of the cost of said works within a period of 50 years, and upon the expiration of said term of 50 years the system of sewers and water works shall revert to and become the properties of the cities of Panama and Colon, respectively, and the use of the water shall be free to the inhabitants of Panama and Colon, except to the extent that water rates may be necessary for the operation and maintenance of said system of sewers and water.

The Republic of Panama agrees that the cities of Panama and Colon shall comply in perpetuity with the sanitary ordinances, whether of a preventive or curative character, prescribed by the United States, and in case the Government of Panama is unable or fails in its duty to enforce this compliance by the cities of Panama and Colon with the sanitary ordinances of the United States the Republic of Panama grants to the United States the right and authority to enforce the same.

The same right and authority are granted to the United States for the maintenance of public order in the cities of Panama and Colon and the territories and harbors adjacent thereto in case the Republic of Panama should not be, in the judgment of the United States, able to maintain such order.

ARTICLE 8.

The Republic of Panama grants to the United States all rights which it now has or hereafter may acquire to the property of the New Panama Canal Co. and the Panama Railroad Co. as a result of the transfer of sovereignty from the Republic of Colombia to the Republic of Panama over the Isthmus of Panama, and authorizes the New Panama Canal Co. to sell and transfer to the United States its rights, privileges, properties, and concessions as well as the Panama Railroad and all the shares or part of the shares of that company; but the public lands situated outside of the zone described in article 2 of this treaty, now included in the concessions to both said enterprises and not required in the construction or operation of the canal, shall revert to the Republic of Panama, except any property now owned by or in the possession of said companies within Panama or Colon or the ports or terminals thereof.

ARTICLE 9.

The United States agrees that the ports at either entrance of the canal and the waters thereof, and the Republic of Panama agrees that the towns of Panama and Colon shall be free for all time, so that there shall not be imposed or collected customhouse tolls, tonnage, anchorage, lighthouse, wharf, pilot, or quarantine dues, or any other charges or taxes of any kind upon any vessel using or passing through the canal or belonging to or employed by the United States, directly or indirectly, in connection with the construction, maintenance, operation, sanitation, and protection of the main canal or auxiliary works, or upon the cargo, officers, crew, or passengers of any such vessels, except such tolls and charges as may be imposed by the United States for the use of the canal and other works, and except tolls and charges imposed by the Republic of Panama upon merchandise destined to be introduced for the consumption of the rest of the Republic of Panama, and upon vessels touching at the ports of Colon and Panama and which do not cross the canal.

The Government of the Republic of Panama shall have the right to establish in such ports and in the towns of Panama and Colon such houses and guards as it may deem necessary to collect duties on importations destined to other portions of Panama and to prevent contraband trade. The United States shall have the right to make use of the towns and harbors of Panama and Colon as places of anchorage and for making repairs, for loading, unloading, depositing, or transshipping cargoes either in transit or destined for the service of the canal and for other works pertaining to the canal.

ARTICLE 10.

The Republic of Panama agrees that there shall not be imposed any taxes—national, municipal, departmental, or of any other class—upon the canal, the railways and auxiliary works, tugs and other vessels employed in the service of the canal, storehouses, workshops, offices, quarters for laborers, factories of all kinds, warehouses, wharves, machinery, and other works, property, and effects appertaining to the canal or railroad and auxiliary works, or their officers or employees, situated within the cities of Panama and Colon, and that there shall not be imposed contributions or charges of a personal character of any kind upon officers, employees, laborers, and other individuals in the service of the canal and railroad and auxiliary works.

ARTICLE 11.

The United States agrees that the official dispatches of the Government of the Republic of Panama shall be transmitted over any telegraph and telephone lines established for canal purposes and used for public and private business at rates not higher than those required from officials in the service of the United States.

ARTICLE 12.

The Government of the Republic of Panama shall permit the immigration and free access to the lands and workshops of the canal and its auxiliary works of all employees and workmen of whatever nationality under contract to work upon or seeking employment upon or in any wise connected with the said canal and its auxiliary works, with their respective families, and all such persons shall be free and exempt from the military service of the Republic of Panama.

ARTICLE 13.

The United States may import at any time into the said zone and auxiliary lands, free of customs duties, imposts, taxes, or other charges, and without any restrictions, any and all vessels, dredges, engines, cars, machinery, tools, explosives, materials, supplies, and other articles necessary and convenient in the construction, maintenance, operation, sanitation, and protection of the canal and auxiliary works, and all provisions, medicines, clothing, supplies, and other things necessary and convenient for the officers, employees, workmen, and laborers in the service and employ of the United States and for their families. If any such articles are disposed of for use outside of the zone and auxiliary lands granted to the United States and within the territory of the Republic, they shall be subject to the same import or other duties as like articles imported under the laws of the Republic of Panama.

ARTICLE 14.

As the price or compensation for the rights, powers, and privileges granted in this convention by the Republic of Panama to the United States, the Government of the United States agrees to pay to the Republic of Panama the sum of $10,000,000 in gold coin of the United States on the exchange of the ratification of this convention, and also an annual payment during the life of this convention of $250,000 in like gold coin, beginning 9 years after the date aforesaid.

The provisions of this article shall be in addition to all other benefits assured to the Republic of Panama under this convention.

But no delay or difference of opinion under this article or any other provisions of this treaty shall affect or interrupt the full operation and effect of this convention in all other respects.

ARTICLE 15.

The joint commission referred to in article 6 shall be established as follows:

The President of the United States shall nominate two persons and the President of the Republic of Panama shall nominate two persons, and they shall proceed to a decision; but in case of disagreement of the commission (by reason of their being equally divided in conclusion) an umpire shall be appointed by the two Governments, who shall render the decision. In the event of the death, absence, or incapacity of a commissioner or umpire, or of his omitting, declining, or ceasing to act, his place shall be filled by the appointment of another person in the manner above indicated. All decisions by a majority of the commission or by the umpire shall be final.

ARTICLE 16.

The two Governments shall make adequate provision by future agreement for the pursuit, capture, imprisonment, detention, and delivery within said zone and auxiliary lands to the authorities of the Republic of Panama of persons charged with the commitment of crimes, felonies, or misdemeanors without said zone and for the pursuit, capture, imprisonment, detention, and delivery without said zone to the authorities of the United States of persons charged with the commitment of crimes, felonies, and misdemeanors within said zone and auxiliary lands.

ARTICLE 17.

The Republic of Panama grants to the United States the use of all the ports of the Republic open to commerce as places of refuge for any vessels employed in the canal enterprise, and for all vessels passing or bound to pass through the canal which may be in distress and be driven to seek refuge in said ports. Such vessels shall be exempt from anchorage and tonnage dues on the part of the Republic of Panama.

ARTICLE 18.

The canal, when constructed, and the entrances thereto shall be neutral in perpetuity and shall be opened upon the terms provided for by section 1 of article 3 of, and in conformity with all the stipulations of, the treaty entered into by the Governments of the United States and Great Britain on November 18, 1901.

ARTICLE 19.

The Government of the Republic of Panama shall have the right to transport over the canal its vessels and its troops and munitions of war in such vessels at all times without paying charges of any kind. The exemption is to be extended to the auxiliary railway for the transportation of persons in the service of the Republic of Panama or of the police force charged with the preservation of public order outside of said zone, as well as to their baggage, munitions of war, and supplies.

ARTICLE 20.

If by virtue of any existing treaty in relation to the territory of the Isthmus of Panama, whereof the obligations shall descend or be assumed by the Republic of Panama, there may be any privilege or concession in favor of the government or the citizens or subjects of a third power relative to an interoceanic means of communication which in any of its terms may be incompatible with the terms of the present convention, the Republic of Panama agrees to cancel or modify such treaty in due form, for which purpose it shall give to the said third power the requisite notification within the term of four months from the date of the present convention, and in case the existing treaty contains no clause permitting its modifications or annulment the Republic of Panama agrees to procure its modification or annulment in such form that there shall not exist any conflict with the stipulations of the present convention.

ARTICLE 21.

The rights and privileges granted by the Republic of Panama to the United States in the preceding articles are understood to be free of all anterior debts, liens, trusts, or liabilities, or concessions or privileges to other governments, corporations, syndicates, or individuals, and consequently, if there should arise any claims on account of the present concessions and privileges or otherwise, the claimants shall resort to the Government of the Republic of Panama and not to the United States for any indemnity or compromise which may be required.

ARTICLE 22.

The Republic of Panama renounces and grants to the United States the participation to which it might be entitled in the future earnings of the canal under article 15 of the concessionary contract with Lucien N. B. Wyse now owned by the New Panama Canal Co. and any and all other rights or claims of a pecuniary nature arising under or relating to said concession, or arising under or relating to the concessions to the Panama Railroad Co., or any extension or modification thereof; and it likewise renounces, confirms, and grants to the United States, now and hereafter, all the rights and property reserved in the said concessions which otherwise would belong to Panama at or before the expiration of the terms of 99 years of the concessions granted to or held by the above-mentioned party and companies, and all right, title, and interest which it now has or may hereafter have, in and to the lands, canal, works, property, and rights held by the said companies under said concessions or otherwise, and acquired or to be acquired by the United States from or through the New Panama Canal Co., including any property and rights which might or may in the future, either by lapse of time, forfeiture, or otherwise, revert to the Republic of Panama under any contracts or concessions with said Wyse, the Universal Panama Canal Co., the Panama Railroad Co., and the New Panama Canal Co.

The aforesaid rights and property shall be and are free and released from any present or reversionary interest or claims of Panama and the title of the United States thereto upon consummation of the contemplated purchase by the United States from the New Panama Canal Co. shall be absolute, so far as concerns the Republic of Panama, excepting always the rights of the Republic specifically secured under this treaty.

ARTICLE 23.

If it should become necessary at any time to employ armed forces for the safety or protection of the canal, or of the ships that make use of the same, or the railways and auxiliary works, the United States shall have the right, at all times and in its discretion, to use its police and its land and naval forces or to establish fortifications for these purposes.

ARTICLE 24.

No change either in the Government or in the laws and treaties of the Republic of Panama shall, without the consent of the United States, affect any right of the United States under the present convention, or under any treaty stipulation between the two countries that now exists or may hereafter exist touching the subject matter of this convention.

If the Republic of Panama shall hereafter enter as a constituent into any other Government or into any union or confederation of States, so as to merge her sovereignty or independence in such Government, union, or confederation, the rights of the United States under this convention shall not be in any respect lessened or impaired.

ARTICLE 25.

For the better performance of the engagements of this convention and to the end of the efficient protection of the canal and the preservation of its neutrality, the Government of the Republic of Panama will sell or lease to the United States lands adequate and necessary for naval or coaling stations on the Pacific coast and on the western Caribbean coast of the Republic at certain points to be agreed upon with the President of the United States.

ARTICLE 26.

This convention when signed by the plenipotentiaries of the contracting parties shall be ratified by the respective Governments and the ratifications shall be exchanged at Washington at the earliest date possible.

In faith whereof the respective plenipotentiaries have signed the present convention in duplicate and have hereunto affixed their respective seals.

Done at the city of Washington the 18th day of November, in the year of our Lord 1903.

JOHN HAY. [SEAL.]
P. BUNAU VARILLA. [SEAL.]

And whereas the said convention has been duly ratified on both parts, and the ratifications of the two Governments were exchanged in the city of Washington on the 26th day of February, 1904;

Now, therefore, be it known that I, Theodore Roosevelt, President of the United States of America, have caused the said convention to be made public, to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof.

In testimony whereof I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 26th day of February, in the year of our Lord 1904, and of the independence of the United States the one hundred and twenty-eighth.

[SEAL.] THEODORE ROOSEVELT.

By the President:
JOHN HAY,
Secretary of State.

EXHIBIT B.

Treaty between the United States and Great Britain to facilitate the construction of a ship canal. Signed at Washington, November 18, 1901; ratification advised by the Senate December 16, 1901; ratified by the President December 26, 1901; ratified by Great Britain January 20, 1902; ratifications exchanged at Washington February 21, 1902; proclaimed February 22, 1902.

A PROCLAMATION BY THE PRESIDENT OF THE UNITED STATES OF AMERICA.

Whereas a convention between the United States of America and the United Kingdom of Great Britain and Ireland to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans by whatever route may be considered expedient and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States without impairing the "general principle" of neutralization established in article 8 of that convention, was concluded and signed by their respective plenipotentiaries at the city of Washington on the 18th day of November, 1901, the original of which convention is, word for word, as follows:

The United States of America and His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland, and of the British dominions beyond the seas, King, and Emperor of India, being desirous to facilitate the construction of a ship canal to connect the Atlantic and Pacific Oceans by whatever route may be considered expedient and to that end to remove any objection which may arise out of the convention of the 19th April, 1850, commonly called the Clayton-Bulwer treaty, to the construction of such canal under the auspices of the Government of the United States without impairing the "general principle" of neutralization established in article 8 of that convention have for that purpose appointed as their plenipotentiaries:

The President of the United States, John Hay, Secretary of State of the United States of America;

And His Majesty Edward the Seventh, of the United Kingdom of Great Britain and Ireland, and of the British dominions beyond the seas, King, and Emperor of India, the Right Hon. Lord Pauncefote, G. C. B., G. C. M. G., His Majesty's ambassador extraordinary and plenipotentiary to the United States;

Who, having communicated to each other their full powers, which were found to be in due and proper form, have agreed upon the following articles:

ARTICLE 1.

The high contracting parties agree that the present treaty shall supersede the aforementioned convention of the 19th April, 1850.

ARTICLE 2.

It is agreed that the canal may be constructed under the auspices of the Government of the United States, either directly at its own cost or by gift or loan of money to individuals or corporations or through subscription to or purchase of stock or shares, and that, subject to the provisions of the present treaty, the said Government shall have and enjoy all the rights incident to such construction, as well as the exclusive right of providing for the regulation and management of the canal.

ARTICLE 3.

The United States adopts as the basis of the neutralization of such ship canal the following rules substantially as embodied in the convention of Constantinople, signed the 28th October, 1888, for the free navigation of the Suez Canal, that is to say:

1. The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules on terms of entire equality, so that there shall be no discrimination against any such nation or its citizens or subjects in respect of the conditions or charges of traffic or otherwise. Such conditions and charges of traffic shall be just and equitable.

2. The canal shall never be blockaded, nor shall any right of war be exercised nor any act of hostility be committed within it. The United States, however, shall be at liberty to maintain such military police along the canal as may be necessary to protect it against lawlessness and disorder.

3. Vessels of war of a belligerent shall not revictual nor take any stores in the canal except so far as may be strictly necessary; and the transit of such vessels through the canal shall be effected with the least possible delay in accordance with the regulations in force, and with only such intermission as may result from the necessities of the service. Prizes shall be in all respects subject to the same rules as vessels of war of the belligerents.

4. No belligerent shall embark or disembark troops, munitions of war, or warlike materials in the canal, except in case of accidental hindrance of the transit, and in such case the transit shall be resumed with all possible dispatch.

5. The provisions of this article shall apply to waters adjacent to the canal, within 3 marine miles of either end. Vessels of war of a belligerent shall not remain in such waters longer than 24 hours at any one time, except in case of distress, and in such case, shall depart as soon as possible; but a vessel of war of one belligerent shall not depart within 24 hours from the departure of a vessel of war of the other belligerent.

6. The plant, establishments, buildings, and all works necessary to the construction, maintenance, and operation of the canal shall be deemed to be part thereof, for the purposes of this treaty, and in time of war, as in time of peace, shall enjoy complete immunity from attack or injury by belligerents, and from acts calculated to impair their usefulness as part of the canal.

ARTICLE 4.

It is agreed that no change of territorial sovereignty or of the international relations of the country or countries traversed by the before-mentioned canal shall affect the general principle of neutralization or the obligation of the high contracting parties under the present treaty.

ARTICLE 5.

The present treaty shall be ratified by the President of the United States, by and with the advice and consent of the Senate thereof, and by His Britannic Majesty; and the ratifications shall be exchanged at Washington or at London at the earliest possible time within six months from the date hereof.

In faith whereof the respective plenipotentiaries have signed this treaty and thereunto affixed their seals.

Done in duplicate at Washington, the 18th day of November, in the year of Our Lord 1901.

JOHN HAY. [SEAL.]
PAUNCEFOTE. [SEAL.]

And whereas the said convention has been duly ratified on both parts, and the ratification of the two Governments were exchanged in the city of Washington on the 21st day of February, 1902;

Now, therefore, be it known that I, Theodore Roosevelt, President of the United States of America, have caused the said convention to be made public, to the end that the same and every article and clause thereof may be observed and fulfilled with good faith by the United States and the citizens thereof.

In witness whereof I have hereunto set my hand and caused the seal of the United States to be affixed.

Done at the city of Washington, this 22d day of February, in the year of Our Lord 1902, and of the Independence of the United States the one hundred and twenty-sixth.

[SEAL.] THEODORE ROOSEVELT.

By the President:
JOHN HAY, *Secretary.*

EXHIBIT C.

Convention as to ship canal connecting Atlantic and Pacific Oceans, 1850. (Clayton-Bulwer treaty.) Concluded April 19, 1850; ratification advised by the Senate May 22, 1850; ratified by the President May 23, 1850; ratifications exchanged July 4, 1850; proclaimed July 5, 1850. (Treaties and Conventions, 1889, p. 440.)

ARTICLES.

1. Declarations as to control of canal, occupation of territory, and commercial advantages.

2. Neutrality of canal in case of war.
3. Protection of construction.
4. Mutual influence to facilitate construction.
5. Guaranty of neutrality.
6. Cooperation of other States.
7. Mutual encouragement to speedy construction.
8. Protection to other communications.
9. Ratification.

The United States of America and Her Britannic Majesty, being desirous of consolidating the relations of amity which so happily subsist between them, by setting forth and fixing in a convention their views and intentions with reference to any means of communication by ship canal, which may be constructed between the Atlantic and Pacific Oceans by the way of the River San Juan de Nicaragua and either or both of the Lakes of Nicaragua or Managua, to any port or place on the Pacific Ocean, the President of the United States has conferred full powers on John M. Clayton, Secretary of State of the United States, and Her Britannic Majesty on the Right Hon. Sir Henry Lytton Bulwer, a member of Her Majesty's Most Honorable Privy Council, knight commander of the Most Honorable Order of the Bath and envoy extraordinary and minister plenipotentiary of Her Britannic Majesty to the United States, for the aforesaid purpose; and the said plenipotentiaries having exchanged their full powers, which were found to be in proper form, have agreed to the following articles:

ARTICLE 1.

The Governments of the United States and Great Britain hereby declare that neither the one nor the other will ever obtain or maintain for itself any exclusive control over the said ship canal, agreeing that neither will ever erect or maintain any fortifications commanding the same, or in the vicinity thereof, or occupy, or fortify, or colonize, or assume or exercise any dominion over Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America; nor will either make use of any protection which either affords or may afford, or any alliance which either has or may have, to or with any State or people for the purpose of erecting or maintaining any such fortifications, or of occupying, fortifying, or colonizing Nicaragua, Costa Rica, the Mosquito Coast, or any part of Central America, or of assuming or exercising dominion over the same; nor will the United States or Great Britain take advantage of any intimacy, or use any alliance, connection, or influence that either may possess with any State or Government through whose territory the said canal may pass, for the purpose of acquiring or holding, directly or indirectly, for the citizens or subjects of the one, any rights or advantages in regard to commerce or navigation through the said canal which shall not be offered on the same terms to the citizens or subjects of the other.

ARTICLE 2.

Vessels of the United States or Great Britain traversing the said canal shall, in case of war between the contracting parties, be exempted from blockade, detention, or capture by either of the belligerents; and this provision shall extend to such a distance from the two ends of the said canal as may hereafter be found expedient to establish.

ARTICLE 3.

In order to secure the construction of the said canal the contracting parties engage that, if any such canal shall be undertaken upon fair and equitable terms by any parties having the authority of the local Government or Governments through whose territory the same may pass, then the persons employed in making the said canal and their property used, or to be used, for that object shall be protected from the commencement of the said canal to its completion by the Governments of the United States and Great Britain from unjust detention, confiscation, seizure, or any violence whatsoever.

ARTICLE 4.

The contracting parties will use whatever influence they respectively exercise with any State, States, or Governments possessing, or claiming to possess, any jurisdiction or right over the territory which the said canal shall traverse, or which shall be near the waters applicable thereto, in order to induce such States or Governments to facilitate the construction of the said canal by every means in their power; and, furthermore, the United States and Great Britain agree to use their good offices, wherever or however it may be most expedient, in order to procure the establishment of two free ports—one at each end of the said canal.

ARTICLE 5.

The contracting parties further engage that when the said canal shall have been completed they will protect it from interruption, seizure, or unjust confiscation, and that they will guarantee the neutrality thereof, so that the said canal may forever be open and free and the capital invested therein secure. Nevertheless, the Governments of the United States and Great Britain, in according their protection to the construction of the said canal and guaranteeing its neutrality and security when completed, always understand that this protection and guaranty are granted conditionally and may be withdrawn by both Governments, or either Government, if both Governments or either Government should deem that the persons or company undertaking or managing the same adopt or establish such regulations concerning the traffic thereupon as are contrary to the spirit and intention of this convention, either by making unfair discriminations in favor of the commerce of one of the contracting parties over the commerce of the other or by imposing oppressive exactions or unreasonable tolls upon passengers, vessels, goods, wares, merchandise, or other articles. Neither party, however, shall withdraw the aforesaid protection and guaranty without first giving six months' notice to the other.

ARTICLE 6.

The contracting parties in this convention engage to invite every State with which both or either have friendly intercourse to enter into stipulations with them similar to those which they have entered into with each other, to the end that all other States may share in the honor and advantage of having contributed to a work of such general interest and importance as the canal herein contemplated. And the contracting parties likewise agree that each shall enter into treaty stipulations with such of the Central American States as they may deem advisable for the purpose of more effectually carrying out the great design of this convention, namely, that of constructing and maintaining the said canal as a ship communication between the two oceans, for the benefit of mankind, on equal terms to all, and of protecting the same; and they also agree that the good offices of either shall be employed, when requested by the other, in aiding and assisting the negotiations of such treaty stipulations; and should any differences arise as to right or property over the territory through which the said canal shall pass—between the States or Governments of Central America—and such differences should, in any way, impede or obstruct the execution of the said canal, the Governments of the United States and Great Britain will use their good offices to settle such differences in the manner best suited to promote the interests of the said canal and to strengthen the bonds of friendship and alliance which exist between the contracting parties.

ARTICLE 7.

It being desirable that no time should be unnecessarily lost in commencing and constructing the said canal the Governments of the United States and Great Britain determine to give their support and encouragement to such persons or company as may first offer to commence the same, with the necessary capital, the consent of the local authorities, and on such principles as accord with the spirit and intention of this convention; and if any persons or company should already have with any State through which the proposed ship canal may pass a contract for the construction of such a canal as that specified in this convention, to the stipulations of which contract neither of the contracting parties in this convention have any just cause to object; and the said persons or company shall, moreover, have made preparations and expended time, money, and trouble on the faith of such contract, it is hereby agreed that such persons or company shall have a priority of claim over every other person, persons, or company to the protection of the Governments of the United States and Great Britain and be allowed a year from the date of the exchange of the ratifications of this convention for concluding their arrangements and presenting evidence of sufficient capital subscribed to accomplish the contemplated undertaking, it being understood that if at the expiration of the aforesaid period such persons or company be not able to commence and carry out the proposed enterprise, then the Governments of the United States and Great Britain shall be free to afford their protection to any other persons or company that shall be prepared to commence and proceed with the construction of the canal in question.

ARTICLE 8.

The Governments of the United States and Great Britain having not only desired in entering into this convention to accomplish a particular object but also to establish a general principle, they hereby agree to extend their protection, by treaty stipulations, to any other practicable communications, whether by canal or railway, across the Isthmus which connects North and South America, and especially to the interoceanic communications, should the same prove to be practicable, whether by canal or railway, which are now proposed to be established by the way of Tehuantepec or Panama. In granting, however, their joint protection to any such canals or railways as are by this article specified it is always understood by the United States and Great Britain that the parties constructing or owning the same shall impose no other charges or conditions of traffic thereupon than the aforesaid Governments shall approve of as just and equitable, and that the same canals or railways, being open to the citizens and subjects of the United States and Great Britain on equal terms, shall also be open on like terms to the citizens and subjects of every other State which is willing to grant thereto such protection as the United States and Great Britain engage to afford.

ARTICLE 9.

The ratifications of this convention shall be exchanged at Washington within six months from this day or sooner, if possible.

In faith whereof we, the respective plenipotentiaries, have signed this convention and have hereunto affixed our seals.

Done at Washington, the 19th day of April, A. D. 1850.

JOHN M. CLAYTON. [SEAL.]
HENRY LYTTON BULWER. [SEAL.]

The Late Representative Pepper, of Iowa.

MEMORIAL ADDRESS

OF

HON. WILLIAM A. ASHBROOK,

OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, May 3, 1914.

On House resolution (H. Res. 501) paying tribute to the memory of Hon. IRVIN S. PEPPER, late a Representative from the State of Iowa.

Mr. ASHBROOK. Mr. Speaker, I was in Ohio on the day set apart to pay a tribute to the memory of my good friend, IRVIN S. PEPPER, of Iowa, and was therefore not permitted to avail myself of that opportunity. My conscience would condemn me, however, if I failed to say just a few words, and have therefore asked the indulgence of the House at this time.

Words never seem so futile as when employed to give expression of the sorrow and loss of a friend. They are meaningless, shallow, and unavailing. A single tear shed, if inspired by an aching heart, is more by far than extravagant expression of words. When I recall in memory the tall, manly figure, the handsome face, the gracious smile, kindled by an honest eye, the hearty hand clasp and kindly words so often spoken, my eyes moisten and I can truly say my heart longs for my friend.

Mr. Speaker, men imagine that elevation to positions of honor and trust mean happiness. We fancy it will bring bliss supreme

and will satisfy our longings. But it is the old story of more pleasure in pursuit than in possession. The things longed for usually bring disappointment with possession. We fight for fortune and for fame. If we reach our loftiest goal, believing, hoping, that at last contentment will be ours, it is but to turn aside in despair, convinced that "all is vanity."

When I end my service here but two things will long linger with me or be recompense for the struggle and strife of this life—the satisfaction that possibly I was able to help lighten the load and brighten the path of some one less fortunate, and the recollection of my association with and friendship for my colleagues. Surely a more cordial, courteous, and considerate body of men never assembled together than may be here found. Good will, good cheer, good fellowship, and an honest and willing desire to help a fellow along prevails more generally in this Chamber than in lodge room, church, or community.

No one was ever sent to Congress who possessed in a larger degree these splendid attributes than did IRVIN PEPPER. He had a big, honest heart. He was ambitious, but never to the extent that he would do a dishonorable thing or resort to unfair methods. I first met Mr. PEPPER soon after he began service here while on a trip to witness the opening of the "Over-sea Railroad," to Key West, Fla. A strong friendship was formed during several days pleasant association in the Southland. Soon after we had a friendly rivalry for a committee assignment. We showed our hands like brothers, and when the contest was ended in my favor, he was just as cordial and as much my friend as before. I think this was his innate disposition. I never heard him speak disparagingly of any man. If he could not speak good, he would not speak ill. His tongue "when it could not praise was chained" and "gentle concord never broke."

He was just beginning life, and a splendid beginning it was, too. The future with all the allurements of higher honors, the culmination of things best calculated to make this life worth living, stood temptingly within his easy grasp. But it is the story of life. "To-day he put forth the tender leaves of hope; to-morrow blossoms and bears his blushing honors thick upon him; the next day comes a frost which nips the tender shoot; and when he thinks his honors still aspiring, he falls, like autumn leaves, to enrich our mother earth."

He was stricken with disease, and before it could be realized, the icy hand of death was upon him. When told a few moments before he closed his eyes for that last long sleep that he would soon fall asleep never more to wake up in this life, he said faintly, but without apparent fear, "If that is so, lay me beside my mother, and take good care of my father." If those who may read this poor tribute of mine to my friend never knew more of his life and character than the expression of his last wish, it would be easy to understand why we loved him and why his people so highly honored him. He honored his father and his mother in life, and they were last in his thoughts as the lights burned low.

When last I saw him in life, late last October, and bid a hasty but a hearty adieu, he seemed the picture of health. I little thought it was possible that the next time it would be to gather about his bier. I shall not soon forget the final scene in that country cemetery in his home State the day after Christmas, so well described by my friend JOE RUSSELL in his tribute. Mother Earth, the last, best friend of man, was carpeted with pure white snow; the bugler's notes reverberated across the prairie as the casket, laden with flowers and surrounded by family and friends, was lowered to the grave. I realized then I would see my friend no more. I looked into the grief-stricken faces of a dear old father, the brothers and sisters, and the hope of immortality rose high in my heart that the separation was not forever.

I can not say—I will not say—
That he is dead. He is only away.
With a cheery smile and a wave of the hand
He has wandered into an unknown land
And left us dreaming, How very fair
It needs must be, since he lingers there.

And you—oh, you who wildest yearn
For the old-time step and glad return—
Think of him faring on, as dear
In the love There as the love Here.

Mild and gentle as he was brave,
With the sweetest love of his life he gave
To simple things; where the violets grew,
Pure as the eyes they were likened to.
The little brown thrush that harshly chirped

Was as dear to him as the mockingbird;
And he pitied as much as a man in pain
A writhing honeybee wet with rain.
Think of him still as the same, I say;
He is not dead—he is just away.

Injunctions.

EXTENSION OF REMARKS
OF
HON. WILLIAM J. CARY,
OF WISCONSIN,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, June 2, 1914,

On the bill (H. R. 15657) to supplement existing laws against unlawful restraints and monopolies, and for other purposes.

Mr. CARY. Mr. Speaker, the amendment offered to exempt labor organizations and farmers' associations from the provisions of this law is a step in the direction of correcting a crying abuse that labor has been suffering from ever since the enactment of the Sherman antitrust law, and although in my opinion it does not go as far as it should in separating property rights and personal relationships, it is still in some measure a protection from the rank injustice that has been perpetrated under the old law.

It is extremely doubtful when the Sherman antitrust law was passed whether it was ever intended to apply to labor organizations and farmers' associations for the betterment of their conditions, and the following extract from a speech by the late Senator Sherman during the debate on the bill would seem to show that the author of the law at least never intended it to so operate:

The bill as reported contains three or four simple propositions which relate only to contracts, combinations, agreements made with a view and designed to carry out a certain purpose which the laws of all the States and of every civilized community declare to be unlawful. It does not interfere in the slightest degree with voluntary associations made to affect public opinion to advance the interests of a particular trade or occupation. It does not interfere with the Farmers' Alliance at all, because that is an association of farmers to advance their interests and to improve the growth and manner of production of their crops and to secure intelligent growth and to introduce new methods. No organizations in this country can be more beneficial in their character than farmers' alliances and farmers' associations. They are not business combinations. They do not deal with contracts, agreements, and so forth. They have no connection with them. And so the combinations of workingmen to promote their interests, promote their welfare, and increase their pay, if you please, to get their fair share in the division of production, are not affected in the slightest degree, nor can they be included in the words or intent of the bill as now reported.

But no sooner had the Sherman law been passed than a method of procedure in the use of the injunctive power of the courts which extended the use of the writ of injunction in a manner as novel as it was infamous.

The present distinguished Secretary of the Department of Labor, the Hon. William B. Wilson, while in Congress delivered a speech on the question and gave a remarkably clear exposition of this dangerous innovation in court procedure, from which I will quote the following:

The extension of the writ of injunction from the field of the protection of property rights into the personal relationship between man and man is a renaissance of the theory of government by discretion long since discarded by the Anglo-Saxon people.

For more than a thousand years there has been a continual conflict between the principle of government by law and the practice of government by discretion with the discretion vested first in the King and later in his representative, the chancellor or judge. Government by law is a government of democracy; government by discretion is a government of autocracy.

Injunctions in labor disputes are innovations in our modern jurisprudence. The original purpose for which injunctions were issued was to restrain parties to any dispute about the title or damages to property from interfering with the property in question, until the courts had determined the property rights involved. These restraining orders were made returnable at the next term of court, or at the session of court where the cases were to be heard and determined, and consequently were never permanent, expiring by their own limitations when the court had convened to determine the question at issue. That they are clearly intended to protect property rights and property rights only is demonstrated by the fact that the courts invariably insist upon a bond being furnished by the parties suing out the writ to indemnify the parties enjoined for any loss that may accrue to them by virtue of the writ having been issued. When such an order of court has been issued it is not a difficult matter for the court to determine the actual damages, if any, that have been sustained through the issuance of the injunction, thereby protecting the restrained parties against any unwarranted invasion of their rights, but when the court issues an injunction in a labor dispute, restraining persons in controversy with employers from doing those things that they have a legal and moral right to do, and as a result of that injunction the contest is lost to the workers, there is no court on earth that can determine the damage that has been sustained by the persons enjoined, and consequently they can not recover from the bond. When the court arrogates to itself the power to issue injunctions never contemplated by the rules of equity, and in direct violation of constitutional and statutory law, and assumes the right to issue injunctions for the purpose of enforcing criminal law, it departs from the domain of property rights and invades that of personal rights in a manner for which there can be no excuse except that the court thereby becomes the sole judge of the law and the fact, and, if the parties enjoined are declared guilty of contempt, the extent of the punishment. All of which is in direct violation of the fundamental laws of the land and the Anglo-Saxon concept of human liberty, as shown by the efforts

of the people for more than a thousand years to destroy the arbitrary automatic power of kings and judges.

The peace of Wedmore, concluded between Alfred the Great and Guthram the Dane, A. D. 878, provided that "If a King's thane be charged with the killing of a man, if he dares to clear himself let it be before 12 King's thanes."

The great charter of human liberty, the Magna Charta of Great Britain, the basis upon which British and American freedom rests, in clause 39 declares:

"No freeman shall be taken or imprisoned, disseized, or outlawed, or banished, or any ways destroyed, nor will we pass upon him, nor will we send upon him, save by the lawful judgment of his peers or by the law of the land."

The Bill of Rights enunciated by the British Parliament for the protection of the common people and signed by William and Mary upon their accession to the British throne, as a condition upon which their title to sovereignty would rest, declares:

"Paragraph 1. That the pretended power of suspending of laws, or the execution of laws, by regal authority, without consent of Parliament, is illegal.

"Paragraph 2. That the pretended power of dispensing with laws, or the execution of laws, by regal authority, as it hath been assumed and exercised of late, is illegal."

The Declaration of Independence declares: "That all men are created equal, that they are endowed by their Creator with certain inalienable rights, and that among these are life, liberty, and the pursuit of happiness," and it further assigns as one of the causes for the separation from the mother country and the establishment of an independent government, "for depriving us in many cases of the benefits of trial by jury."

The Constitution of the United States, which creates our judiciary, gives to it whatever power it can possibly exercise, and limits its jurisdictions, says Article III, section 1: "The judicial power shall extend to all cases, in law and equity, arising under this Constitution, the laws of the United States, and treaties made, or which shall be made, under their authority."

First amendment: "Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof; or abridging the freedom of speech, or of the press; or the right of the people peaceably to assemble and to petition the Government for a redress of grievances."

Sixth amendment. In all criminal prosecutions the accused shall enjoy the right to a speedy and public trial by an impartial jury of the State and district wherein the crime shall have been committed, which district shall have been previously ascertained by law, and to be informed of the nature and cause of the accusation; to be confronted with the witnesses against him; to have compulsory process for obtaining witnesses in his favor and to have the assistance of counsel for his defense.

Ninth amendment. The enumeration in the Constitution of certain rights shall not be construed to deny or disparage others retained by the people.

Tenth amendment. The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States, respectively, or to the people.

Thirteenth amendment, section 1. Neither slavery nor involuntary servitude, except as a punishment for crime whereof the party shall have been duly convicted, shall exist within the United States or any place subject to their jurisdiction.

* * * * * * *

Notwithstanding the constitutional limitations mentioned, modern injunctions have taken three distinct lines, two of which are unconstitutional, arbitrary, and unjust.

1. Injunctions are issued to protect property rights from irreparable injury where there is no remedy at law. That is the only province in which an injunction properly belongs.

2. Injunctions have unwarrantably been issued for the purpose of enforcing existing statutory and common law, arbitrarily invading the jurisdiction of the legislatures and the law courts, thus wiping out of existence that protection against false accusations that freemen have fought for and forced from the hands of autocratic kings and tyrannical governments and defended at the cost of their lives in many conflicts with royalty—the right of trial by jury.

When the legislative branch of the Government has specified the punishment for any violation of law it has provided what, in its judgment, is an adequate remedy and means of protection; and, having provided such remedy, no court has any right to step in over the head of the legislature and provide another remedy.

3. Modern American courts assume the right to issue injunctions interfering with the personal rights of men in exercising free speech, free press, peaceable assemblage, and in their personal relationship with each other. The rights of free speech, free press, and peaceable assemblage are specifically guaranteed by the Constitution. They are the fundamental safeguards of a free people which neither courts, kings, nor cajolery should be permitted to destroy. The personal relationship between man and man comes clearly within the jurisdiction of the law courts and has no place in the courts of equity, unless upon the assumption by the courts that man is property, an assumption repugnant to the sense of right of all civilized communities and specifically forbidden by the thirteenth amendment to the Constitution of the United States.

As the judicial power extends only to cases in law and equity arising under the Constitution, the laws of the United States, or treaties made under their authority, it seems clear that, aside from equity proceedings growing out of the treaties, the only equity power which the judiciary can exercise is to be found in the original jurisdiction granted by the Constitution and such additional jurisdiction as may be conveyed by law. The original jurisdiction granted by the Constitution, aside from that already stated, is found in section 2 of Article III of the Constitution, which provides that it shall extend to all cases affecting ambassadors, other public ministers, and consuls; to all cases of admiralty and maritime jurisdiction; to controversies to which the United States shall be a party; to controversies between two or more States; between a State and citizens of another State; between citizens of different States; between citizens of the same State claiming lands under grants of different States; and between a State or the citizens thereof and foreign States, citizens, or subjects. Even that power is limited by the eleventh amendment, which says, "The judicial power of the United States shall not be construed to extend to any suit in law or equity commenced or prosecuted against one of the United States by citizens of another State or by citizens or subjects of any foreign State."

In all other cases the judicial power extends to cases arising under the law. Congress has on various occasions created courts and limited the jurisdiction of the courts thus created. That is true of the Court of Claims and the Commerce Court. There is no question in the mind of your committee of the constitutional power of Congress to limit the jurisdiction of the courts so that it will not extend to the writ of injunction in the cases mentioned in the bill. The extent to which the judicial power has been exercised in recent years in issuing writs of injunction in labor disputes in a manner which would not be considered if no disputes were in existence makes it necessary that some legislation of this character should be enacted. The first writs of this character issued restrained acts of violence only. From that they have gradually broadened until it has become the practice to enjoin men from inducing others to leave their employment or not to enter employment, or from assembling at, near, or within sight of the complainant's property, or from furnishing food, money, or other things of value to workmen on strike, or from moving strikers away from the strike locality, or from exercising the constitutional right of free speech or of free press, or from refusing to patronize people who are obnoxious to them.

It may be that some of these things which they are restrained from doing are wrong, and that they should not be permitted to do them; but if that be true, the legislative branch of the Government should prohibit by law the things that are wrong, and the law courts, not the equity courts, determine the fact of whether or not there has been any violation of the law. By any other course a grave injustice is done to that portion of our people who are least able to protect themselves.

It gives me great pleasure, more than I can express in words, to vote for this measure and to know that after many long years I can vote on the winning side of a labor proposition. For it has been an uphill fight for those who have consistently, in season and out of season, waged the battle of the worker against the citadels of special privilege. But each succeeding year has seen more power, more interest, and, thank heaven, more results for labor. When I came here nearly eight years ago I was one of the few Members of the House who carried a union card; to-day there are nearly three dozen card men in the membership, and in the next Congress there will be still more, until we reach the just proportion of representation that the workers and producers of the country are entitled to.

Often defeated, sometimes discouraged, but never despairing, the men who strive in labor's cause will continue to fight for human rights; irrespective of party they will maintain a solid front against oppression either of capital or its subsidized tools in business, politics, or journalism, and when we are gone a new generation will carry on the warfare until law shall mean equal justice to all, until prosperity shall shed its sunlight into the cottage as well as into the palace, until the immortal words of Jefferson, "all men are created equal," shall be a living truth in fact as well as word.

Retirement Compensation for Civil-Service Employees.

EXTENSION OF REMARKS

OF

HON. JAMES W. BRYAN,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 9, 1914,

On the bill (H. R. 17041) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. BRYAN. Mr. Speaker, the question of retirement pay for employees, exhausted and spent in the service to which they have devoted their lives, is merely a question of civilization.

Certain tribes, canabalistic and uncivilized, have had the custom of destroying the aged and the infirm; but as the world has advanced in the sciences and the arts and in all the ways of civilization a different view has been adopted by mankind, and anyone who would now advocate the destruction of the old and helpless would subject himself to the well-merited scorn of all right-thinking people. A son who would refuse to aid his father or mother in the hour of dotage would be an unnatural son indeed. All society and all his associates would condemn him as one entirely unworthy.

In the days of slavery a master was compelled to care for the old and infirm slaves. Can it be, then, that the great Government of the United States, after accepting service of one of its citizens for 30 years or more shall drive such a one out of the service and disclaim all responsibility when the infirmities of age prohibit continued efficiency? Such a victim may not have a son or relative to support or provide for him; but if he has, why should the Government place this entire burden on the son or reation?

A certain well-known Government official recently made this statement:

> I don't think the Government should be required to pay old, superannuated employees any more than private industry should be compelled to pay in like cases.

I agreed with him instantly; but, as emphatically as possible, I rebuked the idea that any industry has the right to accept

the life service of a faithful employee and then shirk the responsibility of caring for him when energy and vigor have been consumed in service. Every department of industry must carry this load and charge it up on the price of its product. Bookkeeping systems must be broadened so that the human account can be kept. Industrial accidents, industrial diseases, industrial exhaustion must be included in the account.

Society will make money by it. The wrecks that lay alongside the track of industry have in the end to be cleared away and the terrible toll of expense of such wreckage must be borne by society. Why not keep books and let the division of society particularly liable in each case pay its debt directly in a businesslike way? It will be so much more civilized, and it would be cheaper, too. Of course if a worker's mind fails him and he becomes a mental imbecile, society will take care of him. If he goes blind, there is a place for him; if he becomes an utterly helpless invalid, some institution will open its door to him and society will pay the bill. But who can measure the horror felt by one who has been one of the world's workers to suddenly learn that he can work no more? "Inefficient; get out of the way. The electric current that once charged your system is gone; it's all spent—you are not needed any longer."

Of course it is argued that it is the duty of a Government clerk or an industrial worker to lay up for a rainy day and prepare for the lean years that await us all. No one contradicts that; but let us consider for a moment: First, it is very hard to save money out of the meager salaries that are paid, considering all the demands; some clerks have dependents to provide for. Burdens are never the same. There are many cases where it is impossible to save.

And then suppose a clerk has saved up a little money. Is that any reason why society should work him harder and longer than others, or begrudge him the advantages good fortune and his own wisdom has given him? We are not saved the price of oil because the oil magnate does not need the money. Nor should retirement pay be denied because some won't suffer without it. Retirement pay is a compensation earned for labor already performed. The minimum for each and every employee or clerk is enough to sustain life so long as life lasts. That is a bill society must pay. If after the average is struck some can save so as to better the condition of themselves and their dependents, so much the better.

Retirement pay is not a pension; it is not granted as a bonus. Officers and men in the Army and Navy do not have to specially qualify in order to get what is theirs after retirement. It is only necessary that they serve the number of years required. The retirement pay is a debt against society.

We may pass through the present session without the passage of an adequate retirement law for Federal employees. I hope such will not be the case; but I am sure the present condition will not continue and that we will very soon catch up with the other enlightened nations of the world in the matter.

Agricultural Appropriation Bill.

SPEECH

OF

HON. JAMES W. COLLIER,

OF MISSISSIPPI,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, March 3, 1914.

The House in Committee of the Whole House on the state of the Union had under consideration the bill (H. R. 13679) making appropriations for the Department of Agriculture for the fiscal year ending June 30, 1915.

Mr. COLLIER. Mr. Chairman, for some years it has been vigorously contended by many that a money trust existed in the United States, a trust which absolutely controlled the credit of the Republic. That this control of credit was made possible by a number of the large financial institutions pooling their interests and electing boards of common or interlocking directors, who were to manage the business of various institutions engaged in the same kind of business, but presumably competitors.

It was charged that practically every great financial institution by interlocking its directors with similar institutions had stifled all legitimate competition and that a gigantic monopoly, embracing nearly every branch of productive and commercial industry in the United States, had been established.

The demand for an investigation of these alleged conditions becoming insistent, Congress responded to this demand by ordering an investigation of the Steel Trust, the Sugar Trust, and the Money Trust. The revelations disclosed by these investigations were startling. A complete system of interlocking directorates was found to exist, a system of common directors not alone upon the boards of directors of those institutions posing to the world as competitors, but an interlocking directorate in practically every branch of commercial enterprise.

The investigations conclusively proved that the control of credit in the United States was vested in the hands of a few men. These investigations also proved that these few men had not only secured the control of credit in the Republic but that also, by having practically the same directors on the boards of the various banks, trust companies, insurance companies, railroad companies, and trading, producing, and public-utility corporations, a vast organized monopoly had been formed which destroyed competition in nearly every line of commercial enterprise and threatened the existence of the free institutions of the Republic.

These investigations disclosed the alarming information that 180 directors in 18 of the large financial institutions located in New York, Chicago, and Boston are also directors upon the boards of 41 banks and trust companies located in different parts of the United States. These 180 directors hold 385 directorships in these 41 banks, whose total resources are over six and a half billions of dollars.

They also hold 50 directorships in 11 insurance companies, the next largest money-lending institutions in the Republic, and whose assets amounted to over two and a half billions of dollars.

These 180 directors also hold 155 directorships in 31 railroad systems—not railroad companies, but railroad systems—which embrace numbers of companies, and whose total capitalization is over $12,000,000,000.

They hold 6 directorships in 2 express companies and 4 directorships in 1 steamship company with capital and income of over $340,000,000.

These 180 directors of these 18 large financial institutions located in the three cities I mentioned also hold 98 directorships in 28 producing and trading corporations like the Pullman Co., the National Biscuit Co., the International Harvester Co., the Baldwin Locomotive Works, the American Locomotive Works, the United States Steel Corporation, and 22 other large corporations, whose combined capitalization and total gross annual earnings are in excess of $4,700,000,000.

These same directors hold 48 directorships in 19 public-utility corporations like the American Telephone & Telegraph Co., the Consolidated Gas Co., the United Gas Improvement Co., a number of the large street car systems in the various cities of the Republic, and other utility corporations whose combined capitalization and gross annual earnings amount to over $3,250,000,000.

To summarize, we find that these 180 directors who compose the various boards of directors of these 18 large financial institutions hold 746 directorships in 133 corporations, representing practically all the banking business of the United States; the insurance business, with its vast money-lending power; the great transportation systems, upon which in a large degree the prosperity of the country depends; and the great producing, trading, and public-utility corporations, whose business enters so closely into every citizen's life. In fact, we find, interlocked together, nearly every important line of commercial enterprise in the United States, whose total resources amount to more than $29,000,000,000, all more or less under the complete dominion and control of 18 large dominating financial institutions.

The entire wealth of the Republic is estimated at $130,000,000,000. Of this, considerably more than half consists in land and the improvements thereon, which is in the main owned by those of limited capital. Another large percentage of wealth consists in domestic investments held by small investors, whose earnings and capitalization are too small to attract these financial magnates who have controlled the credit of the country. These percentages of wealth do not, to any great extent, figure in the control of credit in the United States, because they are scattered and disseminated among so many that they affect only local conditions. Eliminating these sources of the Nation's wealth as factors in the establishment and creation of credit, and we find that this $29,000,000,000 owned and controlled by these 18 financial institutions is considerably more than is needed to create a monopoly and to dominate with absolute certainty the entire financial situation of the United States.

After having found that only 18 financial institutions control business organizations whose resources are over $29,000,000,000, the next step to pursue is to look at these financial institutions and see what relation they bear to each other. Investigation discloses the fact that three of these 18 financial institutions practically control over $24,000,000,000 of the $29,000,000,000.

These three firms are the banking house of J. P. Morgan & Co., the First National Bank of New York, and the National City Bank of New York.

Nor is this all, for the investigation further discloses that J. P. Morgan & Co. and the First National Bank, through stockholdings, interlocking directors, partnership transactions, voting trusteeships, and other relations, are bound together in a complete and enduring community of interest. As the Pujo investigation of the Money Trust relates, "Their relations in this regard are, indeed, a commonplace in the financial world."

A glance at the common directorate of J. P. Morgan & Co. and the First National Bank fully justifies this statement.

These three institutions hold 36 directorships in seven banks and trust companies, whose resources are over $777,000,000. They hold 2 directorships in an insurance company with assets of $587,000,000. They hold 47 directorships or voting trusteeships in 11 transportation companies with a capitalization of $3,874,000,000. They hold 23 directorships in 7 producing and trading corporations with a capitalization of $1,989,000,000. They hold 4 directorships in a public utility corporation with capitalization of $621,000,000. Making in all a total of 52 directorships held by Morgan & Co. and 60 directorships held by the First National Bank in 27 great financial institutions with combined resources of $7,848,000,000.

The Pujo investigating committee informs us that—

The acquisition by Morgan & Co. of a large block of stock of the National City Bank, with representation upon its board of directors, and the transactions that followed, in which those two institutions and the First National Bank were joined, as above set forth, show a unison of interest and a continuity of cooperation between the three, such as for many years previously had existed between two of them—Morgan & Co. and the First National Bank.

The Bankers' Trust Co., with its capital and surplus of $20,000,000 and its deposits of over $168,000,000; and the Guaranty Trust Co., with resources of over $232,000,000, are absolutely controlled by J. P. Morgan & Co. through voting trusts. These two financial institutions, together with J. P. Morgan & Co., the First National Bank, and the National City Bank, hold 118 directorships in 34 banks and trust companies, having total resources of $4,666,000,000. They hold 30 directorships in 10 of the 11 insurance companies controlled by the 18 financial institutions, which 10 insurance companies have total assets of $2,203,000,000. They hold 105 directorships in 32 transportation systems, having a total capitalization of $11,784,000,000 out of the twelve billions of dollars of railroad property controlled by these 18 organizations. They hold 63 directorships in 24 of the 28 trading and producing corporations controlled by the 18 financial institutions, whose capitalization and gross annual earnings amount to $3,339,000,000. They hold 25 directorships in 12 public utility corporations having a total capitalization of $2,150,000,000.

In all, these three banking institutions with their affiliations hold 341 directorships in 112 corporations having aggregate resources of over $24,000,000,000, which are considerably more resources than enough to absolutely control the money market of the United States, and to crush down and completely destroy competition wherever it may exist.

Thus a situation of organized monopoly, of control of credit, of destruction of competition perfect in its management, destructive in its operations and unerringly accurate in its accomplishment was presented to the American people as the result of the investigation by Congress of the financial conditions existing in the United States.

There can not be found, however, the same objection to the interlocking of directors in corporations of limited capital whose operations do not extend beyond the local limits of cities, villages, and towns, because these corporations are so limited in their character and circumscribed in their workings that they are inherently unable to form a monopoly in restraint of trade, and if these corporations should so increase their resources, so as to become dangerous to the public, why the legislatures of the various States can by statute regulate them.

In the first instance, the great financial institutions whose resources amount to billions of dollars, interlock their directors for the purpose of creating a monopoly, destroying competition and controlling credit; while, on the other hand, domestic corporations of small capitalization, operating only in a limited way are too insignificant and have not the means to establish either a monopoly or destroy competition even if these interlocked directors should so desire, because there is not sufficient money invested in these corporations to prove a menace to the community, or to create a trust or break down competition. It often happens in small communities that less than a dozen men are financially able to organize and keep going the various business enterprises so necessary to the prosperity and progress of the community. It is essential to the progress and development of the various towns and villages that these small commercial enterprises be established. Such enterprises are intended to build up, and not to destroy, the business interest of the community. To bar those men, whose financial condition is such that they alone can finance these enterprises, might result in financial distress, because these men, perhaps, might be the only ones who could establish these different concerns, and their elimination might result in the town being deprived of the advantages of such enterprises.

Mr. TRIBBLE. Mr. Chairman, will the gentleman yield?

Mr. COLLIER. Certainly.

Mr. TRIBBLE. How would the gentleman discriminate between the large and the small—where would he place the line of demarcation between the two?

Mr. COLLIER. There could be placed a line of demarcation according to the amount of capitalization of these corporations. The reason we want to forbid an interlocking directorate is because it is stifling competition, because it is not giving competitors a square deal, and is obstructing the free channels of trade which should at all times be open to our citizens.

I did not intend to digress upon this phase of the subject, but there is a vast distinction between an interlocking directorate upon the boards of several large financial institutions whose resources amount to billions of dollars and whose operations extend from one part of this country to the other, and which are pooling their interests, destroying their competitors, increasing the cost of living, controlling transportation rates, and in many other ways are proving harmful and hurtful to the interests of all the people of this country; there is, I repeat, a vast difference between that kind of an interlocked directorate and an interlocked directorate in the small local corporations, like the ice company, the public gin, the hardware store, the grocery corporation, and other corporations whose capital is sufficient only for them to transact a legitimate business in a small way, and whose operations do not extend beyond the confines of the community in which the institution is located.

And if such corporations should increase their capital or increase their holdings to such an extent that there is danger of their becoming a menace to the community, then, if their operations are conducted solely within the confines of a State, the legislature of that State can and should take charge and regulate them by statute.

But this digression has nothing to do with the subject I am discussing, for Congress has no control over the affairs of domestic corporations, and this phase of the question can be well left to the various State legislatures.

The Money Trust in the United States was brought about through two agencies. First, a vast system of interlocking the directors of practically every branch of commercial enterprise, bringing them practically under the head of one general management, so that interest rates could be fixed, transportation rates agreed upon, competing banks and other institutions refused credit, and by reason of the directors' privilege of looking into the books of the various banks upon whose boards they sat as directors, examine the accounts of a competitor, and, knowing its financial status, were often, through the means of this unfair advantage, able to force it to close its doors.

The other agency which makes possible a money trust is the present system of underwriting the securities of the great interstate corporations. A few banking institutions control a majority of the stock of these corporations and force them to sell their securities in a noncompetitive market. The interlocking of directors gives them the information to form the trust; the sale of the securities gives the trust the means to control the credit and to carry on their operations.

The present system of underwriting the securities of these interstate corporations is injurious to the corporation, hurtful to the public, and is the principal source of revenue to the underwriters.

The firm of J. P. Morgan & Co. alone in less than 10 years handled the public marketing of securities in interstate corporations to the amount of nearly $2,000,000,000.

This firm acts as the fiscal agent for a number of the great railroad systems, which are compelled to negotiate the sale of their securities through the firm of Morgan & Co.

Railroad companies practically have only two kinds of expense—the cost of operation, including the upkeep of equipment, etc., and the interest on the bonded indebtedness. It is the effort to meet this interest that often causes a railroad to fail to make needed improvement in its rolling stock. No matter how badly equipment is needed, no matter how dangerous the roadbed may become, the interest on the bonded indebtedness must be met. These bonds mature from time to time and have to be replaced by new bonds, and it is through the purchase, sale, and handling of these securities that J. P. Morgan & Co. and their associates have reaped such a rich harvest. From

the best information I gather, I find that the different railroad systems are parceled out among a few of these financial institutions. The railroads are helpless to remedy these conditions, for they must take their securities to the institutions to which they have been allotted.

For an illustration, now it is said the Southern Railroad has been allotted to J. P. Morgan & Co. This firm practically controls this railroad, and for a number of years the late J. P. Morgan and George F. Baker, chairman of the board of directors of the First National Bank, constituted two of its three voting trustees. Since 1895 the firm of J. P. Morgan & Co. have handled for the Southern Railroad the marketing of 32 different issues of securities, aggregating over $130,000,000. The Southern officials are helpless in this matter, for no firm but that of Morgan & Co. can handle these bonds.

Mr. GOULDEN. Mr. Chairman, will the gentleman yield?

Mr. COLLIER. Yes.

Mr. GOULDEN. The gentleman made a statement that the Southern Railroad had to go to J. P. Morgan & Co. in order to have certain securities underwritten. Why?

Mr. COLLIER. Because there was a written agreement to the effect that the late J. P. Morgan, George F. Baker, and Charles Lanier were constituted voting trustees, who acted for the interest of the stockholders as their judgment indicated, and who were to select the directors for this road, and Morgan & Co. were the fiscal agents of the road, and the Pujo investigation shows that, as far as the Southern Railroad is concerned, the late J. P. Morgan absolutely controlled the situation. Mr. H. P. Davidson, of the firm of J. P. Morgan & Co., testified before the Pujo committee that his firm handled practically all of the securities of the Southern Railroad.

When J. P. Morgan & Co. reorganized the Southern a majority of the stock was placed in this voting trust. This deprived the stockholders of all representation and voting power. This voting trust has existed for 19 years, and unless recently changed it is still in force. Those are the reasons why the Southern Railroad has to go to the firm of J. P. Morgan & Co. to handle their securities.

Mr. GOULDEN. Does not the gentleman think, perhaps, it is due to the fact that J. Pierpont Morgan & Co. and others control the money situation there, and that is the reason they had to go to them; that there was no other remedy?

Mr. COLLIER. It was due absolutely to that fact, there is no question about that.

Mr. GOULDEN. One more question and I will not interrupt the gentleman again.

Mr. COLLIER. It is all right, I am glad to yield to the gentleman from New York.

Mr. GOULDEN. Under what general administration was this great financial system built up, who is to blame for that fact?

Mr. COLLIER. There are many reasons for that Money Trust. There are many conditions which brought about a system whereby a few could control the great resources of the country. Of course, a great deal of this control is due, you might say, the principal part of this financial situation is due and was brought about by the enactment of those laws which Congress itself has passed giving special privileges to individuals, but I am not to-day discussing that feature of this question. I am not discussing what brought about this condition. I am trying to discuss a condition that is existing right now, at the present time, in this country of ours.

Now, the question might well be asked, How does it hurt the Southern Railroad or any other railroad for Morgan & Co., or any security company, to handle their securities, and how is this harmful to the stockholders and the people generally, because the securities have to be negotiated.

I will show you how the present system is hurtful to the railroad and injurious to the public. I will give you an illustration, which principle has time and again been applied to nearly every railroad system in the United States. Suppose the Southern Railroad or any other railroad finds that $50,000,000 of its bonds are about to mature and have to be retired.

The officials of the road take $50,000,000 of new bonds to replace the issue soon to mature to Morgan & Co., or any other company which handles securities, and tell them that they must have $50,000,000 to pay the holders of the maturing bonds. Morgan & Co. can handle the negotiation of these bonds in two different ways. They generally buy them outright and dispose of them afterwards. Now, the two ways that Morgan & Co. can negotiate, or rather buy, these bonds from the Southern are as follows: They may tell the officials of the Southern, "We will buy these bonds or handle them for you on a commission, say, of 3 per cent. Turn the $50,000,000 of bonds over to us and we will give you $50,000,000 less our commission of $1,500,000, or in all $48,500,000."

The officials of the Southern say, "We can not do that. We have not the $1,500,000 to pay you, because it takes all we can make to meet the expense of operation, the upkeep of equipment, and pay the interest on our bonded indebtedness." Well, then, Morgan & Co. suggests an additional issue of $10,000,000. "Put some of this in additional equipment and we can then get our commission out of this additional issue of $10,000,000, and we will handle the $60,000,000 of bonds for you." The manager of the Southern tells them that this will be worse than the first proposition, but the firm of J. P. Morgan & Co. shows them how this can be done. Why, one of the firm might say, "There is too much competition in the railroad business. In the town of Meridian, Miss., there are four or five roads competing with the Southern. These roads are cutting each other's throats trying to take business away from each other. The agents of these different roads are soliciting business from the shippers, are going to see them every day asking for orders, and with the keen and active competition thus established the railroads are cutting transportation rates. Follow the example we have set in New York; get together, increase the rate, and charge the same rate on each road. The merchants and shippers will then have to go to you and the people of Louisiana, Mississippi, Alabama, Georgia, Florida, Tennessee, the Carolinas, Kentucky, and Virginia will pay the freight, and we will get our commission and you will be able to meet the interest on these bonds."

Of course I use the Southern Railroad only as an illustration as to how this could be done and do not mean that this was an actual transaction between the Southern and the firm of J. P. Morgan & Co. I have no means of finding out how much the Southern Railroad or any other railroad pays in commissions for the handling of its securities. I know of no way to find this out. I do know, however, that the great majority of railroads in the United States are grossly overcapitalized, and that J. P. Morgan & Co. and a few others have reaped a rich harvest in the handling of these securities. I do know that this gross overcapitalization is causing the various railroads throughout the country to strain every nerve and make every effort, often at the expense of needed repairs, to meet the enormous interest on the bonds which have been so freely issued. I believe that the demand for an increased rate from the Interstate Commerce Commission was brought about by reason of additional and unnecessary expense because of overcapitalization. A demand that may be necessary for the Interstate Commerce Commission to grant, because there is so much overcapitalization that a fair and legitimate rate may not be sufficient to keep up the running expense and pay the interest on the bonded debt, which may be owned by innocent purchasers, whereas if there were no water in these stocks such rate might be more than ample.

These securities should be offered in open market, where competitive bids could be received and the bonds awarded to the highest bidder. As long as there is a trust and a monopoly in the handling of the railroad companies' securities the railroads themselves, in self-defense, will be compelled to make their agreements on transportation rates to take care of the enormous commissions they have to pay these financial institutions for handling these securities.

Mr. QUIN. Will the gentleman yield?

Mr. COLLIER. Yes.

Mr. QUIN. What proportion of the capital stock of these railroads is actual and what water?

Mr. COLLIER. Well, there is so much that I can not tell the gentleman the exact amount. In fact, there is no way that I know that it can be estimated.

The listing of these securities upon the New York Stock Exchange has something to do with the financial situation in the United States. These transactions are for the most part purely speculative, as evidenced by the high ratio of the sales of a given stock during very short periods to the total amount listed, and also by the great disproportion of the shares listed on the exchange and the shares actually transferred on the books of the corporations.

The report of the Money Trust investigation shows that on the New York Stock Exchange since 1906 the entire listed common-stock issue of the Union Pacific Railroad Co. has been sold eleven and one-half times over each year, while in 1912 the number of shares transferred was only 16 per cent of the number sold.

That since January 1, 1906, the entire listed common stock of the Erie Railroad Co. has been sold more than twice over each year on the average, while the number of shares transferred has averaged only 30 per cent of the number sold. Perhaps the best illustration of this selling on the exchange is the case of the Reading Railroad, which is practically controlled by the firms

of Morgan & Co. and the First National Bank. The Pujo report relates that—

It appears that there has not been a year since January 1, 1906, when the Reading Co.'s entire common-stock issue listed and subject to sale was not sold at least 20 times over, and from that on up to 43 times; that in a single month of that period it was sold 6 times over, and that in only 2 months of the entire period was it sold less than once over in a single month; and that although it is a dividend-paying stock, the number of shares transferred on the company's books averaged for the period 8.6 per cent of the shares sold.

Such an indiscriminate dealing in stocks is not only the worst kind of gambling but, in order to get money to carry on this wildcat speculation, withdraws from the legitimate channels of trade an enormous amount of capital. Reference to the report of the Money Trust investigation shows that on data obtained from 32 of the banks and trust companies of the New York Clearing House Association on November 1, 1912, these institutions, for themselves and for their out-of-town correspondents, had outstanding loans on stock-exchange collateral amounting to $766,795,000.

It was this kind of speculation which brought on the panic of 1907, for so many more thousands of shares were sold on the exchange than actually existed that the market got top-heavy, and when demand was made to deliver some of these shares which had never existed, the demand for margins was so great to meet these obligations that the banks could not find the money to loan. This situation at once caused the market to drop, and consequently a panic was precipitated.

While upon the subject of listing shares upon the stock exchange, it is interesting to note the relation the firm of J. P. Morgan & Co. bears to the engraving of the certificates and bonds. No certificates or bonds can be listed upon the New York exchange engraved by any firm save the American Bank Note Co. Yet the evidence in the Pujo hearing disclosed that there was a profit in the business even at half the American Bank Note Co.'s figures. The New York Bank Note Co.; the Security Bank Note Co., of Philadelphia; Elliott & Co., in Philadelphia; and over a dozen other companies would be glad and have been trying to get some of this work. But the late J. P. Morgan was a director of the American Bank Note Co., and, therefore, the untold millions of certificates listed upon the board of the stock exchange were engraved by the American Bank Note Co., which charged the original owner of these securities two prices for their work.

This is a small matter as compared to hundreds of the Morgan investments, but it shows the wonderful genius and the thoroughness of the methods of that concern. If there was a chance of securing a monopoly, no matter how small the business was, it fell into Morgan & Co.'s hands. The firm of Morgan & Co. used a seine which caught the largest whale in the commercial sea, but the meshes of that seine were so tightly drawn that not even a minnow could escape.

The interlocking of directorates places the same men in control of so many different institutions that it is a comparatively easy matter to destroy weaker competitors. This was instanced during the panic of 1907.

The Clearing House Association of New York is another factor in determining the control of credit in the United States. Though a voluntary, unincorporated association, yet it exerts a powerful influence over the financial affairs of the entire country.

It is conducted on arbitrary rules and subject only to these rules and laws of its own governing body. In modern banking clearing houses are absolutely essential in order to facilitate the collection of checks by banks of the same community drawn on each other. They are simply a common meeting place, where the representative of each bank presents the checks his bank has paid to the representatives of the other banks. The amounts each bank has paid for checks drawn on other banks are listed, a balance is struck, and a check is given for the difference. Millions of dollars in the clearing house are balanced this way, and it often happens that as one bank has cashed about as many checks drawn on another bank as the other bank has cashed checks drawn on it, a few dollars will suffice to make up the difference, and each bank has been saved the time and annoyance of having to turn over the cash on each separate transaction, and no one is injured. In the larger cities, where there are thousands of checks drawn each day, it is imperative that there be a clearing house to clear and balance these checks and pay out the difference to each bank that it is entitled to. The New York Clearing House Association, however, does not pay all this difference in money, but in certificates issued by the association upon security furnished by the banks, which certificates the members of the association use in settling with each other, but are not otherwise circulated.

In 1853 there were 52 members of the New York Clearing House Association. Now, when the business is over twenty times as great as it was then, there are only 50 banks which belong to the association. There are, however, a few trust companies which have lately been admitted. No matter what financial standing a bank may have in New York, it can not be admitted to the association except by an affirmative vote of three-fourths of the members, so consequently there are hundreds of banks in New York which do not and can not belong to the association. But as they can not do business in an economical way without clearing their checks, the member banks act as clearing agents for them. The clearing agent has the right at any time without cause to terminate this arrangement with a nonmember bank, and the clearing-house committee often instructs a member bank to terminate this arrangement, which termination in nearly every instance results in the nonmember bank closing its doors immediately after notice has been made public that the bank can no longer clear in the association.

Now, as this clearing-house association is composed practically of the same directors who control the credit of the country, and who have interlocked upon the boards of directors of the various banking institutions, insurance companies, railroad, producing, trading, and public-utility corporations, it is at once apparent that the power they possess in this association is a dangerous one.

The granting or refusing aid, the issuance and calling in of clearing-house certificates of any competitor which does not belong to this association rests entirely without right of appeal in two consolidated committees of five members each, one the regular clearing-house committee, the other the special-loan committee.

In a certain section of New York there was keen competition between the Corn Exchange Bank and the Mechanics & Traders' Bank, these two banks having several branches near together in three different localities in New York. Now, the chairman of the regular clearing-house committee was a Mr. Nash, who was also president of the Corn Exchange Bank, and a Mr. Frew, the vice president of the Corn Exchange Bank, was a member of the select committee of five which passed on loans and aid to financial institutions. Their keenest and most active competitor in the banking business was the Mechanics & Traders' Bank, which was unable to get in the clearing-house association, but had to get agents to act for them. During the panic of 1907 the Mechanics & Traders' Bank, like a great many other banks, applied to the clearing-house association for aid in the way of clearing-house certificates. This bank was a perfectly solvent institution, with deposits amounting to about $12,000,000. The bank was given clearing-house certificates to the amount of $2,100,000 upon their depositing with the clearing-house association collateral with an absolute face value of $6,373,252.52. After depositing this amount of the securities of the bank a short time afterwards the Mechanics & Traders' Bank was notified by the regular clearing-house association committee that in 13 days it must redeem in cash this $2,100,000 in loan certificates, and this notice was published in the newspapers of New York the day before the Mechanics & Traders' Bank received it. Confidence in the Mechanics & Traders' Bank was destroyed, a run on the bank was started, and five days after the publication of this notice the bank closed its doors and went into bankruptcy.

The report of the Money Trust investigating committee on this transaction very charitably concludes by stating that—

We do not for a moment intimate that Mr. Nash or Mr. Frew, as arbiters of the application of the Mechanics and Traders' Bank, could have any thought of gaining an advantage for their own bank over its competitor. But, as a matter of general policy, such a situation should be avoided. It is not fair or wise that either party should be so placed.

Similar instances occurred in the case of the Oriental Bank and in the case of the National Bank of North America and in the case of the New Amsterdam Bank, all of which banks being solvent institutions were yet forced to close their doors in less than a week after notice had been given the public that the clearing house agents would no longer clear for them and that they must redeem in cash their loan certificates. And in the cases of these banks also notice was given the press before it reached the banks.

The commercial existence of a nonmember bank in New York depends upon its affiliation with some clearing-house agent. This bank is then at the mercy of the agent, who can, without cause, sever its connection at any time and easily destroy a competitor. The banks are, in a way, compelled to do business with their agents and to deposit with them, and, of course, the limited number of banks composing the association get the bulk of the deposits and possess an unfair advantage over their competitors.

The Bankers' Trust Co. was organized in March, 1903, and its management placed under a voting trust of three men, two of whom were partners in the firm of Morgan & Co., and, of

course, had absolute control. This company had a capital of only $1,000,000 and a surplus of only $500,000 and its original deposits were less than $6,000,000. The Clearing House Association had a select committee of nine, whose duty it was to pass upon aid to banks in the way of giving them clearing-house certificates. Six members of this committee on loans were directors in the little Bankers' Trust Co., a majority of two-thirds.

Now, let us see how this little trust company, with a capital and surplus of only $1,500,000, grew in nine years. During that period of time, aided by the artificial stimulant of an interlocked directorate with numbers of other institutions, merging or destroying its competitors as they came under its control, and fostered by the tender care of a two-thirds majority of the committee on loans in the clearing-house association, the Bankers' Trust Co. in less than 10 years developed into a financial institution with a surplus and capital of $20,000,000. During that time its deposits grew from less than $6,000,000 to the enormous sum of $168,066,000, with an undivided profit of over $5,000,000, to say nothing of the millions of dollars paid in dividends to its stockholders.

Thus you see that the New York Clearing House Association can not only destroy competing institutions, but can at will take a small banking institution and in less than a decade make it one of the most potent financial factors in the commercial world.

According to the report of the Pujo investigating committee, the panic of 1907, which left behind it a long trail of financial disasters, was started by the closing of the Knickerbocker Trust Co., which followed immediately after the announcement that the National Bank of Commerce, the trust company's clearing agent, would no longer act as such.

We have seen how this system of general control, brought about through interlocking of directorates, can destroy competitors through the medium of the clearing-house association and through the refusal of credit and the unexpected calling in of loans. Let us now see how this system works after competition has been destroyed, either through force or by merger, to prevent the reappearance of competition.

The locomotive manufacturing industry formed a gigantic trust, known as the American Locomotive Co., which trust is absolutely controlled by Morgan & Co. and the First National Bank. The Bankers' Trust Co. and the Guaranty Trust Co. are controlled by Morgan & Co. and the First National Bank by voting trustees. Now, the Bankers' Trust Co., the Guaranty Trust Co., the National Bank of Commerce, the Chase National Bank, and the Astor Trust Co. have each directors of their institutions upon the board of directors of the American Locomotive Co. Morgan & Co. have three of their directors upon the board of the Astor Trust Co., three upon the board of the Bankers' Trust Co., three upon the board of the Guaranty Trust Co., and two upon the board of the National Bank of Commerce. And the First National Bank has three of its directors upon the board of the National Bank of Commerce, three upon the board of the Guaranty Trust Co., five upon the board of the Chase National Bank, five upon the board of the Bankers' Trust Co., and four upon the board of the Astor Trust Co., making in all 31 directors of Morgan & Co. and the First National Bank who are also upon the directorate of the Bankers' Trust Co., the Guaranty Trust Co., the National Bank of Commerce, the Chase National Bank, and the Astor Trust Co. Therefore it is a safe assumption that as 31 of the directors of Morgan & Co. and the First National Bank are also found upon the board of directors of these five institutions, which are in turn represented upon the board of the American Locomotive Co., that in its final analysis the firm of J. P. Morgan & Co. and the First National Bank of New York practically dominate and control by means of interlocking directorates the American Locomotive Co.

All the locomotive works, with the exception of the Baldwin Co., were in this consolidation. So Morgan & Co. and the First National Bank then bought the only independent concern, the Baldwin Works, and now control all the locomotive building in the United States. And thus the various railroads are confronted with one seller only. It is of the utmost importance to the American people that the railroads secure their rolling stock at reasonable prices, because upon the cost of operation the rates are to some extent based. Acting upon this theory, Congress placed steel rails upon the free list, because some of the money saved the railroads in the purchase of their rails went into cheaper transportation rates to the American people. Therefore it is of the utmost importance to the public that the railroads are not compelled to pay exorbitant and unreasonable prices for locomotives.

But suppose some public-spirited men decide that they will build a competing locomotive works. It requires considerable capital to build, equip, and finance a locomotive-building concern. These men would, in all probability, require the financial backing of one of the large financial institutions to handle their securities and to lend them the money. If they went to the First National Bank to borrow this money or to float their securities through its trust company the first question asked would be, "What do you want with this money?" Finding that the lending of this money would be destruction of the monopoly of the locomotive business, it would be refused.

They would then go to the firm of J. P. Morgan & Co. and they would again be refused. They then go to the Bankers Trust Co., to the Guaranty Trust Co., to the National Bank of Commerce, to the Astor Trust Co., to the Chase National Bank, and there upon each board of directors they would find the same men who were also directors in the locomotive works, so, of course, their requests for accommodations would be denied. They would then go to Washington City to the Riggs Bank, and there upon the board of directors they would find one of the National Bank of Commerce directors. They would then go to the American Security & Trust Co., but a director from the National Bank of Commerce would meet them there. They would then go to Pittsburgh to the Mellon National Bank, but a director from the National Bank of Commerce would meet them there; so they would go to Philadelphia to the Fourth Street National Bank, and there they would be confronted with one director from J. P. Morgan & Co. and one from the Bankers Trust Co.; then they would go to the Franklin National Bank, and upon its board they would find one Morgan director, one Guaranty Trust Co., and one from the Bankers Trust Co. They would then go to the Girard Trust Co., and find one Morgan, two Guaranty Trust Co., one Bankers Trust Co., and one National Bank of Commerce director. They would then go to the Philadelphia National Bank, where they find one Morgan and one Guaranty Trust Co. director. They would then go to the Continental & Commercial National Bank in Chicago, there they would find one director from the Astor Trust Co. At the Continental Trust & Savings Co. they would also find a director from the Astor Trust Co. They would then try the First National Bank of Chicago, and on its board of directors they would find one from the First National Bank of New York and one from the Chase National Bank. At the First Trust & Savings Bank they would be met by a director from the First National Bank of New York and one from the Chase National Bank of New York. Again they would try to secure accommodations at the Illinois Trust & Savings Bank, and there they find two directors from the First National Bank of New York, one from the Chase National Bank, one from the Bankers Trust Co., and one from the National Bank of Commerce, and their request would be denied.

Despairing of receiving financial assistance from the great banking institutions of the Republic there is left open to them the great insurance companies of the country, which are also money lenders in large amounts. They go to the board of directors of the Fidelity & Casualty Co., but upon that board there are several familiar faces—Morgan & Co., the Guaranty Trust Co., the Astor Trust Co., and the Bankers' Trust Co., all have some of their directors upon the board of this company. Then they go to the Mutual Life Insurance Co., and there they are confronted with a representative from Morgan & Co., another from the First National Bank, another from the Bankers Trust Co., four from the Guaranty Trust Co., one from the Chase National Bank, three from the Astor Trust Co., and four from National Bank of Commerce; so there is no money there for the purpose of building new locomotive works. They go to the board of the Equitable Life Insurance Co., a majority of the stock of which is owned by Morgan & Co., and take their securities, but upon this board are found one director from the First National Bank, five from the Guaranty Trust Co., two from the Bankers' Trust Co., three from the National Bank of Commerce, and two from the Astor Trust Co. They then go to the New York Life Insurance Co., and again they find the same old faces—the First National Bank, the Bankers Trust Co., the National Bank of Commerce, the Chase National Bank, and the Astor Trust Co., are all represented on the board of the New York Life Insurance Co.; so there is no chance for them there. They try the German American Insurance Co., and there they are met by one director from Morgan & Co., one from the National Bank of Commerce, and one from the Astor Trust Co. They then make another effort, and go to the Continental Insurance Co., but there they find on the board of this company one director from the First National Bank, two from the Guaranty Trust Co., one from the Bankers' Trust Co., one from the

National Bank of Commerce, one from the Chase National Bank, and two from the Astor Trust Co. They then go to the American Surety Insurance Co., and upon its board of directors they find 1 director from the First National Bank, 10 from the Guaranty Trust Co., 3 from the Bankers Trust Co., 8 from the National Bank of Commerce, 4 from the Astor Trust Co., and 3 from the Chase National Bank. They try the Home Insurance Co., and there they find one director from the Guaranty Trust Co., one from the National Bank of Commerce, and two from the Astor Trust Co. They then try the Northwestern Mutual Life Insurance Co., but the same faces meet them there—they find one director from the Guaranty Trust Co., one from the Bankers Trust Co., one from the National Bank of Commerce, one from the Chase National Bank, and one from the Astor Trust Co. At the Penn Mutual Life Insurance Co. they find upon its board a director from Morgan & Co.

But suppose these promoters of the proposed new locomotive works, through subscription or otherwise, raise the money and build the works and place their locomotives on sale. Their agents will go to the Southern Railroad, and there they find that J. P. Morgan since 1894 has been the sole fiscal agent for that road and that he and the chairman of the board of directors of the First National Bank absolutely control that road. They can do no business there, for Morgan & Co. and the First National Bank are in the locomotive business and sell their own locomotives to the Southern. These agents then go to the Illinois Central, which traverses the very heart of the South and Central West. But upon the board of directors of the Illinois Central sit two of the directors of the Guaranty Trust Co., three of the National Bank of Commerce, and two from the Astor Trust Co. So there is no chance to sell any of these locomotives to the Illinois Central. They then go to the Seaboard Air Line Railroad and offer their locomotives for sale, but the same familiar faces greet them at the door, for there they find a director of the First National Bank, two from the Guaranty Trust Co., two from the Bankers' Trust Co., two from the National Bank of Commerce, one from the Chase National Bank, and two from the Astor Trust Co., so there is no chance for business with that road. The representatives of the new locomotive works then go to the Northern Pacific Railroad, one of the great transcontinental trunk lines, and there upon its board they find the familiar faces of three of the Morgan & Co. directors, two from the Guaranty Trust Co., one from the Bankers' Trust Co., three from the Chase National Bank, two from the National Bank of Commerce, two from the Astor Trust Co., while four familiar faces from the First National Bank greet them as they enter. They then make an effort to dispose of their locomotives to the Lehigh Valley Railroad Co., but upon the board of directors of that great corporation they find two directors from Morgan & Co., two from the First National Bank, two from the Guaranty Trust Co., one from the Bankers' Trust Co., one from the National Bank of Commerce, one from the Chase National Bank, and two from the Astor Trust Co. They try to sell to the Delaware, Lackawanna & Western, but upon the board of directors they are met by four directors from the First National Bank, one from the Guaranty Trust Co., one from the National Bank of Commerce, two from the Chase National Bank, and one from the Astor Trust Co. They make an effort to sell their locomotives to the Atchison, Topeka & Santa Fe, but some of the same faces greet them there, for they find one director from Morgan & Co., three from the Guaranty Trust Co., one from the Bankers' Trust Co., and two from the National Bank of Commerce. Still trying to dispose of their locomotives, they try the New York, New Haven & Hartford, and again they meet the same fate, for upon the board of directors of this railroad they find Morgan & Co. has one, the First National Bank has two, the Guaranty Trust Co. has two, the Bankers' Trust Co. has one, the National Bank of Commerce has one, the Chase National Bank has one, and the Astor Trust Co. has two. They then try the New York Central & Hudson River, but again they meet the same old faces, for there they find one director from Morgan & Co., two from the First National Bank, two from the Guaranty Trust Co., one from the National Bank of Commerce, one from the Chase National Bank, and one from the Astor Trust Co. Upon the board of the Union Pacific Railroad Co. they find two directors from the Guaranty Trust Co., three from the National Bank of Commerce, and two from the Astor Trust Co., so they find no chance for a sale there.

Finding the same conditions prevailing in practically every other great railroad system in the United States they will soon discover that there is no market for locomotives, no matter how much the price may be cut, for the same men who make the locomotives control the railroads.

Mr. Chairman, as it is in the locomotive business so it is in almost every line of productive and commercial enterprise.

One of the most significant effects of this merging and trust controlling of railroads is seen in the utter absence of any new road building by independent systems. No competing lines of railroads have been built in the United States in the last 10 years. All the railroad extension has been by those roads controlled by the trust. No new lines can be built, because the same directors who control through the banks and insurance companies of the country the credit of the United States also control the existing railroads, and they will refuse to handle the bonds or otherwise finance a proposed new railroad, because it will interfere with the rich harvest they are now reaping as the result of their consolidations.

A striking instance of how the building of new railroads has been retarded in the United States is recorded in the case of the proposed New York, Wyoming & Western Railroad.

It seems that all of the anthracite coal mines, with the exception of eight mines owned by Simpson & Watkins, who were independent operators, are owned by Morgan & Co., the First National Bank, and the small coterie which controls the various large commercial enterprises in the United States.

Now, the Erie Railroad, the Lehigh Valley Railroad, the Delaware, Lackawanna & Western Railroad, the Reading Railroad, the Central of New Jersey, and the New York, Susquehanna & Western Railroad are the railroads that operate between the anthracite coal fields and tidewater. The same men who own the consolidated anthracite coal mines also control these railroads which carry their coal to tidewater.

I am informed that Simpson & Watkins, the owners of the eight independent anthracite coal mines were much hampered and embarrassed in the operation of their mines through a lack of railroad facilities. There were mysterious delays in shipment, sudden scarcity of cars, and shifting of transportation rates to such an extent that Simpson & Watkins determined to build a railroad of their own to carry their coal to market. To that end they projected a competing railroad to the coal fields and organized the New York, Wyoming & Western Railroad and made their preparations for the building of same.

The building of this proposed road was a matter of much annoyance to Morgan & Co. and the First National Bank. A new railroad extending from the coal fields to tidewater would not alone decrease the price of coal to the consumer, but would force the competing railroads to reduce their transportation rates. Morgan & Co. and the First National Bank decided this problem by purchasing the coal mines of Simpson & Watkins. Thus, competition along several proposed lines was destroyed, the monopoly in the coal and the railroad businesses was again assured, and that was the last that was ever heard of the New York, Wyoming & Western Railroad.

In reference to this particular railroad, the New York, Wyoming & Western, I will say that while I believe that Morgan & Co. and the First National Bank bought these independent mines, and bought them for the purpose of destroying competition, both in the price of coal and in railroad rates, while my information leads me to believe this to be true, yet I am unable to find any documentary proof in this particular instance, and feel that it is only fair to state this, but it could easily have been done, and there are doubtless numbers of instances where it has been done.

Mr. Chairman, we now have a new currency law, which replaces the antiquated system of banking and currency which prevailed so long in the United States and was so helpless in times of financial disaster. The new currency law, by preventing the vast sums of money deposited with the country banks from being concentrated in New York, will to some degree deprive these trust magnates of a large part of the money they have been lending to the gamblers of Wall Street, that they may, through speculation, control the markets of the world.

These deposits will now be placed in the different regional banks located in various parts of the country.

But we will never be delivered from the blighting effects of a control of the credit of the people of the United States until the billions of dollars of securities of the great corporations of the country shall be offered for sale in a free and competitive market, and until the intolerable system of interlocking directorates upon the different boards of the great financial institutions is completely destroyed.

Great problems confronted the Democratic administration. Some of these problems have already been solved. Our administration has the wisdom and the courage to enact into law a measure which will give the American people relief from a system of gigantic monopoly, so stupendous in its organization, so harmful in its operations, and so dangerous in its effects, that its destructive influences, unchecked, will before long undermine the free institutions of the Republic. [Applause.]

Antitrust Legislation.

EXTENSION OF REMARKS
OF
HON. MICHAEL E. BURKE,
OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 5, 1914,

On the bill (H. R. 16586), a bill to amend section 20 of an act to regulate commerce and to prevent overissues of securities by carriers.

Mr. BURKE of Wisconsin. Mr. Speaker, to me it is a great pleasure to support the pending bill, commonly known as a bill to regulate by the Interstate Commerce Commission the issuing of stocks and bonds by railways or common carriers. This pleasure is increased by reason of the opportunity of also supporting, at this time, its sister bills (H. R. 15657), otherwise known as the Clayton antitrust bill, and bill (H. R. 15613) creating an interstate trade commission. In common with the great majority of the American people, I have been looking forward to this occasion with earnest hope and sincere pleasure for many years past. During those many years I have watched with anxiety the ever-increasing growth of combinations, trusts, and monopolies. In common with others I have observed the wide spreading evil practices of these business organizations extend from the Atlantic to the Pacific, and from the Gulf to the Great Lakes. During all of these years the iron hands of monopolies and trusts have been weighing down and crushing the opportunities of the average business man, and at the same time I have listened to remonstrances throughout the length and breadth of the land against the crying evils of unbridled, crooked big business.

This and its sister bills are very comprehensive and far-reaching. An experienced and well-informed Representative has declared upon the floor of this House during this debate that this and its accompanying kindred bills will regulate the management of carriers and directorates of over 300,000 corporations, including banks. It was shown before the Judiciary Committee at its hearings two years ago that the business of this country which would be affected by the proposed legislation amounts to the vast annual sum of $25.000,000,000. It can thus be seen at a glance that the importance and seriousness of this legislation can scarcely be overrated. Notwithstanding the comprehensiveness and difficulties of the problem confronting us, I have faith in the three measures proposed for the relief of the people, and believe that when they are enacted into law that moderate business will have more opportunity than it has had at any time in this country since the Civil War. This legislation has been demanded by the people, regardless of party, and the Democratic Party has promised in its national platforms to enact it.

NECESSITY FOR ANTITRUST LEGISLATION.

Since the approval of the Sherman antitrust law on the 2d day of July, 1890, some 24 years ago, trusts, combinations, and monopolies have increased marvelously in number and in power. They have invaded nearly every conceivable line of industry and human effort. Of late years many prosecutions have been brought against the most powerful and far-reaching of them. In spite, however, of the numerous prosecutions that have been conducted against them they still continue to thrive and to increase in number and viciousness. Their hold upon the business of the country has ramified in every direction. Their movements and machinations have overshadowed and dwarfed the efforts of small business men and small corporations, until this latter class and the people at large can plainly see that their business opportunities are circumscribed and hampered by the methods and schemes of such trusts, combinations, and monopolies. The freedom of moderate business has been limited and dwarfed. All important expansions of business activities of far or great dimensions are at their mercy.

I shall here take the liberty, for the purpose of showing the wonderful and almost irresistible control exercised by these tremendous agencies, of citing a few of these gigantic consolidations of power in the business world and some of their methods.

Louis C. Brandeis, in his book entitled "Other People's Money, and How the Bankers Use it," presents the following statement of facts, which are all well known and never have been contradicted, so far as I am aware, by anyone in authority. Quoting from his book we find the following:

J. P. Morgan (or a partner), a director of the New York, New Haven & Hartford Railroad, causes that company to sell to J. P. Morgan & Co. an issue of bonds. J. P. Morgan & Co. borrow the money with which to pay for the bonds from the Guaranty Trust Co., of which Mr. Morgan (or a partner) is a director. J. P. Morgan & Co. sell the bonds to the Penn Mutual Life Insurance Co., of which Mr. Morgan (or a partner) is a director. The New Haven spends the proceeds of the bonds in purchasing steel rails from the United States Steel Corporation, of which Mr. Morgan (or a partner) is a director. The United States Steel Corporation spends the proceeds of the rails in purchasing electrical supplies from the General Electric Co., of which Mr. Morgan (or a partner) is a director. The General Electric sells supplies to the Western Union Telegraph Co., a subsidiary of the American Telephone & Telegraph Co., and in both Mr. Morgan (or a partner) is a director. The telegraph company has an exclusive wire contract with the Reading, of which Mr. Morgan (or a partner) is a director. The Reading buys its passenger cars from the Pullman Co., of which Mr. Morgan (or a partner) is a director. The Pullman Co. buys (for local use) locomotives from the Baldwin Locomotive Co., of which Mr. Morgan (or a partner) is a director. The Reading, the General Electric, the Steel Corporation, and the New Haven, like the Pullman, buy locomotives from the Baldwin Co. The Steel Corporation, the Telephone Co., the New Haven, the Reading, the Pullman, and the Baldwin Cos., like the Western Union, buy electrical supplies from the General Electric. The Baldwin, the Pullman, the Reading, the Telephone, the Telegraph, and the General Electric Cos., like the New Haven, buy steel products from the Steel Corporation. Each and every one of the companies last named markets its securities through J. P. Morgan & Co., each deposits its funds with J. P. Morgan & Co., and with these funds of each the firm enters upon further operations.

This specific illustration is in part supposititicus, but it represents truthfully the operation of interlocking directorates. Only it must be multiplied many times, and with many permutations, to represent fully the extent to which the interests of a few men are intertwined. Instead of taking the New Haven as the railroad starting point in our example, the New York Central, the Santa Fe, the Southern, the Lehigh Valley, the Chicago & Great Western, the Erie, or the Pere Marquette might have been selected; instead of the Guaranty Trust Co. as the banking reservoir, any one of a dozen other important banks or trust companies; instead of the Penn Mutual as purchaser of the bonds, other insurance companies; instead of the General Electric, its qualified competitor, the Westinghouse Electric & Manufacturing Co. The chain is, indeed, endless, for each controlled corporation is entwined with many others.

In the report of the Pujo Money Trust investigating committee of 1913 the wonderful ramifications of interlocking directories are revealed to our sight. From the sworn testimony we find that the National City and the First National Banks of New York, belonging to the J. P. Morgan firm, constitute the fortified group of the Money Trust. George F. Stillman is the great power in the National City and George F. Baker in the First National Bank. The resources of the First National are $200,000,000 and those of the National City about $300,000,000. A reliable estimate of the Morgan firm places their deposits alone in the aggregate sum of $162,500,000.

George F. Baker was until recently, when he saw the handwriting on the wall, a director in 22 corporations, having, with their subsidiaries, resources of $7,272,000,000. The directors of the bank of which he is the head were directors in at least 27 other corporations, with a capitalization and resources of $4,270,000,000. We have here a spectacle of the First National Bank having a representation by way of directors on boards of 49 different corporations with total resources of $11,542,000,000.

From this same Pujo report we find a few more of the companies in which this Mr. Baker has an interest and exercises influence either as a director, an executive committeeman, or as a voting trustee. The following is a list of the corporations in which Mr. Baker is interested as shown by that report:

First. The First National Bank of New York, National Bank of Commerce, Farmers Loan & Trust Co., and Mutual Life Insurance Co.

Second. In the following railroad companies: New York Central lines, New Haven, Reading, Erie, Lackawanna, Lehigh Valley, Southern, Northern Pacific, Chicago, Burlington & Quincy.

Third. He is interested in the following public-service corporations: American Telegraph & Telephone Co., Adams Express Co.

His interests also extend into the following industrial corporations: United States Steel Corporation and the Pullman Co.

Mr. Stillman, of the National City Bank, of New York, is a director in seven corporations with resources of $2,476,000,000, and the National City Bank, in which he has a controlling influence, has directors in at least 41 other corporations, with their subsidiaries, having a total capitalization and assets of $10,564,000,000.

Those interested as owners of the firm of J. P. Morgan & Co. hold 72 directorships in 47 of the largest companies of the country.

We further find from the committee report that the members of the firm of J. P. Morgan & Co. and the directors of the trust companies controlled by them, and of the First National and the National City Banks, hold as follows:

One hundred and eighteen directorships in 34 banks and trust companies having total resources of $2,679,000,000 and total deposits of $1,983,000,000.

Thirty directorships in 10 insurance companies having total assets of $2,293,000,000.

One hundred and five directorships in 32 transportation systems having a total capitalization of $11,784,000,000 and a total mileage—excluding express companies and steamship lines—of 150,200.

Sixty-three directorships in 24 producing and trading corporations having a total capitalization of $3,339,000,000.

Twenty-five directorships in 12 public-utility corporations having a total capitalization of $2,150,000,000.

In all, 341 directorships in 112 corporations having aggregate resources or capitalization of $22,245,000,000.

As pointed out by Mr. Brandeis, $22,000,000,000 is more than three times greater than the total assessed valuation of all real and personal property in New England, and nearly three times greater than the total valuation of all real estate in New York City. It is double the assessed valuation of all property in the 13 Southern States. It is more than the assessed valuation of all property in the 22 States lying north, south, and west of the Missouri River.

The report of the Stanley investigating committee on the Steel Trust shows, among other things, that the few men who control the Steel Trust are directors in 29 different railroad systems, with 126,000 miles of line, about one-half of the railroad mileage of the country, and that they are also directors in many steamship companies. The Steel Corporation controls transportation through all these business alliances, not merely as carriers but as the largest customers and users of steel. The men who control the Steel Trust are also directors in 12 street railway companies, users of steel, including some of the largest street railways in the world. They are also in 40 machinery and other steel-using companies, acting and controlling as directors; also in many gas, oil, and water companies who are extensive users of iron products, and they predominate in the great telephone and telegraph companies, who use an immense quantity of wire. The total resources of the companies controlled by these few men of the Steel Trust exceeds $16,000,000,000.

The insatiable appetite of the Money Trust seems to know no limitations. Its ramifications extend in every direction and into every industry, and its hooks of greed grasp the business activities and the natural and artificial resources of the Nation wherever those activities and resources are considered to be profitable.

As an illustration, let us take the case of Boston, and it is a fair example of practically every large business city in the Nation. The banking firms of Lee, Higginson & Co. and Kidder, Peabody & Co. practically control the National Shawmut Bank, the First National Bank, and the Old Colony Trust Co., with assets of $288,386,294, a little more than one-half of the banking resources of Boston. The directors of these banks are also directors in 21 other banks and trust companies, and, together, they are practically in control of 90 per cent of the total banking assets of that city. Thirty-three out of forty-two banking institutions in Boston are, in fact, interlocked, and have total assets of $590,516,239, which is about 92½ per cent of the total banking resources of Boston.

It must be apparent to all intelligent, impartial, and discerning men that the presence and controlling interests in these various banking, railway, and other industrial institutions, and with interlocking directories, are not in that business for their health. From the opportunities afforded them it must be apparent to the intelligent American public that the temptations to secure advantages, by reason of their powerful ramifying influences, must be too strong to resist temptation. It is plain to be seen that these men, thus interested and connected in the business world, are in a position to take advantage of the moderate business man acoming and agoing, and by reason of their positions successfully hide their unscrupulous monopolistic methods from the scrutiny and gaze of the Interstate Commerce Commission. They are in positions where it is easy for them, and practically safe under the present law, to smother competition and to promote restraints of trade and foster monopolies.

From the testimony of financial leaders alleged to constitute the group of financiers in control of the credit of the country and from documentary evidence, all taken and received in the Pujo Money Trust investigation, the following interesting group of facts appear:

One hundred and eighty men hold 385 directorships in 41 banks and trust companies having total resources of $3,832,000,000 and total deposits of $2,834,000,000; 50 directorships in 11 insurance companies having total assets of $2,646,000,000; 155 directorships in 31 railroad systems having a total capitalization of $12,193,000,000 and a total mileage of 163,200; 6 directorships in 2 express companies and 4 directorships in 1 steamship company having a combined capitalization of $245,000,000 and a gross annual income of $97,000,000.

These same men hold 98 directorships in 28 producing and trading corporations having a total capitalization of $3,583,000,000 and total gross annual earnings in excess of $1,145,000,000; 48 directorships in 19 public-utilities corporations having a total capitalization of $2,826,000,000 and total gross annual earnings in excess of $470,000,000. In all, these 180 men hold 746 directorships in 134 corporations having total resources or capitalization of $25,325,000,000.

The baneful effects of the practice and custom of interlocking directories is accurately described by Mr. Louis D. Brandeis in the following language:

The practice of interlocking directorates offends laws, human and divine. Applied to rival corporations, it tends to the suppression of competition and to violation of the Sherman law; applied to corporations which deal with each other, it tends to disloyalty and to violation of the fundamental law that no man can serve two masters. In either event it tends to inefficiency, for it removes incentive and destroys soundness of judgment. It is undemocratic, for it rejects the platform, "A fair field and no favors," substituting the pull of privilege for the push of manhood. It is the most potent instrument of the Money Trust. Break the control so exercised by the investment bankers over railroads, public-service and industrial corporations, over banks, life insurance and trust companies, and a long step will have been taken toward attainment of the New Freedom.

Accumulations of great wealth and property are to be found not only among the financial magnates controlling trusts, combinations, and monopolies, but such accumulations of wealth are to be found in stupendous figures in possession of few individuals. Experienced financiers, and others versed in his affairs, estimate the value of the assets and possessions of John D. Rockefeller at $900,000,000. It has frequently been said by those who have made an investigation of the subject that 50 persons in the United States own at least 40 per cent of all its wealth and property. The possession of these vast sums of wealth by few individuals, combinations, and trusts, invests them with the power to say who shall and who shall not secure credit for the development of our great natural resources. In them lies the power, when prompted by greed, avarice, or revenge, to give life or death to business enterprises. When selfishness actuates their motives, and it usually does, there is no freedom and no progress for the moderate business man.

The vast growth and accumulations of wealth and property in this country in recent years, the great increase in multimillionaires, the great concentration of power in the vast corporations of the country, all demonstrate to us that if these phases of our national life are to continue it will be but a short time when there will be a chasm dividing our citizens, with plutocracy on the one hand and serfdom on the other. These phenomena forcibly illustrate the truth of the lines of the poet, who says:

Ill fares the land, to hastening ills a prey,
Where wealth accumulates and men decay.

FEEDERS OF SOCIALISM.

Such vast increases in trusts, combinations, and monopolies and in their nefarious practices and business methods have and are creating more and more dissatisfaction each year among the common people of the country. The great abuses in business have disheartened and discouraged many among the middle class of our citizens. The numerous examples of depression, of extortion, deception, fraud, and discrimination have been going on from year to year, and from day to day. No one who takes up a newspaper can escape noticing the methods pursued by these trusts, combinations, and monopolies in trying to satisfy their greed by feeding upon the lifeblood of the country's opportunities and natural resources. They have seized upon every natural opportunity for increasing their power and wealth, and as they grow in power they grow in arrogance, indiscretion, and despotism. Want of control over them has produced restlessness in the minds of the people.

Upon examples of the gigantic power and corruption of these vast business agencies, socialism feeds its hearers. More converts have been made to socialism in this country by bad examples of trusts and monopolies than by all the other means used by the Socialists. As trusts, combinations, and monopolies have grown in number and power so has socialism grown in number and power. The billboards, in every city in the land in campaign times, have posters in big red letters containing the socialistic motto:

We believe in the Nation owning the trusts, instead of the trusts owning the Nation.

By that language they call the attention of the middle class to the uncontrolled and unpunished evil practices of the trusts, and the result is more converts to their political theories than by any other single argument. The tide of socialism has been rising in this country for the last decade until now it numbers about 1,000,000 voters, and its growth continues, and I prophesy that unless these antitrust bills or something similar are enacted into law and enforced, that the tide of socialism will swell until it overwhelms all other parties. If those who profit by trusts, combinations, and monopolies desire to avoid that dreadful condition, it is up to them to submit to the moderate regulations proposed by these bills, for just so sure as the iron hand of monopoly continues to oppress the people, just so sure will socialism finally succeed and overthrow not only monopolies and trusts, but our republican institutions. So let these special privileges which are opposing these bills reflect that at this time they are choosing between the beneficial purposes of this proposed legislation on the one hand and socialism on the other. Gentlemen, which will you have? These bills are designed to afford opportunities of business freedom for the middle class, and to preserve our republican institutions.

EXAMPLES OF PLUNDER AND SPOLIATION.

As illustrating the imperative necessity for the passage of this bill and its two sister bills to prevent the issuing of stocks and bonds by railways, excepting by permission of the Interstate Commerce Commission, I desire to recall to your memories certain concrete historical plunders and spoliations. A lack of proper legislation relating to the issuing of railroad stocks and bonds has been the cause of stock watering by the railroads and other industrial corporations of this country in the amount of billions of dollars. In the absence of regulations relating to and guarding the issuing of stocks and bonds some of the most stupendous financial crimes known to history have been committed.

In the days of Jay Gould and others the stock of the Erie Railroad was increased from $17,000,000 to $78,000,000 for no other purpose than to play the stock market.

For specific examples of plunder and spoliation let me call your attention to the history of the Chicago & Alton Railway Co. About 1900, while this road was under a businesslike management, paying dividends of about 8 per cent annually, it had total liabilities amounting to $34,000,000. A year or two afterwards a combination, consisting of the late Mr. Harriman, Schiff, Gould, and others, bought the stock of that company at a very large premium and obtained a controlling interest therein. In seven years the capital indebtedness of the company had been increased from $34,000,000 to $114,000,000, an increase of $80,000,000, with only about $20,000,000 paid out for actual improvements and additions, leaving an increase of its stock and liabilities for which there was not any consideration whatsoever of about $67,000,000.

In 1905 the bonds and stocks outstanding of the Southern Pacific Railway Co. amounted to $251,473,400, or $76,880 per mile. In 1906 the capitalization of that company had been increased to $284,153,500, or $86,342 per mile. This appears to have been done within a year. With no additions, improvements, or road building, its debt had increased $31,600,000. This was making a fortune for some fortunate individuals of ingenuity by magic and printer's ink.

During the early fall of 1913 the Interstate Commerce Commission undertook an investigation of the Frisco, the Rock Island, Pere Marquette, Boston & Maine, and New Haven Railroads. These events must be fresh in the minds of all, and we remember the high financial plundering indulged in by the directors and managers of those several railways. According to the showing made before the House Committee on Interstate Commerce the capital stock of the Rock Island Railway Co. was in recent years expanded from $60,000,000 to $75,000,000, and the bonded indebtedness from $71,000,000 to $258,000,000. Three thousand miles of railway, much of it nonproductive, were added to the system, and little of the great increase in the indebtedness was put into improvements of the way or the service. Here we have a striking and forcible example of the manner in which the public are interested and are also imposed upon. The interest on the increased bonded indebtedness was charged to the public in passenger and freight rates, and has been raised from $18,238 to over $38,000 per mile.

The Pere Marquette Railway furnishes another example. The funded indebtedness of this road increased from $25,000,000 in 1900 to over $78,000,000. While there has been an increase of over $4,000,000 in the annual earnings during the last 10 years, yet it is testified to that there has been no material increase in equipment. The road is said to be in worse financial and physical condition than in the year 1900.

One of the most notable features disclosed in the investigation of the purchase of the Chicago & Eastern Illinois Railway by the St. Louis & San Francisco Railway Co. last year was the discounts on bonds and notes and other short-term paper issued by the Frisco and its lines, amounting to over $30,000,000 in 12 years. Another important fact disclosed by this investigation of the Frisco line which is worthy of consideration in this discussion is a comparison of its interest-bearing liabilities with its stock liabilities. In May, 1913, its total capital amounted to $295,000,000, of which only $51,000,000 was capital stock and $244,000,000 was funded debt, including equipment. The capital stock thus seemed to have been only a little over 17 per cent of the total liabilities, while the funded indebtedness seemed to have amounted to a little over 82 per cent.

THE NEW YORK, NEW HAVEN & HARTFORD RAILWAY.

For years the New York, New Haven & Hartford Railway appeared to be one of the most flourishing railway systems of the country. Soon, however, numerous and unaccountable railway accidents, resulting in destruction of large numbers of life and property, occurred. Last fall it was thrown into bankruptcy, and recently its affairs were investigated by the Interstate Commerce Commission, and the facts relating thereto are still fresh in our minds, and new facts are being developed each day. From the testimony of Mr. Mellen, the late president of that railway, given about a week ago, it appears that over $30,000,000 of the assets of that company had been wasted and squandered in its management and in purchasing steamship and trolley lines competing with its main system, so that its president said the other day, under oath, that over $30,000,000 of its property had been wasted and squandered. Here, again, interlocking directories and uncontrolled use of its financial powers and the practice of discrimination resulted in the ruin of a once magnificent and prosperous railway.

On the heels of the great sensational revelations concerning the wrecking of the New York, New Haven and Boston Railway, comes the sensational charges in relation to the Morganizing of the Baltimore & Ohio Railway. Mr. Brandeis, special counsel for the Interstate Commerce Commission, which is investigating the relation between the Baltimore & Ohio and the Cincinnati, Hamilton & Dayton Railways, exposed another game of high finance. By a manipulation of the bankrupt Cincinnati, Hamilton & Dayton Railway, the treasury of the Baltimore & Ohio Railway has been swindled and euchered out of $50,000,000.

For years the New York, New Haven & Boston Railway was loudest in its protestations against regulation by the Interstate Commerce Commission. Its protests were the most vigorous against railway regulation of all the stubborn railways. Its managers pointed with pride that over 50 per cent of its stock and bonds were held by widows and orphans. Whenever they were threatened with punishment for their sins, they shed crocodile tears and hid behind the skirts of widows, and appealed to the sympathies of the Nation against regulation and control. Their hypocrisy has, however, been disclosed. Its officers and directors, on account of insufficient regulation and control by public law, have turned cannibal, and have by wicked exploitations devoured not only the widows and orphans, but the weaker of their fellow plunderers. Yet, we find managers and officers of the New York, New Haven & Boston at this time, when we are trying to pass laws for the relief and protection of the people, joining with their fellow plunderers throughout the country in the hypocritical hue and cry, "Do not disturb our business."

These are but a few of the shining examples of the power, strength, and devouring ways of trusts, combinations, and monopolies. Thousands of a smaller brood of these corporations and monopolies might be mentioned, but time and space forbid, but these are sufficient to show the necessity of new, and proper antitrust legislation. These stupendous facts must demonstrate conclusively to every intelligent and impartial American the necessity of strengthening the Sherman antitrust law by the passage of this and its two sister bills.

DEMAND FOR ANTITRUST LEGISLATION AND BOND AND STOCK CONTROL.

The above are a few concrete examples of the conditions confronting the country. They show a condition of affairs that demands the immediate consideration of Congress. They also show a condition which calls for courage and earnestness on the part of Congress. The evil effects, of which the above cited are but a few, are matters of almost daily observation. Every Representative in this House can point to victims of this system of trusts, combinations, and monopolies in his own district. In every city, in every county and State, there are evidences of their evil practices and wrongdoings. Abandoned mills, purchased and closed by the trusts to prevent competition; commercial failure of the little merchant, who has been for years struggling against these gigantic enemies for fair play; the great natural resources of the country concentrated in the hands of a few, such as its timber, coal, iron, and water powers, conclusively show necessity for passage of these proposed laws. Such are the weighty and startling conditions that challenge the attention and consideration of Congress.

For years these trusts, combinations and monopolies have been increasing by bounds. Their activities, operation, and depressions have attracted the attention of the people of the country. Parties have denounced their existence and have promised relief from their operation and influences. The public has had great patience with them, while executives, legislatures, courts, and parties have attacked the same.

In response to the widespread demands of the public, the Democratic Party has in different national conventions repeatedly denounced the evils arising from their operation and has promised relief.

PLATFORM DECLARATION.

In response to the widespread demands of the public for relief, the Democratic Party in its national platform of 1912 adopted the following plank in relation to trusts:

A private monopoly is indefensible and intolerable. We therefore favor the vigorous enforcement of the criminal as well as the civil law

against trusts and trust officials, and demand the enactment of such additional legislation as may be necessary to make it impossible for a private monopoly to exist in the United States.

We favor the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including, among others, the prevention of holding companies, of interlocking directors, of stock watering, of discrimination in prices, and the control by any corporation of so large a proportion of any industry as to make it a menace to competitive conditions.

We regret that the Sherman antitrust law has received a judicial construction depriving it of much of its efficacy, and we favor the enactment of legislation which will restore to the statute the strength of which it has been deprived by such interpretation.

Equally vigorous declarations were made by the Democratic Party in its platforms of 1908 and 1904.

For 16 years the people of the country have been demanding relief from these intolerable and unjust practices; for 16 years they have knocked at the doors of Congress demanding relief from these conditions, and for 16 years the Republican Party has failed to listen to these demands. The Democratic Party takes advantage of its first opportunity to grant the relief and protection demanded by the people.

Notwithstanding this widespread demand for relief during all these years, Members of Congress occasionally receive at this time protests against the passage of this and its sister bills. A hue and cry has been set up throughout the Nation by the guilty trusts and monopolies protesting against its passage at this time, and pretending that the business of the country demands a rest from congressional action. Investigation, however, has disclosed that nearly all of the protests which have been received here against the passage of this legislation have been manufactured and are artificial protests, excepting those coming from big business. Exposure has been made on the floor of this House by several Representatives of the character of the great majority of these protests. They are produced by the manager of some trust, combination, or monopoly, writing some small business man a letter or circular, suggesting that business is dull, and that it may be improved by preventing Congress from passing this relief legislation.

The small business man is urged to sign some inclosed protest and forward it to his Congressman. The manner in which such protests are created has become so well known to Members of Congress that they are now considered merely as chestnuts, and not as reflecting the genuine sentiments of the sender.

Since the report of the interstate trade commission bill from the committee to the House, the different chambers of commerce throughout the country have taken the opinions of their members upon that bill. Nearly four out of five of the members of the different chambers of commerce have recorded themselves as in favor of its passage. It is safe to consider that these great business bodies of the country fairly reflect the opinions of the genuine and lawful business interests of the country.

RESTORATION OF LABOR RIGHTS.

At the time of the passage of the Sherman antitrust law, it was almost unanimously understood that this law did not apply to workingmen or farm organizations. So certain were the Members of the Senate that labor and farm organizations were not included in the provisions of the Sherman antitrust law that amendments offered specifically providing for the exemption of such organizations from the law were defeated, upon the ground that such expressed exemption was unnecessary because the law in itself did not cover or include such organizations.

During the past 24 years very much discussion has been going on with regard to the class of people that the Sherman antitrust law was directed against. All through those years there has been a division of opinion upon this question among impartial and intelligent thinking men. The men who framed the so-called Sherman antitrust law and placed it upon the statute books had no doubt as to whom such legislation was directed against. This is shown in the debate upon that bill in the Senate. It shows that it was only against the great combinations that this legislation was directed.

Senator Sherman, who introduced the so-called Sherman antitrust law, had no doubt upon this question, for in the debate in the Senate on March 24, 1890, Senator Sherman said:

> Now, let us look at it. The bill as reported contains three or four simple propositions which relate only to contracts, combinations, agreements made with a view and designed to carry out a certain purpose which the laws of all the States and of every civilized community declare to be unlawful. It does not interfere in the slightest degree with voluntary associations made to affect public opinion to advance the interests of a particular trade or occupation. It does not interfere with the Farmers' Alliance at all, because that is an association of farmers to advance their interests and to improve the growth and manner of production of their crops and to secure intelligent growth and to introduce new methods. No organization in this country can be more beneficial in their character than farmers' alliances and farmers' associations. They are not business combinations. They do not deal with contracts, agreements, and so forth. They have no connection with them. And so the combinations of workingmen to promote their interests, promote their welfare, and increase their pay, if you please, to get their fair share in the division of production, are not affected in the slightest degree, nor can they be included in the words or intent of the bill as now reported.

At the time of the consideration and passage of the Sherman antitrust law in the Senate, there were many able, experienced, and learned Senators, and among whom there were none more learned, and experienced, nor more capable of sound judicial interpretation than Senator Hoar, of Massachusetts. While such antitrust bill was under debate in the Senate, on March 27, 1890, Senator Hoar said:

> When you are speaking of providing to regulate the transactions of men who are making corners in wheat, or in iron, or in woolen or in cotton goods, speculating in them or lawfully dealing in them without speculation, you are aiming at a mere commercial transaction, the beginning and end of which is the making of money for the parties, and nothing else. That is the only relation that transaction has to the State. It is the creation or diffusion or change of ownership of the wealth of the community. But when a laborer is trying to raise his wages or is endeavoring to shorten the hours of his labor, he is dealing with something that touches closely, more closely than anything else, the Government and the character of the State itself.
>
> The maintenance of a certain standard of profit in dealing in large transactions in wheat or cotton or wool is a question whether a particular merchant or a particular class of merchants shall make money or not; but the question whether the standard of the laborer's wages shall be maintained or advanced, or whether the leisure for instruction, for improvement shall be shortened or lengthened is a question which touches the very existence and character of government of the State itself. The laborer who is engaged lawfully and usefully and accomplishing his purpose in whole or in part in endeavoring to raise the standard of wages is engaged in an occupation the success of which makes republican government itself possible, and without which the Republic can not, in substance, however it may nominally do in form, continue to exist.
>
> I hold, therefore, that as legislators we may constitutionally, properly, and wisely allow laborers to make associations, combinations, contracts, agreements for the sake of maintaining and advancing their wages, in regard to which, as a rule, their contracts are to be made with large corporations who are themselves but an association or combination or aggregation of capital on the other side. When we are permitting and even encouraging that, we are permitting and encouraging what is not only lawful, wise, and profitable, but absolutely essential to the existence of the Commonwealth itself.
>
> When, on the other hand, we are dealing with one of the other classes, the combinations aimed at chiefly by this bill, we are dealing with a transaction the only purpose of which is to extort from the community, monopolize, segregate, and apply to individual use, for the purposes of individual greed, wealth which ought properly and lawfully and for the public interest to be generally diffused over the whole community.

Among other well-known and illustrious Senators who placed the same construction upon that bill at the time that it was under consideration by the Senate were Senators Teller and Stewart of Nevada, who, among other things, said:

> The bill ought now, in some respects, be satisfactory to every person who is opposed to the depression of labor and desires to see it properly rewarded.

The Democratic Party has at all times construed the Sherman antitrust law as not applicable to labor and farm organizations, and such interpretation was generally placed upon the same until the Supreme Court of the United States, in the noted Danbury Hat case, decided otherwise, and since that time there have been some 101 decisions in Federal courts in labor cases, where it was alleged that labor organizations had violated the antitrust law.

AMENDMENT TO SUNDRY CIVIL APPROPRIATION BILL.

In the Sixty-first Congress, while the sundry civil appropriation bill was under consideration by the House of Representatives in Committee of the Whole, the following amendment was offered to the section making appropriations for the enforcement of the antitrust law:

> *Provided further*, That no part of this money shall be spent in the prosecution of any organization or individual for entering into any combination or agreement having in view the increase of wages, shortening of hours, or bettering of conditions of labor, or for any act done in furtherance thereof not in itself unlawful.

This amendment was carried in the House by a large majority, and thus placed the construction of the House of Representatives of that Congress upon the antitrust law. This amendment, however, was lost when action upon the same was taken in the Senate.

In the Sixty-second Congress a similar amendment, including agricultural and horticultural societies, was offered to a similar appropriation bill for the enforcement of the antitrust law, and the same was adopted by a large majority and concurred in by the Senate. It was vetoed, however, by President Taft.

In the special session of the Sixty-third Congress a similar amendment to a similar appropriation bill was offered and adopted by the House of Representatives and concurred in by the Senate, and the sundry civil appropriation bill, containing this amendment and provision, was approved by President Wilson.

It will thus be seen that at the time of the passage of the Sherman antitrust law, and ever since down to this time, that the House of Representatives, at least, has consistently and continually placed the one interpretation upon that antitrust law, and that is that labor and farm organizations were not impliedly or expressly included in its terms.

CONTRARY COURT DECISIONS.

The United States Supreme Court, in the Danbury Hat case, reported in Two hundred and eighth United States Reports, placed a different interpretation upon the language of the Sherman antitrust law, much to the surprise of Congress, organized labor, and the general public. Ever since the commencement of that suit there has been a persistent agitation on the part of labor organizations throughout the country and a good share of the public in addition, demanding that labor and farm organizations be expressly exempt from the Sherman antitrust law. The Democratic Party, in its platforms, has repeatedly promised to grant this relief to labor and farm organizations, and now at its first opportunity is performing its pledge by including in section 7 of the Clayton antitrust bill the following paragraph:

SEC. 7. That nothing contained in the antitrust laws shall be construed to forbid the existence and operation of fraternal, labor, consumers', agricultural, or horticultural organizations, orders, or associations, instituted for the purpose of mutual help and not having capital or conducted for profit, or to forbid or restrain individual members of such organizations, orders, or associations from carrying out the legitimate objects thereof, nor shall such organizations, orders, or associations, or the members thereof, be held or construed to be an illegal corporation or a conspiracy in restraint of trade under the antitrust laws.

While it is true that the existence and operation of labor unions, fraternal orders, and farmers' organizations were never intended to be included within the provisions of the Sherman antitrust law, yet for years labor leaders have contended that labor organizations were permitted to exist merely by sufferance, and that the Attorney General of the United States, if he were so disposed, might bring suit for the dissolution of such organizations by enforcing the terms of the antitrust laws, as construed by the Supreme Court, and dissolution would have to be adjudged. It has always been the opinion of observing and impartial men that labor organizations and farmers' associations were not conspiracies or combinations in restraint of trade; in other words, that there was nothing in those organizations of themselves which was illegal under the antitrust law.

A careful reading of the Supreme Court decision upon this question discloses the fact that the Supreme Court in tracing the legislative history of the Sherman antitrust law failed to correctly trace and collect the facts of that history, and as a result when the court came to render its decision it interwove a construction into that antitrust law of which it was free at the time of its passage.

For 16 years, and more, the representatives of labor have rapped at the doors of Congress and of its committees for an amendment to this antitrust law which would exempt labor organizations from being classed as illegal. For 16 long years, and more, these just demands of labor for its natural and inherent rights have met with every variety of opposition, corrupt and otherwise, both within and out of Congress. It was only last summer that the exposures in the notorious Mulhall investigation disclosed the activity and corrupt opposition of the National Association of Manufacturers against these demands of labor. The Democratic Party, however, ordered an investigation into the actions of that notorious association, which disclosed its rotten and corrupt methods, thereby clearing the air so that a better understanding of the claims of labor organizations could be had. The paragraph of section 7 herein referred to protects the existence of labor, farm, and fraternal organizations from the operation of the Sherman antitrust law, and by the enactment of this bill into law the Democratic Party fulfills another pledge made in its platform.

Instead of being offended, we are really well pleased to see some of our Republican friends in support of this labor and farm proposition. Their aid is welcome upon the principle of "better late than never." But the friends of labor will not forget that for 16 long years, while the Republican Party was in power, they never found sufficient time to protect the labor and farm organizations of this country from the effects of the Sherman antitrust law as construed mistakenly by the courts. By fulfilling at the first opportunity all party pledges, we are setting a wholesome example for all other parties to follow.

CLASS LEGISLATION.

The opponents of labor's demands contend that the provision of section 7 relating to labor and farm organizations constitutes class legislation. In my opinion it is not, but if it is class legislation, it is legislation for the largest class in America, for there are over 30,000,000 working people in this country. How can it be class legislation when labor and capital are constituted so differently?

What is capital? It is the creature of labor and sometimes of nature's bounty and resources. It is the surplus product of labor and is sometimes combined with monopolized natural resources. Without labor our natural resources would be useless and capital could not exist.

What is there about capital that should make the creature greater than the creator? For what purpose does labor organize? Everyone knows that it organizes merely for self-protection. It was not necessary for labor to organize before capital was given the power of organizing by virtue of incorporation by the law of the land. Why should capital, which avails itself of the privilege of organizing, deny its creator the same right? The objects of labor organizations are merely to advance or preserve their wages, reduce the hours of employment, and to better the conditions of labor. All are matters of self-preservation, and self-preservation, we are taught, is the first law of nature and of nature's God.

Under our Constitution no man, even though he be the high-salaried officer of some corporation, trust, or monopoly, has the right to say to another man whether he shall or shall not work, or to say that he shall not consult with his fellow men about working or refusing to work, or with regard to the terms of employment, so long as the conference is free from violence. The same right must be conceded to the individual or corporation employer. The officials of such corporations have a right to consult with one another, or with like officials of some or all other corporations with regard to the terms upon which they will do their work.

Let no one misunderstand the provisions of section 7 of this bill. It does not exempt labor or farm organizations, or the members thereof, from the consequence of any act of theirs which is otherwise unlawful. It will not permit or justify them, in times of strikes or labor disputes, to use violence upon their fellow men or in destroying property. They will remain answerable and punishable the same as other violators of the law.

In the passage of section 7, labor is merely coming into its moral, natural, and inherent rights, of which it had been deprived by the misconstruction of the Sherman law by the Supreme Court. It merely restores to 30,000,000 workers their natural and inherent rights. There is no class legislation in it. It is merely saying that an organization of human beings shall not be yoked to the same level as an organization of capital, which is the creature of labor. It is merely saying that the creature shall not be greater than the creator.

It has always been a principle of the Democratic Party that the rights of man are greater than the rights of capital. It has always believed in reconciling the differences between the two interests, but has always held that the rights of labor are no less sacred and vested than the rights of capital, and no less "inalienable" than the rights of capital. It believes that capital and labor ought not to be enemies, and that each is necessary to the other.

An enlightened civilization demands that the rights of labor should be zealously guarded. Its welfare means the welfare of the human race in civilization. It is absolutely necessary to capital. Without it capital is a waste, and would decay and become unprofitable. Without labor, bodies of organized capital would be like a school of whales on dry land—flopping, rolling, twisting, and twisting, rolling, and flopping, and getting nowhere. In such a situation capital would become lifeless, inert, and nonproductive. Like stranded whales, capital without labor would soon perish, decay, and disintegrate into atoms.

If capital were to be destroyed, labor, in conjunction with our natural resources, would reproduce it in time; but labor, once destroyed or reduced to the condition of Russian serfdom or Mexican peonage, will leave capital useless and without profit.

In support of this view I appeal to the sentiments of the immortal Lincoln, as expressed in his first message to Congress, wherein he said:

Capital is only the fruit of labor, and could never exist if labor had not first existed; labor is the superior of capital and deserves a higher consideration.

These words were uttered more than 50 years ago. They were true then and they are true now in a stronger and more forcible sense.

Therefore I contend and believe that it is one of the traditions of the Democratic Party that when the rights of man and capital become irreconcilable that the rights of man must prevail. In this case, however, there is no such irreconcilable conflict. Farmers and laborers merely ask that their organizations shall not in themselves be construed as a violation of the antitrust law.

They are perfectly willing that when their members violate the laws criminally that they should be punished the same as other people. The adoption of section 7 into law does not mean that labor organizations or their members will be at liberty to destroy the property of capital or to commit any crimes and remain unpunished. It means that the maintenance and op-

eration of labor organizations shall not in themselves be deemed unlawful; that it shall be construed no violation of the antitrust laws for laborers to meet, consult, and advise with one another, and to devise plans for the upholding of their wages, for diminishing the long hours of labor, and for the improvement of sanitary and other labor conditions. It means for their members to carry on an agitation for these purposes shall not be deemed criminal, but shall be considered as merely the exercising of their God-given rights.

ADDITIONAL LABOR LEGISLATION.

In the Democratic national platform of 1912 we find the following language:

Experience has proved the necessity of a modification of the law relating to injunctions, and we reiterate the pledges of our platforms of 1896 and 1904, in favor of a measure which passed the United States Senate in 1896, relating to contempt in Federal courts, and providing for trial by jury in cases of indirect contempt.

And again the platform says:

Questions of judicial practice have arisen, especially in connection with industrial disputes. We believe that the parties to all judicial proceedings should be treated with rigid impartiality, and that injunctions should not be issued in any case in which an injunction would not issue if no industrial disputes were involved.

Here, again, we have conclusive evidence of the faithful devotion of the Democratic Party to the interests of labor during the last 20 years. Here, again, we have conclusive evidence that the Democratic Party, by virtue of the wise provisions of the antitrust bill now pending before the House, known as the Clayton bill, avails itself of the first opportunity to fulfill and perform its platform pledges.

Sections 18 and 20 of the Clayton antitrust bill relate entirely to labor questions. Among the various bills introduced in the interest of labor in the Sixty-second Congress there were two—one known as the Clayton anti-injunction bill and the other known as the Bartlett contempt bill, which were reported by Democratic committees favorably and passed by the House of Representatives. Minority reports were filed against them by distinguished lawyer members of the Judiciary Committee. The anti-injunction bill was passed in the House with only 21 votes against it. The bill giving the right of trial by jury in indirect contempt cases was passed by the same Congress, with only 18 votes against it in the whole House. These bills were specifically indorsed by the Democratic Party in its 1912 Baltimore platform, and with but slight changes are incorporated in sections 18 and 20 of the Clayton antitrust bill. In substance, they contain the following provisions regarding the rights of labor:

Federal courts are by the provisions of section 18 prohibited from issuing injunctions against persons on account of their refraining from performing any work or labor. This is one of the things in which United States courts in the past have issued injunctions in labor disputes.

These courts are also by the provisions of that section prohibited from issuing injunctions to prevent laborers from recommending, advising, persuading, or consulting with others by peaceful means.

They are prevented from enjoining laboring men from attending at or near a house or place where any person resides or works, or carries on business, or happens to be, for the purpose of peacefully obtaining or communicating information or peacefully persuading any person to work or abstain from work.

Time and time again this was one of the things which laboring men have been enjoined from doing by the different Federal courts.

These courts are also prevented from enjoining laboring people from ceasing to patronize or to employ any party in such dispute. This is another way in which laboring men have been repeatedly enjoined, and which, in my opinion, is an abuse of the writ of injunction.

Such courts are further prevented from issuing injunctions against laboring men from recommending, persuading, or advising others by peaceful means what to do.

The Federal courts are further prevented from enjoining the officers or individuals of a labor organization from paying or giving to or withholding from any person engaged in such disputes any strike benefits or other moneys or things of value.

Strange as it may seem, yet it is a fact testified to by the present Secretary of Labor, that when he was secretary of a certain labor organization he was enjoined during a strike from paying those sick benefits by the Federal courts. Such inhuman and outrageous injunctions will not in the future be issued against any laboring man if this bill becomes a law.

Another wise provision contained in the bill prevents Federal courts from issuing injunctions prohibiting laboring men from peacefully assembling at any place in a lawful manner and with lawful purposes.

Use of injunctions by Federal courts for the last-named purpose have been numerous and have scarcely ever been justified.

Last but not least, Federal courts are prohibited from granting injunctions against laboring men from doing any act or any thing which might lawfully be done in the absence of such dispute by any party thereto.

JURY TRIAL OF INDIRECT CONTEMPTS.

Heretofore it has been a common practice in United States courts to try people charged with indirect contempt by the court and without a jury trial. Laboring men have for years complained bitterly against this unconstitutional method of trying those accused of indirect contempt. Section 20 of this bill, however, provides that indirect contempt shall always hereafter be tried by a jury in accordance with the constitutional right of the people and as pledged by the Democratic Party, for that party in its Baltimore platform declared for the right of trial by jury in indirect contempt cases. Here, again, we have another example of a solemn pledge of that party being faithfully redeemed.

It is well for laboring people and all who are interested to remember that in the same platform the Democratic Party demanded the enactment of a law creating a Department of Labor, represented separately in the President's Cabinet, in which department shall be included the subjects of mines and mining.

Subsequent to that platform declaration, the Democratic House of the Sixty-second Congress passed a bill creating the Department of Labor and making the head thereof a member of the President's Cabinet. This bill subsequently became a law and is now in force. All good people rejoice to know that a Democratic President worthily filled the newly created Cabinet position of Secretary of Labor in the true spirit in which that position was created by appointing as the first Secretary of Labor Hon. William B. Wilson, an actual and genuine representative of organized labor.

Another wise provision contained in the last Democratic platform was one pledging the party, so far as Federal jurisdiction stands, for a Federal compensation law, providing adequate indemnity for injury to body or loss of life of its employees. It affords all friends of Government employees and of labor in general genuine satisfaction that there is now upon the House Calendar, favorably reported, H. R. 15222, otherwise known as the McGillicuddy-Kern compensation bill. This bill provides compensation for employees of the United States suffering injury or occupational diseases in the course of their employment, and for other purposes. It is now upon the Calendar for Unanimous Consent, and there is every prospect that it will soon be reached and passed. Thus another pledge of the party of Jefferson will be turned into law.

INTERLOCKING DIRECTORATES.

In response to a wide and imperative public demand the Democratic Party in its Baltimore platform took vigorous, positive, and certain action with respect to those trusts, combinations, and monopolies which interfere with natural competition and indulge in business practices which tend to monopolize and to restrain trade. Mark the following language in that platform:

We favor the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including, among others, the prevention of holding companies, of interlocking directors, of stock watering, of discrimination in price, and the control by any one corporation of so large a proportion of any industry as to make it a menace to competitive conditions.

To perform this party-platform pledge there is inserted in the Clayton antitrust bill, in section 9, a provision prohibiting the interlocking of directors in certain cases, including banks and trust companies in cities of over 100,000 inhabitants, and in railway carriers and in corporations purchasing or selling equipment, material, and supplies for construction and maintenance of railroads and other carriers.

I have heretofore shown the huge corporations and monopolies in this country that are effected by the interlocking and intertwining of directors. Much agitation at present is being indulged in by those to be effected by this proposed legislation. That portion of the metropolitan press whose history shows that they are identified with the interests of the trusts and monopolies of the Nation have originated loud and vigorous protests against this and other antitrust provisions in the bill. Remonstrances coming from such sources always bear the indelible stamp of being subsidized. The origin of the protests which have been received by Members of Congress from a few moderate business men have been exposed as being largely prompted by these same trusts and monopolies. In strenuous terms they tell us that these provisions are unwise and that the business of the country needs a rest.

It is most natural for those special-privilege interests, which have been for 20 years engaged in nefarious business practices that we are trying to prohibit, to have a poor opinion of

the provisions of this bill. In their present attitude they prove the truth of the old saying:

No guilty man ever yet felt the halter draw
With a good opinion of the law.

So it is natural to expect strenuous objections from such sources to all laws designed to clip their wings and to pare their claws.

There is, however, no genuine or serious foundation for their protests. In many foreign lands just such provisions have prevailed by force of law and custom for many years past, and no one engaged in like business in those countries has found fault with the same.

FOREIGN LAWS UPON THIS SUBJECT.

The prevention of interlocking directors has been found necessary in the experience of many foreign countries, and their laws and customs forbid the same on the theory that as those interests are likely to be dealing with the banks they should not be permitted to be represented on both sides of the bargain. Here are a few of such laws and customs:

Bank of England: Bankers, brokers, bill discounters, or directors of other banks operating in England are excluded as directors. (S. Doc. 405, p. 10.) Custom has enacted that the directors should never be chosen from the ranks of other banks. They are generally taken from the merchant firms and accepting houses. (S. Doc. 492, p. 67.)

Bank of France: Regents (directors) are chosen only from the commercial and industrial classes. The consulting discount committee is composed of 12 merchants and manufacturers. (S. Doc. 405, p. 190.)

National Bank of Belgium: The governors and directors can not be on the board of any other bank. (S. Doc. 400, p. 227.)

Russian banking law: No person is allowed to be a member of the board of management of more than one bank. (S. Doc. 586, p. 16.)

Union Bank of Scotland: No banker or stockholder is eligible as a director. (S Doc. 405, p. 158.)

Commercial Bank of Scotland: Directors must not be directors of any other bank. (S. Doc. 405, p. 174.)

The experiences of foreign countries demonstrate that the prohibition of interlocking directors in the case of banks and other corporations has not worked injuriously. There is no reason whatsoever to justify the claim that such provision in this bill, if it becomes a law, will be detrimental to the best interests of the banks of the country. One of the greatest bankers of the country, as well as the fairest and most impartial, is Mr. Reynolds, president of the Continental Commercial Bank, of Chicago, who, when before the Pujo investigating committee, stated under oath:

Q. Do you approve of the identity of directors or interlocking directors in potentially competing institutions?

A. No, sir; personally I do not believe that is the best policy. That is the reason I am not a director or stockholder in any corporation that deals with us. There is not a day that I am not invited and do not have the opportunity to do it. It has been my theory of the proper method of banking to adhere to that policy.

Q. You have found that you could succeed in that way, too, have you not, Mr. Reynolds?

A. That is true as to whatever we have done. Some people would say that we have been successful. I am a little modest in that direction.

Q. Have you not the largest deposits in the country?

A. With one exception, at any rate; yes.

It is fair to presume that this legislation will work as satisfactorily upon that subject in this country as in foreign countries, and that when applied under this bill to the larger banks the result will later on be the adoption by the smaller banks of the same policy prescribed by law for the larger banks.

PRICE DISCRIMINATION.

Section 2 of the so-called Clayton antitrust bill deals with price discrimination and affects, more or less, nearly everyone engaged in business. It probably will affect more business people and ultimate consumers than any other section in the bill, and is therefore of greatest interest and importance to the general public.

It provides, in substance, that no person or corporation engaged in interstate commerce shall directly or indirectly discriminate in prices between purchasers of commodities in the same or different communities, which such commodities are sold for use, consumption, or resale in any part of the United States or its possessions with the intention of thereby destroying or wrongfully injuring the business of a competitor of either such purchaser or seller. For violations of this section it provides a penalty of a fine not exceeding $5,000 or by imprisonment not exceeding one year, or by both. It contains, however, an important and necessary exception, in that it provides that nothing included in that section shall prevent discrimination in price to and between purchasers of commodities on account of differences in grade, quality, or quantity of the commodity sold, or that makes due allowance only for difference in cost of transportation.

It may be contended that this exception is not warranted and ought not to exist, but this exception takes into consideration certain facts and circumstances which can not be arbitrarily ignored or regulated by law in accordance with the general provisions of the section without doing an injustice to the seller. Differences in grade, quality, or quantity of the merchandise sold or discrimination in selling price arising from differences in cost of transportation are necessarily a natural and inherent necessity. Differences in price because of grade, quality, or quantity, or because of transportation, are due to the immutable laws of nature and business. They constitute honest and inflexible differences, and it would be impossible, confusing, and unjust to place, or to attempt to place, them on an equality or on a nondiscriminating selling price. Such differences do not constitute a partial or biased discrimination.

Every moderate business man knows full well the importance of this provision, and may often have felt the injury inflicted by the evil practices resorted to by the seller discriminating in price between different purchasers of similar commodities in the same or different communities. Such discriminations are invariably resorted to for the purpose of destroying and injuring the business of a competitor, and it is such business men who have vigorously complained against such discrimination. When resorted to they frequently result in the bankruptcy of moderate business men or forcing them to retire.

The necessity for this class of legislation has been recognized by 21 States, which have such a law upon their statute books. The language used in most States is quite similar to that contained in section 2. Those States are Arkansas, California, Idaho, Iowa, Kansas, Louisiana, Massachusetts, Michigan, Missouri, Montana, Nebraska, New Jersey, North Carolina, North Dakota, Oklahoma, South Carolina, South Dakota, Utah, Wyoming, and Wisconsin.

The laws adopted against discrimination in prices in these States were adopted in recent years in response to local sentiment condemning the practice of discrimination in price for the purpose of destroying or injuring the business of a competitor. They are among the most enlightened and progressive States in the Union.

The Legislature of the State of Wisconsin, which State I have the honor in part to represent, adopted an unfair discrimination price law, which has met with the hearty approval of the general public. It is to be found in chapter 165, Session Laws of Wisconsin for 1913. For the purpose of showing the similarity between the Wisconsin law upon this subject and the law proposed by section 2 of this bill, I take the liberty of reading in substance sections 1 and 2 of said chapter:

SEC. 1791n–9. 1. Any person, firm, or corporation, foreign or domestic, doing business in this State and engaged in the production, manufacture, or distribution of any commodity in general use, that shall intentionally, for the purpose of destroying the competition of any regular established dealer in such commodity or to prevent competition of any person who in good faith intends or attempts to become such dealer, discriminates between different sections, communities, or cities of this State by selling such commodity at a lower rate in one section, community, or city, or any portion thereof, than such person, firm, or corporation, foreign or domestic, charges for such commodity in another section, community, or city, after making due allowance for the difference, if any, in the grade or quality and in the cost of transportation from the point of production, if a raw product, or from the point of manufacture, if a manufactured product, shall be deemed guilty of unfair discrimination, which is hereby prohibited and declared unlawful.

SEC. 1791n–10. 1. Any person, firm, company, association, or corporation, foreign or domestic, doing business in this State and engaged in the business of collecting or buying any product, commodity, or property of any kind that shall intentionally, for the purpose of injuring or destroying the business or trade of a competitor in any locality, or to prevent competition by any person who in good faith intends or attempts to engage in such business, discriminates between the different sections, communities, or cities of this State, or between persons, firms, associations, or corporations in any locality, by buying any product, commodity, or property of any kind, and paying therefor a higher rate or price in one section, community, or city, or to any person, firm, association, or corporation than is paid for the same kind of product, commodity, or property by said person, firm, company, association, or corporation, foreign or domestic, in another section, community, or city, or to another person, firm, association, or corporation, after making due allowance for the difference, if any, in the grade or quality and in the actual cost of the transportation from the point where the same is purchased to the market where it is sold, or intended to be sold, shall be deemed guilty of unfair discrimination, which is hereby prohibited and declared unlawful.

Further sections of the law provide necessary penalties and impose the duty upon the attorney general, his office force, and upon the several district attorneys to prosecute all violations of this law.

It will be noticed that the main difference between the Wisconsin antidiscrimination price law and section 2 of the pending bill, treating of the same subject, is that the pending bill permits of discrimination in price on account of the quantity of the commodity sold. The Wisconsin law does not contain this exception. In my opinion it is a material distinction between the Wisconsin law and the law proposed by this bill. According to the Wisconsin law, it is unlawful to make any discrimination or distinction in price on account of the quantity of the commodity sold. I consider an exception made in the law permitting of discrimination in price because of the quan-

tity of the commodity sold natural, wise, and just. Every intelligent and impartial observer must upon reflection admit that it is cheaper, in proportion to weight or measure, for both seller and purchaser to deal in large quantities of commodities. There is a natural and inherent economy and advantage in larger transactions as compared with the smaller, and it is unwise and unreasonable to attempt by human laws to override the natural laws applicable to such matters. In a large transaction there is a natural economy at both ends of the transaction in favor of the buyer and seller. The small purchaser is unable to take advantage of this natural condition in price owing to his want of means or the smallness of his trade. He, too, reaps in such cases only the result of natural conditions.

It may be contended by some people that a national law upon this subject is not necessary, and that the new State laws upon that subject will be sufficiently prohibitive. A good illustration of the necessity of a Federal law upon this subject was afforded me during this session. Our sister State, Michigan, has a statute quite similar to the Wisconsin statute upon this subject. During the session I received petitions, remonstrances, and communications from residents in the Upper Peninsula of Michigan, especially from the city of Menominee, just across the State line in Michigan, complaining that certain great corporations engaged in interstate commerce were selling certain of their products, the market for which they desired absolutely to control, at a lower price in Menominee, Mich., than in Marinette, Wis., across the river. This was being done to drive out all of their competitors from the State of Michigan. This is only one example of such discriminations. It fairly demonstrates the necessity for a Federal law preventing such discrimination in price and giving the people of the different States equality of treatment, so far as this equality of treatment can be reasonably provided.

MONOPOLIES IN THE PRODUCT OF MINES, ETC.

Section 3 of the pending antitrust bill deals with monopolies and near monopolies. It provides, in substance, that it shall be unlawful for the owner, operator, or transporter of the products of any mine, oil or gas well, reduction works, refinery, or hydroelectric plant producing coal, oil, gas, or hydroelectric energy, or for any person controlling the products thereof and engaged in selling such product in commerce, to refuse arbitrarily to sell such product to a responsible person, firm, or corporation who applies to purchase such product for use, consumption, or resale within the United States and its possessions, and provides an adequate penalty for any violations thereof. Wherever a person or corporation is the owner, controller, or operator of a mine of any nature whatsoever he is in possession of a natural wealth, which God in His kind providence intended for the use of all His people.

It was a mistake for this Government in the first place to permit of the private ownership or unregulated operation of mines. In a wild or unsettled country mines are of little or no value. But when a country in which mines are located develops in population and business, civilization and in public necessities, the products of the mine become absolutely necessary and invaluable. This value is increased, not by anything in particular that the owner or operator has done, but by reason of the growing use and necessities of the public. Our industrial history shows us that unscrupulous owners and operators of mines have exercised control at times over the mines owned or operated by them in such ways as to artificially and extortionately increase the price of mine products to the people and industries of the country. The people of the Northwest, where there are no coal mines, have in the last generation at different times experienced great hardships and paid exorbitant and extortionate prices on account of being obliged to depend upon the arbitrary and avaricious greed of mine owners, operators, and unscrupulous speculators. Such owners and operators every year exercise the arbitrary power to regulate the output, transportation, and price of coal, intended not only for the use of factories, but necessary for consumption in private homes, in such a way as to greatly and arbitrarily enhance the price of that necessary commodity. At other times they have controlled the products of iron, copper, silver, and other minerals in such a manner as to control and force up the price of ores to the industries of the country which depend upon the same. At other times they deliberately refuse to make sale of such products, regardless of price. Such control is exercised solely for the purpose of creating and perpetuating monopolies and restraints of trade, whereby the owners and operators may force exorbitant and extortionate prices from those who must have such products.

Oil or gas wells, reduction works, refinery or hydroelectric plants, producing coal, oil, gas, or hydroelectric energy, are naturally and necessarily monopolistic in their character. The owners and operators of such are in a position to easily ruin the industries of different sections or communities, for the purpose of building up other such sections and communities. It is to prevent repetitions of this character that the owners of such products are required to sell the same to a responsible person or corporation applying for the purchase of such product for use, consumption, or resale.

Section 4 of the bill provides, in substance, that any person engaged in commerce who shall lease or make a sale of goods, wares, merchandise, machinery, supplies, or other commodities for use, consumption, or resale within the United States or its possessions, and who shall fix a price charged therefor, or discount from, or rebate from such price on the condition, agreement, or understanding that the lessee or purchaser thereof shall not use or deal in the goods, wares, merchandise, machinery, supplies, or other commodities of a competitor or competitors of the lessor or seller shall be deemed guilty of a misdemeanor and shall be punished by a fine not exceeding $5,000 or imprisonment not exceeding one year, or both.

SECTION 5.

This section authorizes any person who shall be injured in his business or property by reason of anything forbidden in the antitrust laws to sue therefor in the United States district court in the district where such defendant resides, or is found, or has an agent, without respect to the amount in controversy, and entitles him to recover, upon proving his case, threefold the damages by him sustained, including a reasonable attorney fee.

USE OF JUDGMENT BY THIRD PARTIES.

Section 6 places a weapon in the hands of those injured by violators of the antitrust law which will prove to be very effective in deterring and preventing future monopolizations or attempts to monopolize on the part of trusts, monopolies, and combinations. It provides that whenever a final judgment or decree be obtained by or on behalf of the United States under any antitrust law against any defendant having entered into a contract, combination, conspiracy, or trust in restraint of trade or commerce, or attempts to monopolize or combine with any person or persons to monopolize any part of the interstate commerce in violation of any of the antitrust laws, that such judgment shall constitute, in any other proceedings, an estoppel against such defendant in a suit by a third party, the same as between the United States and such defendant; it shall be against such defendant conclusive proof as to the same question of law in favor of any other party in any action or proceeding brought for violations of any of the antitrust laws against the same defendant.

Heretofore combinations in the form of trusts and conspiracies in restraint of trade and monopolies have with impunity violated the antitrust laws knowing full well that the amount of injury or damage done to most persons would be so small as not to justify them in prosecuting suit for damages. This section enables any persons who otherwise would not be able to maintain and prosecute a suit against some powerful monopoly to make use of any judgment which the United States may have obtained against any such defendant violating the antitrust laws upon the same state of facts, without going to the expense of new and further prosecution and trial. This section will constitute a very effective preventative of future violations of the antitrust laws by monopolies and big business.

ACQUIRING STOCK IN ANOTHER CORPORATION.

One of the means pursued by unscrupulous corporations in seeking to acquire undue advantages is the purchase or control of stock or shares of capital of other corporations. Section 8 prohibits all corporations engaged in interstate commerce from acquiring, directly or indirectly, in whole or in part, any of the stock of another corporation also engaged in commerce where the effect of such acquisition is to eliminate or lessen competition between the corporation whose stock is so acquired and a corporation making the purchase, or the effect is to create a monopoly in any line of trade in any section or community.

It further provides that no such corporation shall acquire the whole or any part of the stock of two or more corporations engaged in interstate commerce where the effect of such acquisition or the use of such stock by voting or granting of proxies is to eliminate or subsequently lessen competition between such corporation, or any of them, or to create a monopoly in any line of trade in any section or community. Exception, however, is provided where the purchase of such stock by any corporation is solely for investment, and not to use the same by voting, or to bring about, or attempting to bring about, the lessening of competition.

Much complaint has been made against these provisions. This, however, apparently has been done without taking notice of a further provision in such section 8, which provides that nothing contained in this section shall be held to affect or impair any right heretofore legally acquired. In other words, these provisions will apply solely to the future, providing that such interownership does not now constitute a violation of the antitrust laws. A further exception is provided in the case of railway corporations, which are specifically permitted to aid in the construction of branch or short-line railways so located as to become feeders of the main line of railway.

Corporations affected by the provisions of this bill, preventing one corporation from owning stock in another, are vigorous in their opposition to the same. They seem to regard it as a newly devised scheme to interfere with what they consider their vested rights. They contend that it is untried and experimental. They point to this proposed prohibition as evidence of the inexperience of the Democratic Party in dealing with big business. Their memories and knowledge of history, however, are poor and short. The owning of stock in one corporation by another was never allowed by common law.

The first State to repeal the common-law principle that one corporation could not own the stock in whole or in part of another corporation was New Jersey. In so doing New Jersey made itself extremely popular with all the trusts, combinations, and monopolies. In view of this provision such trusts, monopolies, and combinations have favored the State of New Jersey as the State in which to organize and file their articles of organization. It is no wonder the State has become known as the paradise of trusts and the mother of monopolies. So favorable to big business are the laws of that State that corporations organized in it are authorized to do business not only throughout the United States, but throughout the world. Because it abrogated the common-law principle which prevented one corporation from owning the whole or any part of the stock of another, the commercial pirates of the country seek the shelter of its laws.

By degrees some of the other States have relaxed the common-law rule until the country became full with pools and holding companies, which are the direct support of trusts and monopolies. This part of the pending bill, when it becomes a law, will prohibit and render illegal the so-called "holding corporations," whose purposes are to control the policies and price of commodities of the corporations which become units of such holding corporations. It is only fair to say, however, that the proposed law will interfere only with such holding companies as substantially lessen competition.

COMMON DIRECTORS.

Among the salutary provisions contained in section 9 we find several relating to common or interlocking directors. By its language no person who is engaged as an individual or member of a partnership or is a director or other officer of a corporation engaged in business of producing or selling equipment, materials, or supplies to or in the construction, maintenance, or operation of railways or other common carriers engaged in commerce shall act as a director or any other officer in any other common carrier engaged in commerce to which he or such partnership or corporation sells or leases, directly or indirectly, equipment, material, or supplies, or for which he engages in work of construction or maintenance. It also contains several other provisions relating to the interlocking of directors which time and space forbid me from mentioning in detail.

PERSONAL GUILT.

Section 12 specifically provides for the personal guilt of the officers of a corporation violating the antitrust laws. Heretofore corporations guilty of violating such laws have been merely fined, and the penalty has fallen on the public and on the stockholders instead of the officers who have been guilty of having the company violate the law. A few prison sentences of the officers of guilty corporations will do more to force a wholesome observance of the antitrust laws than all the fines that the courts may impose. The danger of being reached personally will tend to create in the minds of corporation officers a wholesome respect for the laws passed to prevent restraints of trade and monopolies.

REGULATING OF STOCK AND BOND ISSUES.

A few years ago the Interstate Commerce Commission called attention to the advisability of the Government regulating the issuing of railway stocks and bonds. At the time of this recommendation it seemed to have attracted little or no attention. Since then revelations have occurred in connection with the issuing of stocks and bonds of several railways. Some of the more gigantic stock-watering schemes are shown in the history of the purchase of the Chicago & Eastern Illinois Railway by the St. Louis & San Francisco Railroad, by the Pere Marquette road in Michigan, in the Southern Pacific Railway Co., the Chicago & Alton Railway Co., the New York, New Haven & Hartford Railroad Co., the Boston & Maine Railway Co., and last but not least in the relations of the Baltimore & Ohio with the Cincinnati, Hamilton & Dayton Railway. If time permitted, many other instances of a similar nature, although not perhaps as great in dimensions, might be cited. Nothing can more forcibly and concisely present the situation than the recommendations of the Interstate Commerce Commission made last year in the affairs of the New Haven Railway. In its report the commission, for the second time in seven years, gave the following recommendation:

No student of the railroad problem can doubt that a most prolific source of financial disaster and complication to railroads in the past has been the desire and ability of railroad managers to engage in enterprises outside the legitimate operation of their railroads, especially by the acquisition of other railroads and securities. The evil which results, first, to the investing public, and finally to the general public, can not be corrected after the transaction has taken place; it can be easily and effectively prohibited. In our opinion the following propositions lie at the foundation of all adequate regulation of interstate railroads:

1. Every interstate railroad should be prohibited from spending money or incurring liability or acquiring property not used in the operation of its railroad or in the legitimate improvement, extension, or development of that railroad.

2. No interstate railroad should be permitted to lease or purchase any other railroad, nor to acquire the stocks or securities of any other railroad, nor to guarantee the same, directly or indirectly, without the approval of the Federal Government.

3. No stocks or bonds should be issued by an interstate railroad except for the purposes sanctioned in the two preceding paragraphs, and none should be issued without the approval of the Federal Government.

It may be unwise to attempt to specify the price at which and the manner in which railroad stocks and securities shall be disposed of; but it is easy and safe to define the purpose for which they may be issued, and to confine the expenditure of the money realized for that purpose.

House bill 16586, entitled "An act to amend section 20 of an act to regulate commerce, to prevent the overissue of securities by carriers, and for other purposes," is designed to place safeguards over the issuing of securities by railways so as to protect investors in such stocks, as well as the general public, from fraud and deception. The necessity for such regulations have been noticed and commented upon by our ablest newspapers and magazines for years as well as by our most experienced statesmen. To-day, in the history of the New York, New Haven & Hartford Railroad, we can see the sad havoc worked upon innocent investors, the most of whom were widows and orphans, by the unscrupulous managers of that railway. Stocks and bonds were issued by its directors and managers not for the purpose of carrying on its legitimate business or for the making of needed and natural improvements, but in buying up competing lines, consisting of steamboat and trolley lines, at great and reckless prices.

Only recently the leading newspapers were commenting upon the sensational news that already a committee representing the stock and bond holders who had been imposed upon have been making arrangements for the commencement of suit to recover from the late managers and directors of that railroad the sum of $125,000,000. The overissuing of stocks and bonds by railways is termed the watering of stocks and bonds. The issuing of watered stocks and bonds is a detriment to the genuine stock and bond holders of a railway or any other industrial corporation's stocks and bonds. It is not only a damage and a detriment to the interest of the genuine stock and bond holders who have invested actual cash in the company, but it is a damage, detriment, fraud, and imposition upon the public, because the greater the amount of stocks and bonds, the greater must be the rates which the company is forced to charge the public for passenger and freight service in order to pay dividends on such watered stock.

A partial protection for the public against the payment of dividends upon watered stock was provided by the Sixty-second Congress in the passage of an act providing for the physical valuation of railway property. The Interstate Commerce Commission is now actually engaged in performing the duties imposed upon it—of obtaining the physical valuation of railways—by that act. Fair and reasonable railway rates can not be ascertained and charged in this country until the Interstate Commerce Commission shall have possessed itself of figures showing the actual physical valuation of railway property. Fair railway rates based on a fair value of their property, measured by the money actually invested in that property, is the guide with which the Interstate Commerce Commission can safely fix just and reasonable rates to be charged for railway traffic. Reflection shows us, however, that the ascertaining of the physical valuation of railways will have been in vain if, after it shall have been completed, such railways should still be at liberty, without hindrance or control, to issue and sell such stocks and bonds as they may be able to dispose of to uninformed investors. To prevent the great work and expense nec-

essary to obtain the physical valuation of railways from becoming useless, and to protect the public from excessive passenger and freight rates, it has been deemed wise to include in the antitrust legislation a provision under which hereafter railways engaged in interstate commerce can issue no new stocks and bonds without complying with the requirements of the United States law.

This is a matter which has attracted the attention of all parties and the public in general for many years. Until now, however, no attempt to regulate and control the issuing of such stocks and bonds has been attempted by Congress.

The last national Democratic platform specifically declared for the declaration by law of the conditions upon which corporations shall be permitted to engage in interstate trade, including the prevention of stock watering. Several previous platforms of that party declared likewise. We of the Democratic Party now come to redeem that pledge to the people by the enactment into law of bill H. R. 16586. It provides in substance that after its passage it shall be unlawful for any common carrier engaged in interstate commerce to issue any capital stock, or certificate of stock, or any bond, or other evidence of interest in or indebtedness of the carrier, unless it be for some purpose within its corporate power and in the public interest necessary for the performance of its public service, and not tending to impair the financial ability of the carrier to discharge its duty to the public, nor unless and until, and then only to the extent that upon application by the carrier, and after investigation by the United States Interstate Commerce Commission of the purposes and uses of the issue of stocks and bonds and the proceeds thereof, such issue shall have received the approval by order of such commission as being reasonably necessary and appropriate for the purposes stated. The application to the commission is required to be given wide publicity in order that all concerned may have notice and may be heard, if they desire. Further details of the purposes for which they desire to issue such stocks and bonds must be publicly made. Their proof must be submitted at public hearings before the commission, and must be verified as any legal proceedings. If the commission upon the showing of such railways deems that the authorizing of additional stocks and bonds is necessary to enable the railway to carry out its obligations to the public, it will grant the application; otherwise it will be rejected.

Stocks and bonds issued under this proposed new law will have to be based upon intrinsic value, and a disinterested quasi judicial body having only the welfare of the corporation and the public at stake will be the sole judge of the propriety and the necessity of issuing such bonds and stocks. But in so doing such bonds and stocks will depend for their value upon the property of such railway carrier, for the bill provides, among other things, that nothing contained in it shall be construed to imply any guaranty or obligation to such issues of stocks and bonds on the part of the United States. Reports are required to be made from the officers of such railways annually, or more frequently if desired by the commission, showing the disposition made of the proceeds. Under this proposed law it will be impossible to repeat the wild and crooked financial histories of the railways to which I have referred. Under such a law it will be impossible in the future for the crooked railway magnates to increase the rates of traffic required to be paid by the public in order to pay dividends upon what is known as watered stock and bonds.

Such frauds, which have made our railway investments notorious throughout the civilized world, will then be a thing of the past. Speculators and bona fide investors will then understand that railway stocks and bonds issued after the passage of this act represent actual and genuine investments. They will have assurance that such stocks and bonds will then be based upon intrinsic value. With such investments made safe under the proposed law, money will be forthcoming from people of moderate means and from savings with which to build and extend the needed and necessary railways and industries of the country.

Foreign money will again seek our shores and contribute to the circulation of the lifeblood of national prosperity. Railway rates of all kinds will be based solely on a fair return on an honest actual investment. The dishonest speculators will be forced to retire, and the haunts that once knew them will know them no more. Natural competition will be restored and will prevail in all the Nation. Business freedom will be reestablished and new oportunities afforded and opened to the industrious, active, thrifty, and ambitious workers and business men. Prosperity will reign, and the threatening clouds of socialism and of the Industrial World Workers shall disappear from our national horizon.

Revision of the Laws—Judiciary Title.

EXTENSION OF REMARKS

OF

HON. CHARLES H. DILLON,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, June 17, 1914.

Mr. DILLON. Mr. Speaker, the amendment to section 169 is of the utmost importance to the bench and bar, as well as to the litigants in the Federal courts. On July 18, 1913, I introduced House bill 6916, providing—

That in all cases, both civil and criminal, in the Federal courts where the constitutional right of a jury trial exists the court in charging the jury must not express any opinion upon the facts of the case.

The rule in the Federal court is stated by Justice Gray in Simmons *v.* United States (142 U. S., 155):

It is well settled, by a long series of decisions of this court, that the judge presiding at a trial, civil or criminal, in any court of the United States is authorized, whenever he thinks it will assist the jury in arriving at a just conclusion, to express to them his opinion upon the questions of fact which he submits to their determination.

In this case the defendant was on trial for aiding and abetting in the embezzling of funds of a certain national bank. The court said to the jury:

I have the right, under the laws of the United States, to give you my opinion on questions of fact * * *. I shall confine myself to stating to you the law by which you are bound, simply calling your attention to the questions of fact which are to be decided by you, for, as you know, juries decide questions of fact and not the court.

On the next day the jury came into court and asked to be discharged from further consideration of the case. Whereupon the court said:

This case has occupied a long time. It is a case of importance, and the discharge of the jury at this time would involve another trial. It seems to me that that should not be had unless in a case of necessity. I see in this case no such necessity. I can not understand the failure to agree arises from any difference of opinion based upon the insufficiency of the evidence in this case. Whenever in the opinion of the court the testimony is convincing it is the duty of the court to hold the jury together Therefore I must decline your request to be discharged.

This conviction was affirmed by the Supreme Court of the United States.

Pittsburgh Railway Co. *v.* Bloomer (146 Fed., 720) was a case charging the railway company with negligence in starting the car while the plaintiff was in the act of alighting. The court said that if the car was started while the plaintiff was in the act of alighting from it there was negligence on the part of the defendant, and added:

Looking at it in that way, it seems to me, is about the only way you can look at it.

The court of appeals in this case said:

All the learned judge in the present case did, in using the language complained of, was to tell the jury how the proofs in the case on the subject of the defendant's alleged negligence impressed him.

In Provident Savings Life Association Society *v.* Hadley (102 Fed., 856) the circuit court of appeals, in reviewing the case, says:

In charging the jury in an action on a policy of life insurance, upon a question whether the insurance company was influenced to enter into the contract by false and material misrepresentations, the court said: "It is difficult for me to see that it is material. Perhaps it will be difficult for you to see that it is. But this is not for me to pass upon, but for you."

It was held that the judge's right to interfere with the finding of the jury upon such question being expressly renounced in the charge, the expression of the judge's opinion was without prejudice.

Sebeck *v.* Plattdeutsche (124 Fed., 11) is a case in the circuit court of appeals where the defendant was the owner of a park at which it held public amusements, to which it charged a fee, the defendant giving an exhibition of fireworks when plaintiff was injured through the alleged negligence in the construction of the explosives. The court said to the jury:

If the company employed a couple of Italians about whom they knew nothing, they did not exercise the prudence which an intelligent person should have exercised. For myself, I do not believe for a minute that they did any such thing; but that is a question of fact for you to determine, and not for me.

The court of appeals affirmed the case, holding that the judge had the right to express his opinion of the facts in view of the fact that he informed the jury that they were the judges of the facts.

Ever since the formation of our Government we have permitted the Federal judge to express his opinion o the evidence

in the case. We borrowed the practice from England and have maintained this rule of law down to the present time.

Practically every State in the Union now prohibits the judge from expressing his opinion upon the evidence. The States have outgrown the old, worn-out English rule of law and have preserved the constitutional right of a jury trial. They have declared, in effect, that the court must not express his opinion on the facts of the case.

Experience has taught us that the jury system is the best and safest system ever adopted by any civilized country. No better system exists and none can be found to take its place. The 12 jurors coming from every walk of life are the safest and best tribunal for passing upon the constitutional rights of the citizen.

No one can doubt that this Federal practice is frequently abused and the constitutional right of a jury trial is often subverted. The jurors are summoned from every part of the State, and are strangers to each other. They take their place in the court room amidst gorgeous surroundings and expensive equipment. The marshal heralds the coming of the court; the members of the bar and officials arise, as an act of homage, to the coming of the court, who appears with great ceremony and ascends the judgment seat. Everyone is impressed with the judicial power and knowledge. When the court tells the jury his opinion of the facts the jurors, fearful of censure, timid of their rights, readily reach the conclusion that the opinion of the judge is better than their own. The jury trial becomes a farce, the opinion of the judge becomes the opinion of the jury, and thus the constitutional right of a jury trial is subverted and destroyed.

The amendment should be placed upon the statute books in order that the Federal court may not hereafter trespass upon the constitutional right of a jury trial. Otherwise, we might just as well abolish the Federal jury system and substitute a trial by the court.

The Colorado Coal Strike—Enforce the Law.

EXTENSION OF REMARKS
OF

HON. GEORGE J. KINDEL,
OF COLORADO,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 8, 1914.

Mr. KINDEL. Mr. Speaker, on several occasions I have endeavored to express myself upon conditions incident to the labor disturbances which have prevailed for some months in the State of Colorado. My inability to secure recognition for that purpose I now regard otherwise than a misfortune. Heretofore I must necessarily have spoken as others have done upon this subject, more or less upon hearsay and conjecture. Such is not, to the same extent at least, the case to-day. The real facts, the truth concerning what has happened and is happening in connection with that unfortunate situation, is at last coming out.

Seldom, if ever, within my memory has a great State been subjected to more misrepresentation or been worse maligned than has the State of Colorado during the past six months. It has been held up to the Nation and the world as the lawless abode of anarchy, peopled only by grasping and wholly unprincipled corporations and their rebellious slaves, partially held in check by the officers of the law until recently, when the State treasury became bankrupt and utter riot, disorder, and insurrection held sway.

The yellow press of my State, ably seconded by journals of like character elsewhere, have, from time to time, deluged this country with such a flood of sensational stories as to hold the interest and, in some degree, blind the judgment and good sense of the general public. Well meaning but emotional women have become hysterical, and, largely because of their apparent sincerity, have carried conviction by their recital of industrial wrongs which they have been told existed. The judge of a court of Colorado, less known and therefore more credited away from home than where he unfortunately belongs, oblivious to the interests and good name of the people of the State which for too long a time has charitably afforded him a livelihood, has swept across the country with a troop of vaudeville artists with the apparent purpose of adding luster to his peculiar fame by spreading denunciation and falsehood where it would best attract attention. And behind all this press bureau and these itinerant vendors of libel, slander, exaggeration, and positive falsehood can be seen the scheming, cunning, well-paid officers and salaried agents of a monopolistic labor union.

The State of Colorado is not what it has of late been represented to be; the people of that State are no less high-minded, patriotic, law loving, nor otherwise different from those of any other State. The chief executive of my State, while not a prizewinner for wisdom and courage, is a sincere and honest man. The National Guard of Colorado, so much condemned by labor leaders and their sympathizers, not because of what it did, but because it stood for law enforcement, holds a high rank among the citizen soldiers of this country, and is the peer of any national guard in the United States. Nor are Colorado business men and business interests different from those elsewhere, unless it be in their extreme tenacity of purpose and admirable devotion to a principle, irrespective of financial results.

Mr. Speaker, my State, its business interests, and its people as a whole have had heaped upon them much undeserved abuse on the floor of this House and in the sensational press of the country. They have had thrust upon them an industrial conflict of an unnecessary and wholly inexcusable character. I have waited in vain for Representatives more versed in parliamentary procedure and abler of speech than I to deny the infamous stories that have been circulated about our industrial enterprises and explain the character of the war which, in the name of labor, has been waged in Colorado for many months. I have been told that criticism of labor is popular neither here nor among my own constituents, and that I can best subserve my own political interests by remaining quiet upon such a subject. It may be true that in this place one can not with propriety express nor vote his convictions when labor is involved. I do not believe that moral cowardice is commended in my home State. But, be that as it may, it is more important that the truth prevail than that GEORGE KINDEL represent the State of Colorado in Washington, and I propose here and now to express my views and to the extent of my ability acquaint such as care to know with a few of the essential facts in connection with the disturbances which have attracted and held the attention of the whole country. If, in so doing, I shall seem to condemn labor and organizations of labor, I trust I shall not be misunderstood. True labor and wisely conducted labor unions have no better friend than I, for I am a member of a union that has accomplished much good. It is for this reason that I am compelled to denounce the methods of the particular labor organization which has brought disgrace, industrial blight, and almost financial ruin upon my State.

Before proceeding, Mr. Speaker, I desire to present as a part of my remarks a few of many memorials and resolutions recently received by me from my people at home. I first desire to call attention to the following resolutions unanimously passed May 25, 1914, at a mass meeting of citizens of the town of Longmont, in Boulder County, where much of the disorder has had its origin:

RESOLUTIONS ADOPTED BY A MASS MEETING OF CITIZENS OF LONGMONT, COLO., MAY 25, 1914.

Whereas a certain class of people whose only claim to publicity is their ability and purpose to breed contempt of law, to encourage riot, murder, and incendiarism, are posing before the world as the representatives of the patriotic citizens of the patriotic State of Colorado: It is

Resolved, That we deny that this small class of agitators represents in any large sense the public sentiment of this State, and we denounce as unworthy of citizenship these people who, to advance their political ambitions, to gratify their silly vanities, and thrust their otherwise obscure personalities into the limelight, would befoul the nest that shelters them, incite ignorance to lawlessness, plunge the State into anarchy, and hold it up to the world emasculate and unworthy a place in the galaxy of Commonwealths; and

Whereas all Denver daily newspapers, under the gauzy pretext of maintaining popular rights, are aiding and abetting lawlessness, riot, and anarchy: It is further

Resolved, That such newspapers are unworthy the moral or financial support of the law-abiding citizens of the State; and

Whereas the State militia, called to service by the legally constituted authority, and representing the sturdy manhood of the State, has been doing its duty as fully as did the young men of a generation ago, who bared their breasts to the assaults of disunion, we protest against the unpatriotic, false, and libelous vituperation that has been so unjustly used against our young soldiers as destructive to a wholesome military spirit that may stand the Republic in good stead in the no distant future; and

Whereas we believe that the sovereignty of the State of Colorado and not the private disputes of individuals or corporations is the issue we are facing today: We therefore

Resolved, That it is the duty of every loyal citizen to sustain by word and deed the governor of the State at whatever cost in putting down rebellion, punishing treason by whomsoever instigated, and redeeming the State from the humiliation of standing as a mendicant, hat in hand at the door of the White House, begging for the protection we are too feeble to afford ourselves, and to protest to the world that the mouthings of near statesmen, frenzied women, and patriots for revenue only is not the voice of the sovereign State of Colorado.

I may be permitted to next call attention to a resolution emanating from a most unusual and highly respected source,

namely, several bodies of the Ancient and Accepted Scottish Rite of Freemasonry in the State of Colorado. The resolutions are as follows:

Whereas during the past several months there has existed in the coal-mining districts of our State a condition of insurrection against the lawful authority of our State government wherein several thousand misguided and largely unnaturalized men, speaking more than 20 different languages, unacquainted with the true principles of constitutional government, consisting in part of returned soldiers from the recent foreign wars, armed with high-power rifles, incited, led on, and financially sustained by agitators and professional trouble makers, mostly nonresidents of our State, possessing no property or other interests in our Commonwealth, have bid open defiance to and made organized war against the lawfully constituted authority of our State, murdered many men, and created a reign of terror in the said mining districts, and have destroyed hundreds of thousands of dollars worth of property;

Whereas the regularly organized National Guard of Colorado did, without bloodshed (except the reported cases of two men), suppress the said insurrection and maintain an armed peace in the said coal-mining districts until, on account of lack of appropriated funds to pay and maintain the National Guard of Colorado in the field and the oft-repeated and unjustifiable refusal of our prejudiced State auditor to audit bills and issue warrants for such payment and maintenance, it was deemed necessary to withdraw the greater part of the said National Guard of Colorado from said districts;

Whereas thereafter there occurred the attack on the forces of the National Guard of Colorado stationed at Ludlow, during which attack 1 boy was accidentally killed by a bullet coming from the direction of the insurrectionists and 2 women and 11 children who had crowded together in a hole under a tent were smothered without fault of the said National Guard of Colorado; and also during which attack the National Guard of Colorado, while under fire from the insurrectionists, heroically rescued a number of women and children from similar holes; and

Whereas there never was any such occurrence as the so-called "Ludlow massacre," and the National Guard of Colorado never did, at any time or place, kill any women or children; and

Whereas concerning the aforesaid matters and things, many false, libelous, and maliciously misleading statements and articles have been published and circulated to the great injury of our loyal people: Now, therefore, be it

Resolved, By the several bodies of the Ancient and Accepted Scottish Rite of Freemasonry, S. M. J., United States of America, in the State of Colorado, that we, with all other good men and good women, without respect to political affiliation or sectarian belief, are loyally bound to support and maintain constitutional government and the just enforcement of the laws.

That while we welcome to our State intelligent, peaceable immigrants, who come seeking to become citizens and are willing to support American constitutional government, we denounce and condemn as dangerous to free American institutions the importation and congregation in this country of large numbers of unassimilable immigrants of such characters and modes of life as to be unfitted ever to become good citizens.

That if there be differences between employers and employees, and if there be infractions of law or neglect of compliance with law by either employers or employees in regard to matters of employment, these things should be remedied by mutual contracts, by legislation, or in the courts; but armed rebellion against the constituted authorities can not be countenanced by good people and in all cases must be suppressed.

That the only lawful authority in this State is vested in the citizens of this State or in proper cases, in the citizens of the United States, acting through and by their lawfully chosen representatives, and any and all combinations of people making armed insurrection or war against such lawful authority are guilty of treason, should be condemned and punished accordingly.

That we deplore, denounce, and condemn the publication and circulation throughout the State and Nation to the great injury of our loyal people of the many false, libelous, and maliciously misleading statements and articles regarding the said coal-mining insurrection and regarding the acts of our governor and of the National Guard of Colorado in connection therewith.

That we commend and express our grateful appreciation to the officers and men of the National Guard of Colorado, who have valiantly and patriotically sought to do their duty in defense of constitutional government and the enforcement of law and order in our State under the most trying circumstances, without pay, suffering unusual hardships, facing an armed enemy of superior numbers.

That the people of Colorado are amply able to govern themselves, but when organized bodies of men in other States send arms, ammunition, men, and money into this State to create and maintain insurrection and make war against our State authority which, if successful, would overturn the government of this State, it becomes a serious menace to the National Government and a matter of national importance.

That in memory of those who were killed on the field of battle or assassinated while pursuing the line of their duty a grateful people should erect and maintain upon the ground hallowed by their blood monuments inscribed, "Here lies a martyr to the cause of constitutional government and the prevention of the establishment of anarchy in this State."

The following names are signed to the resolutions:

Ralph E. Stevens, Charles A. Stokes, Clarence M. Kellogg, and David Plessner, members of the committee, and Henry B. Teller, acting master, Delta Lodge of Perfection No. 1; Walter D. Salter, jr., wise master, Mackey Chapter of Rose Croix No. 1; Ralph E. Stevens, commander, Denver Council of Kadosh No. 1; George L. Hodges, master of Kadosh, Colorado Consistory No. 1, A. A. S. R., and Charles H. Jocobson, secretary.

I next present a series of resolutions adopted at a mass meeting of the citizens of Steamboat Springs. They speak for themselves, and again evidence the sentiment of the people of Colorado, who know whereof they speak:

Whereas a state of insurrection has existed within the State of Colorado whereby it became necessary for the governor of the State to call upon the armed force of the United States to preserve law and order, as well as the preservation of life and property; and

Whereas during such state of insurrection there has been loss of life and destruction of property; and

Whereas the governor of this State has been maligned by this same class of people who have abetted and encouraged violation of law, and by false representations have misled and deceived not only many of the citizens of this State but of the entire country as well, and thereby have created a false impression abroad as to the integrity of the people of this State and their willingness and ability to maintain law and order; and

Whereas the differences between the striking miners and the mine operators are small compared with the greater wrong of insurrection now prevailing, and the question of maintaining law and order is at this time the paramount question, and we do not now attempt to pass upon or consider the merits of the controversy between the miners and the operators or to take sides with either:

Now, therefore, we, citizens of the county of Routt and State of Colorado, in mass meeting assembled for the purpose of expressing our adherence to the principles of law and order, do firmly resolve that law and order must and shall prevail within the State of Colorado; that private difficulties must and shall be settled by and in accordance with the laws and procedure enacted by the people of the State for their own government and control and not by force, violence, or intimidation; that whatever abuses may exist must be corrected in a lawful and orderly way and not by force of arms; and that it is the inalienable right of every American citizen to work for whom he pleases and upon such terms as to him are satisfactory; and in this right he must and shall be protected.

Resolved, That we hereby condemn the men, women, and newspapers who have aided and encouraged violations of law, who have maligned the governor, abused the National Guard, and embarrassed both the governor and the National Guard in their efforts to suppress insurrection and to restore peace as traitors to the State. And we hereby pledge ourselves to use every honorable means to restore and maintain law and order and constituted authority within the confines of our beloved State.

Resolved, That we commend the governor for his efforts to maintain peace and order, and express the belief that his efforts would have been more effective had he been supported by his associates in the statehouse instead of being embarrassed at every turn by State officials in sympathy with mob spirit.

Resolved, That we heartily commend the members of the general assembly for so promptly supplying the means for the payment of the National Guard and for so promptly and patriotically supporting the governor of the State in the hour of need, and especially commend the representative and senator from this district.

Resolved, That we commend those newspapers throughout the State which have stood for a firm law-and-order policy.

Resolved, That we condemn the attitude of Judge Ben B. Lindsey with reference to the industrial conditions of the State and deny the truth of his statements with respect thereto, as reported in the press, and protest against his assumption of authority to speak for us or for the people of this State.

Resolved, That we urge cities and civic bodies everywhere in this State to make an open stand for law and order in this the greatest crisis Colorado has ever been called upon to meet.

Last but not least I present the views of good men and women, expressed and published to the world by the eminent writer Mr. Thomas Tonge for the Law and Order League of Colorado:

DENVER, *May 18, 1914.*

To the Rocky Mountain News:

It is generally conceded that Colorado excels any other State in the Union in the extent and variety of its undeveloped resources.

The intelligent and judicious development of such resources means increased population, increased productiveness, increased money in local circulation, great improvement in all lines of business, and better opportunity for everyone to make a living, certainly much needed at this time.

The aggregate loose capital of all the 900,000 people of Colorado does not begin to be sufficient to finance the development of the resources of the State.

Hence the necessity for outside capital, whether in the form of companies or syndicates, large or small, or desirable immigrants from other States, business men, farmers, manufacturers, etc., each bringing more or less capital, aggregating very large sums.

For instance, it is conservative to say that $5,000,000 wisely and honestly expended in the metalliferous mining industry of Colorado in the development and equipment of carefully selected "prospects" or partially developed properties, or the resuscitation of dormant mines with good past production records, would, in due time, result in the production of probably $100,000,000 of new mineral wealth.

Unfortunately at the present time Colorado is cursed and handicapped by an abnormal supply of professional salaried labor agitators with socialistic theories; professional politicians (the female politician being more contemptible than the male) and professional reformers, practically all of them with an eye to salaried public positions, present or future.

They are the parasites of the body politic, have involved the State in large indebtedness, and brought it into undeserved disrepute.

They have been mistakenly accorded by the press an undue amount of that publicity and notoriety which is an important part of their stock in trade.

The function of government, whether National or State, is "the protection of life, limb, and property."

Under the malign influence of professional agitators, mostly from outside the State and their Molly Maguire department, such functions of government in Colorado has been temporarily hindered, to the serious financial loss of the State as a community, and, directly or indirectly, also of the reputable citizens and taxpayers individually.

Outside capital, whether large or small, will not come to Colorado unless life, limb, and property are protected.

Eliminating all the appeals of ignorance and prejudice which have been spoken, written, and published, the fundamental issue in the present coal strike is the "open shop"—the right of the individual, under Federal and State law, to earn a living without belonging to a union and without risk to life and limb at the hands of the Molly Maguire element of the union.

The more one realizes the needs for unions the more one deplores the manner in which some of them are conducted. The "rant and

cant" of the salaried professional agitators who dominate some of them necessarily react, in public opinion, against unions generally.

The future prosperity or otherwise of Colorado generally and of its great majority of reputable citizens individually largely depends on the suppression of anarchy, the effective discountenancing of professional demagogues, and the restoration and continuance of "law and order," including the "protection of life, limb, and property."

It is high time that law-abiding, public-spirited citizens asserted themselves. The Law and Order League of Colorado is opportune, and, irrespective of political affiliation, should have the fullest support from all good citizens, with their "all" in this State.

THOMAS TONGE.

I will not further burden the record by reading additional documents and letters of like import received from hundreds of business and civic organizations and individuals in my State. Enough has been shown to evidence the attitude of all save the officers and agents of the United Mine Workers of America and their sympathizers. The memorial of Kensington Council, No. 19, Junior Order United American Mechanics, unanimously adopted at Denver May 19, 1914, presented to the Senate by Senator THOMAS, from Colorado, and found in the RECORD of May 20, 1914, is an instructive document. The Association of Colorado Women, represented recently in Washington by Mrs. Helen L. Grenfell, while late in its efforts to correct the misrepresentation and counteract the prejudice originating elsewhere, is commended by all good citizens. Aside from certain obviously biased elements of society the people of Colorado can discover neither justification nor excuse for the calling of the strike in the Colorado coal fields or the methods employed by the leaders in conducting its progress.

Prior to the calling of this strike no substantial differences existed between the mine owners and their workmen. There had been no State-wide labor trouble for 10 years; only 2,048 out of a total of 23,000 miners in Colorado, New Mexico, and Utah were members of the United Mine Workers of America. But the officers of this organization proceeded to import into Colorado a horde of paid professional agitators and agents with the avowed purpose of circulating among the miners and injecting into their minds a spirit of discontent and dissatisfaction with their employers and the conditions under which they were working. Among those so engaged and brought into the State are found the names of Frank Hayes, of Indiana; James Mullen, of Arkansas; George Hargrove, of Indiana; A. B. McGary, of Iowa; A. Germer and H. C. Pettit, of Illinois; Victor Marietta, of Ohio; John L. Britton and Frank Holuf, of Oklahoma; Jonas Gott, of Iowa; William Diamond, of Michigan; Charles Batley, of Missouri, and a host of others, including the sainted Mother Jones, whose residence, according to her testimony, is "wherever there is trouble." (See congressional investigating committee record.) All of these people are experienced labor agitators or leaders of strikes in West Virginia and other fields.

For the information of a misguided public, may I be permitted to insert the following documents obtained by me from the public library in Denver? They contain much valuable information concerning the life and character of this "stormy petrel":

"POLLY PRY."

A JOURNAL OF COMMENT AND CRITICISM.

[Denver, Colo., Saturday, Jan. 2, 1904, vol. 1, No. 18.]

At Coliseum Hall, Sunday night, January 3, 8 p. m., a mass meeting of union-labor people and their sympathizers.

J. Warner Mills presiding.

Judge Frank Owers, J. O. Morris, O'Neil, Sullivan, Haywood, Moyer, and "Mother" Jones, speakers.

That is the announcement which is expected to crowd the big hall to suffocation. The real attraction is "Mother" Jones, national labor agitator, about whom everybody is curious—which is why the following story may be of interest:

Mary Harris, born in Cork, Ireland, 60 years ago, of respectable parentage and good antecedents.

Brought to New England at an early age. People settled in Maine. Educated in common school. Taught a country school for several years.

Married a prosperous farmer, and when widowed immediately allied herself with a labor movement then attracting attention in the East, claiming that she wanted to elevate the laboring classes, educationally and socially.

Began to associate with labor leaders and reformers at the time of the A. R. U. strike of 1894. Since then has kept pretty busy stirring things up. Has had a record for never advocating peace, nor arbitration; but always being for strife and war.

Was particularly prominent in the Pittsburgh strike of 1895, miners' strike of 1897, central Pennsylvania strike of 1899 and 1900, the coal strike of last year in the anthracite district in Pennsylvania, and the textile strike in Philadelphia.

During the latter strike she placed herself at the head of 100 men, women, and children, and started with them on a march to Oyster Bay to interview President Roosevelt and demand his intervention in behalf of the strikers. She held daily meetings along the route, soliciting subscriptions for the maintenance of her party, and finally landed at Oyster Bay with a handful of her followers—but she did not see the President, and the expedition ended there.

That is the record, so far as the labor movement is concerned, of the woman known from Maine to California as "Mother" Jones, labor agitator and leader—"Mother" Jones, who is always to the front when there is strife, with her battle cry of "We'd rather fight than work"; "Mother" Jones, who gets $5 per day and expenses so long as there is trouble brewing, who since 1900 has received a salary from the mine workers' organization, and who is said to be worth any five men as an agitator.

But down in the "Pinkerton" office there is another record, one that reaches back to 1889, when "Mother" Jones was a well-known character, not alone in the "red-light" district of Denver, but in Omaha, Kansas City, Chicago, and far-off San Francisco.

That record covers many pages, but a few of the facts are all that are necessary to show you the character of this petticoated reformer. They say of her:

"Vulgar, heartless, vicious creature, with a fiery temper and a cold-blooded brutality rare even in the slums."

"An inmate of 'Jennie Rogers's' house on Market Street, Denver, some 12 years ago. She got into trouble with the Rogers woman for bribing all of her girls to leave her and go to a house in Omaha, for which act she was paid a procuress's fee of $5 to $10 apiece for the girls."

"She was a confidential servant in Rose Lovejoy's private house on Market Street, Denver, and with her several years."

"Was well known to Annie Wilson, another Denver woman, who ran a place on Market Street, afterwards had a place in Cripple Creek, and now lives in Kansas City."

"Known to Lolo Livingston, with whom she went to San Francisco."

"Lived in Eva Lewis's house on Market Street at the time Coxey's army passed through here, and took a prominent part in the Denver preparations for their care."

"Is known to Harry Loss, a piano player at 1925 Market Street, who says he knew her first in Omaha in 1894, when she lived in a house at Tenth and Douglas. She was then selling clothes to the girls."

"A sewing woman for the sporting class, living on Lawrence street (name withheld), knew her 12 or 15 years ago, when she lived with Minnie Hall, and afterwards with Jennie Rogers; says it was commonly reported that she was a procuress by trade," etc.

What do you think of it?

The anarchists and socialists of the entire country are making desperate efforts to establish their headquarters in Colorado and to make this State the central stronghold for these pernicious evils. They want to control the politics of the State and to have a point from which to disseminate their doctrine, and they believe they can do it. The large number of foreign miners and the isolation of much of the territory is greatly in their favor, and the prolonged and vicious struggles going on now in the various strike centers argues well for their number and power.

Therefore it behooves the people of this State to heed even the ridiculous statements of this infamous old woman, because behind her words there is a real purpose; and more, that purpose has many supporters.

The meeting called for to-morrow is another evidence. It can not be laughed away nor sneered out of existence. If it is held, you will see that it will be attended not by a handful but by thousands; nor will it be the last; and unless it is put down, and put down now, Colorado is in for more trouble than we have ever dreamed of.

"POLLY PRY."

A JOURNAL OF COMMENTS AND CRITICISM.

[Denver, Colo., Saturday, January 9, 1904. Volume 1, No. 18, page 4.]

"Mother" Jones didn't appear at the Coliseum Hall mass meeting last Sunday night. Neither did she formally launch the new political party for which she stands sponsor. All to the great disappointment of the crowd that had gathered to see her.

She came to Denver early last Sunday morning from Trinidad, with the avowed intention of making one of her "rip-snorting" speeches at the meeting. She went to the Oxford, got some Denver papers, and suddenly became indisposed—at least, that is the story they gave out.

And now "Mother" Jones has disappeared—utterly vanished—from Colorado. She left the Oxford early Monday morning, and since that time not a trace can be found of her. They say that she is not in Trinidad nor Telluride; neither can she be found in the northern fields nor at Cripple Creek; or, if she is, her usual haunts know her no more.

However, "Mother" Jones always was a changeable being, ever since she was known as "Mother" Harris, in May, 1889, when she leased the house then standing on what is now 2114 Market Street, between Twenty-first and Twenty-second Streets.

She refurnished it from top to bottom and soon opened it as a "house" that afterwards became one of the most notorious in the city.

Had seven inmates, who were known as the "best-looking girls on the row." For several months took great pride in the character of her house and the class that patronized it. At that [time] it was the most exclusive "house" on Market Street.

Made a specialty of midnight lunches and social card games, at which unlimited gambling was indulged in.

Catered entirely to the "gang" then in control of the city, county political machines, and a few wealthy mining men.

Four months after opening the house had over $15,000 on deposit in city banks.

Had a "friend" at that time called "blackleg."

He deserted her in September and went to New Mexico with an inmate of the house. After that "mother" went to the bad.

Took to drink and was arrested several times on the charge of drunkenness and disorderly conduct. Left her "house" to manage itself, and in a short time it became one of the typical dives of Market Street.

By November 15 she had spent the $15,000 she had on deposit in the bank only a few months before and borrowed $2,500 from S. H. Engel, a loan broker, giving a chattel mortgage on the furniture in the "house."

On December 20, 1889, the mortgage was foreclosed, the furniture sold, and the house closed.

"Mother" Jones then became an inmate of the "Minnie Hall House." Then came the record, as I told it last week.

And this is the woman the wives and children of the deluded call "mother."

Interesting, isn't it?

It was uniformly recognized that the terms and conditions under which the Colorado miners were employed were far more advantageous than those existing in the eastern coal fields,

where the union was in control. The earnings of the miners were more than satisfactory; the uncontroverted testimony taken by the investigating committee of this House discloses the average daily earnings at five representative mines for the months immediately preceding and following the strike to be $4.41, $4.27, $4.08, $4.67, and $4.90 per man. The following is the authenticated and properly certified pay roll of the Rouse mine of the Colorado Fuel & Iron Co. for August, 1913, the month immediately preceding the strike.

Pay roll of the Rouse mine of the Colorado Fuel & Iron Co. for August, 1913.

Name.	Number days worked.	Earnings.	Average per day.

The following facts may be gathered from the foregoing figures: Eleven of the men upon this pay roll earned between $100 and $110 for the month; 13 earned between $110 and $120; 15 earned between $120 and $130; 6 earned between $130 and $140; 8 earned between $140 and $150; 9 earned between $150 and $160; 5 earned between $160 and $170; and 2 earned over $170 for the month. The average daily wage for the month was $4.41. Seventy-two miners who worked 25 and 26 days, respectively, averaged $4.75 a day, or more than $120 for the month.

The following is a like authenticated pay roll of the Bowen mine of the Victor-American Fuel Co. for the month of August, 1913:

It will be observed that 43 men upon this pay roll, who worked 20 days or over, averaged $4.53 per day and $100.48 for the month; 30 men, working 20 days or more, averaged $4.98 per day and $109.95 for the month; 25 men, working 20 days or more, averaged $5.04 per day and $112.42 for the month; 20 men, working 20 days or more, averaged $5.25 per day and $118.95 for the month. The average daily wage for all miners employed was $4.27. The maximum workday was eight hours, and many of the men worked less than eight.

The figures set forth in the foregoing pay rolls represent the total amount earned by the miners, and from such earnings there is uniformly deducted $1 per month for physicians' services and hospital privileges for each man and his family and 50 cents for sharpening tools, and so forth.

Aside from satisfactory wage conditions, the Colorado miner worked never to exceed eight hours per day, and as much less as he saw fit. He was paid in cash twice each month; he was privileged to trade at the company's store, if such existed, or elsewhere, if he preferred. All these assertions are of course denied by the labor leaders, but they are nevertheless true, and will not be controverted by anyone having a proper regard for facts.

Notwithstanding the general satisfaction and contentment which prevailed, a mock convention of miners was called by the strike leaders and a strike was declared. Adolph Germer, a Socialist leader, knowing in advance full well what the result of this pretended convention would be, and several days before the strike was called, purchased firearms in the city of Pueblo and sent them into the mining districts to be distributed among his uneducated followers, and immediately after the call was issued a reign of intimidation, violence, murder, arson, riot, and general lawlessness commenced.

The leaders of the strike have always asserted with the utmost assurance that when the strike was called more than 12,000 men responded and that at least 95 per cent of the men employed in coal mines of the State went on strike. I desire to call attention to the following tabulation of figures taken from the reports in the office of the State coal-mine inspector of Colorado:

COAL MINES OF COLORADO—DATA TAKEN FROM REPORTS OF STATE COAL-MINE INSPECTOR.

Average number of men employed since Aug. 1, 1913, compared with corresponding months of previous year, and percentage of corresponding months of previous year.

Months.	Men.	Months.	Men.	Per cent of corresponding month, previous year.
Aug., 1913	12,059	Aug., 1912	12,196	99
Sept., 1913	12,346	Sept., 1912	12,059	102
Oct., 1913	7,696	Oct., 1912	13,893	55
Nov., 1913	8,016	Nov., 1912	14,354	56
Dec., 1913	9,665	Dec., 1912	15,244	63
Jan., 1914	10,375	Jan., 1913	14,684	71
Feb., 1914	10,026	Feb., 1913	14,153	71
Mar., 1914	10,146	Mar., 1913	12,802	79

Tonnage of coal produced since Aug. 1, 1913, compared with corresponding months of previous year, and loss and gain in tons compared with previous year, and percentage of corresponding months of previous year.

Months.	Tons.	Months.	Tons.	Loss.	Gain.	Per cent of corresponding month, previous year.
				Tons.	Tons.	
Aug., 1913	859,047	Aug., 1912	801,933		57,114	107
Sept., 1913	764,873	Sept., 1912	855,753	92,880		89
Oct., 1913	545,155	Oct., 1912	979,644	434,489		56
Nov., 1913	536,698	Nov., 1912	1,042,689	505,991		51
Dec., 1913	604,357	Dec., 1912	1,129,261	524,904		54
Jan., 1914	726,115	Jan., 1913	1,107,005	380,890		66
Feb., 1914	620,458	Feb., 1913	879,577	259,119		71
Mar., 1914	626,865	Mar., 1913	768,264	141,399		82

It appears from these official figures that in September, 1913, there were employed in the coal mines of the State 12,346 men; the strike was called September 23, 1913. During the month of October there were employed 7,696 men, or just 4,650 less than the preceding month. In other words, the maximum number of men who went on strike was 4,650. Between the months of October and December, 1913, 1,969 men returned to work, so that in December the men employed aggregated 9,665. I say 1,969 men returned to work, because during that period the coal companies had brought no so-called strike breakers to their properties.

The tabulation further shows that if 4,650 was the maximum number of men who went on strike and 1,969 of these returned to work during the two months following the call, there remained at the end of December of the men who originally struck only 2,681.

The interesting fact also appears that in March, 1914, there were engaged in and about the coal mines 79 per cent of the number of men employed during March, 1913, and that these men produced 82 per cent of the total tonnage for March, 1913. In other words, the men now employed in the coal mines have a greater efficiency per man than those at work a year ago. This seems to be a conclusive answer to the oft-repeated assertion that the men now at work are less efficient coal miners than those employed heretofore.

Mr. Speaker, the Colorado coal strike was not inaugurated by the men actually at work in the mines, nor because of the existence of any conditions which might afford just ground for dissatisfaction among them. Coal mining is universally recognized as a hazardous and dangerous business, especially in a district where the dry atmosphere is more conducive to the creation of dust and roof conditions to falls than in many other localities. But general conditions in the mines in Colorado were exceptionally favorable to the miners when this calamity was thrust upon our State. The mine owner is neither a brute nor a fool; he will not knowingly subject his property to destruction nor his men to unnecessary danger. Selfish interests alone dictate a contrary policy. Aside from this, I may say that I am personally acquainted with many of the operators of my State, and I know them to be honorable and humane men, who entertain a keen solicitude for the welfare of their employees. They have done, and are doing, much looking to the health and well-being of their men and the safety of their properties. That the miners knew and appreciated this is evidenced by the tenacity with which more than 10,000 continue to work in the face of intimidation, violence, and personal danger to themselves and their families. In addition to that, fair treatment and proper conditions are made compulsory under new mining laws and the initiative, referendum, and recall.

It was the agitator, not the miner, who complained and who has wrought all this havoc. And for what—simply and solely to compel the operators to recognize the United Mine Workers of America. And what does this mean? It means that the owner of every coal mine in the State must enter into a written contract with this organization, and thereby agree, in effect, to employ only members of that union, and to deduct from the pay roll of every such member all union dues, fines, and assessments for which the member may be indebted, and then remit this sum to union headquarters. To be more specific, these agitators and leaders, the representatives of not to exceed 2,000 striking men, say to the mine owners of my State, "You must discharge every one of your 10,000 loyal and satisfied workmen unless they join the United Mine Workers of America, and if they join, you must deduct from their pay roll such amounts as we may hereafter see fit to assess against them, and send it to the union treasury to use as we see fit."

It has already been charged that the United Mine Workers of America is a criminal conspiracy under the Sherman Antitrust Act. Its officers and many of its leading members are at this moment under indictment in the courts of several States. In 1912 the Socialist element in its ranks secured control of the organization, and its constitution was amended so as to proclaim that its members are entitled to absolutely all the profit derived from the business in which they are engaged to the exclusion of the man—the parasite, as he is termed—who has invested his capital in a presumably legitimate business. But if these things were not so, the demand for this so-called check off, the insistence of these leaders that an employer shall and must arbitrarily deduct from the pay roll of every employee, whether such employee desires it or not, an amount to be determined by others is so un-American and, in my opinion, so unlawful as to compel all fair-minded men to condemn any orgazination, be it a labor union or otherwise, which insists upon such a practice as one of the cornerstones of its structure. There is no other labor organization in the world which depends upon this iniquitous practice for its existence. The check off can be defended upon no possible theory.

The necessity for the maintenance of the open shop, for which the mine owners of Colorado are fighting, involves a principle far from local in its character. If this country is to endure, at least in its present form, the constitutional right of every man to work for whom, when, and upon such terms as he sees fit must be preserved, and the employers of labor in Colorado who are standing for this principle deserve, instead of denunciation, the encouragement and support of every patriotic citizen. It will be a sad day for our country when men decline to fight to a finish for a principle.

Several weeks ago at a time when the emissaries of the United Mine Workers of America were trying to make it appear that Mr. John D. Rockefeller, jr., was responsible for and had the power to terminate the Colorado coal strike, the distinguished chairman of the investigating committee of this House telegraphed Mr. Rockefeller that Mr. Green, secretary-treasurer of the United Mine Workers of America, had made public a statement announcing that the demand for recognition of the union would be waived, and it was suggested to Mr. Rockefeller, in view of this circumstance, that negotiations be entered into looking to a settlement. Mr. Green was immediately called upon by the miners of Illinois, then in convention at Peoria, to explain what he meant by making such a statement. He answered by denying that such an announcement had ever been made by him, and asserted that under no circumstances would union recognition be waived in Colorado. More recently, on June 6, John R. Lawson, in charge of the strike, with headquarters at Denver, reiterated the oft-repeated "No peace without recognition of the union."

Union recognition is now, as it has always been, the only issue, and upon this issue, with all it implies, there should be no such thing as compromise with any union, much less with the United Mine Workers of America as at present constituted and controlled. In this connection I desire to read the reply of the Colorado operators to the suggestion of the chairman of the investigating committee:

DENVER, COLO., *April 30, 1914.*

Hon. M. D. FOSTER,
House of Representatives, Washington, D. C.:

Answering your telegram of last night addressed to Mr. John D. Rockefeller, jr., and referred to Colorado coal-mine owners for reply. When on April 16 the governor withdrew all except a small detachment of militia from the field, law, order, and quiet prevailed in this State. There were employed by the operators of coal mines more than 10,000 apparently contented men. On the morning of April 20 the striking miners in the Ludlow tent colony, 2 miles from the nearest coal mine, placed their women and children in which they considered places of safety and made an armed attack upon the militia encamped near by. The fight continued throughout the day and several men were killed. During the battle the tent colony was destroyed by fire. Next day the bodies of 2 women and 11 children were discovered in a hole under a tent where the strikers had placed them when the attack upon the soldiers was begun. They had all been suffocated. None of these children and no woman was killed by rifle fire, nor did the soldiers know or have any reason to suspect the presence of noncombatants where the strikers had concealed them.

On April 23, Lawson, international board member United Mine Workers of America and the leader of the strikers, in an interview published throughout the State asserted that a war of extermination would thenceforth be conducted by the strikers, and Doyle, secretary of the United Mine Workers of America, by wire instructed the officials of local unions to watch for the approach of the militia, which had been again ordered back into the field. The meaning and purpose of such language was obvious.

Since that time the strikers, in armed bands varying in number from 50 to 400, have attacked the town of Delagua from the hills and killed three men. They have dynamited and burned the buildings and equipment of the Empire, Southwestern, and Green Canyon mines at Aguilar. They have driven men, women, and children into the Empire mine and sealed the entrance with explosives. After the declaration of a truce agreed to between the governor and Hawkins, attorney for the United Mine Workers of America, they drove the postmaster and others away from the Sunnyside mine and took possession of it, as well as the Pictou mine. They dynamited the tipple at the McLaughlin mine and fired many shots into the buildings at Maitland. They forcibly entered the store building at Rockvale and carried away guns and ammunition. They attacked the buildings and dwelling houses at the Chandler mine and kept up a merciless fire from the hills for nearly 40 hours, killed one man, and finally took possession of the camp by slipping in a number of men under a white flag. They have burned, dynamited, and completely destroyed the McNally mine in Huerfano County, kept up an almost continuous fire from entrenchments for 50 hours upon the Walsen mine, wounded one woman, killed and wounded four men, and killed a surgeon wearing Red Cross insignia while attending wounded soldier on field. They viciously attacked the Hecla mine in Boulder County, killed one and wounded three men, and drove all employees and their families to cover for many hours. They attacked the Forbes mine in Las Animas County with a force of 400 armed men, killed 7 miners, including 4 Japanese, and burned everything in sight, including a stable and 33 mules

In the prosecution of their campaign of extermination, the foregoing are some of the things these men have done during the past few days with the tacit consent, active cooperation, and under the personal direction and control of officers and paid agents of the United Mine Workers of America.

As before stated, the coal-mine operators of this State now have in their employ about 10,000 men who are satisfied with the conditions of their employment. We promised these men protection from personal violence when the strike was called, and they have stood loyally by their employers under most trying circumstances, disregarding the dangers and privations incident to the recent armed attacks of the strikers upon them and their homes. With these men we will always treat concerning matters affecting their welfare. But we can not enter into negotiations of any character with the officers and agents of the United Mine Workers of America, who alone are responsible for the terrible reign of disorder and bloodshed which has disgraced this State. Instead of it being our duty so to do, we conceive it rather to be the duty of the officials of the United Mine Workers of America, who called the strike, to now call it off. They can do so if they see fit, and by so doing they will, within an hour, in a great measure, restore industrial peace and prosperity to this State.

In no event will the American people, when fully advised, long permit 1,200 or 1,500 armed strikers to continue their unlawful efforts to prevent 10,000 law-abiding and industrious men from working for whom, when, and upon such terms as they see fit.

The Colorado Fuel & Iron Co., by J. F. Welborn, president; the Rocky Mountain Fuel Co., by David W. Brown, president; the Victor-American Fuel Co., by G. F. Bartlett, jr., vice president; the Oakdale Coal Co., by William B. Lewis, president; the South Canon Coal Co., by Harry F. Nash, general manager; the Primrose Coal Co., by H. B. King, president; the Rugby Fuel Co., by George D. Kimball, general manager; the Huerfano Coal Co., by S. S. Murphy, president; Fruth & Autrey; the Consolidated Coal & Coke Co., by C. L. Baum; the Routt County Fuel Co., by E. L. Prentiss, president; the Yampa Valley Coal Co., by P. M. Peltier, president; Hayden Bros. (Juniper Mine), by Lewis A. Hayden; the Empire Coal Mining Co., by Marthens & Siple; the Southwestern Fuel Co., by J. W. Siple, president; National Fuel Co., by H. Van Mater, president; the Royal Fuel Co., by H. Van Water, president; the Union Coal & Coke Co., by J. V. Bowen, president; Moffat Coal Co., by S. M. Perry, president; Leyden Coal Co., by S. M Perry, president.

Mr. Speaker, it may seem a new rôle for me to appear as the defender of corporations. Much of my life has been devoted to what I have believed to be just criticism of many corporate abuses. But there are times when a position assumed by even corporate interests is correct. The position of these Colorado operators is correct. It deserves and shall receive my approbation and support. I know the men who say, "We can not enter into negotiations of any character with the officers and agents of the United Mine Workers of America, who alone are responsible for the terrible reign of disorder and bloodshed which has disgraced this State." These men mean what they say. There will be neither negotiation nor compromise. I agree with them as they proceed, "instead of it being our duty to do so, we conceive it rather to be the duty of the officials of the United Mine Workers of America, who called the strike, to call it off; they can do so if they see fit, and by so doing they will, within an hour, in a great measure, restore industrial peace and prosperity to this State." But this they have neither the courage nor disposition to do.

There is but a single effective remedy—let maudlin sympathy for those who stand in open rebellion against constituted authority be banished. Let all good citizens encourage and assist the officers of the law in faithfully and rigorously executing the statutes and constitutional provisions of the State of Colorado and of the United States. In this way, and in this way only, under existing conditions, can the rights of all parties be restored and preserved and the dignity of a great State and the greatest country on earth be maintained.

Enterprise of Los Angeles in Developing a Great Harbor.

EXTENSION OF REMARKS
OF
HON. CHARLES F. CURRY,
OF CALIFORNIA,
IN THE HOUSE OF REPRESENTATIVES,
Tuesday, June 16, 1914.

Mr. CURRY. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD, I include an address delivered by my colleague, Hon. JOSEPH R. KNOWLAND, on April 11, 1914, at the Los Angeles Harbor celebration. Congressman KNOWLAND'S address follows:

ENTERPRISE OF LOS ANGELES IN DEVELOPING A GREAT HARBOR—REVIEW OF WHAT CONGRESS HAS DONE TO ENCOURAGE WATER TRANSPORTATION.

An event such as we witness to-day more than compensates for a 3,000-mile trip across the continent. The formal opening of this magnificent harbor, which will afford more than 100 miles of water front when fully developed, is an occasion of more than ordinary importance. I am glad to note that the Board of Engineers for Rivers and Harbors at Washington appreciate the importance of this harbor by approving the plan for a channel 1,000 feet in width to meet the increasing needs of commerce. I have no doubt but that Congress will provide the money.

As in the past, I shall assist Los Angeles Harbor in every way possible when the request for the appropriation comes before Congress.

ENTERPRISE OF LOS ANGELES.

In an address which I delivered before the tenth annual convention of the National Rivers and Harbors Congress, which convened in Washington in December, I said, in referring to Los Angeles Harbor, that if there was an individual in that vast assemblage who hailed from a locality which nature had provided with harbor facilities, but where there was no inclination to develop and improve what nature had placed at its doors, that I would direct that individual's attention to this wonderfully enterprising community.

I then cited how the city of Los Angeles, finding itself 20 miles from the ocean and realizing the difficulties to be encountered in bringing the Pacific to its doors, but fully appreciating the importance of a deep-water terminal, did the next best thing, extended its boundaries to the ocean, and then bonded itself for harbor improvements.

SUPPORTED OWENS RIVER PROJECT.

But this community has always had the nerve to tackle big things. I remember a few years ago when Senator Flint and your other southern California Representatives came before Congress with a mighty scheme to bring water to this community from the Owens River that many Members of Congress fairly gasped at the audacity of the plan, but as usual we complied with your wishes, and that great project, which to some of our eastern friends appeared somewhat visionary, is now an actuality, just as Los Angeles Harbor is to-day. Your enterprise is almost beyond the comprehension of many of our eastern friends.

ADVANTAGES OF MUNICIPAL CONTROL.

Experience has demonstrated the advantages of State or municipal control of harbor facilities as contrasted with that of corporations or individuals. The administration as well as ownership of terminals in every locality should be in the hands of the people so as to accord to the smallest shipper the same advantages and facilities which heretofore, in too many instances, have been enjoyed exclusively by favored corporations and large shippers. In California to-day there are few harbors which the people do not control, but in many localities it has been a long and hard struggle.

CONGRESS HAS ENCOURAGED WATER TRANSPORTATION.

It should be gratifying to the people of the country to know that the Congress of the United States, in so far as it exercises jurisdiction, has enacted legislation aimed to provide for the fullest utilization by all the people of the vast rivers and harbors of the country, for the improvement of which the Government has expended over $700,000,000, exacting no toll, but attempting to encourage commerce between the States. Congress has endeavored to prevent the throttling of these watercourses, the great highways of the people, over which exclusive franchises and rights of way can not be granted.

KNOWLAND AMENDMENT TO PROTECT SHIPPERS.

Let us briefly review some of the national legislation of such tremendous importance to this harbor and to every waterway in the country. Prior to 1910 there were many instances where railroads would temporarily lower rates, where water competition was encountered, and when the water carrier, in many instances working with limited capital, was driven to the wall, then the railroads would raise the rail rates. It was my privilege to offer an amendment upon the floor of the House providing that when a railroad in competition with a water route reduced its rates for the purpose of driving out the water competition it could not again raise the rate unless it could show to the Interstate Commerce Commission some cause other than the elimination of the water competition. This amendment was adopted and is now a part of the interstate commerce act.

RAILROAD-OWNED SHIPS NOT TO COMPETE WITH RAIL LINES.

This amendment was important, but it was not believed that it was far-reaching enough to meet conditions which it was feared would exist with the opening of the Panama Canal. For this reason there was written into the canal act a provision prohibiting railroads from operating ships through the canal in competition with their rail lines. This inhibition was believed to be in line with sound public policy, preventing railroads from practically paralleling their rail lines. The provision does not prevent railroads from operating steamships through the canal when engaged in foreign trade, but only when they compete with their rail lines for transcontinental traffic, which should not be permitted if the canal is to prove of real value as a regulator of freight rates.

TRUST-CONTROLLED SHIPS BARRED FROM CANAL.

Ships engaged in the coastwise or foreign trade are prohibited, under the canal act, from operating through the canal, if such ships are owned or controlled by persons or companies violating the Sherman antitrust law. Powers were also conferred upon the Interstate Commerce Commission enabling that body to establish physical connections between railroads and the docks of water carriers. The commission was also empowered to establish through routes and maximum joint rates between rail and water lines; to establish maximum proportional rates by rail

to and from the ports to which traffic is brought or from which it is taken by the water carrier. If interstate railroads enter into arrangements with water carriers operating from a port in the United States to a foreign country, through the Panama Canal or otherwise, for the handling of through business between interior points of the United States and such foreign country, the Interstate Commerce Commission may require such railroad to enter into similar arrangements with any other steamship line.

FEDERAL GOVERNMENT GENEROUS TOWARD CALIFORNIA.

The people of California are fully alive to the impetus which will be given water transportation with the opening of the Panama Canal. The improvement of our waterways means much in the development of this State. The Federal Government has been generous with California in the way of appropriations. We have a coast line 1,555 miles in length. In order to impress upon Congress the vast extent of our coast line, I exhibited upon the floor of the House last month, when the river and harbor bill was being considered, a large map of the United States, and on the Atlantic side I marked a coast line corresponding in length and degrees of latitude with that of California. This line extended from Beverly, Mass., to Charleston, S. C. Within this area were 10 States or parts of States. I think I proved that California was asking for no more than she was entitled to receive.

WONDERFUL FUTURE OF CALIFORNIA.

Our State has a wonderful future. Her resources are as yet undeveloped. The mighty Pacific, which washes our shores, offers possibilities almost beyond our comprehension. To the west are Hawaii, the Philippines, and the Orient. To the north that great storehouse of treasure—Alaska—which Congress has recently decreed shall be opened up by the construction of railroads and the vast resources of that Territory made available to the people. To the south that mighty artificial waterway, the dream of centuries, made a reality by American pluck and genius, and which, at any cost, must remain forever under American control. California to-day is indeed the land of opportunity, and when opportunity knocks Los Angeles is always the first to open her doors.

Is the Navy Department Controlled by the Steel Trust?

REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 13, 1914,

On the bill (H. R. 17041) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. CARY. Mr. Chairman, I asked for this time simply to say that I am heartily in favor of the proposition contained in the amendment offered by the gentleman from Illinois [Mr. TAVENNER]. I am in favor not alone for the Government manufacture of ammunition but for armor plate as well. I introduced a resolution some time ago asking that something be done for the witnesses that come to the front and tell how the Armor Trust had beaten this Government out of millions of dollars. I sincerely hope that some day that resolution may pass, and we will find out how much money has been taken from the Government by the Armor Plate Trust.

Mr. Chairman, on the 5th of last month the distinguished gentleman from Kansas [Mr. MURDOCK] made the following important statement on the floor of this House, and it is significant that the Members of the House, of all political parties, who were present and heard his speech most heartily applauded the justly severe criticism which the gentleman from Kansas made against Attorney General McReynolds on that occasion. He said:

> Now, here is a question that I would like to ask in all seriousness: The Secretary of the Navy sits at the same counsel table with the Attorney General of the United States. Here is a straight-out violation of the law; here is a combination in restraint of trade; here is a monopoly; here is a witness of high integrity, of entire credibility, who testified that this is a monopoly; here is a great Government which is the victim of that monopoly. What is the matter with the Attorney General of the United States? [Applause.] Why does he sit silent and permit this Government to suffer this wrong? Why does he not get busy? I ask the question in a humble spirit of inquiry. I will get no answer from any source. [Applause.]

Why does the Secretary of the Navy submit to having the United States Government held up and robbed of millions of dollars by the Armor Trust every year when he has it in his power to take steps to put a stop to it at once? Everyone knows—and no one knows better than the Secretary of the Navy himself—that if he were to write one short letter to Congress asking for the passage of the bill to protect witnesses and pay rewards for convicting evidence of the frauds and robberies perpetrated on the Government by the Armor Trust which I introduced on August 22, 1913, that Congress would pass the bill at once, and the evidence would be produced and the robbery of the Government by the Armor Trust would be stopped for all future time, and millions of dollars of the money already stolen would be recovered from Carnegie and his Armor Trust crew and put back into the Public Treasury. The witness bill provides as follows:

> A bill (H. R. 7601) authorizing the Navy Department to offer and pay rewards for the detection of violations of the antitrust act of July 2, 1890.
>
> *Be it enacted, etc.*, That the Secretary of the Navy of the United States be, and he is hereby, authorized and directed to offer and pay rewards to the person or persons who shall first furnish to the Government of the United States information which shall lead to the detection of violations of the antitrust act of July 2, 1890, in cases where such violations shall injuriously affect the Navy Department or any business connected with the national defense, or in cases where the Government has been defrauded in the character, quality, or price of the material furnished and where, as a result of information or evidence so furnished, the Government succeeds in recovering money or property as fines, forfeitures, or otherwise the reward shall be 20 per cent of the amount so recovered.

Now, Mr. Chairman, the gentleman from Kansas got no answer to the question which he asked on May 5, and there is no doubt but what the Attorney General and the Secretary of the Navy will be equally agile in dodging the question I am putting to them to-day.

Mr. Chairman, these great heads of executive departments may succeed in dodging the question put to them by single Members of the House, but, Mr. Chairman, there is one question they can not dodge or evade or refuse to answer, and that is a question put by the whole House in the form of a resolution of inquiry, and such a resolution I now offer to this House in the following:

House resolution 544.

> Whereas the Hon. Josephus Daniels, Secretary of the Navy, has stated in testimony before the Committee on Naval Affairs of the House and in an official letter to the Senate that there exists a combination and conspiracy of armor manufacturers who are "holding up" the Government of the United States and forcing the Navy Department by a monopoly combination to pay extortionate prices which amount to a robbery of the Government of several million dollars each year: Therefore be it
>
> *Resolved*, That the Secretary of the Navy is hereby requested to inform this House what steps, if any, he has taken to have his colleague, the Attorney General, take action for the prosecution of this monopoly combine of armor manufacturers;
>
> *Resolved further*, That the Attorney General is hereby requested to inform this House what steps he has taken to prosecute civilly and criminally this armor trust above mentioned.

And I insist that the extreme gravity and urgency of the question, involving as it does the effectiveness of our whole Naval Establishment, and the question of the safety of the Nation itself warrants and demands immediate action on the part of the patriotic Members of the House.

Mr. Chairman, certain notorious Wall Street newspaper apologists for the Armor Trust and the Army and Navy ring, notably the New York Herald and the Milwaukee Sentinel, have wept and complained bitterly because in my resolution of May 7, 1914, I did not incorporate names of offending officers and full detailed proofs. They also attempt falsely to put upon me the blame for the refusal of the Committee on Rules to report my resolution to investigate these scandals.

I would call the attention of the New York Herald and Milwaukee Sentinel to the fact that it is not my fault but the fault of the Committee on Rules of the House that the resolution to appoint a committee to investigate has not been reported.

As for the names of officers, they will be produced under oath and in documentary evidence whenever the investigating committee is appointed.

Furthermore, the gentleman from Illinois [Mr. TAVENNER] has to-day in his speech on the floor of this House named one of the ordnance officers, with specifications. Now let the New York Herald and Milwaukee Sentinel rush to his defense and to the defense of those members of the Committee on Rules and of the Committee on Naval Affairs who have thus far failed or refused to report to this House either my resolution for the appointment of a special committee to investigate the armor frauds and other scandals of the Navy Department or my bill of August 22, 1913, for the protection of witnesses and payment

of rewards for convicting evidence against the great criminals of the Armor Trust.

Allow me to refresh the memory of all parties in interest by incorporating the resolution, which is as follows:

House resolution 506.

Whereas certain Chiefs of the Bureau of Ordnance have made misleading reports to their superiors and to Congress; and
Whereas Chiefs of Ordnance have attempted to deceive Congress on the effect of high explosives; and
Whereas our Navy and coast defenses are being constructed as recommended by officers who are disloyal to their official oath; and
Whereas the Armor Trust is being favored by said misleading reports: Therefore be it

Resolved, That the Speaker of the House of Representatives is hereby authorized and directed to appoint a committee of nine Members of the House, of which number five shall be of the majority and four of the minority. Said committee is hereby directed to make an investigation of the subject matter embraced, misleading Congress by false reports. Said committee is also directed to investigate if there has been a conspiracy between the United States officers and the armor manufacturers or other persons in defrauding the country or the Government.

Said committee is authorized to sit during sessions of Congress and recess of Congress, to compel the attendance of witnesses, to employ such clerical and other assistance as may be necessary, and to administer oaths to witnesses. The cost and expenses of said committee shall be paid from the contingent fund of the House of Representatives. Said expenses shall be paid out on the audit and order of the chairman or acting chairman of said committee.

Mr. Chairman, in my speech of March 3, 1913, and which appeared in the RECORD March 15, I have asked Congress to investigate the Armor Trust; and the question is "Is the Navy Department controlled by the Steel Trust"?

The documentary evidence to which I referred in my speech rendered conclusive proof that our country, in fact, that the Government, has been deceived by their Chiefs of Ordnance, as they made false reports manifestly intended to mislead Congress and to favor the Steel Trust.

When the Democrats in Congress were in the minority, many Members asked for an investigation of the armor conspiracy, but now that they have the power to order a complete investigation they seem to shelter the conspirators, therefore the country is forced to the conclusion that those Democrats who control the organization are insincere.

Now, if as is everywhere constantly reiterated in the public press, the Democratic majority of the House is under the orders of President Wilson and can not act except as he directs them, I give notice to the Chief Executive in the White House to act, to preserve, protect, and defend the Constitution and the rights of the people of the United States.

Mr. Chairman, the country demands that Congress go to the bottom of this affair and use drastic measures, as the conspirators are so powerful that they defy the law. Remember, Washington said:

No punishment, in my opinion, is too great for the man who builds his greatness upon his country's ruin.

Panama Canal Tolls.

EXTENSION OF REMARKS

OF

HON. MOSES P. KINKAID,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 12, 1914.

Mr. KINKAID of Nebraska. Mr. Speaker, the die is cast for a result which will be un-American and which the most cogent reasoning would be powerless to prevent. In the brief remarks I shall make, my purpose will be to state my reasons for the two votes I shall to-day express and to show that I will have been steadfast and consistent throughout in the three times, since in the year of 1912, the question of tolls exemption has been before the House.

Mr. Speaker, to repeal because of the belief that the exemption from tolls is equivalent to paying a ship subsidy express and direct I should regard as a statesmanlike act, but to repeal for the professed reason that exemption from tolls constitutes a violation of the Hay-Pauncefote treaty, but regardless of whether this be right or wrong repeal must be had, I regard as unpatriotic legislation.

The bill has passed both Houses, but with an amendment in the Senate, and it is upon this amendment we are to vote, rather than upon the bill as amended, as I at first expected would be the case.

The Senate amendment reads:

Provided, That the passage of this act shall not be construed or held as a waiver or relinquishment of any right the United States may have under the treaty with Great Britain, ratified the 21st of February, 1902, or the treaty with the Republic of Panama, ratified February 26, 1904, or otherwise to discriminate in favor of its vessels by exempting the vessels of the United States or its citizens from the payment of tolls for passage through said canal, or as in any way waiving, impairing, or affecting any right of the United States under said treaties, or otherwise, with respect to the sovereignty over or the ownership, control, and management of said canal and the regulation of the conditions or charges of traffic through the same.

I should have unhesitatingly voted against the bill as amended in the Senate had opportunity been afforded me, just as I did vote against the bill when we could not properly amend it when first up for consideration in the House. But, I regret to say, the parliamentary status now is that the tolls-repeal bill has passed both the House and the Senate, and there is no vote now to be had in the House on the bill. That has gone beyond the point where either House can change it; but the Senate has proposed an amendment to be added to the bill, and that amendment we are called upon to vote for or against. This is the view of the best parliamentarians on the floor of the House, and substantially, if not about expressly, the language in which they have stated their views about it. Under the rules and practice the bill itself is bound to pass. The Senate amendment, while very objectionable to me, because lacking in the certainty, definiteness, and vigor which I think should characterize it, would yet limit the serious consequences of the effect of the bill passed without it. Passed without this Senate amendment, in compliance with the message of the President, obedient to which the bill was introduced, the right of the United States to ever exempt its ships or the ships of its citizens from the payment of tolls would be barred. The question of this right would be permanently determined against the United States. When the bill was first in the House I stated in my remarks that if the bill must pass it should be accompanied by an amendment constituting a solemn and positive declaration of the right of the United States at any time in the future to exempt from tolls, but it was impossible then to secure any sort of an amendment in the House.

Mr. Speaker, I shall vote first for the Moss amendment, which reads:

But it is hereby affirmatively declared that the United States has the right to exempt from payment of tolls for passage through the canal its vessels of every kind, and also those of its citizens, and the absolute sovereignty of the United States over that canal is hereby specifically and positively affirmed.

I had intended to prepare an amendment myself, also of a positive and definite character, but official attention given to the exigencies of a very deserving constituent precluded my having time to write it. Under the circumstances I shall be very glad to vote for the Moss amendment. It would be a great improvement adopted as a substitute for the Senate amendment. It gives due notice to all the world that the United States does possess the right to exempt from tolls payment, while the Senate amendment is wholly wanting in an allegation or affirmation that we do possess the right to exempt or any particular rights. The language of the Senate amendment is, "any right the United States may have," but it asserts no certain right. It is equivalent to saying if the United States has any rights it does not by the repeal waive such rights. As a pleading of a cause of action by a plaintiff in any of our courts it would not be sufficient. A plaintiff is required to declare he has a certain right and that it has been violated, or had property and it has been wrested from him, damaged, or destroyed by the defendant before a court will entertain his complaint. In this respect the proposed Moss amendment is a great improvement upon the Senate amendment, and if substituted for the latter our rights in the canal would be far better preserved. But it is clear the Moss amendment will be defeated, with the consequence that I shall vote not for the bill as amended, but for the Senate amendment, standing singly and alone, for the bill passed without the Senate amendment would be ruinous to the cause of the United States; but passed with it our right to yet have our day in court on the question will be preserved negatively, but to less advantage than if it had affirmed the rights of our country to the extent of the Moss amendment. It being inevitable that the bill will pass, I deem it my duty to vote to limit its effect as far as it may be possible, and this upon the principle that, so far as may be practicable, everything of value should be saved out of a conflagration. I am confident it was on this ground that Senators supported the Senate amendment as the best to be secured after better amendments had been voted down.

Mr. Speaker, I regard it as a great blunder that the repeal is to be made, though limited by the Senate amendment, and that it would have yet been a mistake to have passed the repeal even with a far better amendment than the Senate amendment. When our rights are assailed why should we place ourselves to the greatest possible tactical disadvantage? Why precipitately hand over or surrender all that another nation claims and

more too? This is too much like one in the possession of his own personal property, when some third person puts up a claim to it of an indefinite character, voluntarily turning its possession over to the claimant and then going into court with a replevin suit to recover it back. We have possession of our own canal, ready to pass our ships through free with all of the legal presumptions incident in our favor. It is no time for us to surrender these advantages; the time would be unpropitious to repeal with even good economic reasons existing therefor with our rights thus challenged. Standing firm in our right to exempt regardless of the economic benefit or disadvantage to do so, the laboring oar would be upon the foreign country denying our right, and this is as it should be. This is a general principal and rule of jurisprudence throughout the civilized world, especially with English-speaking people. Why be so prodigal of our rights and advantages by committing the folly of passing the repeal, thus yielding all the advantages claimed by Great Britain or other nations? By so doing the consequence is that we exchange places with Great Britain. We relieve her of the burden of plying the laboring oar by needlessly taking it upon ourselves. It will be now for the United States to take the initiative in having the extent of its rights determined, and this will be a remarkable and anomalous dilemma brought about by itself. Instead of repeal putting the question to rest it is bound to become more acute and its seriousness greatly augmented.

Mr. Speaker, I made my position clear in the remarks I made when the bill was first before the House. I voted against this very exemption clause now sought to be repealed when it was offered by amendment by the gentleman from Michigan [Mr. DOREMUS], but our side was outvoted. Very consistently I would have voted for the repeal when this repeal bill first came up had it hinged only upon the economic question—whether ship subsidy would be desirable—but the express purpose of the repeal, as conclusively shown by the message of the President, is to grant or surrender every right of the United States brought in question by foreign countries, and even more. Near the close of my remarks I stated "I do not seek to preserve subsidy, but to maintain economic and legislative liberty." Such is my position now.

Mr. Speaker, are we making history? Yes; but the regrettable chapter will have been written with the enactment of this repeal bill. There then will remain to be written, and it surely will be written before many years, the concluding chapter on tolls exemption, which I am sure will vindicate our rights and restore our Nation's honor.

Panama Canal Tolls.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. WILLIAMS,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 12, 1914.

Mr. WILLIAMS. Mr. Speaker, I for one heartily concur in the conference report and in the action of the Senate in attaching to the bill repealing the tolls provision of the Panama Canal act the limitation reserving whatever rights we now have under the Hay-Pauncefote treaty. I voted against the rule adopted in the House which prevented amendments, because I felt then as I do now that there should be a saving clause attached to the bill reserving whatever rights we have under the treaty. I feared then that an unconditional repeal of the tolls provision, in the light of the President's message, assigning the special reason that it was in violation of the Hay-Pauncefote treaty, would amount to a construction on our part of the treaty and operate as a waiver or an estoppel of our right to insist in the future upon a provision exempting any portion or class of American ships from the payment of tolls. I do not know that we will ever want to discriminate in favor of any or all of American shipping, but I favor reserving and not waiving the right to do so in the event we should ever see fit to exercise that right.

After the bill passed the House, and while the same was under consideration in the Senate, I received a letter from the Hon. Samuel Alschuler, of Illinois, on the subject, which I herewith submit as a part of my remarks, and ask to have the same extended in the RECORD.

KRAUS, ALSCHULER & HOLDEN,
Chicago, May 5, 1914.

Hon. W. E. WILLIAMS, M. C.,
House of Representatives, Washington, D. C.

MY DEAR FRIEND: I have just received and carefully read copy of your speech made in the House last March 30th, on the "Panama Canal Tolls" bill, and wish to express to you my gratification therewith and my congratulations as well.

You may recall my seeing you at Washington early in the year on my way to South America. Not returning until the middle of April, and during the interim being practically out of communication with things here, I was rather surprised to note the attention being given to "Canal tolls" legislation—to my mind out of all proportion to the importance of the subject.

A few days before getting your speech I received a circular letter purporting to be sent out by "The Committee for the Preservation of American Rights in Panama Canal," 55 Liberty Street, New York, with the name of its president, Bainbridge Colby, appended.

From the fact that a copy was sent to me, I conclude it must have been given wide circulation, and that in any event you were likewise a recipient.

Upon its perusal it seemed to me so replete with fallacy and misstatement that I felt moved to make some reply; but realizing of what little consequence this would be, and feeling upon receipt of your speech that most of what I would have said had already been thereby much better and far more conspicuously and effectively put forth, I promptly suppressed the inclination.

There seems to be abroad in the land a good deal of unctuous talk about the sacredness of party platform declarations, and largely by persons whose plentiful experience in platform building ought to make it plain to them, as I know it is to me, and believe it is to you and others, that a political convention is a mighty unsuitable place for the formulation of a code of laws respecting the details of government.

The trouble is that platforms are too much loaded up with nonessentials, of the merits of which the average member of the convention knows little, and usually, when it comes to the time of adopting the platform, cares less.

We know too well how persons interested in a given proposition, by persistent persuasion and shrewd logrolling, working with other persons interested in other propositions, too often succeed in engrafting upon a party platform matters and things which should be considered only in a deliberative legislative body.

I have long ago concluded that a popular nominating convention is but illy equipped for legislative duties, and that such ephemeral bodies should not undertake the business of statute making. Their functions should be limited to the nominating of candidates and the enunciation of fundamental principles and general policies. The unwisdom of a contrary course is plainly indicated in this very "free-tolls" matter.

In the Colby letter it is asserted that at the Baltimore convention, after the platform adopted by the resolutions committee was read to the convention, the "free-tolls" paragraph was debated in the open convention. I recall no such discussion, nor, indeed, any opportunity for it; nor does the printed record of the proceedings of the convention show there was any. It is my recollection that the report of the committee was not presented until after the days of exciting contest over the presidential nomination, and that the nominating speeches for vice presidential candidates were interrupted to receive this committee's report. A fine chance would anyone then have had to secure a hearing before the convention on this or any other proposition. And one attempting it would most likely have been effectively and promptly howled down as a rank disturber of Democratic peace and harmony. But suppose it was discussed, would any discussion possible at such time and place give the members sufficient knowledge of the subject to definitely and finally dispose of it?

If it is right to exempt coastwise American ships from canal tolls, it should of course be done. If it is not right, party platforms can't make it right.

I am not going to make to you an argument on the wisdom or unwisdom of the exemption. You have made one infinitely better than I could hope to. But there are a few things that occur to me, which I may as well get out of my system while I am at it.

How we Americans, and particularly Democrats, who are presumably opposed to subsidies, can justify this almost direct granting of possibly several millions of dollars annually to certain shipping interests is quite beyond my ken. And why to "coastwise" transportation rather than to American carriers of foreign commerce The former already has that large protection which comes from practical prohibition of such trade in other than American vessels, while under the guise of protection to American manufacturers our foreign shipping has long ago been driven from the seas. The realization of this came to me with added force and much humiliation during my travels last winter. I recall seeing our flag upon one merchantman in the important port of Santos, Brazil, and was informed that this was something of an event, as it was but the sixth ship flying our flag which had entered that port in 26 years. In the other foreign ports visited the experience was similar.

Surely it is the foreign rather than the coastwise shipping which needs the encouragement, and so far as the treaty is concerned, if the coastwise ships may be granted exemption upon the theory that they are our own, by the same token all American ships might be likewise accorded the exemption.

But once again the railroads are sought to be made the scapegoat, and it is urged that because of the exorbitant rates of the transcontinental railroads exemption to the coastwise vessels should be granted in order to secure the lowering of rates through the competition which it is claimed would follow.

I do not much doubt that the transcontinental railroads are making the dear public pay all that "the traffic will bear," and anything that may be properly done to compel justice to the public in this regard ought not to be omitted. But if transcontinental rates are too high, why not compel the railroads to lower them? This, I believe, is clearly within governmental power.

Suppose, instead of building a canal at a cost of upward of $400,000,000, our Government, in order to bring the transcontinental railroads to book, should have built another such railroad, would any reasonable person maintain that in order to compel existing railroads to transport at reasonable rates the Government should grant the use of its railroad free of all charge? But what is the difference in principle

between spending four hundred millions for a canal and granting its free use to certain ships in order that they may bring down the rates of existing railroads, and in spending perhaps one-half as much to build such a railroad and grant its use free to those who may ship over it? And in this connection there occurs to me the fallacy of the proposition of denying entirely the use of the canal to ships owned by railroads. If railroads may lawfully own, control, and operate ships, there should be no discrimination against them, if our oft-repeated pledge of fealty to the Jeffersonian doctrine of "Equal rights to all and special privilege to none" is any more than a mere "platform" fulmination.

If it is contrary to public welfare and against public policy that railroads should be permitted to own, control, or operate ships, there should be enough of virility, power, and ingenuity in the Government to so declare by suitable legislation, and to enforce its laws to that effect.

I believe it is fundamentally wrong for individual corporations to undertake a variety of distinct functions. Railroads should not be permitted to engage in other business than that of railroad transportation. They should be as completely divorced from shipowning, controlling, or operating as they should be from farming, mining, and other activities in themselves distinct and separate from the railroad business. But we should not suffer our railroads to own or control ships and then deny to these ships the rights accorded to other ships. But in any event, I do not see why the strong hand of Government may not regulate coastwise shipping rates as well as the rates of transcontinental railroads, regardless of who may control the ships.

Wholly aside from the moral obligation which rests upon a great nation to live up to the spirit as well as the letter of its solemn contractual obligations, such as treaties with other nations, upon the plainest dictates of justice and fair dealing, of simple honesty, and of sound policy as well, our Government should not break away from the doctrine of equal rights to all, by granting special privileges to such American vessels as engage in coastwise trade under guise of giving them exemption from canal tolls. And I rejoice that the President has the moral courage to stand by our fundamental principles, when it would be much easier and possibly more popular to yield to the opposite clamor upon the convenient pretext of carrying out a platform promise. And I am likewise gratified that you and others of my good friends are giving him loyal, steadfast, and effective support in this contingency.

With best wishes for your good health and happiness and success in your candidacy for reelection to the high office in which you are so ably and acceptably serving, I am, as always,

Very sincerely,

SAMUEL ALSCHULER.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. SILAS R. BARTON,
OF NEBRASKA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, June 12, 1914.

Mr. BARTON. Mr. Speaker, on March 5 of this year the President of the United States came before this body and asked us to repeal that provision of the Panama Canal act of August 12, 1912, which exempts vessels engaged in coastwise trade from paying tolls.

He advanced as his reasons that there was a difference of opinion as to whether or not we had the right to do this, and said that the question was not debated outside the United States; that everywhere else the language o fthe treaty is given but one construction, meaning the British construction. He says further:

We ought to reverse our action without raising the question whether we are right or wrong.

He said:

I ask this of you in support of the foreign policy of the administration. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure.

Here was a question that had been passed upon by a past Congress. The act had been applauded in the Democratic and Progressive Party platforms. The President as a candidate had supported the measure on the stump in his campaign. The votes of the people for the parties voicing praise of the measure were greatly in the majority. The people of this country seemed satisfied, but the President, under some pressure that no one yet has fathomed, found the repeal of the act of so much importance that he asked Congress to accept the British construction of the treaty and surrender their contention. The reasons he advanced were:

I ask this in support of the foreign policy of the administration. We ougat to reverse our actions, right or wrong. I shall not know how to deal with other matters of even greater delicacy and nearer consequence if you do not grant it to me in ungrudging measure.

I appeal to all people if the reasons were sufficient to convince a thinking man that he ought now to reverse the decision of the Congress that adopted this measure and violate the platform pledges of the parties that made their promises to the people and give in "ungrudging measure" a right in a canal that had been built by American ingenuity, American men, and American money and surrender to the British contention.

I voted "no," and as an American and a Member of an American Congress am proud of that vote.

Members who desire to voice the sentiments of the President, right or wrong, and become "rubber stamp" Congressmen try to cloud the main issue by shouting subsidy. They want to muddy the waters, so that people's minds will be diverted from the main issue, the right to collect or not to collect tolls at our pleasure. But the people of this country will not permit the issue to be so beclouded, especially so when the President has placed the construction of the treaty above the economic phase of the question.

I read the speeches in the Senate and House and marvel at the men who are for repeal on economic grounds, taking the position that the exemption of tolls is a subsidy. A subsidy to them is a most monstrous, hideous thing, it is the acme of all crime. When I read this I wonder that they are so blatant, for some of these statesmen have a record here for several years that may be analyzed along that basis, and if this record discloses the fact that they have voted for hidden subsidies is it not just possible that the people who want them to be frank may criticize their actions as against their speeches?

Let us analyze this for just a moment. Most Members of this House and the Senate voted for that "pork-barrel" legislation, the river and harbor bill. I voted against it, for I am firmly of the opinion that the greater part of the appropriation is for political pull rather than practical business. The 1915 report of the Chief of Engineers, page 30, shows total river and harbor appropriations to have been $789,288,614.45 for all purposes. To this tremendous sum of $789,288,614.45 in past appropriations is now to be added in the year 1914, for present and future payment obligations, $95,176,875, or a total of $884,465,489. Again, to this sum should be added $273,000,000 in projects heretofore adopted and begun; also $92,500,000 for projects heretofore adopted but for which no appropriation has yet been made; also 120 additional surveys in the 1914 bill, entailing unknown future expenditures.

It is not my intention to here analyze that more than three-quarter million dollar expenditure to show how much has gone to benefit the Ohio, how much to the Mississippi, and how much to the Soo Canal, but simply to lay down this proposion: That in all this expenditure, greater than that of the canal, we have not heard these doughty antagonists of subsidy introducing bills to compel the people who use these waterways to pay toll to reimburse the Government. Why? In the Panama Canal, railroad-owned ships had to pay toll. Only those ships not identified with big interests were permitted to go through free.

If those Members mean what they say and are honest in their contention, I ask them why in all these years they have served as Members of Congress they have not asked the Steel Trust who sends the greater part of the commerce through the Soo Canal to pay tolls? The people of all the country pay these tolls as they paid the cost of construction and now the upkeep. How much benefit do they get?

I ask them again if it is fear of the magazines of this country who do much to make and unmake men that they do not stop the subsidy these people enjoy? The second-class matter contributes to the bulk of the mail handled 62 per cent of the tonnage; they contribute only 4.98 per cent of the receipts. The loss they create is about $60,000,000 per year. About one-half of the pages are covered with advertising, a pure business venture.

The 2-cent or first-class matter, paying in excess of its cost to transport, handle, and deliver it, makes up the deficiency created by the second-class matter. How can Members who are so bitterly opposed to subsidy square themselves on the condition described?

Many of you voted for the tariff bill that contains this clause:

J. Subsection I. That a discriminating duty of 10 per cent ad valorem in addition to the duties imposed by law shall be levied, collected, and paid on all goods, wares, or merchandise which shall be imported in vessels not of the United States—

And so forth.

Is not this a direct subsidy? What excuse can you offer for so betraying your people and insulting your ideas of justice?

I shall, if I retain my seat in Congress, introduce measures to eliminate some of these subsidies, and, of course, shall expect the vote of Members who have talked so loudly to their constituents against subsidy.

The bill was not given in an ungrudging manner. The Senate fought long and hard and as a result presents for our consideration the pending amendment. I do not like the amendment and prefer to support an amendment that asserts our rights, but rather than see the bill adopted without it, as it in a measure leaves the fight unsettled, I shall support it, thus

saving as much as possible out of the un-American surrender and leave the rest of the action to the voters of this country.

Some Members claim that the question of our rights under the Hay-Pauncefote treaty should be submitted to arbitration. Some contend with the President that the British construction is right, while others, the class to which I belong, contend that we are sovereign on the canal, and I will vote to construe the treaty that way.

In the other branch of Congress amendment after amendment was introduced fighting every inch of the way until as a last resort to pass the bill and pacify England, and I believe create joy in the hearts of the owners of transcontinental railroad stock this amendment now before us for consideration was conceded after much force and heroic efforts on the part of Senators who are defending our American interests.

This amendment says that the passage of this act shall not be construed or held as a waiver or relinquishment of any right the United States may have under the treaty with Great Britain ratified the 21st of February, 1902, or the treaty with the Republic of Panama ratified February 26, 1904, or otherwise to discriminate in favor of its vessels by exempting the vessels of the United States or its citizens from the payment of tolls for passage through said canal or as in any way waiving, impairing, or affecting any right of the United States under said treaties or otherwise with respect to the sovereignty over or the ownership, control, and management of said canal and the regulation of the condition or charges of traffic through the same.

This leaves the matter a draw, for while it does not assert our rights in a positive way, it, in a negative way, proclaims them; and as one who believes in doing the best I can, I shall vote for this amendment, hoping that the American people, in whose wisdom I have unbounded confidence, will by affirmative action instruct their Members of Congress to sustain our American rights.

England did not dig one square foot of the Suez Canal, but to-day she owns and controls it. She acquired it by sharp practice. In every epoch of our Nation's history England has endeavored to encroach upon American rights and American soil. Her history is a history of aggrandizement among nations she has taken by bullying tactics, by diplomacy, and by every method known to those who acquire great riches, and after she once gets possession of a valuable right or property she holds on like a bull dog. Her domineering history of the Irish nations and our struggle of seventy-six will prove to any open mind the terrific effort it takes to again get a right reinstated.

We have built the canal with our men and our money. We will pay out enormous sums each year to fortify and maintain it. If we yield our rights in peace, we have forfeited them in war. For my part I resent English intrusion into our domestic business, and shall, when this matter comes before us again, as it surely will, vote then, as I do now, to sustain American rights in American property and resist to the last ditch an un-American surrender to the British or any other nation under the sun.

Four Periods of United States History.—The South's Part in Making History.

EXTENSION OF REMARKS

OF

HON. SAMUEL J. TRIBBLE,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, June 20, 1914.

Mr. TRIBBLE. Mr. Chairman, under the leave granted to me to extend my remarks in the RECORD I include an address delivered by Miss Mildred Lewis Rutherford, historian general United Daughters of the Confederacy.

The address is as follows:

FOUR PERIODS OF UNITED STATES HISTORY—THE SOUTH'S PART IN MAKING HISTORY.

Last year at Washington, you remember, your historian general sounded a very sad note; this year she is able to sound a far more cheerful one. Twenty-one of twenty-two State divisions have reported systematic work along historical lines; 6 of the 11 States having no divisions, have also reported progress; and some individual chapters have sent most valuable contributions recording Southern events.

This advance has been a great encouragement, and it has made me feel that if such advance continues in the same proportion each year, it will not be long before the South shall be placed where she rightly belongs in the annals of history.

WAR WITH MEXICO.

Have you ever asked yourself the question, "Why so many of the men who fought in the Mexican War were from the South?" It is officially stated that two-thirds were. A southern man was in the White House, the two leaders were southern men, and the heroes of nearly every battle were from the South. The South has been misunderstood and therefore misrepresented by the historians of this period of history.

The Missouri Compromise of 1820 left the negroes congested in the Southern States, for after Missouri was admitted as a State there could be no slaves above a certain degree of latitude. Now, there were many men in the South very anxious for the gradual emancipation of the slaves, for we were beginning to realize that under the institution of slavery the negro was the free man and the slaveholder was the slave. There were many who did not believe in slavery, but having inherited this property did not know how best to get rid of it. They realized what it has taken the North 50 years to learn, that it would never do to free them in the midst of an Anglo-Saxon race born to rule. Abraham Lincoln realized it, for he was trying in every way up to the time of his death to arrange for the colonization of the negro in Central America or Liberia. Edmund Randolph realized what it would mean. He wanted to free his slaves, but he said, "We have a wolf by the ear, to let him loose is dangerous, to hold him is equally dangerous."

Thirty-two times the Virginia Legislature tried to abolish the slave trade. Massachusetts was the first State to legislate in favor of it, and Georgia was the first State to legislate against it. There were 130 abolition societies in the United States before 1850, and 106 were in the South. We had 5,175 members and the North only had 1,162.

By this War with Mexico the men of the South hoped for an extension of territory, so as to make the gradual emancipation of slaves a possibility.

Santa Ana had acknowledged the independence of Texas, but Mexico refused to acknowledge it, so when Texas was admitted as one of the United States war was declared.

The independence of Texas had been gained just as the independence of the Colonies, by right of arms. Can we ever forget those heroes of that conflict between Texas and Mexico? Moore, Houston, Fannin, Bowie, Crockett, Austin, Travis, Bonham, and many others equally as brave. Can we ever forget our heroes of that War with Mexico?

Who was so highly commended for engineering skill but our beloved Robert E. Lee? Who was the hero of Buena Vista? Our Jefferson Davis. Can you not hear him now as he said, "Come, Mississippians; cowards to the rear, brave men to the front"? and those brave sons of Mississippi, aided by equally brave Kentuckians, followed their leader to victory. Who won Brazeto and Sacramento and captured Chihuahua? William Doniphan, "the Patrick Henry of Kentucky." Who was the hero of Chapultepec? Thomas Jackson, our Stonewall. Who were the heroes of Palo Alto, Matamoras, Resaca de la Palma? All southern men.

Who planted the United States flag in the City of Mexico? Quitman, of Mississippi. Who first scaled the ramparts of Monterey? Rodgers, of Alabama. And was not David Hill, of South Carolina, called the bravest soldier of that war? And who wrote "the Bivouac of the Dead," which immortalized these heroes? Theodore O'Hara, of Kentucky.

Yes; southern arms surely deserve the renown of that victory.

THE SOUTH ON THE DEFENSIVE, OR THE ABOLITION CRUSADE.

I said that the South was preeminent in the last period, but was she allowed to reap the reward of her victory? Not at all. Seward and other northern politicians gathered in convention at Pittsburgh, Pa., and arranged to so legislate that no slaves should be in this newly acquired territory. This naturally made the South indignant, for she resented the many acts of injustice that had been shown to her. She had been unjustly treated in the tariff acts of 1830, when Hayne and Calhoun, of South Carolina, boldly contended for her rights. Hayne said, "It is unconstitutional for a Government to make laws to enrich one section and impoverish another," and he was right. The hiding of runaway slaves, and believing their representations of plantation life rather than the representations of the Christian men of the South caused increased resentment. Thirty thousands of our negroes, the property of the planters, had been encouraged to run away and hidden from their owners by means of the so-called "underground railways" at the North and sent across the line to Canada.

As in family life a child is punished if disobedient, so in plantation life a disobedient and unruly negro had to be punished. Discipline had to be maintained on the plantation, as in the

home. Now, it was more agreeable for that negro to run away and cross the border line, where he knew he would be protected, than to receive his just punishment. And it was perfectly natural for this kind of negro to exaggerate his threatened punishment. He told the abolitionists that we yoked them to plows to cultivate our fields, and the abolitionist, willing to believe this, did so, not realizing that the negro was our salable property and that a $60 mule would be much cheaper for this work than a $1,200 negro. He said that we used dogs to tear their flesh when we used bloodhounds to track the runaway. If an overseer, and these overseers were rarely southern men, whipped a negro cruelly, as did sometimes happen on the large plantations, but not oftener than parents sometimes whip cruelly a child, that overseer was at once dismissed. Had no other reason than a selfish reason prevailed, a slaveholder could not afford to have his property injured by brutal treatment.

Harriet Beecher Stowe's Uncle Tom's Cabin was founded on one of these cruel misrepresentations by a negro from a Mississippi plantation. Mrs. Stowe, of course, really believed it to be true. But that book did more than any other one thing to bring on the war between the States. The South felt powerless to stem the tide of popular belief at the North, so fanatical did these political abolitionists become.

A Georgia lawyer, Thomas R. R. Cobb, brought out about this time a book, The Law of Slavery, which really is a most remarkable production. Every available authority upon the subject of slavery among all nations was carefully studied and quoted. Coming just about the time of Uncle Tom's Cabin, it was suppressed in the North, and the war coming on prevented a second edition in the South. When William Lloyd Garrison heard that this book proved that the institution of slavery was defended by the Bible, he said, "Better, then, destroy the Bible," showing to what length his fanaticism led him. Fourteen Northern States passed personal-liberty bills, and were violating the fugitive-slave law which was included in Henry Clay's omnibus bill. The South, feeling that this omnibus bill was unjust to her, accepted it, hoping to bring peace. When these same Northern States, violating the law, urged the election of Abraham Lincoln as President of the United States, and he was elected without a single electoral vote from the South, the Southern States felt no right would be respected and it was full time to secede.

Eleven States rapidly seceded, and the Confederate Government was formed at Montgomery, Ala. The blockade came almost with secession. Had the South found a market for her cotton and tobacco, possibly the surrender would never have taken place. Or had the prisoners been exchanged, as President Davis and Gen. Howell Cobb so strenuously urged, Gen. Lee would not have been obliged to surrender. Of one thing I am assured, the horrors of Andersonville Prison could have been averted.

Do you ask, Would it have been better had the South been victorious? I must say no; God knew best. Far better to have a Nation as we now have, with such a man as Woodrow Wilson at the head, supported by those strong Democratic leaders from North and South, wisely doing the things which stand for right, than to be sovereign States, as we would have been, the prey of any petty republic which desired to interfere with us.

The war did not begin with the firing on Fort Sumter. It began when Lincoln ordered 2,400 men and 285 guns to the defense of Sumter. The surrender was not due to Federal victories, but to Confederate exhaustion. The Confederate forces were 1 to 5; 175,000 men surrendered to 1,050,000. The North lost as many men at the Battles of Wilderness and Spottsylvania as were lost in the French and Indian wars, the Revolution, the War of 1812, and the Mexican War combined.

THE HUMILIATED SOUTH OF THE RECONSTRUCTION PERIOD.

After the surrender the soldiers returned to their homes, where homes remained, oppressed and depressed. They literally had nothing left but the ground upon which they stood. Families were scattered, negroes freed, banks closed, no currency available. The slaveholder knew less than his overseer and slaves about the practical part of farming. The lawyer had no clients; the teacher had no pupils; the merchant had no credit; the doctor had no drugs. Ah, it was pitiful! Georgia and South Carolina suffered most on account of the desolation caused by Sherman's march to the sea.

This was the time when those women of the Confederacy showed of what stuff they were made. They put their loving arms about those husbands and sons and they said, "We are not conquered, we are just overpowered, and we think it were better that you fought, even if you did not win, than never to have fought at all. The South is going to come out all right; you wait and see." What prophets they were, for is not the South to-day the Nation's greatest asset?

They began to collect the bodies of the Confederate soldiers scattered over the battle fields, placing them where they could care for them, and where they could deck their graves with flowers. Then they began to erect monuments over them. The men said, "We can not help you, for we are under an oath of allegiance." The women said, "We are under no oath," and the work went on. Ben Butler, in Louisiana, said we should not build monuments to our Confederate dead, and so said Meade in Georgia, but we did it anyway, didn't we? They did not know southern women. More monuments stand to the Confederate soldier to-day than to any other soldier of any other nation who ever fought for any cause.

Had not Lincoln been assassinated all would have gone well even then, for the negroes still loved their old owners and did not wish to leave them. Indeed they were like little children, they did not know how to make a living for themselves, and they did know that "ole marster" would never let them suffer. Lincoln's death was the worst blow that could have befallen the South. Lincoln was not such a great negro lover as has been represented in history. He was southern born and knew the true relation between the owner and his slaves. It is true he did not believe in slavery; neither did Washington nor Jefferson nor Mason nor many other leading men of the South. Stonewall Jackson never owned but two slaves in his life, and they begged him to buy them. But Lincoln was an intense Union man, and he determined to preserve the Union at all hazards. If he could do it with slavery, all right; if not, slavery must go. His emancipation proclamation did not free the negroes as a race. It freed your father's slaves and my father's slaves, but it did not free Gen. Grant's slaves nor the slaves in Missouri, Maryland, Kentucky, Delaware, and other States where slaves still remained after the war. This proclamation, the result of a rash vow, was only a measure to punish the seceding States. He had said in his inaugural address the South need not fear his interference with their slaves. The slaves were not really freed until a southern man—John Henderson, of Missouri, proposed the thirteenth amendment to the Constitution after Lincoln's death. But had Abraham Lincoln lived he would never have stood for that reconstruction measure of Thad Stevens. We would never have been put under military rule and divided into districts; we would never have had the Freedman's bureau to humiliate us; he would never have stood for social equality in the South; he knew the thought of the people too well; we would not have had that rule of the carpet-bagger and scalawag in the South, and I am perfectly sure he would never have stood for that exodus order of Thad Stevens's, which more than any other one thing is responsible for the present-day negro problem. That order tore more children from their parents than was ever done in all the years of slavery by any slave block.

Thad Stevens saw that the negroes were remaining with their old owners, and he could not accomplish the plans laid for social equality of the negro in the South. He told them if they remained with their former owners they would be made slaves again, and ordered that no two families could remain upon the same plantation. This caused a separation of families and a rending of ties and a fearful alienation between whites and blacks followed. The faithful mammies would not leave "marster's white chile," and that is the reason so many were found many years after freedom still with their former owners.

Oh, Daughters of the Confederacy, members of our Indiana chapters, there was a friend of the South from your Indiana in those awful reconstruction days. As our Mr. Cunningham has been instrumental in erecting a memorial to Mr. Owens, who was so good to our prisoners during the war, so I would like to see you erect some memorial to that Democratic Congressman so anxious to help the South in this hour of her need. I refer to Dan Vorhees, of Indiana. He said it was a shame to make dead provinces out of living States. He said the South was a white man's country and should be kept so, but that reconstruction committtee would not listen to his pleading.

The Ku-Klux Klan was an absolute necessity in the South at this time. This order was not composed of the "riffraff" as has been represented in history, but of the very flower of southern manhood. The chivalry of the South demanded protection for the women and children of the South.

Yes; the North was preeminent in this period of our history. But does not the South stand out in no uncertain light? It has proven to the world that she can be as brave in defeat as in victory; she can stand humiliation and lawlessness with Christian resignation; she can bear and forbear and yet suffer in silence, and, while having far more to forgive and forget, she has a heart ever ready to do the things that make for peace,

and stands ready to-day to stretch forth her hand in the true spirit of reconciliation.

The record of the Confederate soldier, the heroism of the Confederate women, the monuments erected to southern valor, have caused the whole world to be lost in admiration and wonder.

It was very hard for our southern men, unused to manual labor of any kind, to try to adjust themselves to the new order of things in the South. It really was easier for the women than for the men, and some men never did get adjusted, and some women have never been reconstructed.

The kitchens in the old civilization were never in the house, but some distance from it. There was no need that they should be in the house then, for there were plenty of young negroes to run back and forth with the hot waffles, the hot egg bread, the biscuits, and the battercakes. But when the women of the South had to go into the kitchen after the negroes left, or had become too impertinent to be allowed around the house, the inconveniences were greatly felt. You must remember there was rarely such a thing as a cookstove before the war. All cooking had to be done in an open fireplace, with oven and pots. There were no waterworks, and all water had to be drawn from the well or brought from the spring. There were no electric lights, no gas lights, no kerosene lamps, even, and lard lamps were really a rarity, used only by the rich. The dependence for light were wax, tallow, and sperm candles. The wood had to be cut and the chips had to be picked up, and all this consumed time and required great patience. This was the beginning of the breaking up of home life in the South, and it proved the deathblow to the old-time southern hospitality. Things began to brighten, however, as the years rolled by, for the new homes in the South began to add the kitchen to the house and conveniences were gradually introduced, so that with gas stoves, electric plates, and fireless cookers our southern women are as independent to-day as the women of the North, and can cook as good a meal with as little trouble, and wash and iron, too, if need be. They really have more sympathy and more patience with the negro help than the women of the North, and really are more anxious to aid the negroes in the right way.

We had been an agricultural people before the War between the States, and were satisfied to be. We never realized the possibilities in our grasp. We did not know that we had 9,000,000 horsepower in our streams of the South. We did not know that we could make anything worth while out of the cottonseed we were yearly throwing away. We did not know that there was untold wealth lying beneath our feet, but we know it now. South Carolina first began to realize the possibilities in her cotton mills. She discovered that she was selling her cotton crop every year to Massachusetts for $30,000,000, and Massachusetts was making it into cloth and thread and selling it for $100,000,000. The thought came, "Why may I not keep that money in my own State?" and that is what South Carolina is doing to-day, and other Southern States are following her example.

I think the Spanish-American War did much to make the South realize her own powers. At least it made the two sections know each other better. That war taught us loyalty to the United States flag, which we had not loved during those four years of war and during those seven years of reconstruction which followed. But when our boys put on that uniform of blue and fought under the Stars and Stripes side by side with the boys of the North we began to feel it was our flag as much as it was the flag of the North. The South showed that she was again loyal to the Union, for more volunteers from Southern States, in proportion to population, went to that war than from any of the Northern States, and our boys made themselves known, too.

Who was commander in chief of the Atlantic Squadron? Winfield Scott Schley. Who was made minister to Habana? Fitzhugh Lee. Who was called "The Wizard of the Saddle"? Joe Wheeler. Who commanded the *Brooklyn* when Cervera's fleet was destroyed? Schley. What vessel fired the first shot of the war? The *Nashville*, commanded by Maynard, of Tennessee. Who fired the first shot at Manila? Stoakley Morgan, of Arkansas. Who was promoted for gallantry on the field? Micah Jenkins, of South Carolina. Who shed the first blood of the war? John B. Gibbs, of Virginia. Who was the first to fall in battle? Worth Bagley, of North Carolina. Who was Dewey's right-hand man? Tom Brumby, of Georgia. Who was the hero of Santiago Bay? Winfield S. Schley. Who was the backbone of the Santiago campaign? Joe Wheeler. Who sank the ships to block the enemy and saved the day? Hobson, of Alabama. Who raised the flag at Manila? Brumby, of Georgia. Who was sent with a message to Garcia? Rowan, of Virginia. Who was sent to count the ships in Santiago Bay? Victor Blue, of Carolina. Every one our southern boys. Then, who was put in command of the American troops in the Philippines? Ewell S. Otis. Who was made governor of the Philippines? Luke Wright, of Memphis. And does this not show our boys of the South equaled in courage and heroism the boys of the North?

THE TRIUMPHANT SOUTH.

Do you know that three-fourths of all the cotton in the world is raised in the South? Do you know that Europe pays the South annually $600,000,000 for her cotton, and that is only one-third of the products the South supplies to her? Yes, cotton is king, and that king was born in Georgia. Do you know that three-fourths of all the sulphur mined in the world comes from the South, and all used in the United States comes from Louisiana? Do you know that Louisiana sulphur mines dominate not only the sulphur trade of America, but all Europe? Do you know that three-fourths of all the coal in the United States is in the South? Do you know that seven-eighths of all the forest area of the United States is in the South? Do you know that the only diamond mines out of Africa are in Arkansas? Do you know that all the phosphate beds of the United States are in the South?

Do you know that Tennessee's coal is better than Pennsylvania's coal? Do you know that Georgia's marble is better than Vermont's marble? Do you know that Texas' oil wells produce annually 85,000,000 barrels of oil—far more prolific than those of Pennsylvania? Do you know that Joseph Watkins, of Georgia, patented the cotton gin one year before Eli Whitney? Do you know that the largest cotton warehouse in the world, covering 161 acres of land, is in Memphis, Tenn.? Do you know that Georgia mills are making velvet, and Georgia mills are making the thread from which are made those beautiful curtains in your Philadelphia homes? Do you know how many lumber mills there are in the South? Ask the Manufacturers' Record. I know that the largest sawmill in the United States is in Arkansas. Do you know that the largest fertilizer plant in the world is in Charleston? Do you know that the largest sulphuric-acid plant is in Tennessee? Do you know that lead was first mined in Mississippi?

Do you know that our corn equals that of Iowa, our wheat that of Illinois, our oats that of Ohio, our apples those of the East, and that our Georgia peach is the best in the world?

Do you know that Dr. Seaman Knapp, for whom Tennessee's Agricultural College is named, was a Louisiana man? Do you know that the pioneer of scientific agriculture was Edmund Ruffin, of Virginia? Do you know that "the rural philosopher" was John Taylor, of Virginia? Do you know that the first professor of economics and statistics was James De Bow, of Louisiana?

I do not believe you know what our agricultural colleges are doing to make the South realize her own greatness. One county in Georgia has 41 different kinds of soil, and experts are finding out all sorts of things about our southern soils. Why, we are furnishing food and fiber for the world, and there lies beneath our feet yet untold, undeveloped wealth. The South has 55 different minerals.

We have no right to cry hard times in the South; it is a disease we have caught from others. Our nearness to Panama will make us the center of the world's trade, and Panama would not be habitable, would it, but for our William Gorgas, of Alabama? As we have one-half of the seacoast of the United States, the South will be the logical point for the future naval displays of the world.

No, we do not realize our own greatness, because we do not know our own country. It is a great country, this United States of ours. It spans a continent; it is the youngest, yet it is the noblest of all the nations of the world. Nature has really seemed partial to the South, for while she has given great stretches of land to the West, much of it is barren waste. While she has given great fertility to the North and East half the year, there is icy bleakness the remaining half. To the South she has given almost perpetual spring; we scarcely know when summer ends and winter begins; when winter ends and spring begins. Half way between icy bleakness and tropical heat, partaking of the advantages of both, but not injured by the disadvantages of either. We have soil and climate the most wonderful in the world; rainfall abundant, but not in excess. Situated in the latitude of the Holy Land, we are the home of the orange, the pineapple, and the banana; the home of the rose, the jasmine, and the oleander; the home of the palm and the live oak and the

magnolia; the home of the pomegranate, the apple, and the peach; the home of the pecan, the walnut, and the chestnut, to say nothing of the watermelon, "the 'possum and the 'taters."

Bathed on the east by the Atlantic Ocean, tempered by the warm waters of the Gulf Stream; on the south, by the tepid waters of the Gulf of Mexico; on the west, reaching to Mexico and California, the land of flowers; protected on the northwest by the grand old Rockies from Alaska's icy blasts. The Mississippi, "the Father of Rivers," flowing through our entire length of States; the Appalachian Range on the eastern shore, with its highest peak in North Carolina; the Blue Ridge running toward us and ending in that geological monstrosity—our Stone Mountain of Georgia. Nature has worked wonders in our midst—the Mammoth Cave in Kentucky, the Natural Bridge in Virginia, the bottomless Blue Spring in Florida, and the Tallulah Falls of Georgia.

Are we teaching patriotism to our children? Do you ask me, "What is patriotism?" My, what magic in the word! Love and loyalty to home and country. Love as tender as that of a mother for a child; loyalty so unselfish as to forget self. Patriotism is the spark that kindles the Nation's fire; it is the fountain from which the Nation's prosperity flows; it is the helmet that shields the Nation's life; it is the shield that guards the Nation's home.

Patriotism is inborn, and if you have it not you are abnormal. [Laughter.] It should begin with love of God, then love of home, then love of country, then love of State, then love of place. America is a Christian country, ours by Divine gift. Liberty is God's acknowledgment that we are capable of receiving the gift.

Our Government has no model, nothing like it in the world. A government of the people, by the people, for the people. Benjamin Hill, our "silver-tongued orator," said: "It was planned not by human wisdom but by Divine guidance. The Romans never dreamed of it; the Greeks never could have conceived it; the European mind never could have evolved it." Alexander Stephens said that the creed of patriotism is "Improvement of the mind, erection of schools and temples of learning, interest in the things that make for industry, and good will to all men."

A patriot is one who saves his country's honor. You were patriots, veterans, for you saved your country's honor, and now, God bless you, you have lived to see your country's triumph. Everything you fought for has been acknowledged by those against whom you fought. Even Harriet Beecher Stowe's son, Rev. Charles Stowe, has publicly said that there was a rebellion, but it was the North that rebelled against the Constitution; that slavery could not have been the unmitigated evil it has been represented to be, or one could not account for the faithfulness of the slaves when the men of the South were at the front; that there was undoubtedly some good in a civilization which could produce such a beautiful Christian character as "Uncle Tom."

Veterans, "heroes in gray, with hearts of gold," it was harder to live after the war than it was to face the bullets on battle fields, was it not?

Yes; the South is triumphant to-day. She is not only the Nation's greatest asset, but she is the world's greatest asset. This is the golden age—an age of great power, buoyant strength, great wealth, and freedom to run an unhindered race. But we must remember that there is a danger in golden ages. Hannibal lost the fruits of his victories by the orange groves and vineyards of Campania. Marc Antony lost his by the alluring charms of a Cleopatra. Let us then beware lest greed of gold, selfishness, or intemperance engulf us. Let the public weal be as the apple of our eye. Let us keep the ballot box pure. Let duty ever be our watchword.

Sail on, thou great and mighty Ship of States, sail on over billows and through storm and seas, sail on.

May balmy breezes and gentle winds waft thee into a safe and quiet harbor. May thy keel be strong, thy sails pure and white. May duty be thy polar star. Sail on, sail on, undaunted by Mexico's threatening waves, by Panama's alluring charms, by selfish trusts, by tariff blasts, yea, by women's votes, sail on, and thou shalt surely enter into rest and peace, if we as patriots will only firmly stand, and knowing the right dare to maintain it.

One last word:

Now, Daughters of the Confederacy, teach, I pray you, your children this:

> Though we were overpowered, we were not degraded,
> Southern laurels have never faded;
> All is not lost unto us,
> Only baseness can undo us.
> Kneeling at your country's altar,
> Teach your children not to falter,
> Till the right shall rule in Dixie.

Panama Canal Tolls.

EXTENSION OF REMARKS
OF
HON. CYRUS CLINE,
OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 12, 1914.

Mr. CLINE. Mr. Speaker, under leave to extend remarks upon the motion to agree to the Senate amendment to the Panama Canal tolls proposition, I desire to express myself briefly. I have the satisfaction of being consistent in the whole history of this legislation. I was against the proposition to extend freedom from the payment of tolls to the Coastwise Shipping Trust in 1912, not only upon economic grounds but because a fair and reasonable construction of the Hay-Pauncefote treaty denied the right of Congress to exempt our coastwise shipping. Not a single American, from ambassador down, who aided in the negotiation of the treaty either directly or indirectly, but declares that there was no purpose to exempt any nation from any obligation imposed upon any other nation. The Senate amendment is absolutely harmless. We simply say by it that we do not estop ourselves from opening up the question of free tolls again or to assert any right that we have under the treaty. We neither add to our rights or take from them by this amendment. The alacrity with which influential Democrats hasten to support this amendment on the theory that its adoption permits what would have otherwise been a binding construction of the treaty is absurd.

Gentlemen who ridiculed the President and the House for their attitude on the repeal bill now seek to square themselves with their entire party history on the question of gratuities or subsidies by indorsing the bill under the cloak of the Senate amendment in the closing opportunity. There are some Democrats who have learned that the party will not follow them, no matter how insistent, when to do so would be to impeach a long-established cardinal doctrine of democracy. Not a man who now reverses himself on this vote to adopt the amendment because of its curative elements but knows that it does not in the least or in any manner affect our rights under the treaty. It will be observed by everybody that not a word has been spoken by gentlemen who fought this bill in the House on the theory that we were abandoning the Baltimore platform in urging its passage. That the free-tolls proposition was in some mysterious manner included in the platform without the knowledge of the delegates to the Baltimore convention is attested by the fact that out of 828 answers received from delegates by Senator GORE 714 were in favor of repeal, 124 opposed to repeal, and 40 were noncommittal. Many delegates had no knowledge that the free-tolls provision was in the platform until they read it in the paltform after the convention had adjourned.

Every man who is familiar with the history of the Democratic Party knows that with knowledge coming to the delegates assembled in a national convention that it was proposed to engraft into the party platform, and that, too, in the same section that denounced gratuities and subsidies, an indorsement in favor of free tolls to the most obnoxious shipping combine in this country that such a proposition would not have received 1 per cent of the votes. Gentlemen who now for the first time propose to vote for the repeal of the free-tolls bill through the adoption of a Senate amendment seem visibly touched with the apprehension that it is a great crisis for the American people. Gentlemen need have no alarm or anxiety about the matter. In the adoption of this amendment, and in the concurrence with the Senate in the passage of the bill, we show to the commercial world our purpose to maintain our sacred honor in all of our engagements. We do in the end what we proposed to do in the beginning—open a new highway for the world's commerce and dedicate to the use of all nations on terms of "entire equality." I have confidence in the construction of the treaty by the men who negotiated it; I have confidence from an economic point of view in the opinion of Col. Goethals, who constructed the canal and said that we ought to exact tolls from every vessel that used this great highway that the American people had dedicated to the world that the expenses of its maintenance might fall alike on everyone. I have confidence in the American people, 95 per cent of whom would rather see the canal abandoned than to adhere to a selfish and unpatriotic construction of the Hay-Pauncefote treaty that would smirch our honor and dignity as the world's leading nation in high ideals and patriotism.

The American Flag.

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 16, 1914.

Mr. BUCHANAN of Illinois. Mr. Speaker, under the unanimous consent granted to me to extend my remarks in the RECORD, I include an address delivered by the Secretary of the Interior, Franklin K. Lane, on the American Flag.

MAKERS OF THE FLAG.

The effort of Rudyard Kipling to epitomize the American spirit, in his poem by that name, has been widely quoted here and elsewhere.

Secretary of the Interior Franklin K. Lane, in his address to employees of his department yesterday, offers in classic form the idea of an American of the spirit which has made his country great. Here it is:

ADDRESS BY FRANKLIN K. LANE.

[Delivered on Flag Day, 1914, before the employees of the Department of the Interior, Washington, D. C., by Franklin K. Lane, Secretary of the Interior.]

"This morning as I passed into the Land Office the Flag dropped me a most cordial salutation, and from its rippling folds I heard it say: 'Good morning, Mr. Flag Maker.'

"'I beg your pardon, Old Glory,' I said, 'aren't you mistaken? I am not the President of the United States, nor a Member of Congress, nor even a general in the Army. I am only a Government clerk.'

"'I greet you again, Mr. Flag Maker,' replied the gay voice, 'I know you well. You are the man who worked in the swelter of yesterday straightening out the tangle of that farmer's homestead in Idaho, or perhaps you found the mistake in that Indian contract in Oklahoma, or helped to clear that patent for the hopeful inventor in New York, or pushed the opening of that new ditch in Colorado, or made that mine in Illinois more safe, or brought relief to the old soldier in Wyoming. No matter; whichever one of these beneficent individuals you may happen to be, I give you greeting, Mr. Flag Maker.'

"I was about to pass on, when the Flag stopped me with these words:

"'Yesterday the President spoke a word that made happier the future of 10,000,000 peons in Mexico; but that act looms no larger on the flag than the struggle which the boy in Georgia is making to win the corn-club prize this summer.

"'Yesterday the Congress spoke a word which will open the door of Alaska; but a mother in Michigan worked from sunrise until far into the night to give her boy an education. She, too, is making the flag.

"'Yesterday we made a new law to prevent financial panics, and yesterday, maybe, a school-teacher in Ohio taught his first letters to a boy who will one day write a song that will give cheer to the millions of our race. We are all making the flag.'

"'But,' I said impatiently, 'these people were only working.'

"Then came a great shout from the Flag:

"'The work that we do is the making of the flag.

"'I am not the flag; not at all. I am but its shadow.

"'I am whatever you make me, nothing more.

"'I am your belief in yourself, your dream of what a people may become.

"'I live a changing life, a life of moods and passions, of heartbreaks and tired muscles.

"'Sometimes I am strong with pride, when men do an honest work, fitting the rails together truly.

"'Sometimes I droop, for then purpose has gone from me, and, cynically, I play the coward.

"'Sometimes I am loud, garish, and full of that ego that blasts judgment.

"'But always I am all that you hope to be and have the courage to try for.

"'I am song and fear, struggle and panic, and ennobling hope.

"'I am the day's work of the weakest man and the largest dream of the most daring.

"'I am the Constitution and the courts, statutes and the statute makers, soldier and dreadnaught, drayman and street sweep, cook, counselor, and clerk.

"'I am the battle of yesterday and the mistake of to-morrow.

"'I am the mystery of the men who do without knowing why.

"'I am the clutch of an idea and the reasoned purpose of revolution.

"'I am no more than what you believe me to be and I am all that you believe I can be.

"'I am what you make me, nothing more.

"'I swing before your eyes as a bright gleam of color, a symbol of yourself, the pictured suggestion of that big thing which makes this Nation. My stars and my stripes are your dream and your labors. They are bright with cheer, brilliant with courage, firm with faith, because you have made them so out of your hearts. For you are the makers of the flag, and it is well that you glory in the making.'"

Contested Election Case—Gill v. Dyer.

EXTENSION OF REMARKS
OF
HON. LEWIS L. MORGAN,
OF LOUISIANA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, June 19, 1914,

On the following resolutions (H. Res. 548):

"*Resolved*, That L. C. Dyer was not elected a Representative in the Sixty-third Congress from the twelfth district of the State of Missouri, and is not entitled to a seat therein.

"*Resolved*, That Michael J. Gill was duly elected a Representative in the Sixty-third Congress of the United States as a Representative from the twelfth district of the State of Missouri, and is entitled to a seat therein."

Mr. MORGAN of Louisiana. Mr. Speaker, this case has been discussed with great ability by experienced and able Members of the House, who have cited many authorities in support of their respective contentions, and little remains to be said.

However, if you will be generous enough to bear with me a few moments, I shall endeavor to sum up in a few words the salient facts in this contest and the conclusions I have deduced therefrom.

No matter what our political principles may be, it is incumbent upon each and every one of us to impartially analyze and examine the evidence in this contest in order to do substantial justice as between the contestee and the contestant. Individually, I am hopeful of being able to discharge the duty which devolves upon me without feeling that I belong to a different political persuasion. This we must all do in order to disabuse our mind of everything that is calculated to excite prejudice and passion.

This record convinces me that there is a great deal of philosophy in that old saying, "Evil carries in it the seeds of its own destruction."

According to the official returns, Mr. Dyer received 11,981 votes and Gill 11,249 votes. A contest was immediately filed by Gill and a recount followed, which resulted in reducing Dyer's vote to 11,777 and increased Gill's vote to 11,428.

The testimony in this record shows—and it is admitted—that Mr. Gill went to the fifth ward with a clear majority of 666 votes, but in that ward, according to the official returns, he was unspeakably defeated by Mr. Dyer in spite of the fact that in that ward there was a veritable landslide for the nominees of the Democratic Party.

Now, Mr. Dyer charges that Gill voted against Tom Kinney in 1910, when he was the Democratic nominee for Congress, and therefore the opposition to him in the fifth ward was brought about by his own political perfidy. It is evident that the contestee is not unmindful of the fact that this charge serves as a two-edged sword. It is intended, in the first place, to prejudice the House against the contestant and at the same time to adroitly account for approximately 1,000 scratched Democratic votes in the fifth ward.

In order to bring you to a just appreciation of Mr. Gill's alleged duplicity, Mr. Dyer undertakes in a very dramatic manner to delineate the life, character, and services of Tom Kinney. He contends that Mr. Kinney was a man of splendid instincts and well intrenched in the hearts of the people of his ward, therefore his people very naturally resented Mr. Gill's treachery by voting against him when he offered for the same position, and thus Mr. Dyer accounts for the anti-Gill sentiments. These sentiments would do the gentleman infinite credit if he had not been driven to that expedient by necessity. A few brief months ago he applied to Tom Kinney such epithets as thief, scoundrel, grafter, and so forth. These strictures and culpatory observations are somewhat out of jar with his present eulogy.

Heaven forbid that I utter one syllable to the disparagement of Tom Kinney. May his memory always remain enshrined in the hearts of his people. But nevertheless the fact remains—and I

say it with all due deference to him—that Tom Kinney, like many other worthy citizens, seemingly was not very popular in his ward, for when he appealed to the sovereign voters in 1910 for their support he received in the fifth ward, where there are 2,000 Democratic voters, only 500 votes.

You will observe that in the sixth and twelfth precincts, where the election was ostensibly conducted in an honest and legitimate manner, Mr. Gill lost but 7 Democratic votes in each precinct. This conclusively proves that there was no feeling of enmity harbored against him by the people of that ward because of this alleged political duplicity.

This record also discloses the fact that Tom Kinney contested Mr. Dyer's election in 1910, and the ballots of the twelfth congressional district were ordered recounted; yet no one intimated that Mr. Gill voted against the Democratic nominee. Two years come and go, and still there is no charge of disloyalty laid at his door. Mr. Gill in 1912 announced for Congress and went before the people of his district and asked for their support; and, strange to say, he was enthusiastically supported by Tom Egan and Mike Kinney, the brother-in-law and brother of Tom Kinney, whom Mr. Dyer declares Gill voted against in 1910. Is it not singularly strange that this alleged insidious act of Gill was not unearthed until he had won the Democratic nomination?

Now, the defenders of Mr. Dyer firmly assert that Gill did not deny the charge; yet we find Mr. Dyer in his brief makes this illuminating statement:

True it is that Clooney, of Gill's own ward, continued to support him, and that O'Donnell, of the sixth ward, voted and worked for him because he doubted the correctness of the records showing Gill's vote and believed Gill's denial of the charge that he had voted for Dyer. (Brief, p. 11.)

Hence we see that Mr. Gill did unequivocally deny the charge, and the circumstances I have just referred to, in my judgment, corroborate him—so much so that I am ready to accept his denial. Furthermore, there is nothing in this record to show that Gill's vote had not been tampered with for the sole purpose of subjecting him to the wrath of Tom Egan and Mike Kinney.

Now, in order to further account for the opposition to Gill in the fifth ward, it is charged that he was opposed by the union labor. However, we find outside of the fifth ward that Judge Bond, the Democratic candidate for the supreme court, received 10,439, and Gill 10,434; J. A. Bradshaw, the Democratic candidate for railroad and warehouse commissioner, received 10,562, and Gill 10,434. Now, it is very obvious that the result outside of the fifth ward conclusively destroys this trumped-up charge.

Mr. Gill alleges that the result in the fifth ward was accomplished by a well-planned conspiracy, in which the Democratic and Republican judges and clerks either actively or tacitly participated, and a careful examination of the testimony established the accuracy of this charge beyond the possibility of a doubt.

Gill further avers that Tom Egan, a member of the board of election commissioners for the fifth ward, colluded and conspired with the judges and clerks of the election for the purpose of electing Mr. Dyer; and allow me to say that this is not an unwarranted assumption on the part of the contestant, but a fact satisfactorily substantiated by the record.

Why, Mr. Dyer states that "the Democratic judges and clerks were requested as voters to scratch Gill's name, but there was absolutely no attempt to interfere with their official duties." I am at a loss to know by what authority Mr. Egan commanded the judges and clerks to scratch Gill as voters, and, as a matter of fact, he enjoys no such authority, but, appalling as it is, the fact remains that they followed out his instructions. Mr. Dyer further tells us that Gill's defeat was "a personal matter between Egan and Mike Kinney." Hence we hear from the lips of the contestee himself that these men decided to defeat Gill, and in the attainment of this desire they were not deterred by either law or common decency.

Tom Egan's bold and despotic attitude brings to mind the philosophical words of Humboldt:

I never could believe that Providence had sent a few men into the world ready booted and spurred to ride and millions ready saddled and bridled to be ridden.

When Mr. Egan took the stand, as a witness, he was asked:

Q. How many of the judges and clerks did you invite to the meeting?—A. Never invited any of the judges and clerks. We never bothered with the judges and clerks at all, as they knew what to do themselves.

In this connection he further stated, still referring to the judges and clerks:

They understood anyhow what to do to vote against him, Gill, and help any of the others that did not know how.

Now, these statements, in my judgment, are indicative of the venom which rankled in Egan's bosom, and the disgraceful manner in which the commissioners discharged their duties clearly proves that he knew whereof he spoke. To bring you to a just realization of the significance of Egan's statement, I may add for your edification that he is a brother-in-law of Mike Kinney, who was a candidate for the senate in 1912. Now, allow me to digress right here to say that, according to this record, the judges and clerks of the second precinct, who were obviously officiating for Tom Egan, serenely traded votes with their Republican colleagues, the Republicans voting for Mike Kinney for the senate and the Democratic judges and clerks voting for Dyer for Congress. This is another evidence of their loyalty to Egan, and this seems to be the only enlightening qualification they possessed for the position.

I might further add that Tom Egan is a Democratic committeeman from the fifth ward, and it is the custom of the board of election commissioners to accept the names of the judges and clerks submitted and recommended by the committeemen of the respective wards.

This record conclusively shows that 87 judges and clerks either actively debauched the ballots or acquiesced in the perpetration of this detestable offense at the behest of the man by whose mandates they were clothed with the authority of election commissioners. This record is replete with proof that 37 of the Democratic judges and clerks on the 5th of November, 1912, acted in collusion with their Republican colleagues to satisfy, even according to Mr. Dyer's own contention, Tom Egan's unsatiable vengeance, and incidentally to advance the political fortunes of his brother-in-law, Mike Kinney.

As I said heretofore, Gill, feeling very much outraged by reason of the manner in which the election was manipulated in the fifth ward, demanded a recount of the ballots, and this recount disclosed the appalling fact that the fifth ward election was a disastrous travesty, a pretense, and a fraud. Why, these fifth ward election performers would make the ballot-box stuffers in some of the larger cities of the country look like cheap, bungling amateurs.

The recount itself was a disgraceful showing up of their detestable work; it is a horrible indictment, written by their own hands; it ipso facto impeaches them; stamps them as forgers and falsifiers and conclusively demonstrates that their returns are not entitled to the merest credence at our hands. Their returns, in my opinion, bear about the same relation to the truth that a dog's bark bears to his appetite.

The recount of the second precinct reduced Dyer's vote from 199 to 106 and increased Gill's from 5 to 73.

The recount in the fourth precinct reduced Dyer from 132 to 110 and gave Gill 68 in lieu of 49.

The recount in the fifth precinct reduced Dyer from 186 to 148 and increased Gill from 23 to 51.

The recount in the ninth precinct reduced Dyer's vote from 183 to 149 and increased that of Gill from 3 to 14.

The recount of the fourteenth precinct tickets showed Dyer entitled to 128 votes instead of 148 and Gill 71 instead of 68.

We also find that, according to the official returns, Mr. Dyer carried the third precinct by 18 votes, but the recount divulged the fact that the precinct had been actually carried by Mr. Gill by 10 votes.

Why should the sacred character of Virtue shine on a villain's countenance?
Ye powers!
Why fix'd you not on treason's front,
That we might know to avoid perfidious mortals?

Now, the elimination of the returns of the second, fourth, fifth, ninth, and fourteenth precincts, which were indisputably false, forged, and falsified, will change the result of the election and overcome any plurality claimed by the contestee.

It is claimed by the defenders of the fifth ward election machinery that to err is human; but does any reasonable being believe or can he stretch his imagination to the point of believing that these miscellaneous discrepancies and inaccuracies are the result of ignorance, error, or inadvertence? From no process of reasoning can you reach any such conclusion. I am unable to bring myself to subscribe to any such fallacy.

You can not doubt the verity of the returns of the second, fourth, fifth, ninth, and fourteenth precincts and yet seat Mr. Dyer. And you can not ever hope to convince the membership of the House that these returns are entitled to the merest probatus weight. Hence it is your inescapable duty to set aside at least the returns of the five precincts above enumerated.

Mr. Chairman, it seems to be an unpardonable insult to the intelligence of the House to ask it to accept the returns of these election officials. Why, the Republican judge, Jacob Wherli (335) of the second precinct, when asked if his return was correct, replied: "I don't know whether it is correct." Now, I have too much respect for my own character to undertake to legitimate a creature so fraught with dishonesty and doubt

that it is disowned and spurned by its creature. If the Republican judge has no confidence in his own work, in Heaven's name how can you bamboozle yourselves into believing that you should accept his returns as authentic proof of the votes cast in the second precinct for the respective candidates for Congress.

The recount, as above stated, completely discredits the returns made by the judges and clerks of the fifth ward. Now, you will observe that the recount changes the returns in practically every precinct, and in several instances they increase Mr. Dyer's vote from two to five votes.

Mr. Dyer assumes that this is conclusive proof of the integrity of the returns. In my judgment there is no apparent reason why these errors should have crept into the returns of every precinct, and I feel safe in saying that the promiscuous jugglery which was so prevalent in the fifth ward is alone responsible for these glaring and inexcusable inaccuracies. In their hurried manipulation of the ballots they very naturally made inadvertent errors.

The recount gives Gill 179 more votes than the official returns show him entitled to and reduces Dyer 204, making a difference of 383 votes in favor of Gill. The immortal Shakespeare would character this "as flat burglary as was ever committed."

Mr. Dyer, in justification of these returns, says:

In every precinct they had been on continuous duty from 6 o'clock in the morning until 7 o'clock that evening, when the polls were closed, before they could count a single vote. It is not remarkable that working under such conditions of strain and fatigue serious clerical errors should creep into their official returns in these five precincts.

Oh most lame and impotent conclusion. Let us glance over the gigantic work which consumed so much of their physical strength and absorbed all of their moral fiber.

In the second precinct there were 201 votes cast.

In the fourth precinct, 215 votes cast.

In the fifth precinct, 329 votes cast.

In the ninth precinct, 179 votes cast.

In the fourteenth precinct, 362 votes cast.

Now, when we are told that these measly few votes could not be accurately compiled and honest returns of them made, I am like the old judge who advised the eloquent young lawyer to "pluck out some of the feathers from the wings of his imagination and put them in the tail of his judgment."

There can not be any doubt but what these discrepancies are the result of a deliberate conspiracy to defeat Gill, and can not be explained intelligently or rationally upon any other theory.

In the fifth ward 1,991 Democratic votes were cast. Gill's name, we find, was scratched from 997, and on 888 the name of Mr. Dyer appeared in lieu thereof. One thousand Democrats in one ward supporting a stand-pat Republican is surely an unusual spectacle; so extraordinary that we poor, erring skeptics are likely to think that there is "something rotten in the State of Denmark."

FIRST PRECINCT.

J. Kirk Kellar (1364), a Republican judge, sworn on the part of the contestee, when asked:

State what was the style of the oath and how was it administered.

Answered:

Well, simply that he would solemnly swear that on this occasion he could not prepare his ballot.

This is one of the deplorable methods employed by Egan's henchmen to deny Gill the rights guaranteed to him by the Missouri statutes, and I submit that it is our bounden duty to right this wrong. If justice is denied him here, where can he hope to look for help? Mr. Kellar was further asked the following question:

After that oath was administered, Mr. Kellar, you say such a voter could * * *. In case such a voter asked for a Democratic ticket and Hahn was preparing his ticket, what was done by Mr. Hahn in the way of preparing his ballot?

Answer:

Voter generally had a slip of paper or card, something to indicate he wanted something scratched. Mr. Hahn scratched the names and inserted others.

SECOND PRECINCT.

John Stark (1878), a Republican judge, sworn on the part of the contestee, testified that Daniel Morrissy, "another lean, unvarnished artificer," prepared ballots for the voters without swearing them as to their illiteracy; entered the polling booth and made up ballots separate and apart; and out of the presence of the other election officers and alone and unaided by his colleagues, canvassed and announced the result. He further testified that the return was signed before they even pretended to close the polls.

It may be well for me to add right here the following, which was incorporated into the general instructions sent to the judges and clerks for their guidance:

Every judge in every precinct must count each and every and all of the ballots of all parties, and should not permit the judges of one party to count the ballots of another party alone; and the judges, each and every one, should further see that the clerks of election properly tally the votes during the count, and that the totals are correct and the returns properly certified. All of your work must be done in the presence of all and by all.

Jacob Wherli (326), a Republican clerk, testified that no oath was administered and that Morrissey entered the booth and made up ballots out of the presence of the other judges and clerks. In this precinct Gill's name was scratched from 63 Democratic ballots and Dyer's name was inserted into 60 thereof. He also stated that Morrissey counted and canvassed the ballots and announced the result.

NINTH PRECINCT.

Oscar Hauserman (540), a Republican judge, testified that no oath was administered to illiterates, and that Mauer, a Democratic judge, indiscriminately prepared ballots, without pretending in some instances to even ask the voter how he desired to vote.

W. H. Gibbons, a Republican judge, said that no oath was administered to any of the supposed illiterates, and upon opening the ballot box Mauer and Byrne, Democratic judges, handled and counted the Democratic ballots. He further stated that these two gentlemen completed the tally without giving Gill a single vote, whereupon the witness demurred and claimed that Gill was at least entitled to one vote, as he had voted for him. The witness further testified that he glanced at a few Democratic ballots which were on the table before them and saw three votes for Gill, and called Mauer's and Byrne's attention to this fact, and Mauer replied, "All right; give him them."

FOURTEENTH PRECINCT.

Mr. T. A. Hubert, Republican judge, stated that no oath was administered to the voters and that Clooney, a Democratic judge, alone counted the ballots and announced the results thereof.

It can not be said that the testimony hereinabove referred to emanates from the lips of men whose often alleged inherited prejudices and predilections render them incapable of testifying fairly and impartially in a contest of this character, for the testimony in the record has been wrenched from the lips of the Republican representatives who presided at that farcical election.

Mr. Speaker, no man within hearing of my voice, irrespective of the ability of his head, can successfully vindicate the action and conduct of this band of political satellites. The testimony in this record is so clear and convincing that no person possesses enough dexterity or ingenuity to disguise the fact that the end the election machinery had in mind was the defeat of Gill.

The registration roll of the fifth ward was offered in evidence and is a part of this record. Its accuracy has not been assailed, therefore it is conclusive and full proof of its contents. This roll shows that there are 85 illiterates in the entire ward. Now, in order to conserve the purity and the freedom of elections in the State of Missouri we find that that State has enacted the following law:

Illiterate voters; judge to prepare ballot, when: Any elector who declares under oath to the judges of election having charge of the ballot that he can not read or write, or that by reason of physical disability he is unable to mark his ballot, may declare the choice of candidates to the judges having charge of the ballots, who, in the presence of the elector, shall prepare the ballot for voting in the manner hereinbefore provided: *Provided, however*, That the provisions of this section shall not be construed to allow any judge or judges of any election to enter a booth for the purpose of assisting any elector in preparing his ballot. Such judges, after reading to the elector the contents of the ballot, shall, without leaving their respective positions, prepare such ballot as the elector may dictate.

Yet we find in every precinct that these omnipotent judges and clerks, in open and flagrant violation of the law, openly and unblushingly prepared ballots without condescending in a single instance to swear the person offering to vote as to his illiteracy or physical disability. In one precinct particularly a card was not infrequently handed to one of the judges or clerks, who prepared the ballots, and in many instances prepared and cast the same without the mental or physical assistance of the voter, thus disregarding the clear mandates of the law and denying the Democratic nominee the protection guaranteed to him by that law.

FIRST PRECINCT.

All of the judges and clerks voted for Dyer. Gill's name was scratched from 666 Democratic ballots and Dyer's name written in on 61 of them.

SECOND PRECINCT.

All of the judges and clerks voted for Dyer. Gill's name was scratched on 63 ballots and Dyer's name inserted into 60 thereof.

Judge Bishop voted a straight Democratic ticket, but on the recount his ballot could not be found.

Eichholz testified that the judges and clerks declined to give him a Democratic ticket. However, he finally succeeded in se-

curing one and voted it straight; but on the recount it was found that Gill's name had been scratched therefrom and Dyer's written in.

THIRD PRECINCT.

Four of the judges and clerks voted for Dyer. Gill's name was scratched on 38 ballots and Dyer's name written in on 36 of them.

Charles A. Hanson testified that he voted a straight Democratic ticket, but when the ballots were recounted Gill's name had been scratched and Dyer's name written in lieu thereof.

FOURTH PRECINCT.

All of the judges and clerks voted for Dyer. Four witnesses testified that they voted the straight Democratic ticket, but when the recount was made it was discovered that Gill's name had been scratched therefrom and Dyer's written in place of same.

Gill's name was stricken from 68 Democratic ballots and Dyer's name appeared on 61 thereof.

FIFTH PRECINCT.

Five of the judges and clerks voted for Dyer. Gill's name was scratched from 114 ballots and Dyer's name written in on 107 of them.

SEVENTH PRECINCT.

All of the judges and clerks voted for Dyer. Fourteen ballots missing on the recount. Gill's name was stricken from 72 Democratic ballots and Dyer's name written in on 69 of them.

EIGHTH PRECINCT.

Five judges and clerks voted for Dyer. Gill's name scratched from 25 Democratic ballots and Dyer's written on 22 thereof.

NINTH PRECINCT.

Five judges and clerks voted for Dyer. Gill's name was scratched from 96 ballots and Dyer's name written on 79 thereof.

John Maguire, a Catholic priest, and four other witnesses testified that they voted the straight Democratic ticket. When their ballots were examined on the recount it was found that Gill's name had been stricken therefrom and in some instances Dyer's name written in.

TENTH PRECINCT.

All judges and clerks voted for Dyer.

Jonas Banaschek swore that he voted the straight Democratic ticket, but on the recount it appeared that Gill's name had been scratched off.

ELEVENTH PRECINCT.

All the judges and clerks voted for Dyer. Gill's name stricken from 93 Democratic ballots and Dyer's written in on 92 thereof.

John Dapoz and W. J. Wolfe testified that they voted a straight Democratic ticket, but when their ballots were examined it was found that Gill's name had been scratched and Dyer's name written therein.

THIRTEENTH PRECINCT.

Four of the judges and clerks voted for Dyer. Gill's name was scratched on 42 Democratic ballots and Dyer's name written in on 38 of them.

FOURTEENTH PRECINCT.

All of the judges voted for Dyer. Gill's name was scratched on 44 Democratic ballots and Dyer's name appeared in lieu thereof.

Judges and clerks permitted strangers in the polling place, and allowed them to freely handle the ballots and count them.

Samuel Altman and five other witnesses testified that they voted a straight Democratic ticket, but when their ballots were examined on the recount it was discovered that Gill's name had been scratched and Dyer's written therein.

FIFTEENTH PRECINCT.

All of the judges and clerks voted for Dyer. Gill's name was stricken from 39 Democratic ballots and Dyer's written in on 33 of them.

Ira Miller and Clinton Brooks voted a straight Democratic ticket, but when their ballots were examined on the recount it was found that Gill's name had been scratched therefrom and Dyer's inserted.

In this precinct lead pencils were exclusively used in the booths by the voters for marking their ballots, but when they were examined on the recount this fluid chirography had turned to simon-pure ink. Do you not know that this transition took place after the votes had been actually deposited in the ballot box?

SIXTEENTH PRECINCT.

Five judges and clerks voted for Dyer.

John J. Dassler voted the straight Democratic ticket; however, it developed on the recount that Gill's name was scratched and Dyer's name written in lieu thereof.

Walter Pfeiffer voted the Progressive ticket; Thomas J. Cockrell voted the Socialist ticket; T. B. Fluke voted the Republican ticket, as did Esau James and Arthur L. Franklin. But when their ballots were examined on the recount they were found to be Democratic tickets with Gill's name scratched and Dyer's name written in lieu thereof, all in the same handwriting.

Gill's name was scratched from 108 Democratic ballots and Dyer's name written in on 106.

SEVENTEENTH PRECINCT.

Five of the judges and clerks voted for Dyer.

Albert C. Ross and six other witnesses swore that they voted the straight Democratic ticket, but when their ballots were examined on the recount Gill's name had been stricken therefrom and Dyer's written in.

In this precinct the judges and clerks arbitrarily ejected the challengers and watchers from the polling booth whilst they were handling and counting the ballots, and would not permit them to reenter until they were threatened with criminal prosecution. Of course, we are safe in assuming that the purpose of their ejection was to enable the election officials to render a good account of their stewardship to Egan.

Gill's name was scratched from 93 Democratic ballots and Dyer's name written in on 61 of them.

Now, who did Mr. Dyer place upon the stand to prove that the judges and clerks did not deviate from the path of rectitude? Several of the judges and clerks themselves and Tom Egan and Mike Kinney. The judges and clerks made a desperate but lamentable effort to defend their accomplices. Of course, in doing this they were defending themselves. It was not expected that they would recount the happenings of that day, for such disclosures would have brought about an immediate disruption of their civil relations. It is needless to say that we thoroughly understand why Tom Egan and Michael Kinney have exerted every effort to justify the alleged errors made by the election officials—the election officials are now about to face the bar of public justice to answer for their wrongdoings, and Tom Egan, as the record shows, is in a great measure responsible for the predicament in which these weaklings find themselves.

We find that, according to the evidence in this case, Gill's name was scratched from 995 Democratic ballots and the name of L. C. Dyer written in on 888; and in each precinct the substitution of Dyer's name practically represented the work of one and the same man, notwithstanding the fact that we find from the evidence that there are only 85 illiterate voters in the entire ward.

Now, if you are going to travel out of the four corners of this record in utter disregard of the law and assume that these 888 scratched ballots represent just so many illiterates, then I ask why was not an oath administered to each as to his illiteracy? The answer is obvious. The election officials well knew that if any effort had been made to administer the oath required by the Missouri statutes that self-preservation would have impelled the voters to decline to swear themselves into a felon's den and this would have enabled them to prepare and mark their own ballots, uninfluenced and unperturbed by the election officials.

Mr. Dyer in his brief makes this ludicrous statement:

> The Republican clerk, Wherli, in the second precinct, and the Republican judge, Gibbons, in the ninth precinct, come forward after the recount has disclosed the errors mentioned, and as would-be informers, seek to clear their own skirts of self-imagined guilt by telling these stories about what Mauer and Morrissy said and did.

You may as well undertake to still the waves of the infuriated ocean as to undertake to convince this House that these two Republicans were seeking to clear their skirts of self-imagined guilt. Neither were they actuated by any desire to explain a mistake, for no one knew better than the two Republicans that the work of Mauer and Morrissy was the result of a preconcerted design to disregard the election laws of Missouri, to defeat Gill and deny the people of the twelfth district the right to elect their own Representative. It is possible, however, that they were looking for immunity, knowing that their transgressions had been brought to light and that all the transgressors were going to feel, in all probability, the heavy hand of punishment which they so eminently merit.

Mr. Dyer again, in part, says:

> That is a statement I make; the record will bear me out absolutely on that point. In every precinct where this was done, following the long-established custom prevailing at all elections for years past, it was agreed by common consent by all the judges and clerks that any voter who called for assistance on the ground that he could not properly prepare his ballot should be helped by one of the judges of the same political party as the voter, to be determined by the ticket called for by the latter. This plan was adopted for the sole purpose of assuring to all voters fair and impartial treatment and with absolutely no fraudulent, dishonest, or ulterior motive."

Now, the contestee himself admits that the all-powerful election machinery had, by common consent, agreed to suspend the

operations of the Missouri election laws. However, when he is pressed by Judge WATSON, whose sense of justice revolted against the mere mentioning of such an autocratic procedure, you will observe that he immediately retracted in same breath this statement and attributed the nonenforcement of the Missouri statutes to the judges' and clerks' ignorance of the law. Judge WATSON asked:

Mr. Dyer, do you say that the election officers testified that it had been the custom in previous elections to dispense with the administration of that oath?

Answer:

I do not know that they went that far, Judge; but they did say that they did not understand the law to be that they were to swear voters upon their ability to fix their ballots at the election; that they knew there was some swearing of the voters that had to be done, but they thought that was confined to the time the voters came to register; that is, the testimony of the judges, and everyone of them testified fully.

There is no doubt but what the judges and clerks in the fifth ward agreed to abrogate the election laws of Missouri on that day, and when they arrogated to themselves the right to do so, Gill's defeat from that moment was inevitable, for practically every judge and every clerk were viciously opposed to his candidacy. He was then absolutely at the mercy of these coconspirators, and about this there can not be any doubt, if Mr. Dyer's statement is correct. He tells us that the electorate of the fifth ward is illiterate. If this is true, the election machinery was thus enabled to take advantage of these unfortunate voters, and every line of evidence in this record cries out that this is exactly what they did.

Mr. Speaker, when the attorney representing the contestant offered to introduce in evidence copies of the indictments now pending against the election officials the contestee violently protested, and characterized the attorney's effort as unfair and illegal. Yet you know and I know that if the grand jury had not acted in this matter the defenders of Mr. Dyer would in stentorian voices ask, if these underlings are guilty of the crimes which we seek to fasten on them, why did not the grand jury return true bills against them. Now, we most assuredly admit that an indictment per se proves nothing, but experience has taught me that the pending indictment will shut out a great deal of claptrap oratory.

Mr. Dyer again argues that where testimony in chief is offered during the time for rebuttal it should be excluded. Now, the House has repeatedly held that it will not always follow this strict rule of the courts, but will admit, examine, and consider testimony that tends to prove the existence or nonexistence of fraud. I may add that, as to testimony he complains of, he availed himself of the right to cross-examine the witnesses when they were examined, yet opposed its admission on the ground that it was taken "in violation of a well-known rule of law." I do not think it lies well in the mouth of Mr. Dyer or his defenders to invoke this hypertechnical rule of evidence and in the very next breath undertake to justify the reckless and wanton disregard of the Missouri election statutes by the election officials on the ground of ignorance and inadvertence.

If it is the purpose of this House to safeguard the sanctity of the ballot, it should brush aside these technical obstructions, which are intended to clog the wheels of public justice, and freely and fully investigate into election frauds.

McCrary on Elections:

The right of suffrage is not a natural right, nor is it an absolutely perfect right. It is a right derived in this country from constitutions and statutes.

In other words, Mr. Speaker, the several States of the United States have a perfect right to prescribe the qualifications of voters, limited alone by the provisions of the fifteenth amendment of the Constitution. Hence when the voter undertakes to exercise this right he must do so in strict accordance with the clear mandates of the laws of the State in which he is a voter.

Bisbee against Finley. In this case the committee, in part, said:

It is a fundamental principle as firmly established as any rule of law that votes must be cast as the law directs.

Now, it is contended on this floor that mere irregularities in violation of the directory statutes are immaterial. It is indeed offensive to the intelligence of this House to hear it stated, with some apparent gravity, that the election officers can recklessly disregard the directory requirements of the election laws of a State and yet not destroy the authenticity of their labors. Is it possible that it can be successfully argued that the election laws of Missouri are merely directory and can, therefore, be violated with impunity? Will you, or can you, excuse fraud upon this ludicrous plea? If this rule of law has been written into the decisions of this House for our guidance, then a few unconscionable election officers can at pleasure defeat the will of the people. When we establish such a precedent we will then succeed in destroying every vestige of confidence the people have in elections. The only obstacle which stands between public decency and the political corruptionist is the majesty of the law. Now, you may emasculate or tear it down, but when it crumbles and falls your political remains will be found buried deep beneath its ruin.

I agree with the gentlemen on the other side when they contend that mere irregularities on the part of the election machinery do not necessarily vitiate the official returns of the election; that is, if it is possible to ascertain the true result thereof. This principle of law has been inculcated and enforced universally by the courts, as well as this House, and no one will undertake to question its wisdom. In the case under consideration, however, the contestant does not contend that the returns of the election officers should be set aside because of mere irregularities, but for the reason that the entire proceedings in certain designated precincts are tainted with fraud, and that the truth can not be inferred therefrom. It has been held, though actual fraud may not be established, nevertheless if the officers, through ignorance or design, disregard their official duties to such an extent as to render their returns unreliable, they must be set aside. The soundness of this principle of law appeals to every man's sense of justice and right. The recount alone in this case conclusively shows that the returns are unworthy of credit and therefore of no earthly value as evidence.

American and English Encyclopedia of Law:

When proof has been given as to the surrounding circumstances by the party alleging fraud, and these circumstances are such as to raise an inference of fraud and make out a prima facie case, the burden of proof shifts, and the onus of showing that there was no fraud is on the other party.

Are you going to establish by your decision a rule of law which will forever render absolutely inoperative the laws intended to clothe the voter with the right to exercise his elective privilege in a free and untrammeled manner? The provision of law which prohibits the clerks and judges of elections from preparing or attempting to prepare the ballot of any voter is not an idle requirement, but by this means you protect the peaceable and humble voter from the influence of the political boss, conserve the secrecy of the ballot, and thus obtain a true expression of the will of the people. This piece of legislation, which the lawmakers in their wisdom passed, is intended to enable the people to vote according to the dictates of their own conscience, and it must be complied with.

Now, the defenders of Mr. Dyer thunder forth that these well-meaning judges and clerks are entitled to our plaudits for assisting the voters in making and casting their ballots, asserting that they were actuated alone by an honest desire to help the unfortunate voter who possessed not the requisite educational qualifications to make his own ballot. Now, this is enough to provoke a smile from the lips of an Egyptian mummy. Why, this record reeks with proof of their concerted attempts, not only to tamper with the ballots of the honest voter but, moreover, to deprive the district of its duly elected Representative.

It is not charged here that the election machinery permitted persons to vote who were not qualified electors under the laws of Missouri. If this contest were predicated upon any such grievance, we could readily, and gladly would, undertake to eliminate the illegal votes by a painstaking examination of the record. But it is charged that the votes of the fifth ward were fraudulently marked, illegally cast, wantonly tampered with after they had been deposited in the ballot box, and falsely compiled and tallied. And these charges are well supported by evidence. Therefore it is utterly impossible—that is, with any degree of accuracy or certainty—to separate the honest vote from the spurious vote. Hence, we must needs set aside the returns, and this salutary principle of law will withstand all the onslaughts of misguided and partisan men.

DISTINCTION BETWEEN ILLEGALITY AND FRAUD.

The distinction is between mere illegality and fraud in the conduct of elections. The first does not deprive the candidate of any votes save those proven to have been illegally cast for him; the second, by destroying the value of the returns as evidence, causes the rejection of the entire poll, and deprives the candidates of all the votes cast for them, the legal as well as the illegal ones, unless otherwise proved. (Wise v. Young, 55th Cong.)

I have but little patience with the gentlemen who argue that inasmuch as the evidence does not connect Mr. Dyer with the perpetration of the frauds complained of he should not be made the scapegoat of the wrongs committed by others, and that the well-established rules of law governing cases of this nature should be brushed aside and Mr. Dyer given every latitude and every opportunity to retain his seat.

Now, it is of little concern to this House whether Mr. Dyer colluded with those who actually stuffed the fifth ward ballot boxes or whether he conspired with those at whose instance these burglarious acts were committed. Was Mr. Dyer legally

elected as the Representative from the twelfth congressional district of Missouri? Is he the beneficiary of the frauds complained of? These are the questions we are called upon to determine and decide, not according to the dictates of congressional discretion but in conformity with the well-established precedents.

I shall not vote to throw the strong arm of the House around any person whose election has been brought about by fraud, upon the assumption that the beneficiary's hands are unstained and untarnished. Mr. Dyer is unquestionably conversant with the evidence in this record; he is thoroughly familiar with the methods employed by the fifth ward election officials; and he presumably knows that the mark of fraud is indelibly stamped upon every act of the officials.

When a person purchases stolen property, knowing the same to be stolen, he is guilty of a crime, and he will not be allowed to evade the consequences of his wrongful act by declaring that he did not himself take and carry away the stolen property or that he did not know that the thief intended stealing the same. The question is, Did he know the property had been stolen at the time he purchased it, or did he subsequently ascertain that he had purchased stolen property and still retain possession of the same?

When Mr. Dyer appeared before the committee he asserted with emphasis that it was the clear and unmistakable duty of Mr. Gill to take the testimony of the body of voters of the fifth ward; and having failed to do this, his contest must necessarily fall to the ground for lack of evidence. He also confidently declared that Mr. Gill had ample and sufficient time in which to do this.

Mr. Speaker, after the committee had heard the arguments, analyzed the evidence, and reached the irresistible conclusion that Mr. Dyer had no color of right to a seat in this House, he then appealed to the committee for further time to take testimony in his own behalf, claiming that the time allotted him under the law for taking testimony was inadequate. As a further excuse, he informed the committee that he did not believe it would undertake to reject the entire returns of any precinct.

Now, Mr. Dyer knew that 45 witnesses had impeached their ballots; that the recount impeached the integrity of the officials presiding at the election; that it destroyed the reliability of their returns; and that there were countless other circumstances in the record supported by proof which conclusively established fraud and conspiracy to defeat Mr. Gill. Yet Mr. Dyer could see no logical reason why he should have been required to take the testimony of the voters. While I shall scrupulously refrain from attempting to impugn the motives of the gentleman, nevertheless it seems to me that he advisedly waited until the eleventh hour to ask for an extension of time. Of course you know that to grant an extension, especially at this late date, will be to pigeonhole the contest, and this will be a travesty on justice. If you intend to redress the wrongs suffered by Mr. Gill at the hands of the fifth ward election officials, you must act now, in the living present. Mr. Dyer is fulfilling the duties of the office, receiving the emoluments thereof and enjoying the many privileges with which a Member is invested, and will continue to do so until the present term practically expires; that is, if the extension asked for is granted.

The defenders of Mr. Dyer insist that this case should be reopened in order to give him an opportunity to prove the votes actually cast for him. Now, I vigorously protest against any such reprehensible proceeding. The record is closed, and both Mr. Dyer and Mr. Gill have had their day and time in court.

What, wouldst thou have a serpent sting thee twice?

To open the case would be tantamount to ordering and holding another farcical election, which would be dominated by the same sinister influences that debauched the previous election. Furthermore, the testimony extant convinced and still convinces the committee that Mr. Gill is legally entitled to appear upon the floor of this House as the Representative from the twelfth congressional district of Missouri, and that Mr. Dyer is an interloper.

If Mr. Dyer had asked at an opportune season time for an extension, his request would have merited at least our sober and careful consideration, even in the face of his own laches; but coming, as it does, on the very dawn of another election, we almost feel justified in questioning the motive which inspired it.

GIDDINGS AGAINST CLARK.

But a more conclusive reason for denying the motion for an extension of time is found in the fact that the sitting Member does not show that he made any effort whatever to procure testimony, much less that he used the diligence required. He does not show that he gave notice of his intention to take the testimony of a single one of the witnesses upon whose testimony he intended to rely but failed to get; nor does he show that he issued a subpœna for any one of said witnesses. He does not show that he took a single step toward taking the testimony of these witnesses. If the sitting Member had given the requisite notice to take the testimony of the witnesses relied upon and had issued subpœnas for them, and had failed after using all the means afforded by the law to get their testimony, he might perhaps then be heard to ask an extension.

All the eminent law writers throughout the country hold that fraud can seldom be established by direct and positive evidence. It must be deduced from facts and circumstances.

The frauds herein alleged are inferred from the following facts and suspicious circumstances, namely, the pernicious and autocratic activities and threats and prophetic statements made by Tom Egan, that apostle and high priest of vengeance; the admissions wrung from the lips of Republican election officials touching the questionable conduct of themselves and their colleagues; the open and willful disregard of the Missouri election laws; the unaccountable disappearance of certain ballots; the marking of ballots by clerks and judges without the assistance or assent of the voters; the segregation of the ballots immediately upon the closing of the polls; the canvassing and compiling of Democratic ballots by Democratic judges violently opposed to Gill; the refusal of the judges to accredit Gill with a single vote in one of the precincts, in spite of the fact that one of their colleagues voted for him; the expulsion of the challengers and watchers immediately after the polls were closed; the reappearance of certain ballots from which Gill's name had been scratched and Dyer's written therein with pen and ink, which ballots had been cast in a booth where lead pencils were exclusively used; and the false and falsified official returns made by the judges and clerks.

Now, this is a résumé of some of the facts and circumstances upon which the committee based its report and upon which it expects the House to sustain its finding. Are these facts and circumstances compatible with honesty and fair dealing? No; a thousand times no.

Fraud can rarely, if ever, be proved by direct evidence, and the rule is that whenever a sufficient number of circumstances which point to its existence are clearly established a prima facie case of its existence is made, and if this case is not met with explanation or contradiction it becomes conclusive. (Mitchell *v.* Walsh, 54th Cong.)

The attempt on the part of some to distort the facts and ridicule the suspicious circumstances surrounding the conduct of the election in question will doubtless afford some weak-kneed brother an excuse to avoid the force of the contestant's evidence. Yet we believe the record is ample and sufficient to convince the conscience and judgment of any unprejudiced person that Gill is by every principle of justice entitled to the seat now occupied by Mr. Dyer.

The defenders of the contestee argue that we are seeking to destroy and nullify the ballot of the honest voters of the fifth ward by vitiating the returns thereof. This we respectfully gainsay. We are not attempting to disfranchise any of the honest voters; we are not attempting, nor is it our desire, to deny the honest voter the right to exercise his elective franchise according to the dictates of his own judgment, but we are firmly resolved not to permit a band of coconspirators, under the leadership of any man or set of men, no matter how powerful he or they may be, to bring about this very result.

Though the mills of God grind slowly, yet they grind exceedingly small;
Though with patience He stands waiting, with exactness grinds He all.

If it is the purpose of the House to safeguard the purity of elections, we must not permit those who preside at our elections to disfranchise an entire district under the assumed garb of ignorance. To do this means to unbind the hands of those whose chief stock in trade is their willingness to do the biddings of the destroyers of public decency and justice.

This record methodically analyzed and weighed by the ordinary rules of evidence should satisfy and convince every impartial Member that fraud has been committed in every precinct except the sixth and twelfth during every stage of the proceedings.

We concede the onus of proof, of course, devolves upon the contestant who assails the official returns. This is a principle of law enforced throughout the country. I submit, however, that the contestant has fully and completely discharged that duty.

The law presumes always that an officer discharges faithfully and correctly the duties of the position to which he is assigned, and this presumption can only be repelled by valid evidence. The contestee has earnestly labored to impress this fact upon us. Suffice it to say that the mere recount simply annihilated this presumption.

Of course it is entirely unnecessary for me to say that I have not the merest prejudice against Mr. Dyer. I would not knowingly do him the slightest wrong or injustice, for I have too much respect for my own character to attempt to deprive him of his seat in Congress, unless I believed that that seat

rightfully belonged to another. Believing this, I would be derelict to my duty if I were to take any other position. The evidence in this record established, beyond the peradventure of doubt, fraud and conspiracy; therefore no consideration of friendship or congressional amenities should in any wise interfere with the demands of public justice. The people of Missouri are relying upon our sense of justice for the protection of their laws in this instance, and, hackneyed as it may seem, we all know that upon a pure administration of the laws of this country depends the integrity and honor of this House.

This is not a contest between Republicans and Democrats; it is a matter which rises far above the narrow plane of partisanship. The sole question here to be settled, and without equivocation, is whether the laws are to be respected and upheld and the people allowed to elect their own Representatives.

If this record does not establish fraud, conspiracy, and falsification to the entire satisfaction of the most incredulous creature under the blue canopy of heaven, then I am prepared to admit the absolute inefficacy of human testimony. If the returns of the judges and clerks, impregnated as they are with such depravity, are to receive our seal and certificate of approval, a decent and well-governed election will soon be a rarity in this country.

These deductions do not emanate from one who is inimical to the contestee, but are the honest reflections of one who is desirous of compelling those who are vested with the authority of election commissioners to try at least to safeguard the purity and freedom of elections. No greater boon can be conferred upon the American people.

When bad men combine, the good must associate, else they will fall, one by one, an unpitied sacrifice in a contemptible struggle.

Hitting the Cotton Workers.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, June 20, 1914.

Mr. MOORE. Mr. Chairman, I wish to discuss the condition of the cotton trade and to submit certain information and statistics showing the effects of the Underwood tariff law upon that industry.

It was noticeable during the consideration of the present law that the cotton planter was to be taken care of in the reduction of certain duties imposed by the Payne law upon cotton ties, bagging, and certain other of the commodities which the planter has to buy. It was also patent that the manufacturer of cotton goods was to be severely cut wherever he had protection. He was plainly told to go out and compete with the world. The unfairness of this situation is gradually being unfolded by the actual operation of the new tariff law to both the cotton producer and the cotton manufacturer.

If the purpose of the revision was to strike down the eastern manufacturers, it has, to a certain extent, been successful; but if the purpose of it was to build up southern industries, it has not accomplished everything in that line that might be desired. True, there is an effort now and then to bolster up the situation and to make it appear that trade is booming, as for instance when on May 26 my distinguished Democratic colleague, Mr. HOWARD, of Georgia, indicated that "southern cotton mills are running full time all the time," or when my colleagues, Messrs. TAGGART, of Kansas, and CULLOP, of Indiana, indicate that "crops are good" and that the harvests will be plentiful, but the cold, hard facts as they come up from the business and industrial world do not bear out the statement that even the southern cotton mills are running full time or that there is any bright prospect that the great crops that are predicted will find as profitable a market as they deserve. On the contrary there is plenty of evidence that our exports are decreasing and that our American gold is leaving the United States to pay for the increased volume of imports superinduced by the mistakenly low rates of duty established by the Underwood law. In all industrial centers there is more unemployment than usual and a less wage-earning power to purchase the products of the farm, no matter how bountiful is the harvest. Indeed, as in 1907, there is more than a fair prospect that the farmer will suffer from falling prices, if he does not have to burn his grain for want of a market. The time is coming, if it is not at hand, when ordinary prudence dictates the closest economy in our domestic affairs, since business enterprise is practically at a standstill and business men hesitate to take the risk of entering upon new fields of endeavor. This involves the wage-earning power and that is the power to buy.

WORLD CONDITIONS IN COTTON.

To the suggestion of our southern friends that cotton mills are running "full time," and to those who think that "good crops" will relieve existing business tension I submit two statements published June 18. One of these is a dispatch from Paris giving a world's-eye view of the cotton situation. It follows:

"COTTON MEN FEAR LOSSES—INTERNATIONAL COMMITTEE CHAIRMAN OF CONGRESS SAYS DEPRESSION IN UNITED STATES IS GREAT.

"PARIS, *June 17.*

"The International Cotton Congress closed its sessions here yesterday. Sir Charles Wright Macara, chairman of the committee of the International Federation of Master Cotton Spinners and Manufacturers' Associations, made a statement, based on reports from committeemen from various countries, in which he said that the outlook was never blacker.

"The all-around depression in the United States is considerable, he said, while in England it is severe. Much money is being lost, and only the spinners of the finer kinds of cotton are holding their own.

"In France, Sir Charles said, the feeling is more hopeful. In Germany the market is dull, while in Austria many looms are idle. Many Austrian spinners, he asserted, are finding American yarn unprofitable to handle and are taking up the Indian output.

"Sir Charles said that the only way to avoid bad trade and heavy losses is to organize for the restriction of production. This has proved impossible of accomplishment hitherto, because of the variety of interests concerned."

AMERICAN COTTON SUFFERS.

The other is a dispatch from Washington, giving the American view of the situation:

"COTTON EXPORTS FALL—DECREASE OF OVER $3,000,000, COMPARED WITH MAY A YEAR AGO.

"WASHINGTON, *June 17.*

"Exports of breadstuffs from the United States last month amounted to $12,413,380, compared with $12,818,757 in May, 1913.

"The value of cattle, hogs, and sheep ($86,853) exported was slightly in excess of May exports last year. The cotton figures were $24,847,517, a decrease from May, 1913, of more than $3,000,000."

These two reports appearing in the newspapers upon the same day might be classified as merely "psychological," or, being in such full accord, might fall under the ban of "a secret conspiracy" against the administration at Washington if it were not for the interesting statement of the Department of Commerce, Bureau of Census, also mailed on the same day, showing a marked decrease in the exports of raw cotton—which is supposed to be tariff proof—and a considerable increase for the month of May in the imports of raw cotton from Egypt, Peru, China, and other countries; that is to say, in May, 1913, the southern planter exported 468,966 bales of cotton, and in May, 1914, he exported only 393,572 bales, whereas the imports of cotton from Egypt, Peru, China, and elsewhere increased from 1,077 bales in May, 1913, to 16,213 in May, 1914. And as evidencing the fact that our southern friends have full knowledge of the menace thus presented, we have the bills recently introduced in Congress by Mr. EDWARDS, of Georgia, and others, which propose to check importations of Egyptian cotton because of the so-called pink bollworm; all of which goes to show that the United States can not very long or very successfully discriminate against the manufacturers and consumers of raw materials without ultimately affecting the cotton producer.

But the gentleman from Georgia tells us that "practically every mill in my State and in my district now is in full operation. Some of them are running night shifts, as they are called, and none of them have been suspended by fear of intended legislation [applause on the Democratic side] or by the action of the tariff upon these industries. * * * It is another of those Republican bugaboos that they find on the side of a road every time we seek to control big business in this country, which has run rampant over the people for the last 16 years under Republican rule. [Applause on the Democratic side.]"

SOUTHERN COTTON MILLS HARD HIT.

Now, in view of what the manufacturers and workingmen of the city of Philadelphia and vicinity tell me about the hosiery and knit-goods trade, the basis of which is raw cotton, which we take from our friends in the South, I was surprised to hear that the new tariff law had worked so successfully in the in-

terest of the southern mills. I have not attempted to make a general canvass of the situation, but did start an inquiry, which has satisfied me that not only are the southern mills not busy, but that they were doing all they could to curtail production to hold what business they have without disorganizing their plants. I did not go beyond a dozen mills in Georgia and North Carolina and South Carolina, where the manufacture of raw cotton is undertaken, to ascertain the real state of affairs. Between the lines it would appear that our southern friends have no desire to find fault with the new tariff law—that is politically pardonable—but they certainly are not in a boastful mood with regard to its benefits.

Here is a sample letter from a manufacturer of cotton yarns in Georgia:

EDWARDS MILLS,
Athens, Ga., May 28, 1914.

J. HAMPTON MOORE,
Washington, D. C.

DEAR SIR: Replying to your letter of May 27 in regard to cotton mills in Georgia running full tilt. In this section around Athens there are nine cotton mills. One of these is running full time, the balance all running four days in the week, and have been for some time. Business this year with us has been the worst yet; whether this is due to tariff law, we can't say. We have not been able to sell our product this year, so had to cut down running. Could not get near cost for yarns, so we quit making it.

We hear that many mills in the South are running three or four days a week and some closed down entirely.

Truly,

L. F. EDWARDS.

—

GASTONIA, N. C., *May 28, 1914.*

Hon. J. HAMPTON MOORE, M. C.,
Washington, D. C.

DEAR SIR: Replying to your favor of the 27th, we are operating only one-half of our machinery, and have not been able to run that only at a loss for some time.

This mill was erected during the year 1912, and was equipped with the most modern machinery we could buy at that time.

We manufacture 8's to 20's.

Yours, truly,

ARMSTRONG COTTON MILLS CO.,
C. B. ARMSTRONG,
President and Treasurer.

—

MOUNT HOLLY, N. C., *May 29, 1914.*

Hon. J. HAMPTON MOORE,
House of Reprcsentatives, Washington, D. C.

DEAR SIR: In reply to your favor of the 27th instant, I beg to say that we find the market conditions in our business at present very unsatisfactory. While we are running short time at present on old orders, we find it almost impossible to sell further quantities of yarns in sufficient quantities to take up our full production at profitable prices. The prices we are offered in most all instances are below the cost of production, and, as we see conditions at present, it seems that very soon we will of necessity have to close down for a while and await the improvement of prices for our product.

Yours, very truly,

TUCKASEEGE MANUFACTURING CO.,
H. A. RHYNE, *Secretary-Treasurer.*

—

THOMASVILLE, N. C., *May 28, 1914.*

Hon. J. HAMPTON MOORE,
Washington, D. C.

DEAR SIR: We have your favor of the 27th in regard to cotton mills in this section operating in full. We also note what you say as to the effect the tariff and other things have had on the industry. We think it a mistake in regard to the cotton mills all running full time, for you will find they are curtailing quite a lot, and some mills have closed down indefinitely. We do not know that the tariff change has all to do with the condition of the cotton industry. Just now we think a lot of the unfavorable conditions can be attributed to general business depression. You ask whether or not our business is as good as before the change in tariff law went into effect.

Will say that we are not in position to say in regard to this, as our mill was new and had not become established by the time the tariff law was changed, and it is hard to make a comparison with our conditions now and a year or two ago.

We feel that we are going to have to meet some close competition from some quarter, so we are trying to economize in every way and meet conditions the best we can.

Very truly,

JEWEL COTTON MILLS (INC.),
By T. J. LILLARD,
Secretary and Treasurer.

Several other mills in North and South Carolina also reported business bad. Some of them did not attribute it to the tariff, as, for instance, Mr. J. S. Wier, of the High Shoals Co., Charlotte, N. C., who writes that "In all probability several million spindles in the South are running not over two-thirds time at present. I understand that a number of mills have closed down entirely for the time being, due to unsatisfactory trade conditions on cotton yarns and cotton cloths. Personally, we do not say that the new tariff is responsible for the unsatisfactory conditions confronting the American cotton manufacturers, for the reason that we understand there has been practically no increase in the importation of cotton yarns and cotton cloths."

Mr. R. S. Reinhardt, president of the Elm Grove Cotton Mills, Lincolnton, N. C., who does not think the new tariff "has had a thing to do with the present depression," writes: "You have been misinformed as to the mills running full tilt," and adds that 1,000,000 spindles are not running more than two-thirds time.

Mr. Joseph E. Hart, of Yorkville, S. C., secretary and treasurer of the Hard Yarn Spinners' Association, confirms this statement and adds: "We certainly wish that there was some way for somebody somewhere to give us some aid."

THE WAGE EARNER IS BEING CUT.

It will be observed that these southern manufacturers were asked about business conditions only, and they replied very frankly that business was not good. The wage question was not put up to them, but the presumption is that if they are curtailing their output or not running at all a very large number of American working men and women who were formerly employed in those mills are now without that employment. It is inevitable that wage earners must suffer along with the producers of the raw material when the mills shut down. In the eastern mills there has already been a great deal of idleness, and in some cases a reduction of wages where the process of running short handed has been found inexpedient. The Philadelphia newspapers last week indicated that wage reductions had already started in one of the mills, and that this was due to the fact that the difference in wages paid in German knitting mills and the higher wages paid here, which the present tariff law does not protect, left only the alternative of a wage reduction or a shut down. As showing the tendency in the hosiery trade in particular, I submit the following letter from the Brown-Aberle Co., of Philadelphia:

PHILADELPHIA, *June 8, 1914.*

Hon. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

DEAR SIR: The few figures mentioned below will show at a glance the very unsatisfactory condition of business at the present time:

1913.

April 21 to May 3, wages paid to 434 employees	$9,705
May 5 to May 17, wages paid to 436 employees	9,734
May 19 to May 31, wages paid to 440 employees	8,393

1914.

April 20 to May 2, wages paid to 440 employees	9,022
May 4 to May 16, wages paid to 406 employees	6,068
May 18 to May 30, wages paid to 390 employees	5,800

The new Underwood bill is now beginning to hit our factory hard, and from the outlook there appears to be very little in sight for us. If something doesn't come along shortly, we will be unable to avoid closing our entire plant. We must stop running machine after machine, while enormous quantities of hosiery are being landed at all the ports in this country. American manufacturers making three days per week, and American workers drawing in their envelopes about half of their average pay.

Yours, very truly,

BROWN-ABERLE CO.

It is evident that we can not force foreign competition upon American manufacturers when wages and overhead charges abroad are less than they are here without injuring the producers of our own raw materials and the operatives of our own mills. The wage problem, as it relates to materials entering into cotton manufacture, all of them affected by the tariff, is

very clearly set forth in the following letter from W. Evan Chipman, secretary of the Chipman Knitting Mills, Reading, Pa.:

CHIPMAN KNITTING MILLS,
EASTON, PA., *May 15, 1914.*

Mr. J. HAMPTON MOORE,
House of Representatives, Washington, D. C.

DEAR MR. MOORE: There is one little point about reduction of wages that seems to escape a great many minds, and that is the fact that it is impossible for any one industry, even though the help were satisfied, to reduce wages sufficient to make up for the reduction we have had in the tariff. In fact, if we were to take all the wages of the help in our mill, it would hardly make up for some of the reductions that have been made. Consequently, before the manufacturer can get on a competing basis, it is necessary to wait until we level all wages through every industry from which he gets material. In other words, in our own industry the wages in the cotton fields, spinning mills, paper mills, paper-box factories, printing office, coal mines, supply houses, and, in fact, all of the different branches of trade from which we buy material, must be reduced so that all of these materials can be furnished to us on the same basis at which they are furnished to the foreign manufacturer before we would be on a clear, level, competitive basis.

Yours, truly,

W. EVAN CHIPMAN.

UNEMPLOYMENT IN NEW ENGLAND.

Commenting upon the New England cotton-mills situation last month, the Daily Trade Record had this to say about employment:

[From the Daily Trade Record, May 2, 1914.]

"FALL RIVER—THE MILL SITUATION.

"Mills are continuing to report further losses of skilled help and a more extended reduction of production. Idle machinery throughout the mills has been estimated this week at approximately 85 per cent, and it is expected that the enforced curtailment will reach one-fifth of the total production within a short time.

"The exodus to outdoor employment has already begun and it is affecting mostly the weaving department, where the skilled operatives are employed. Yet the treasurers are not, apparently, disturbed, and in many cases they are even satisfied to shut down a fifth of their machinery. They point out that goods are now piling up, and the idle machinery affords a curtailment that will keep down the accumulation. Conditions for the next few weeks will be watched with keen interest by the treasurers, because of the general feeling that failure to improve will result in a curtailment policy. Such a plan will be taken up only as a last resort, because the mill men realize that the labor shortage is a serious problem here, and every effort is to be made to keep all the skilled help possible in the mills and in the city.

"Textile union officials are also viewing the situation with interest, but whatever plans were considered for a renewal of the agitation for a wage increase have been abandoned for a time at least. They realize that conditions do not warrant steps toward an increase in wages, and this matter will probably not be taken up by the textile council until some marked improvement in the trade is apparent."

That was on May 2, before "psychology" was applied to modern conditions. On May 24 the New Bedford (Mass.) Standard indicated that the situation was not better, as viewed from the manufacturers' viewpoint. It said:

"Transactions in mill shares the past week have been few and far between, and if there was any tendency at all to the market, it might be termed a drooping one. The most conspicuous decline was in Dartmouth Manufacturing Co. common, which dropped to 135 asked, in spite of the declaration of a regular dividend of 2½ per cent due June 1. The fact that the Wamsutta mills has found it necessary to close down a portion of its plant caused the bid price of that stock to drop to 118, although as a matter of fact a little lot of three shares sold during the week at 120, the same as the last previous sale.

"There is little at the present time in the actual conditions to induce investors to add to their holdings of mill shares. This condition is due, in some measure at least, to the fact that certain mill interests insist on selling their product at less than what it cost to make it. Since the demand for textiles in general is small, it is natural that there should be keen competition among the manufacturers to market their products. However, there is something wrong when these manufacturers, or any part of them, persist in selling their goods as much below cost as they are doing at the present time."

Continuing, the Standard said:

"The question of price will remedy itself, but a more serious factor is the drastic legislation which is being introduced into the situation and may cause Massachusetts to step down from the proud distinction held for many years of being a larger producer of textile goods than any State in the Union. The national legislation, such as tariff changes and the new banking laws, are of themselves serious, but when added to drastic State legislation they do, indeed, become a very serious factor. When legislation results in the elimination of the fit and the placing of the unfit in charge of our industries and banking facilities it is a matter of the utmost seriousness."

WE ARE SPENDING OUR MONEY ABROAD.

If we were to inquire why these depressed conditions prevail amongst the manufacturers and the workingmen, as well as the planters, we would probably find at least a clue to the answer in a careful scrutiny of the imports. The vast difference in cotton cloths alone is shown in the comparative figures for January, February, and March, as follows:

January, 1913	$958,097
January, 1914	1,682,785
February, 1913	727,121
February, 1914	1,454,439
March, 1913	721,902
March, 1914	1,402,071

These figures show that we are sending our money away. We are not employing it at home.

As to this change in our foreign trade situation, Thomas O. Marvin, secretary of the Home Market Club, of Boston, gives the following interesting summary:

"ENGLAND'S INCREASED EXPORT OF COTTON PIECE GOODS.

"While American exports of cotton cloths under the new tariff show a decline for the first three months of 1914 amounting to over $1,200,000, the cotton mills of the United Kingdom largely increased their export trade. Piece goods shipped from British mills to foreign customers increased 88,000,000 yards over the same months last year. This is an increase of $10,000,000 in the value of cotton goods exported from British mills in the first three months of 1914. The United States during these three months has increased its purchases of English-made piece goods by nearly $1,000,000. Our purchases of cotton cloths from France, Germany, and Switzerland are three times as large as they were a year ago. In January, February, and March of last year we imported cotton cloths to the value of $2,407,000; for the same months this year the importation of cotton cloths has increased to $4,539,000.

Imports of cotton cloth showing increase by countries for first three months of 1914.

FOREIGNERS WATCHING OUR MARKETS.

The foreign view of the situation created by our new tariff is revealed in the consular reports, which show an increasing interest in all our markets. The foreign manufacturer is busy supplying our home trade; the foreign middleman is likewise taking advantage of the plight of our own manufacturers and merchants. All this tends to unsettle American business and displace American goods. Witness the solicitude of a Belgian agent who is prepared to find low-priced goods for American consumers in various lines from pig iron to cotton and woolen blankets:

BRUSSELS, BELGIUM, *November 7, 1913.*

DEAR SIRS: As the new American tariff suppresses the customs duties for a certain number of raw and half-prepared material and diminishes for a great part the same duties on the finished goods, I think that the moment is favorable for the offering you my services.

I therefore beg to ask you to kindly let me know with all particulars, i. e., by sending me, if possible, complete specifications pro forma invoices re the following Belgian articles, which I am in a position to supply promptly and at very low prices:

Every description of cast iron, iron, and steel: Pig iron for foundry use; blooms, billets, slabs; merchant iron and steel, round, square, and flat; ears for making turned shafting a specialty; sheet iron of any description; hoop iron; rails, beams, T, U, varillas, American section and weights; steel constructional works, bridges and roof trusses, riveted girders; cast-iron pipes for water supplies; and all re metallurgy.

Portland cement of any specification, packed in bags or barrels of any weight, at buyer's option.

Window glass of any size and thickness.

Polished plate glass, beveled or not, plated or not.

Textile fabrics of any kind: Cotton and woolen blankets, linen cloth, drills for trousers.

I trust that you will kindly send me a full description of the orders which you could eventually put before me, and I shall hasten to quote you immediately my lowest prices.

In the event my offer would be of no interest to you, I should be greatly obliged if you would kindly hand it over to a friend of yours, who could eventually purchase articles of Belgian manufacture.

The best commercial and bank references are at your disposal.

_____,
Brussels, Belgium.

AND WE ENCOURAGE FOREIGN PRODUCTION.

Another evidence of the manner in which American gold that might be circulating in America for American products goes out of the country for the encouragement of foreign manufacturers and the employment of foreign labor is the influx of foreign goods as advertised by the great department stores. I select two sample advertisements, which help to explain the method by which in the long run the demand for cheap foreign commodities under a low tariff law eventually disturbs American conditions to the extent of displacing the labor in the mills and curtailing the market of the farmer.

ADVERTISEMENT NO. 1.

"This store is Philadelphia's principal distributing point for the world's standard makes and grades of underwear and hosiery. We now have the greatest spring and summer assortment ever gathered together in this store. All the best manufacturers, foreign as well as American, have contributed to our unrivaled stocks.

"Owing to the reduction in tariff we are enabled to quote lower prices on many lines than formerly prevailed.

"Our assortments of men's socks are noteworthy—many styles and grades from France, England, and Germany—from 18 cents to the finest of lisle and silk.

"Worthy of special notice are some extra values in imported cotton and lisle hosiery for men and women—made with tear-proof heels."

ADVERTISEMENT NO. 2.

"A new kind of hosiery sale that grew out of an 800-year-old sale.

"Twice a year, for 800 years, Chemnitz, Germany, has held a fair or sale of the products of its home industries, and Chemnitz is the home of lisle, cotton, and mercerized hosiery.

"Goods sold during this sale were manufactured during what would ordinarily have been the idle season.

"Our representative attended the recent fair and saw a wonderful opportunity for a large purchase; so he made the purchase, and we are selling 52,200 pair of men's and women's stockings at less than the Chemnitz fair prices. Such a sale of stockings was never atttempted in this city before."

CHEAP GOODS FORCE CHEAP WAGES.

The point about these advertisements and the many others of their kind is that they show that low tariffs aid in taking money out of this country, away from our own enterprises, which are thus halted and distressed by the competition they are made to stand, regardless of the difference in overhead charges and wages. I am in receipt of a copy of the Irish Industrial World of February 7 last which states that the average of 32,000 linen workers in Ulster is 12s. 6d., or $3.12 per week. If we were considering linen manufacture, how could the American manufacturer compete with that condition, unless some protection in the form of a duty paid to the Government was laid against that miserable foreign wage?

That wages are the crux of the controversy is gradually becoming evident to the man in the mill, as well as to the man upon the farm. It will not profit the farmer to have good crops in great quantity if the mill worker or the artisan is not earning wages with which to buy.

That wage conditions in the textile industry are better in the United States than in any competing country has been demonstrated time and again. We pay from two to three times as much to the workingman in the American mills as is paid in England or Germany or Belgium or France, and much more in proportion than in some other countries. I do not find this situation better described, so far as the cotton industry is concerned, than in a statement by Samuel Ross, a veteran labor leader of New Bedford, Mass., who, in the Standard of May 24, 1914, is quoted as follows:

ADVANCEMENT OF AMERICAN MILL WORKERS.

"One of the greatest sources of gratification to me, after my many years of effort in behalf of the wage earners, is the knowledge of the improvements which have been effected during the last 30 or 40 years in the standard of living and the working conditions of the cotton-mill operatives. As I look back to the time when I first came to New Bedford as a worker in the mule room, back in the early eighties, and compare the conditions under which the operatives lived and worked in those days with the conditions prevailing to-day, I can not help feeling that our efforts for improvement and advancement have been rewarded with a very large measure of success.

"My attention was directed recently to articles which have appeared from time to time in the Cotton Factory Times, the great labor paper of the cotton district of Lancashire, England, these articles giving the reminiscences of aged workers in the English mills. They told of the time, 60, 70, or 80 years ago, when children too small to walk were carried to the mills in the early morning; when young and old worked 66 hours a week; when overseers thrashed children for being late; when the mill workers lived mostly on porridge, and hardly enough of that. Of course, I do not remember any such conditions in this country, for the workers here have always fared better than those in England, and, too, my memory goes back only about 35 years, when conditions in England were very much improved. But at the same time I do know that there has been a very appreciable improvement in conditions in Massachusetts, and right here in New Bedford, within my time.

BETTER HOUSING CONDITIONS.

"If one wished to compare housing conditions among the cotton-mill workers back in the early eighties with conditions to-day, he should visit the mill tenements built and owned by the Wamsutta or the Grinnell mills and then some of the large three-tenement houses in which the greater part of the operatives now live. The old mill tenements represent the standard of living 35 years ago, the 'three deckers,' as they are called, represent the standard of living to-day. A visitor to each in turn would note that the four-room tenements have given way to tenements of five or six rooms; that bathrooms and inside toilet accommodations have taken the place of the outhouses in the yard; that gas for lighting and cooking has been substituted for oil; that the furniture is more elaborate and there are more comforts and luxuries in the way of carpets and pianos. In the old days those families which were fond of music were usually contented with a house organ, for the piano would cost too much. Now the piano is much more general."

WHY SHOULD WE INJURE OURSELVES? WHY?

We can not contemplate the foregoing statements without wondering just why, in view of the general development of the country and the full employment of labor up to the period of the tariff agitation and the demand for new regulatory laws, there should be so much unrest, uncertainty, and depression in the business world. That depression has struck the cotton business is certain. That it has not been confined to the cotton business is also true. Why should so unfortunate a state of affairs have been projected? Was it because of the Mexican war muddle? Was it because of the Panama tolls mix up? Was it inefficiency? Was it "psychology"? Or was it bad politics and misrepresentation with regard to the effects of a protective tariff?

Whatever it was—and I am one of those who believe it was chiefly tariff tinkering—the letting go of the protection we had against unfair foreign competition and the admission of the foreign commercial and industrial world into our markets upon its own terms—it was the surrender of a hard-earned advantage which was most unfortunate for our whole country as well as for the cotton trade. The people demanded a change—or, at least, they seemed to have done so—and they got it.

IS IT "WARFARE AGAINST BUSINESS"?

In the opinion of Mr. George W. Ochs, editor of the Philadelphia Public Ledger, in a recent address to the Ohio Society of that city, it may be charged up to "the warfare against business." Mr. Ochs came to Philadelphia after a long experience as a newspapers editor and observer at Chattanooga, Tenn. He is therefore a friend of the South.

"Is there any justification, in view of the record of this country within the past generation, for this insensate assault upon business and industry?" asks Mr. Ochs. "What has happened that there should be a conclave of politicians at Washington who permit this industrial espionage? Judging from their acts, one would suppose that American industry and business had practically perished; that American enterprise was an unknown quantity among business men; and that our country needed politicians to direct commercial life.

"Now, what are the facts? In 1880 our population was 50,000,000. In 1900 it was 75,000,000. In 1913 it was 97,000,000.

"In 1880 the wealth of this country was estimated at $42,000,000,000. Twenty years later at $88,000,000,000. In 1913, $107,000,000,000. We are told there has been no distribution of wealth in this country; that the wealth of our Nation has been concentrated into the hands of a few flint-faced, hard-fisted malefactors. What are the facts? In 1880 the per capita wealth of the country was $850, In 1900, $1,164. In 1913, $1,310. The per capita distribution in 1880 was $9. In 1900, $26, and in 1913, $34.64.

WHAT WE STAND TO LOSE.

"Taking it from another angle, the best barometer of the people's wealth is in savings bank deposits, which show the distribution of this wealth. In 1880 the savings banks of the United States had on deposit $1,819,000,000; in 1900, $2,389,000,000, and 1913, $4,451,000,000, an increase of over 500 per cent in 33 years—money that the people of the United States in their individual capacity have deposited in actual cash and are holding to-day in savings banks. This does not include national banks nor trust companies.

"The number of depositors in the savings banks in the United States shows a very much greater increase than our population. In 1880 there were 660,000 depositors in savings banks. In 1900 there were 6,000,000; in 1913, 10,000,000, an increase in 13 years of 66 per cent in the number of depositors, whereas the population in the same 13 years increased somewhat over 25 per cent.

"Now, let us study for an instant what our business men have been doing—those who have been under duress or suspicion, and whom Congress thinks need some further drastic penalization. In 1880 we sold to foreign countries $835,000,000 worth of American products. In 1900 this increased to $1,349,000,000, and in 1913 to $2,465,000,000, an almost incredible increase.

"Now, how about the manufacturing interests? It is even more marvelous. In 1880 we exported $121,000,000 worth of manufactured goods. In 1900, $484,000,000, and in 1913, $1,187,000,000, an increase of 1,000 per cent, nearly, in 30 years."

OCCASION FOR PAUSE AND WONDER.

So startling an array of facts is calculated to make any American citizen pause and wonder. Why should we so legislate as to halt our own progress? The penalization of business by inquisitorial and oppressive laws is a sad and serious blunder. But what shall we say of that legislation which destroys our own great home market and sets the highest and best-paid labor in the world in competition with the ill-paid labor of Europe? It is for the people themselves to determine.

Naval Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. SAMUEL A. WITHERSPOON,
OF MISSISSIPPI,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 16, 1914,

On the bill (H. R. 14034) making appropriations for the naval service for the fiscal year ending June 30, 1915, and for other purposes.

Mr. WITHERSPOON. Mr. Speaker, I will ask the Speaker to call my attention after I have used 30 minutes.

Mr. Speaker, this is a novel proposition. As I understand it, it is a new invention for the purpose of squandering the public funds, and I am opposed to issuing any patent on it. [Laughter.] Now, we passed a bill through the House providing for the construction of two more battleships. The Senate has concurred with us. I explained to this House the best I could when the bill was under consideration that there were six corporations in the United States equipped to build battleships; that it takes three years to construct a battleship, and that, therefore, it is necessary to authorize two every year in order to give each one of these corporations a job all the time.

We authorized all that was necessary to keep the Government pets going, and if the House had just let it alone you never would have heard of selling any battleships and constructing a third one. But we made a great mistake by amending the bill so as to provide that one of these two battleships should be constructed in a Government navy yard. When you did that, you did not leave enough to go around. [Laughter.] Consequently it became necessary to devise some kind of a scheme by which all of these corporations would have a job on a battleship all the time. This amendment before you answers the demand.

Now, the effect of this amendment, if adopted, if you decide to sell the two of our battleships and with the proceeds build a dreadnaught, there are two effects which will follow from it. One is that the construction of this third dreadnaught is going to afford much profit to the corporation that builds it.

As I pointed out here before, the graft in the armor plate alone on a battleship is over a million dollars, to say nothing of the shells and the powder and all the other things. It is absolutely unnecessary for me to argue to you that one effect of our selling two battleships and building another dreadnaught is going to be to increase the profits of the trust. The other effect of it is going to be a decrease and a lessening of the efficiency and power of the Navy in every respect. These are the two effects of it.

In the first place it is going to lessen the number of our battleships. When you start out on this policy of selling 2 of our 39 battleships and with the proceeds constructing a third one, when you get through with the 25 battleships under that kind of a policy, then you will have instead of 39 but 27 battleships left. And you will have 12 less than Germany has now. That is the effect of it if the policy is adopted and started on with reference to the number of ships; and whenever they can get the number of our battleships less than the number in the German Navy, then you will hear such a clamor as you never heard before for the construction of more ships, because we have not as many as Germany.

Take next the number of guns. The *Mississippi* and the *Idaho* each has four 12-inch guns, each of them has eight 8-inch guns and eight 7-inch guns, making 40 guns on the two ships. It is proposed to sell those two ships with 40 guns on them and to substitute therefor one ship with 12 guns.

The chairman in his remarks a few moments ago stated that you were going to have twelve 14-inch guns. That is an utter impossibility. You can not have any such thing as that. Of course, you can take the proceeds of these two battleships when you sell them and add enough money to that to get any sort of a ship you want; but that is not a fair way to present it. A fair way to consider this question is whether or not, when you sell these two ships and get in their stead another ship that costs the same amount of money, you have lost or gained by the transaction. If you were to build a dreadnaught that would carry twelve 14-inch guns, you would have to build one with a tonnage of 31,400; you would have to build one that would cost $17,000,000, and of course you can add five or six million dollars to the proceeds of these two battleships if you can sell them at cost and build that kind of a ship, but the fair thing for us to consider is what we can get for the money that these ships will sell for, whether we will get something more valuable or less valuable than these two ships. In my judgment the very best you could do with these would be to build a dreadnaught like the *Arkansas*. As stated to you here, the tonnage of each of these ships is 13,000, or together their tonnage is 26,000. The *Arkansas* is the only ship we have that has a tonnage exactly equal to both of these—26,000—and that is the very best ship you could get with the proceeds of the sale of these two.

The *Arkansas* has twelve 12-inch guns, and if you could succeed in exchanging these two ships for one like the *Arkansas*, then you would have exchanged eight 12-inch guns on these two ships for twelve 12-inch guns on the *Arkansas*. In other words, you would gain four 12-inch guns, but in doing that you will lose sixteen 8-inch guns and sixteen 7-inch guns, or 32 of those guns. The question is whether or not you could afford to give up thirty-two 8-inch and 7-inch guns for four 12-inch guns. That is the proposition. I say, when you do it you lessen the efficiency and power of the Navy in every respect. In the first place, you start out by lessening the number of guns. You

exchange 40 for 12, and you lessen the number of guns by 28 on this one transaction, and if you were to continue that policy until you had disposed of all 25 of our battleships, getting in their stead 12 dreadnaughts, then you would have reduced the number of guns on our armored vessels from 926 to 578. We now have 89 more guns on our armored vessels than Germany has, but if you adopt this policy and carry it through, then we would have on our armored vessels 259 guns less than Germany has. You would thereby change from a condition of superiority in number of guns by 89 to a condition of inferiority to the extent of 259. That is the first effect of it. We now have 9 more armored vessels than Germany has. If you were to continue this policy until you dispose of all of our battleships, then we would have 3 less than Germany.

The third effect of the proposed scheme to dispose of two of our battleships and to construct a dreadnaught in their stead would be to decrease the weight of the metal in a broadside from our Navy, which is one of the measures of naval power given by our experts.

If we were to make the proposed exchange, we would, as already suggested, gain four 12-inch guns, and the weight of the metal in a broadside from these four guns is 3,480 pounds; but we would lose sixteen 8-inch guns, whose projectiles weigh 260 pounds each, making 4,160 pounds, and sixteen 7-inch guns, whose projectiles weigh 165 pounds, making 2,640 pounds. In other words, the weight of the metal in a broadside from the thirty-two 8-inch and 7-inch guns which we will lose by the exchange would be 8,800 pounds, or 5,320 pounds more than the weight of the metal in a broadside from the four 12-inch guns which we would gain. And if we were to continue this policy until we shall have sold all of our 25 battleships, and with the proceeds of each two built a dreadnaught, the total weight of the metal in a broadside from all our armored vessels would be reduced 63,840 pounds. The total weight of the metal of a broadside from all our armored vessels is now 45,954 pounds greater than that of the German armored ships; but if this new policy is carried out it will be 17,886 pounds less than that of the German armored vessels. If, therefore, the weight of the metal in a broadside is any measure of naval power, the inevitable effect of the proposed policy will be to transfer the relative superiority of our fleet over the Germans to a condition of decided inferiority.

The fourth effect of the change proposed in the Senate amendment is to greatly lessen the muzzle energy of our fleet; and our naval experts tell us that this is the better test.

The four 12-inch guns which we would gain by the exchange each have a muzzle energy of 48,984 foot-tons, or a total muzzle energy for the four of 195,936 foot-tons; while the sixteen 8-inch guns which we lose each have a muzzle energy of 13,715 foot-tons and the sixteen have a total muzzle energy of 209,440 foot-tons, and the sixteen 7-inch guns, each having a muzzle energy of 8,338 foot-tons, have a total of 133,408, which makes a total muzzle energy for the thirty-two 8 and 7 inch guns of 342,849 foot-tons which we would lose, against the 195,936 foot-tons we would gain. In other words, the proposed change would lessen the muzzle energy of our guns 146,912 foot-tons; and if we were to continue the policy until we had exchanged all of our 25 battleships for 12 dreadnaughts, the total muzzle energy of our fleet would be reduced 1,722,944 foot-tons. It is now 444,110 foot-tons greater than that of the Germans, but this new policy will make it 1,278,834 foot-tons less than that of the German ships. If, therefore, the muzzle energy of the guns is the measure of naval power, the inevitable effect of this strange departure will be to change our naval status from a condition of superiority over the German fleet to the extent of 444,110 foot-tons to a condition of inferiority to the extent of 1,278,834 foot-tons. In making this comparison I have supposed that the proposed dreadnaught would be armed with the 12-inch, 45-caliber gun, which is the best gun made, which is the same big gun with which the *Mississippi* and the *Idaho* are armed, and not with the 12-inch, 50-caliber gun, with which the *Arkansas* and *Wyoming* are armed, because this 50-caliber gun has such defects that it was never put on but two of our ships, and the last six dreadnaughts built and building are all armed with the 45-caliber gun. But the real measure of the difference between the power of the guns which we would lose and those we would gain by the transaction is not perceived by a consideration of either the weight of the metal in a broadside or the muzzle energy of the guns in one salvo. The true measure of the difference is what the guns will do in a given period of time.

If a battle could be decided by one broadside, then the weight of the metal in a broadside or the muzzle energy of the guns would be a more approximate measure of superiority, but since experience tells us that in actual naval battles there are only seven hits out of every hundred shots, and that on an average it takes 100 hits from 12-inch guns to put a battleship out of action, it is manifest that the real measure of superiority of guns is not what they will do on the first round but what they will do in a given period of time, and that those guns which can first fire the amount of steel necessary to overcome the enemy's ship are the superior. Now, the capacity of the four 12-inch guns which we would gain by the transaction is to shoot twice a minute, or the four guns would fire eight shots per minute. The four would therefore shoot each minute 6,960 pounds of projectiles and these projectiles would be propelled by a muzzle energy of 391,872 foot-tons. The sixteen 8-inch guns will shoot six times per minute each, or all of them will shoot 96 times per minute. The weight of the metal which the sixteen 8-inch guns will shoot in a minute is 24,960 pounds, and the muzzle energy which would propel these projectiles would be 1,256,640 foot-tons. The sixteen 7-inch guns will shoot 8 times per minute, each or all of them will shoot 128 times per minute. The weight of the metal which these sixteen 7-inch guns will shoot in a minute is 21,120 pounds, and the total muzzle energy propelling these projectiles would be 1,067,264 foot-tons. In the period of one minute, therefore, we have this difference between the four 12-inch guns which we would gain, and the thirty-two 8 and 7 inch guns which we would lose by the proposed transaction. First, the four 12-inch guns would fire 8 shots and the thirty-two 8 and 7 inch guns would fire 224 shots, or the 32 guns would fire 28 shots to every one fired by the four 12-inch guns. Second, the weight of the metal fired in a minute by the four 12-inch guns is 6,960 pounds and that by the thirty-two 8 and 7 inch guns is 46,080 pounds, or 39,120 pounds more than that of the four 12-inch guns. Third, the muzzle energy which in a minute would propel the projectiles from the four 12-inch guns would be 391,872 foot-tons, and the muzzle energy which would propel the projectiles from the thirty-two 8 and 7 inch guns would be 2,323,904 foot-tons, or 1,932,032 more foot-tons than the muzzle energy from the four 12-inch guns every minute.

These three vast differences in the number of shots, in the weight of the projectiles fired each minute, and in the muzzle energy developed every minute would have to be multiplied by the number of minutes which the battle would continue in order to determine how much we would lose in a battle by adopting this startling proposition to exchange two of our battleships for such a dreadnaught as you could build with the proceeds of the sale; and then if this startling reduction in the naval power of one of these transactions be continued until we have exchanged 25 battleships for 12 dreadnaughts, the loss of power is apparently so great as to make it incredible how any American could have even suggested it. Having now shown that this radical change in our naval policy would, when carried out, reduce the number of our battleships from 39 to 27; that it would reduce the number of our guns from 926 to 578, the 348 guns which constitute the reduction having the capacity to shoot twenty-eight times as often as those for which they had been exchanged; that we would lose 63,840 pounds of metal in every broadside from our fleet and the muzzle energy would be lessened 1,722,944 foot-tons; and that, according to every known test, the superiority of our Navy to that of Germany would thereby be changed to a palpable inferiority in every respect—we wonder how anyone with patriotism in his heart and brains in his head could have made the preposterous proposition. There is only one explanation of this absurd and rotten proposition that is consistent with common honesty, and that is the current report and belief that the dreadnaught with all big guns is superior to the common battleship with 4 big guns and a much larger number of smaller guns. It is important to note when this error was born. England had built 41 battleships, Germany 20, and the United States 25, every one of which was armed with 4 big guns and from 8 to 20 smaller guns. Up to this time it was the universal opinion of the naval experts of the world that the most effective and powerful warship that could be built was one whose main battery consisted of both large and small guns. But the three leading nations of the world were then supplied with as many battleships as could be used in a battle, and it was apparent that the folly of building more battleships would become apparent to the people unless some good reason could be shown.

It then happened that the wisdom of the naval experts of the world changed with great suddenness. The advantage of arming a battleship with guns of different sizes could no longer be seen. The dreadnaught was invented, and with almost miraculous unanimity all the naval experts of the world agreed that all these 41 English battleships and these 25 American battleships were a mistake in naval construction, and that no battleship was worth building unless it was armed exclusively with big guns. Therefore since 1904 all battleships have been armed

with big guns exclusively and called dreadnaughts, and the idea has been disseminated that the old battleship had been supplanted by the dreadnaught and is not to be counted or considered. Whether the dreadnaught was discovered and adopted because it was better, or because a ship with supposed superiority had to be substituted for the battleship in order to furnish an excuse for the waste of more money in naval armament, after we had built more battleships than we could use, is the question. Whether the adoption of a new style of ship under the pretense that the old style was obsolete and worthless was a conclusion arrived at by a consideration of the public defense and from patriotic motives, or whether the demand of the trusts for a continuation of the immense profits they had realized in the construction of 25 battleships, is a question which is easy to solve if one will take the trouble to consider the facts in whose light one can readily see why no one in any country of the world ever thought of arming warships exclusively with big guns until the people had been taxed and impoverished with the construction of an all-sufficient number of ships armed with guns of different sizes. The contention that the dreadnaught is an engine of such power and destructive force that the old battleship can not contend against it is based on the assumption that being so much larger and possessing so much more powerful machinery, and, consequently, having so much greater speed, it can select the range at which it will fight, and with its big guns it can, from a distance at which the larger number of smaller guns on the old-style battleship would be harmless, destroy it. This idea has been expressed so often that many people who do not know the facts believe it, and even those who assert it have by constant repetition convinced themselves that there is some truth in it. The fallacy in this contention lies in the failure to consider facts material to a correct solution of the question and in the assumption of facts that are untrue.

First. It assumes that all the guns on a dreadnaught are superior to those on the battleship. Eight of our battleships are armed with 12-inch 45-caliber guns, and these are not only the best guns made, but are the same as the guns on a number of dreadnaughts in our own and foreign fleets. It is true that there are not as many of them as there are on a dreadnaught, but there is no range of battle at which these same guns would not reach the dreadnaught with as much effective force as the same guns on the dreadnaught could reach the battleship, and the larger size of the dreadnaught and the consequent greater frequency with which it would be hit and the smaller size of the battleship and the consequent less frequency with which it could be hit equalizes in a large measure the difference in the number of big guns.

Second. The superiority of the big gun on the dreadnaught over the smaller gun on the battleship and its power to do effective work at ranges where the smaller guns would be useless is limited by the human eyesight and the impossibility of using the big guns at such ranges. A naval battle is liable to occur at night, when the range would have to be so close that the smaller guns would be quite effective, and therefore during half the time there could be no foundation for the contention that the dreadnaught could fight at such ranges as to make the smaller guns of the battleship useless. Even in the daytime the fog is often so dense that the crew on a ship can not see another ship until it is so near as to result in a collision, and when there is no fog there is, a larger part of the time, such mists on the ocean that a battleship could not be seen at any such ranges as would make its guns ineffective. During six days spent on the ocean to witness the target practice of our ships, I am safe in saying that during nine-tenths of the time a battleship could not be seen 12,000 yards, and the shooting had to be suspended on account of the mists, which made it impossible to see the battleships towing the targets. This limitation of the human vision by night, fogs, and mists reduces the supposed power of the dreadnaught to destroy a battleship at ranges which would make the guns of the latter ineffective to a minimum, and demonstrates that if such superiority exists at all it is confined to such rare periods as to have little value.

Third. Another fact which utterly demolishes the contention that a dreadnaught could select a range of battle at which the smaller guns of a battleship would be useless is that the guns of a dreadnaught would be worn out before it could destroy the battleship. On page 124 of the Navy Annual, which is regarded as the highest authority on such subjects, I find this language with reference to the guns on a warship:

> Both numbers and sizes are important. Numbers are required because shooting at sea is very inaccurate, and many rounds must be fired to produce the hits necessary to defeat a ship. In no action during the Russo-Japanese War did the hits amount to more than 6 or 7 per cent, except perhaps in the Battle of Tsu Shima, as to which the facts are wanting. From the results of that war it has been estimated that 100 hits from 12-inch and other guns then in use are required to put a ship of the line out of action, which gives some idea of the number of rounds required to insure victory.

All the naval battles in this war, as well as all those in the Spanish-American War, were fought at such close ranges as to make the small guns effective, and as the inaccuracy of the shooting increases with the distance, it is certain that in a naval engagement now in which the dreadnaughts selected such long ranges as to be out of the reach of the smaller guns on the battleships the number of hits would not be greater than in the Russo-Japanese War. If, then, we assume that in a fight between the *Idaho* and *Mississippi* on the one side and a dreadnaught armed with 12-inch guns on the other the dreadnaught should select such a long range as to be out of reach of the 8-inch and 7-inch guns of the battleships, and that it would have to shoot 100 times to hit 7, and that it would take 100 hits to put either of the battleships out of action, it follows that the dreadnaught would have to shoot 1,400 times to destroy each of the battleships, or 2,800 times to destroy them both. But the life of these big guns is only 175 rounds. They carry such immense charges of powder that the heat of every explosion softens the chamber of the gun, and the passage of the shell through it in its softened condition erodes the gun, and when this operation is continued 175 times it is useless until relined.

In order to enable the men to hit with it at all they have to use the gun in target practice 12 rounds per year, according to our practice, and when they have fired it 75 times we have it relieved, so that our big guns have at all times the capacity to shoot just 100 times, when they would be worn out. In a supposed engagement between the *Idaho* and the *Mississippi*, which the amendment proposes to sell to some foreign nation, and such a dreadnaught as we could build with the proceeds of the sale, when the dreadnaught's 12 guns had each been fired 100 times, or 1,200 times for all, it would lack 200 of shooting the requisite 1,400 times to make 100 hits, and all of its big guns would be useless. It would then be the easy victim of the battleship it had not touched and the other which it had wounded, and would either be destroyed by them or else it would have to escape by its superior speed. This would be the result of the proposed exchange, not taking into consideration the fact that while the guns of the dreadnought were being worn out the eight 12-inch guns on the two battleships would have done the dreadnaught as much damage as eight of its guns would have done either of the battleships. These facts show that a dreadnaught to be effective must select such battle range as would make the 8 and 7 inch guns of the battleships effective weapons in the battle, and refute the idea that it can successfully fight beyond the reach of the smaller guns.

The Senate amendment, proposing a sale of the *Mississippi* and the *Idaho* and the construction of a dreadnaught with the proceeds of the sale, means, as I have said, the exchange of thirty-two 8 and 7 inch guns for four 12-inch guns, and I have now pointed out the facts which enable us to see whether the exchange would be sensible or not. These facts are that the 32 smaller guns are 4 times as many as the 4 big guns; that they will shoot 28 times as often in a minute as the larger guns; that in every broadside the 32 guns will shoot 5,320 pounds of steel more than the four 12-inch guns, and their projectiles will be propelled by 146,912 foot-tons more muzzle energy in every broadside than the shells from the four 12-inch guns. On the other hand, I have shown that the impossibility of seeing a ship at long distances, except under the most favorable atmospheric conditions, the increasing inaccuracy of sea shooting as the distance increases, the great number of hits necessary to overcome a ship, and the short life of the big guns, overthrows the theory that a dreadnaught can in practice select ranges of battle out of the reach of smaller guns.

If anyone will bear these facts in mind it will be easy to determine whether thirty-two 8 and 7 inch guns would be more effective than four 12-inch guns in battle. The sole object of a naval battle is to overcome the enemy. This can be done in two ways. The first way is to perforate his ship so near the water line as to fill it with water and sink it. To destroy the ship by the use of big guns is the theory of the dreadnaught. The second way to overcome the enemy is to kill his men, to disable his guns, and destroy his firing stations, and this is the method aimed at in the plan of the battleship. The question therefore reduces itself down to the inquiry whether the dread-

naught with its small number of guns is more likely to strike and penetrate a battleship at a point which would sink it before the battleship could kill its men, disable its guns, and destroy its firing stations and communications. If you will read the learned and unanswerable argument of this question by Reginald Custance, on pages 122–131 of the Navy Annual for 1913, you will be forced to answer the question in favor of the old-style battleships. In part he uses this language:

The sizes of the guns depend on the work to be done, which is to defeat the enemy. Now, an enemy is defeated as soon as he is disarmed; that is to say, as soon as his guns are silenced and his torpedoes can not be fired, since he will then be helpless. Will an enemy be defeated more quickly by being disarmed directly by having his guns and torpedo tubes put out of action, or indirectly by being sunk? An examination of the actions fought in modern times has shown that, whether the ships were armored or not, the guns have been reduced to silence and the enemy defeated before the ship foundered. No similar evidence is available as to the tubes, but being placed under water in ships of the line they can only be put out of action by disabling the firing stations, which should not be more difficult than to disable guns. The evidence seems to show that the quickest way to defeat an enemy with the gun is to disarm him directly by putting his guns and tubes out of action rather than indirectly by sinking him.

What must be done to disarm an enemy? It is necessary to disable his personnel, to injure his guns and firing stations, and to disorganize his communications, which last increase in importance as the system becomes more centralized. Since the personnel, guns, and firing stations are scattered over a wide area and are not to be found in many parts of the ship which may be struck by projectiles, we see why a large number of blows must be delivered. The necessary weight of these blows depends partly on the estimate of the effect produced by bursting shell and partly on the thickness and distribution of the armor, with which all ships of the line are very imperfectly protected. The effect produced by the explosion of shells differing in size has been estimated both from peace experiments and from results obtained in actual battle. Peace experiments have been found to be misleading, because the shell is made to explode exactly on the desired spot, and its effect has usually been exaggerated by the experts, whose minds are often warped by preconceived ideas. Battle shows not only the difficulty in hitting the right spot, but that to do so is more important than to hit with a heavy shell. The war facts also indicate that if the object in battle is to disarm the enemy the effect produced by a shell is by no means proportional to its weight. Men can not be more than killed, neither can guns be more than disabled, to both of which small shell properly placed are quite equal. Hence the error of comparing the fighting power of ships by the total weights of their broadsides. What can be more misleading than to compare the broadsides of the *Orion* and *Rio de Janciro* in that way? The weights are 12,500 pounds and 12,900 pounds, respectively, but the one will have 10 effective guns in action against 14 of the other at long ranges and 24 at decisive ones, which means that the "firing capacity" of the latter may be more than three times that of the former. These facts are concealed by comparing total weights.

Armor K. C.

Unarmored	2″	7″	8″	9″	10″	11″
30.5 centimeters, or 12 inches, up to extreme ranges				11,000	9,400	8,000
15 centimeters, or 6 inches, up to extreme ranges			Proof.			
Percentage, 60	12.8	.....	6.5	4	5.5	8.8

The above diagram, which is drawn to scale, shows how imperfect is the armor protection, and represents the area of the whole vertical target exposed by a comparatively modern ship above the designed water line, and including the flying deck and superstructure up to the level of the floor of the conning tower. It is to be noted that at deep draft much of the 10-inch belt will be under water, and the protected area will be less than shown. The parts of the barbettes inside the ship are not included; neither are the funnels nor the masts, nor is any allowance made for the deck area, which adds materially to the size of the target both at long ranges and in a rolling ship. On the diagram are marked in yards the ranges in battle at which the guns named can be reasonably assumed to drive shells charged with high explosive through armor of the thickness shown. It will be noted that the whole ship is perforable inside 8,000 yards by 12-inch armor-piercing shell, and nearly three-fourths of her at longer ranges by 12-inch common shell and by 6-inch projectiles. The thick armor—9-inch, 10-inch, and 11-inch—is to be found on the primary gun positions and water line, which present very small targets and are very difficult to hit, as war experience has shown. It follows that at ranges at which it is likely to be struck the whole of the armor is perforable, and thus loses much value. As the ship carries upward of 5,000 tons of armor and somewhat more than 3,000 tons of guns, it is not unreasonable to ask whether it is quite certain that the full value is derived from that 5,000 tons and the very large sum of money which it represents.

This statement of the facts, which shows the limitations of the power of the big guns and the extent of their capacity to destroy a battleship, discloses that the portion of the ship which, if perforated, would admit the water and sink it is less than 8.8 per cent of a vertical section. If we consider that, according to history, there would on an average be a hundred hits before a shell would strike that small part of the ship which a 12-inch shell must strike in order to destroy it, that in order to make the required 100 hits the guns on the dreadnaught must be fired 1,400 times, and that the erosion in the big guns is so great that they would probably wear out before the 1,400 shots were fired, it becomes apparent that the efficiency of a dreadnaught in battle is theoretically very doubtful, and since it has never been tested in actual battle, the idea that it could at long ranges destroy the ordinary battleship has not been established by facts, reason, or experience.

The only respect in which its superiority over the battleship can be admitted is that if one of its shells from very long range should chance to strike near enough to the water line it would at long ranges perforate the vessel, admit the water, and cause it to sink; but, in view of the facts stated, this chance is so remote that it deprives the dreadnaught's superiority in this one particular of any practical value. It is true that the shells from the big guns of the dreadnaught would not only destroy the enemy's ship, if they should chance to strike it in the small vital point, but they would as effectually overcome it should they strike at those points where it would disable its guns, kill its men, disorganize its communications, and destroy its firing stations. But these points are so few and so widely scattered over the ship and the big guns of the dreadnaught are so few and fire so slowly and so frequently miss the entire ship at the long ranges at which they are designed to fight that they could not be relied on to overcome the enemy in this way. On the other hand, the 8 and 7 inch guns of the *Idaho* and *Mississippi* could not, except at very short ranges, penetrate the thick armor plate which protects the belt of the enemy's ship, and therefore could not overcome it by sinking it. In this particular they are inferior to the guns of the dreadnaught. But, as shown by Mr. Custance, 60 per cent of the average modern warship has no armor protection at all; 12.8 per cent of it is protected by armor plate only 2 inches thick and 2.4 per cent of it is protected by armor plate only 7 inches thick. In other words, there is 75 per cent of the ship which the shell from the 8-inch guns would penetrate even at the distance of 7 miles and still more at shorter ranges. And since the 32 smaller guns on the *Idaho* and *Mississippi* could, as I have shown, shoot twenty-eight times as many shells every minute as the four big guns for which it is proposed to exchange them, it is evident that in a battle between them and such a dreadnaught as we could build with the proceeds of their sale, their chances of overcoming the dreadnaught by striking it in the points where its men would be killed, its guns disabled, its communications disorganized, and its firing stations destroyed, would be twenty-eight times as great as their chance of destruction by the dreadnaught. And when it is remembered that the barrels of the guns have no protection but are completely exposed, and that these 32 small guns would shoot 224 shells every minute, and that every time one of these shell struck the exposed barrel of a big gun it would be put out of action, it becomes perfectly manifest that the *Idaho* and *Mississippi* would, in a battle, be far superior to any dreadnaught we could build with the proceeds of their sale. A fair deduction from the facts therefore leads us to the same conclusion reached by Mr. Reginald Custance, who says:

The evidence seems to show that the quickest way to defeat an enemy with the gun is to disarm him directly by putting his guns and tubes out of action rather than indirectly by sinking him.

But it should not be necessary to reason out a proposition which the facts of history establish. In all the battles fought since the battleship came into existence we have a sure test of the relative superiority of a small number of big guns on the one side and a large number of small guns on the other. In the Spanish-American War and in the Russo-Japanese War there were a number of battleships engaged in the battles, and all of them were armed with four big guns each and a much larger number of 8, 7, and 6 inch guns. Here the few big and the many smaller guns had abundant opportunity to show which were the more effective. In all of these battles in both of these wars all the victories were won by the small guns. Not a single ship was sunk by the projectiles from the big guns penetrating its belt and admitting the water. Not a single ship was destroyed on the dreadnaught idea. But every ship that was overcome succumbed to the force of the smaller guns before it foundered. It is true there were no dreadnaughts in any of the battles, but all the battleships engaged had the big guns with which dreadnaughts are armed exclusively, and also a much larger number of smaller guns, and the fact that the smaller guns did the work demoustrates the truth of Mr. Custance's contention that a large number of small guns capable of penetrating 75 per cent of the ship will overcome it by killing the men, putting the guns out of action, destroying the firing stations, and disorganizing the communications long before the big guns will happen to penetrate the ship at such points as to sink it. It is evident the same result would have followed if all the big guns in those battles had been on dreadnaughts and the much greater number of smaller guns had been on

the battleships. When facts prove and experience confirms a proposition those who search for the truth are bound to accept.

The proposition that a battleship armed with four big guns and a larger number of small guns is more effective than the dreadnaught armed with big guns only has been accepted by the world, and the idea of the dreadnaught armed with big guns only has been abandoned as a mistake. Anyone who will read a description of modern ships will see that this is true. While all the dreadnaughts in the English Navy are armed with big guns exclusively, yet all those which England is now building, and of which we have the description, including the *Iron Duke*, *Marlborough*, *Benbow*, and *Queen Elizabeth*, are armed partly with big guns and partly with a larger number of 6-inch guns. Germany never did fully accept the dreadnaught idea of all big guns, and all of her so-called dreadnaughts are armed with both large and small guns; and she is now reducing the number of the big guns on her latest dreadnaughts from 12 to 8, just as England is reducing the number of big guns on the five ships now building of the *Queen Elizabeth* class to 8 and arming each of them with twice as many 6-inch guns. Japan, knowing from actual experience that her victories were won with the 6-inch guns, has put a large number of them on all of her dreadnaughts, and on some of them she has reduced the number of big guns from 12 to 8 and armed them with twice as many 6-inch guns. The *Rio de Janeiro*, a Brazilian dreadnaught, which, next to the *Pennsylvania*, is the most heavily armed ship in the world, has twenty 6-inch guns. The *Almirante Cochrane*, a 28,000-ton ship now building for Chile, has sixteen 6-inch guns. The fact already discussed, the experience of naval battles, and the consensus of opinion throughout the world show that the most effective ships of war are those built upon the plan of the *Idaho* and *Mississippi*, armed partly with big guns and partly with a large number of smaller guns, and that the discarded idea of an all-big-gun ship was a mistake. These views are based on the assumption that if the *Idaho* and *Mississippi* should be sold we could build a dreadnaught of the same tonnage as the two combined, which would be 26,000 tons, and the *Arkansas* and *Wyoming* are the only ships of this tonnage. They each carry 12 big guns.

In order to construct such a ship with the proceeds, the two ships would have to be sold for at least their cost price. This could not be done, because nothing that is second hand can be sold at cost. But the chairman of the committee tells the House that with the proceeds of the sale of these two ships we would build a dreadnaught like the *Pennsylvania*, with a tonnage of 31,400 and twelve 14-inch guns. How we could build with the proceeds of the sale a ship which has a tonnage 5,400 tons greater than the combined tonnage of the two to be sold, and with everything in the ship, including the guns, turrets, and machinery, so much larger, he did not stop to explain. The only explanation is that after the proceeds of the sale are exhausted Congress would be asked to appropriate from five to ten million dollars more to complete the vessel. Of course, in that way, we could get a more powerful ship. But it would be like the fellow who swapped a $100 horse for a $50 horse, and then contended that he made a good trade, because with the $50 horse and $100 in cash he procured a better horse than the one he had at first. But whatever kind of a ship we may get instead of the two to be sold, the only way to determine whether the proposed transaction is advisable is to compare the *Idaho* and the *Mississippi* not with such a ship as we could procure by an increase in the taxation of the people, but with such a ship as we could procure with the proceeds of the sale. But whether the object of this radical departure in our naval policy is to provide a building contract for some corporation and to provide for profits to capital and employment to labor, or whether it is the result of ignorance of the facts or a failure to consider all the facts material to a correct solution of the question, or whether it is born of the crazy notion that "capital ships" are the only means of the public defense, I submit as an unanswerable proposition that a policy which would reduce the number of our battleships from 39 to 27, the guns on armored vessels from 926 to 578, the weight of the metal in every broadside 63,840 pounds, the muzzle energy of the fleet 1,722,944 foot-tons; which would exchange thirty-two 8 and 7 inch guns for four 12-inch guns in the first transaction, and 384 for 48 if we should continue it with our 25 battleships; which, according to the actual lessons of naval warfare, and according to the enlightened opinion of the world would greatly lessen the efficiency and power of our Navy, should be thoroughly investigated and the facts reported to Congress by the Committee on Naval Affairs before we make the proposed leap in the dark.

Resolution from the Commercial Club of Omaha.

EXTENSION OF REMARKS

OF

HON. SILAS R. BARTON,

OF NEBRASKA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 26, 1914.

Mr. BARTON. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following resolution:

Whereas it is to the interests of the State of Nebraska and her citizens to promote agriculture and conserve the natural resources of the said State; and

Whereas the United States Government is about to appropriate $57,000,000 for the improvement of the Mississippi River in such manner as will improve and give ease and safety to navigation, prevent destructive floods, promote and facilitate commerce, trade, and the Postal Service; and

Whereas a large part of the flood waters of the Mississippi River sought to be provided for come from the watershed east of the Rocky Mountains; and

Whereas the State of Nebraska is situated about midway between the Rocky Mountains and the Mississippi River by reason whereof flood waters originating in the Rocky Mountains and easterly thereof pass through tortuous streams tributary to the Mississippi River from the westerly to the easterly boundary of Nebraska; and

Whereas in the westerly part of the State of Nebraska there is a large acreage of semiarid land extremely valuable for agricultural purposes, provided a sufficient water supply can be secured, the annual precipitation not being great enough to insure crops; and

Whereas certain enterprising citizens of the counties of Kearney, Phelps, and Gosper have set on foot a movement looking to the scientific application of the flood waters of the North Platte River and other streams to the semiarid lands of western Nebraska for the promotion of agriculture; and

Whereas the United States, through the Department of the Interior, is now conducting an investigation into the feasibility of the proposition in question; and

Whereas it is the policy of the present administration to rehabilitate, conserve, forward, and promote the agricultural interests of these United States and conserve the natural resources thereof, and is lending aid in this direction whenever and wherever possible; and

Whereas as nearly as can be ascertained, approximately one-third of the flood waters of the Mississippi River, which the Government is now seeking to control, originate in the Rocky Mountains and pass through the State of Nebraska, which waters, if diverted to and used upon the farm lands in the western part thereof, will greatly relieve the situation on the Mississippi River, so troublesome and expensive to the National Government; and

Whereas the National Government has in times past appropriated and expended enormous sums of money in constructing levees and protection work along the Mississippi River, and will necessarily be compelled to appropriate and expend large sums of money in the future if the flood waters referred to are not diverted for beneficial purposes; and

Whereas, in order to insure the public welfare, it is both essential and the part of wisdom to conserve our natural resources, to promote intensified farming, and take whatever steps are necessary to provide a sufficient water supply for all semiarid lands and appropriate therefor the natural water supply; and

Whereas the soil in Phelps, Gosper, Kearney, and other adjacent counties is, we believe, admirably fitted for the application and retention of flood waters referred to in the spring of the year, when said waters, if not impeded, obstructed, or diverted, find their way into the Mississippi River wasteway, where they bring irreparable damage, destroy millions of dollars' worth of property, and blot out human lives: Now, therefore, be it

Resolved, (1) That the Commercial Club of the city of Omaha hereby indorses the action taken by the citizens of Kearney, Phelps, and Gosper Counties, and recommend its extension to other counties in the State.

(2) We commend the present administration and the Department of the Interior for its interest in the welfare of the citizens of Nebraska.

(3) We vote our thanks to the Commoner for giving a matter of this kind, which is so vital to Nebraska and her citizens, space and indorsement, and order a copy of these resolutions forwarded to it.

(4) We urge upon Congress the necessity of drafting and adopting at its present session an amendment to the appropriation bill to provide funds to care for the flood waters of the Mississippi River now before it, and in said amendment appropriate sufficient moneys to divert to beneficial uses, conserve, and utilize the flood waters in western Nebraska for the benefit of the agricultural interests in accordance with plans made by the Interior Department, said moneys to be expended and said work to be done under the supervision of competent men employed by the Interior Department.

(5) That in the interests of the public welfare we urge the commercial clubs and other similar organizations throughout the entire State of Nebraska to adopt resolutions and obtain the support of their members and citizens with whom they come in contact to the movement in question, and that they solicit the support of their respective Members of Congress.

(6) That a copy of these resolutions be sent to the United States Senators and Representatives elected to the National Congress from the State of Nebraska for their indorsement hereof, and that they are hereby requested to lend their aid to the amendment of the appropriation referred to in order to secure its adoption by the National Government.

The Truth About Mexico.

EXTENSION OF REMARKS
OF

HON. WILLIAM S. HOWARD,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 22, 1914.

Mr. HOWARD. Mr. Speaker, the following letter, received by me several months ago from Mr. George Robinson Hackley, of Mexico City, who, by reason of his long residence in Mexico, has acquired an intimate knowledge of the political situation, is printed in the RECORD by me for the sole purpose of giving to the American people the unvarnished truth as to conditions in that unfortunate country. Most of his statements as to the success of the constitutionalists in northern Mexico are prophetic, and I feel assured that anyone who really wants to be informed upon conditions as they really exist will find his statements of fact and conclusions most interesting and instructive:

AUGUST 28, 1913.

Hon. WM. SCHLEY HOWARD,
House of Representatives, Washington, D. C.

MY DEAR SIR: As the Mexican situation is of universal interest and of extreme importance to the United States, and as there is manifestly a lack of disinterested, unbiased information, and, consequently, a lack of understanding and a diversity of ideas and opinions on the subject, and as it is desirable that our people should know the truth, I have decided to give a résumé of the conditions as they appeared to me before leaving Mexico the latter part of August, 1913, and I shall scrupulously endeavor to present the case fairly and strictly in accordance with the facts.

In my opinion, military dictatorships in Mexico are no longer possible, and a government of the masses by the classes and for the classes can not be reestablished or maintained, and the present dictatorship is, I am confident, doomed, being opposed by a tremendous majority of the people, who have been awakened by Madero, shown their wrongs, taught their rights, and inspired with the ambition to shake off the yoke of feudalism and slavery, of which they have been the victims for centuries, and enjoy the blessings of liberty and equality and an opportunity to improve and elevate themselves.

A great many people appear to think that the masses are incapable of advancement physically, intellectually, or morally, but I dispute this and believe that they have possibilities which would develop rapidly under favorable conditions. Undoubtedly there were a great many who thought, or pretended to think, that the masses under the feudal system of Europe were incapable of any great advancement or self-government, and this was especially true in France before the Revolution; but time and experience have proved that this was a mistaken view, and I would like to see these people given a real chance to rise before utterly condemning them. I have often thought how unfortunate it is that, as a rule, neither nations nor individuals are able to profit by the experience of others, hence "history repeats itself."

Madero was not overthrown by the people and his overthrow could have been effected only by the detestable methods of bribery, treachery, treason, and murder which characterized the movement and which was undoubtedly inspired solely by personal ambition tainted with malice and revenge and supported by big business and special privilege, with no thought or care for the welfare of the country or the happiness or will of its people.

The old Diaz dictatorship, viewed from certain angles, looked good, strong, and efficient. Speaking in a purely material sense, it was good for and satisfactory to most of the wealthy Mexicans and nearly all foreigners, and it must be admitted that a little of the progress and prosperity which developed during his reign "seeped through on the masses," and he did a great deal to develop the material resources of the country and establish credit abroad, but there were vital fundamental defects in his system. He did not take into consideration the welfare and happiness of the masses and did very little to educate or assist in their elevation and advancement, as the present almost universal illiteracy and deplorable conditions of the masses indisputably proves. He neglected the more important human resources of his country. How well Carlyle's description of France in the last days of the reign of Louis XV covers the conditions in Mexico at the end of Diaz's rule:

Such are the shepherds of the people; and now how fares it with the flock? With the flock, as is inevitable, it fares ill, and ever worse. They are not tended, they are only regularly shorn. They are sent for to do statute labor, to pay statute taxes, to fatten battle fields (named "bed of honor") with their bodies, in quarrels which are not theirs; their hand and toil is in every possession of man, but for themselves they have little or no possession. Untaught, uncomforted, unfed; to pine stagnantly in thick obscuration, in squalid destitution and obstruction; this is the lot of the millions.

Under Diaz the "cientificos," composed largely of Government officials who had their greedy tentacles in nearly all the important enterprises of Mexico—the railroads, banks, land, industries, and so forth—being stockholders in a large number of these interests, scientifically, unscrupulously, and shamelessly exploited the people. This is conceded by some of the oldest and best friends of Diaz.

He permitted the institution of a land law which enabled the hacendados (planters), Government officials, and others to ruthlessly dispossess unnumbered thousands of poor people from lands which had been occupied by their families for generations and appropriate them for themselves, which was a national crime and calamity and one of the greatest causes of the revolution of 1910.

Under his régime the large landholders, many controlling millions of acres, some as much as fifteen and seventeen million, enjoyed practical immunity from taxation, cultivating only a fractional part, leaving, like the dog in the manger, millions of rich acres to lie fallow, which would, no doubt, under a proper system of taxation and favorable opportunity for the small farmer to acquire land, have produced wondrous results in the development of a real nation.

Under him the masses, on the haciendas (plantations), in the factories, mines, and so forth, were practically slaves, enjoying no liberties to speak of, and their condition was far worse, in most respects, that that of the slaves in the United States before the Civil War. Their wages were small, hours long, and conditions insupportably oppressive. As an example, in the textile mills, of which there are about a hundred and fifty in this Republic, employing some 40,000 workers, the hours were from 6 in the morning until 9 at night, with a half hour for breakfast and a half hour for luncheon, receiving very low wages, and being required, as a rule, to purchase their meager food and raiment from the commissary stores of the companies at extortionate prices. They were not permitted to organize and strike for the purpose of improving their conditions, but were, by necessity, compelled to meekly submit to whatever conditions the employer chose to impose.

The workmen did inaugurate a strike several years ago, during the rule of Diaz, at the large Rio Blanco cotton mill at Orizaba, which was promptly suppressed by the federal soldiers, who killed over 500. Under Diaz the "tienda de raya"—pay-roll store—flourished, and was, with its abuses, a patent instrument in the propagation and maintenance of a species of slavery, collections for all goods sold by the commissary stores of mills, haciendas, mines, and so forth, being made through the pay roll, and through the system of advancing money at usurious rates of interest, as high as 12 per cent per week being charged in many instances, the laborer almost inevitably became hopelessly in arrears, and, as he could not leave until the debt was canceled, became perpetually peoned, thus the expression "peoned for life."

Under Diaz there was undoubtedly peace, prosperity, and commercial progress, but "the peace was artificial"—words of Madero—resting on a flimsy foundation of force and fear, the former being largely a bluff, and the real prosperity reached only a small per cent of the people, special privileges and advantages of exploiting the masses being enjoyed by the landholders, manufacturers, hacendados, and other employers of labor, and as special privilege is selfish, cruel, and pitiless, and tenaciously clung to by those who enjoy it and who overlook and ignore almost entirely principles and ideals as well as the rights of others, this element still approves of and commends the Diaz form of Government, looking at it from its own individual point of view, and, being blindly prejudiced, are unable to comprehend that such a form has been utterly repudiated and is beyond recall. There are, however, some disinterested foreigners who honestly consider that the Diaz form of government is the only practical and efficient government for this country, and it is only fair to state that I am one of a small minority of Americans in Mexico who view the matter differently. A Government whose protection and beneficence reaches only an infinitesimal part of its people, leaving the rest in a state of ignorance, servility, and darkness, is radically wrong.

The contract-labor system employed on a great many of the haciendas was a disgrace to civilization.

Under Diaz governors were selected by the President, also "jefe politicos," who were usually corrupt, exercised tyrannical and despotic powers, and committed outrageous abuses and injustices.

These are some of the glaring deficiencies of the Diaz administration. Now let us dispassionately examine his successor.

Madero was a young man, a member of one of the largest, richest, and most prominent families in northern Mexico, who was educated in the United States and Europe, possessing high ideals, strong convictions, exalted principles, indomitable courage and patriotism, and honestly and sincerely desired and hoped to redeem and elevate the masses of his people, realizing from the beginning the stupendousness of the task and that it would probably cost him his life. "El que a salvador se mete, crucificado sale." The representative of a great cause has been foully slain, but not the cause, which is stronger to-day than ever. "The martyred Madero is stronger than Madero the apostle."

The crucifixtion of Christ and the burning of the Christians by Nero failed to throttle the cause of Christianity, and it is my firm belief that no just cause can be permanently impeded, especially the cause of a people struggling for liberty.

Like nearly all reformers since the world began, Madero was the victim of the most savage and unscrupulous abuse and villification, especially by the press, largely controlled by the old régime, which, through its long existence, was strongly ramified, rich, powerful, and influential, and could not become reconciled or even resigned to relinquish the privileges and opportunities which it had enjoyed, and consequently was determined to undermine and destroy him at any cost. He was called an idealist, a visionary, a fool, a knave, a fakir, a spiritualist, weak, and other harsh names, and yet this little man had the courage and ability to take up the cause of the people and assail and overthrow the supposedly invincible Diaz, and even his worest enemies concede his honesty and good intentions.

He first made a campaign throughout the Republic, arousing the people; wrote the "Presidential Succession," which is a strong and powerful exposition of the conditions of his country; was arrested at Monterey; imprisoned at San Luis Potosi, escaping, disguised as a peon, to the United States, where he organized the revolution of 1910, carrying it through to a successful conclusion, declining, however, to accept the presidency provisionally or to assume that high office except by the expressed will of the people, which events, it seems to me, ought to constitute an ample contradiction of the allegations of his unjust detractors. But let us go further.

I have been asked to state just what Madero really accomplished for Mexico, which I am glad to do. Naturally his responsibilities and difficulties in the transition from absolute despotism to a democratic form of government were tremendous, his task, indeed, Herculean—enough, in fact, to appall the stoutest heart—and his perplexities were materially increased by the revolution in the north, headed by Orozco, which undoubtedly was supported by members of the old cientifico party, and the recalcitrancy of Zapata. However, in spite of all sorts of difficulties and obstacles and the most powerful, vindictive, and shameful opposition, he unquestionably accomplished a great deal in a short space of time.

Querido Moheno, one of the most active members of congress, a strong opponent of Madero, and an ardent advocate of the present régime, stated on the floor of congress that he prostrated himself on his knees daily to give thanks to God for the liberty of speech which Madero had given them. Under Díaz congressmen were mere figureheads.

El País, one of the most prominent dailies, a Catholic organ, and one of Madero's bitterest foes, in a recent editorial gave credit and expressed appreciation for the liberty of the press given by Madero.

Under Madero a department of labor was instituted and through it a new tariff of wages and conditions for textile workers affecting 40,000 operatives was established. This tariff provided a maximum of 10 hours' labor per day, higher wages for the 10 hours than was formerly obtained for 14 hours, and prohibited the employment of children under 14 years of age. Can any disinterested, unbiased person honestly dispute or doubt the beneficence or far-reaching effect of this humane measure?

Under Madero, through the newly granted liberty of organizing and striking the stevedores and dock laborers at Vera Cruz and other ports obtained advances of over 25 per cent in wages; the shopmen of the National Railways an increase of 10 per cent, the telegraph operators a similar increase, etc.

Undoubtedly Madero would have ameliorated and corrected the barbarous and pitiable condition of the peons on the haciendas, especially those existing under the contract-labor system, where the laborers were not only slaves but prisoners subjected to the most brutal and inhuman treatment had he lived.

The agrarian question, one of the most important, was more difficult, but it is my conviction that Madero earnestly desired to solve it, within the law and with due respect to the property rights of all, to dispossess the holders of lands fraudulently acquired and restore them to the Indians, who had been so ruthlessly and cruelly dispossessed, and if he had had the time and opportunity would at least have materially improved matters.

Madero sowed the seeds of a higher and better civilization, and the harvest should—and I sincerely believe will—come.

How such ideals do realize themselves and grow, wonderously, from amid the incongruous ever-fluctuating chaos of the actual. This is what world history, if it teach anything, has to teach us.

And now listening reluctantly for the moment, and for the sake of argument and analysis, to the contention of many that the present Government is the only practicable and efficient form for this country, casting to the winds all ideas of principles and morals, of right and justice, and making an impartial comparison of conditions under Madero, considering the extraordinary handicaps placed in his way, with the conditions under the present régime, what do we find? Conditions are, undoubtedly and unquestionably, distinctly and decidedly worse in almost every sense now than during the Madero régime. The opposition to him, aside from, perhaps, most of the privileged classes, the newspapers, largely owned and controlled, as stated before, by his enemies, which helped hound him to death, some ambitious and unscrupulous politicians, was comparatively slight and, apparently, under way of adjustment. And here a word about Zapata, one of the formidable problems encountered by the President.

It is claimed that Madero, realizing his indebtedness to Zapata for his assistance to the revolution of 1910, and that primarily he was in arms because of wholesale ejections from and appropriations of lands belonging to the "indígenas," the wholesale destruction of their homes and villages, tried to pacify the "Attila of the South," who was naturally justly impatient for the restoration of lands, being loath to institute a campaign of extermination or adopt harsh measures if possible to avoid them, and was therefore possibly too humane and tolerant, for which he was most bitterly criticized; but he was negotiating with Zapata, through Lic. Martínez, and it is alleged that an agreement and settlement was in sight. This, however, is problematical, and it is exceedingly difficult to obtain tangible data. This view seems logical, however, and I am inclined to credit it.

Under Madero all the frontier gateways except El Paso were continuously open; now all these gateways have been closed for six months, with apparently small prospects of being opened in the near future.

Under Madero probably 90 per cent of the railway mileage was continuously in operation, while now over 50 per cent of the national railways is closed to traffic, and the Southern Pacific Railroad Co. of Mexico, having over a thousand miles of track, has for the last six months been almost entirely out of commission.

Under Madero the opposition of Orozco in Chihuahua had been practically quelled and there was not a single State or legislature in the union in open opposition, and with the exception of Zapata in Morelos, Salgado, with a small following in Guerrero, Genovevo de la O in the State of Mexico, some intermittent disturbances in Oaxaca, and one or two small bands in Puebla and maybe one or two other States, maintained largely by the old Cientificos, the country was pacified. What are the conditions now? There is opposition, more or less strong, in almost every State in the union.

Sonora: With the exception of Guaymas, entirely in hands of the constitutionalists, and fall of Guaymas seems probable.

Coahuila: Almost entire State, including port of Piedras Negras, in possession of the Carrancistas.

Durango: Entire State, including capital, in hands of Carrancistas.

Chihuahua: Thousands under arms and important territory occupied by constitutionalists.

Nuevo Leon: Large numbers of armed constitutionalists, who have made considerable progress, controlling good part of State.

Tamaulipas: Several thousand constitutionalists, under Lucio Blanco and others, hold the port of Matamoras and other towns, and are threatening the capital city of Victoria and port of Tampico.

San Luis Potosi: Large number of constitutionalists, estimated at several thousand, operating and have captured several important towns, including Matehuala.

Sinaloa: Very strong constitutionalist following and several thousands under arms.

Nichoacan: Gertrudis Sánchez, with probably 1,500 men, has captured Zamora, Uruapam, Patzcuaro, etc., and threaten capital city of Morelia.

Guerrero: Jesús Salgado and his men, Figueroa and his men, numbering several thousand, dominate a considerable portion of the State.

Morelos: Zapata and his following, estimated at from 10,000 to 20,000, under arms against the Government. Government has sent large numbers of troops to this State, where it is concentrating its force, adopting the most vigorous measures, including the reconcentration plan; and while Government officials claim that great headway has been made, I learn from reliable sources that the State is still far from being pacified.

Jalisco: There have been a number of uprisings in this State, and there is evidently considerable discontent, but which has usually enjoyed immunity from disturbances, due, it is claimed, to the large number of small farmers, who ordinarily prefer peace. There are over 2,000 landholders in this State, while in the rich and fertile States of Morelos and Michoacan there are less than 30 in each.

Hidalgo: Several thousand armed men opposing Huerta.

Zacatecas: Large number of revolutionists under Natera captured a number of towns, including the capital of the State.

Federal district: Private information indicates over 10,000 in arms?

Puebla: Thousands of revolutionists under arms.

State of Mexico: Several thousand under arms.

Vera Cruz: Number of uprisings, and papers recently announced uprising of 10,000 "indigenas" in the Huasteca district.

Uprisings in Tepic, Oaxaca, Yucatan, Campeche, Guanajuato, and so forth, and, but for the difficulties of obtaining arms and ammunition, it is conceded by a great many, even some of those favorable to Huerta, that the revolutionists would rapidly increase and triumph in a short time, probably within a few months.

Besides, there is an important contingent who has not yet spoken, not daring, except guardedly, who have not yet acted, being unable to do so without arms, who will have to be reckoned with later. In short, the revolution is a conflagration which can not be quenched and must ultimately triumph.

Under Madero the currency of the country was stable, the ratio of Mexican money to United States being maintained on the basis of two Mexican dollars for one American dollar; now an American dollar is worth about $2.80 Mexican currency, and foreign exchange, except in limited amounts, difficult to obtain.

Under Madero the credit of the country was maintained abroad, and arrangements had been concluded to obtain all the money required.

Under Madero the earnings of the railways were reasonably satisfactory, enabling them to meet fixed charges and pay dividends, now the earnings of the national railways are less than half of what they were under Madero, being insufficient to cover any part of the fixed charges and, in fact, barely sufficient to cover operating expenses, and the properties are on the verge bankruptcy.

The commercial interests, as a rule, were able to operate profitably during Madero's régime, but now business of nearly every kind is paralyzed and a financial crisis threatens, the Mexican Government, fortunately for the country, being unable to obtain any more money abroad.

Likewise there has been a slump in Government receipts and terrific increase in expenses under the present régime.

Under Madero his worst enemies, including Felix Diaz and Bernardo Reyes, enjoyed guaranties and full legal protection, whereas now political enemies, including senators and congressmen, who, under the constitution, are entitled to immunity from arrest, magically disappear.

There was never a question of recognition of the Madero Government; now, the United States is withholding recognition, and, apparently, some European countries, who acted under a misapprehension, due to the position taken by Ambassador Wilson, have repented their recognition.

Under Madero there was some destruction of bridges, track, and equipment, but it was insignificant compared with the destruction under Huerta, which has been stupendous.

The losses to agricultural, mining, timber, and almost all other interests, have been enormous under Huerta.

These comparisons ought to suffice to show that the present Government, which is a despotic, military dictatorship, the very worst form of government, is not a success, but a decided failure. However, in spite of these incontrovertible facts, its friends, being reluctant to admit their error of judgment, contend that it will yet dominate the situation, even some of those who have suffered great losses, but I do not believe such a result possible.

Undoubtedly it is proceeding with all the energy possible, but I have never, from the beginning, had any sympathy with or confidence in its ability to control the situation, and simply could not believe that its revolting methods—the barbarous methods of the dark ages—could prevail in this enlightened twentieth century. Huerta has done everything possible to strengthen the army and its loyalty to him, having promoted, by the wholesale, officials and increased the pay of the private soldier from a dollar to a dollar fifty per day, an increase of 50 per cent, and has greatly increased it numerically, but it is exceedingly difficult, almost impossible, to improvise an efficient fighting force in Mexico, especially under the circumstances, where the army must be recruited, by forced conscription, from the very element it is fighting, which is, almost to a unit, Maderista and, consequently, opposed to this Government; in other words, the Government must secure its force from the very force it is opposing, a decided anomaly and, naturally, it will not work out and there have been thousands of desertions from the Federals to the rebels. Therefore, it is exceedingly doubtful, even with the tremendous advantages which the Government has of almost unlimited arms and ammunition and the Government machinery, if the opposition can be put down and made to stay put.

The Spaniards, with over 200,000 soldiers, having nothing in common with or sympathy for the revolutionists, and consequently no scruples about fighting them, concentrated in the small territory of Cuba, were unable to conquer the revolutionists, either in the 10 years' war from 1868 to 1878 or in the last war from 1895 to 1898, when American occupation occurred. Furthermore, the inability of the Government to obtain money abroad will prove a serious obstacle to their making real headway.

The de facto government had, to a great extent, at least in Mexico City, the support of the commercial interests, who blindly and, as I think, illogically believed in its efficiency; but in the face of disastrous results this support is waning.

It also has the incalculable advantage of the support of the press, which is as much enslaved as the press of France in the days of Napoleon, any having the temerity to oppose being promptly eliminated. Recently the publication of El Voto, La Voz de Juarez, and El Diario del Hogar in Mexico City was suppressed for criticizing the government, and La Opinion and La Union in Vera Cruz suspended. The Mexican Herald, the only American paper in the metropolis, supported from the very beginning the Huerta government and condemned our own.

I am one of the few Americans who sincerely and heartily approve and applaud the course of our Government and have absolute faith in its honesty of purpose, its high principles and justice, as well as its wisdom. I thank God that our President had the principle and moral courage to refuse, in spite of the insistent clamor of big business interests, many being unscrupulous mercenaries, to help foist this false government upon an unwilling and resisting people—did not help to prolong artificial conditions brought about by one of the most diabolical and revolting crimes in history, but is, on the contrary, lending his moral support to the cause of the people who are irresistibly struggling for liberty. There are thousands of intelligent Mexicans who respect and admire the attitude of nonrecongition and the high moral ground maintained, one remarking, "Wouldn't it be a pity and shame if there was not a single foreign Government to stand for morality and principle in dealing with the Mexican situation?"

As will be appreciated, we can not speak as fully and freely in Mexico as those who desiring to stand in with and profit through the present Government, are willing to overlook, for expediency and, in many instances, to my amazement and horror, sanction the awful guilt involved in its establishment and, therefore, openly and dogmatically espouse it, at the same time shamelessly and unpatriotically knocking and sneering at our own Government, consequently, comparatively little is heard of this side of the question. Still there are, unfortunately, many who, without having any special interests involved, take the same stand, but they are decreasing.

I am certainly proud and delighted that Washington has refused to recognize or put its approval on the assassins who have usurped the Mexican Government, who, instead of representing the will of the people, represent a betrayal of the will of the people as expressed in the triumph of the Madero revolution and his election to the presidency. Certainly recognition could not be predicated on moral grounds, and it is my firm conviction that, regardless of precedent or the action of any other nation, business and expediency should wait on principle. One of the Spanish viceroys, seeing the miserable condition of the masses, made efforts to improve their condition, when he was told by rich mine owners that such policy would ruin the mining interests of Mexico, replied, "The liberty of the peon is more important than all the mines in the world," and the principles of the present struggle are far more important than all the

foreign dollars invested in Mexico. Besides, I do not believe that recognition would permanently help business, but would, on the contrary, in the end, be detrimental, probably prolonging an intolerable condition and delaying a real settlement, and why should we countenance or lend our aid to the extension of an evil which the Mexican people to their credit are energetically resisting. The constitutionalists stand on a firmer and higher ground than Huerta, as they are fighting against usurpation and for liberty and constitutional government, and should, in my opinion, receive from our country and Government every sympathy, encouragement, and assistance consistent with our honor. How can we honorably recognize, affiliate with, or assist an illegal, unconstitutional Government, established by "irregular force" and violence, causing the deaths in the very beginning, through an infamous fake battle when Mexico City was "shot up," of thousands of innocent people, including women and children, even babes? To me it is unthinkable.

Naturally you would ask, as everyone else does, "After the present government, what?" Probably only a prophet could answer. The situation is most difficult. If the opposition unites on an honest, patriotic man having the interests of the nation at heart and desiring to educate in a practical way and improve the people, who is strong enough to prevent the classes, constituting a small minority of only about 10 per cent, from interfering, the problem should be solved. Will, as frequently in past history, the right man appear? Let us wait and hope.

Undoubtedly a man who could count on the confidence and support of the masses and having the recognition and support of the United States would have a far better chance to govern successfully than one opposed by the masses. Then, too, maybe the classes have learned a lesson by the absolute failure of Huerta, and, instead of obstructing, might realize that it would be to their interest and that of their country to assist in the regeneration and advancement of the people. God grant that they may, and thus eliminate the possibility of a repetition of the horrors of the French Revolution.

Anyhow, a false start has been made, and they must go back and build a government and create a peace resting on a better and firmer foundation—the will and support of the majority, and largely on the principles advocated by Madero. "Porfirismo" is dead and can never be resurrected. Feudalism and slavery have received their death warrant and must go.

I would like to see the Mexican people, in whom I have a very friendly and sympathetic interest, given a real chance to try out a constitutional and more representative form of government. Madero was not given a fair show; in fact hardly any show at all; but his unselfish interests and efforts in their behalf is understood and appreciated by the masses, and his grave is their most sacred shrine, and thousands upon thousands buy, kiss, and weep over his picture, and future generations will gratefully bless him.

Sincerely, yours,

GEORGE ROBINSON HACKLEY.

Frankford Arsenal and Rock Island.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 23, 1914,

On the bill (H. R. 17041) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. MOORE. Mr. Speaker, the ineffectual efforts to obtain additional ground for the Frankford Arsenal through this bill and the increase of appropriations to build up the arsenal at Rock Island have resulted in the collection of certain data with regard to the two institutions which I now put in the RECORD under leave just granted me to extend my remarks.

I am prompted to present these facts more particularly because of the address of the chairman of the Appropriations Committee [Mr. FITZGERALD], in which he clearly indicated his belief that the arsenal business of the United States should gradually be concentrated at Rock Island. Such a policy, of course, involves more than the mere question of appropriations. It has to do with fuel cost, power cost, cost of material and transportation, in addition to the most important of all, the availability and cost of labor. All these questions are treated in the paper I submit herewith. It has not only been prepared with very great care, but it shows the relative value of the two arsenals and also deals with Rock Island's famous water power, the method by which it was obtained, and the cost at which it is developed.

ROCK ISLAND FUEL COST.

1. A statement has been published showing the large savings made at the Frankford Arsenal in the manufacture of artillery ammunition, and the magnificent economies of that arsenal have been advanced as an argument for an increase in the manufacturing facilities at the Rock Island Arsenal. It has been stated that the Rock Island Arsenal can manufacture cheaper than the Frankford Arsenal, owing to the former obtaining its power from a dam in the Mississippi River, and therefore presumably free of charge. As a matter of fact Congress appropriates every year for the Rock Island Arsenal $12,500 to maintain this dam. It is understood that the Rock Island Arsenal contracts for about 5,000 tons of soft coal every year, which, at an assumed cost of $2.40 per ton, amounts to $12,000, which would make a total charge for fuel, including the maintenance of the dam, of $24,500.

Under the contract which the United States has with the former owner of the water power at the Rock Island Arsenal, the Government is obligated to furnish this company with a fourth of the power developed by this dam free of charge, and, therefore, the water power is not as free as it appears to be. When the dam is low, the Rock Island Arsenal is obliged to buy electric power from a local power company and the annual cost for the purchased power has been as high as $2,000. The power furnished by the dam is not used to heat the shop buildings, which is done by steam, for the generation of which the 5,000 tons of soft coal are purchased.

FRANKFORD FUEL COST.

On making inquiry it has been ascertained that the Frankford Arsenal consumes annually about 8,600 tons of coal, which costs about $24,000, so that apparently the cost of fuel at the Rock Island Arsenal, including the maintenance of the dam, amounts to more than the cost of coal furnished to the Frankford Arsenal. These figures do not take into consideration the fact that Congress appropriates $12,500 annually for the care of the bridges leading to the Rock Island Arsenal, which is located on an island in the Mississippi River. These figures should also be charged against the power plant at the Rock Island Arsenal for the very reason that its favorable location, so far as water power is concerned, makes it inevitable that there shall be bridges connecting the arsenal with the mainland. It will be seen, therefore, that the care of the bridges and the maintenance of the dam, amounting to $25,000, alone amount to more than the cost of the coal used at the Frankford Arsenal. But when the cost of the steam coal, viz, $12,000, used at the Rock Island Arsenal is considered the difference in favor of the Frankford Arsenal is much greater.

It is believed that the manufacturing output of the Frankford Arsenal is only slightly less than that of the Rock Island Arsenal. The aggregate of the amount of the completed orders and of the uncompleted orders at the close of the last fiscal year was slightly larger for the Frankford Arsenal than for the Rock Island Arsenal, although the amount of the completed orders was considerably less in the case of the Frankford Arsenal. It is interesting to know that the cost of fuel at the Frankford Arsenal amounts to only nine-tenths of 1 per cent of the value of the articles manufactured thereat. The fuel cost is therefore very negligible.

GOVERNMENT GIVES AWAY WATER POWER.

2. But the preceding considerations are an insufficient basis on which to determine the cost of the power developed by water at the Rock Island Arsenal. This Rock Island Arsenal water power dates from 1837, when a charter was granted to private parties to build a dam across a branch of the Mississippi River at Rock Island. The dam was actually built in 1841 and 1842, but apparently until 1865 the different owners of this water power were continually in financial difficulties, when it was acquired by the Moline Water Power Co. By a joint resolution of Congress, approved March 2, 1867, the Secretary of War was authorized to purchase from the Moline Water Power Co. its title to the water power, on the condition that the United States would develop the water power and furnish one-fourth of it to this company free of charge.

The development of this water power since that time has actually cost the United States the large sum of $1,624,750, and in addition Congress has made appropriations for extraordinary repair to this water power within the same period in the sum of $246,150. A list of the various acts in which the above amounts were provided for is given as an appendix to this paper. The annual interest charge on the cost of the development of this water power at 3 per cent is $48,742.50, and on

adding to this amount the $12,500 appropriated annually for the maintenance of the water power, we have a total annual charge of $61,242.50. It is understood that the Rock Island Arsenal takes about 1,600 horsepower from its water-power plant. Assuming that this quantity of power is taken daily throughout the year, it follows that 2,960,000 kilowatt hours are taken in electrical energy from this source of power. The annual interest charge for this quantity of energy being $61,242.50, it follows that the cost of a kilowatt hour of electrical energy as furnished by the water power at the Rock Island Arsenal is 2 cents. This cost is probably the highest in this country, when interest charge alone is considered. But the operating charges of a power plant comprise not only the interest charges but also the wages of engineers, oilers, and so forth, depreciation, and insurance. If these items were added to the above cost, it would probably make the cost of electrical energy at the Rock Island Arsenal at least 2½ cents per kilowatt hour.

STEAM VERSUS WATER POWER.

There is a general impression that since there is no charge for water in a water-power plant the cost of the energy derived from such a plant is nominal. As a matter of fact, a steam plant having a capacity of 2,000 kilowatts has been constructed for $60 per kilowatt, or $120,000 for the entire plant. Such a plant would furnish all the energy that the Rock Island Arsenal is now taking from its water power. There is no reason, however, to doubt that a steam plant having a capacity of 2,000 kilowatts can not be constructed for $200,000. It follows, therefore, that had a steam plant been constructed at the Rock Island Arsenal instead of a dam the cost of power would have been at least one-half, and probably less, than it is now costing to produce. It is understood that the Commonwealth Edison Co., in Chicago, is producing electrical energy at about six-tenths of a cent per kilowatt hour, or about one-fourth of what it is probably costing at the Rock Island Arsenal, but larger and more economical mechanical units for generating electricity are used by this company.

The above discussion does not take into consideration the fact that the Rock Island Arsenal is on an island, and it was so placed in order to utilize the water power developed by the Mississippi River. For the construction and repair of the bridges between the Rock Island Arsenal and the main land Congress has appropriated since 1869 the huge sum of $1,310,550, and the various acts and amounts are given in the appendix to this paper. As stated above, Congress also appropriates $12,500 annually to maintain these bridges.

The advantages, therefore, of the Rock Island Arsenal in regard to obtaining free water power from the Mississippi River are not as great as they apparently appear to be; and, in fact, Rock Island Arsenal possesses no economical advantages whatever by reason of its water power, when the cost and maintenance thereof are considered. It might be very advantageous as an economical proposition to abandon the water power and to generate its electricity by a steam plant.

FRANKFORD ARSENAL ECONOMIES.

2. The economies of the Frankford Arsenal are based on many considerations, one of which is its magnificent location in the largest manufacturing city in America, which makes it easily accessible to a large skilled-labor market and to its sources of supplies. In this respect it has marked advantages over the Rock Island Arsenal.

3. The Frankford Arsenal, in regard to procurement of skilled labor, is located in a territory comprising Philadelphia and Camden, which had a combined population in 1910 of 1,643,546. The Rock Island Arsenal is located in a territory comprising Rock Island, Moline, and Davenport, and all three cities had a combined population in 1910 of 91,562, or about one-eighteenth of the population of the territory in which the Frankford Arsenal is located. It is generally recognized that the Frankford Arsenal, by its location, has access to about 250,000 skilled workmen. It is doubtful if the Rock Island Arsenal has access to more than 15,000 skilled workmen. These figures show the enormous advantage that the Frankford Arsenal has in regard to the procurement of skilled labor over the Rock Island Arsenal.

4. The Frankford Arsenal, in regard to procurement of material for manufacturing purposes, compares most favorably with the Rock Island Arsenal. The Frankford Arsenal in the manufacture of ammunition utilizes largely brass, steel, and explosives. The brass comes mainly from Connecticut, which is about 150 miles distant, whereas the Rock Island Arsenal is nearly 1,200 miles from the same source of supply. The Frankford Arsenal procures steel largely from Bethlehem and Reading, which are only about 60 miles distant, whereas the Rock Island Arsenal is nearly 1,000 miles from the same source. The latter arsenal could probably, however, obtain steel from Gary, Ind., and Pittsburgh, Pa., which are 210 and 650 miles distant, respectively. The Frankford Arsenal procures explosives from Carneys Point and Picatinny Arsenal, N. J., which are located about 30 and 140 miles, respectively, distant, whereas the Rock Island Arsenal is located over 1,000 miles from these same sources.

BASE OF OPERATIONS NEARER FRANKFORD.

5. All the important experimental work of the Bureau of Ordnance of the War Department is conducted at the Sandy Hook Proving Ground, such as testing cannon, carriages for cannon, and artillery ammunition. This work is of the utmost importance, and it is conducted by disinterested officers, who have nothing whatever to do with the manufacture of the materials so tested. The Sandy Hook Proving Ground is located at the entrance of New York Harbor, and is 122 miles from the Frankford Arsenal. If the manufacture of artillery ammunition was conducted at the Rock Island Arsenal, it would mean that such material would have to be shipped 1,100 miles to obtain that independent test by disinterested officers.

6. Philadelphia is one of the principal seaports of the country, which gives the Frankford Arsenal a marked advantage not only for rail but also for water transportation. If the Frankford Arsenal should ever secure the adjacent Lennig property, the purchase of which has been recommended since 1875, ocean-going steamers could obtain their ammunition at the arsenal and distribute it to convenient seaports throughout the country. The Frankford Arsenal should supply all the eastern seacoast forts and interior Army posts within convenient distance at less cost than they can be supplied by all-rail routes from the Rock Island Arsenal. With the opening of the Panama Canal the Frankford Arsenal should supply the Pacific coast forts and posts and insular possessions in the Pacific at a very much less cost for transportation than can the Rock Island Arsenal.

GOVERNMENT APPROPRIATIONS FOR ROCK ISLAND ARSENAL.

7. The Rock Island Arsenal, as compared with the Frankford Arsenal, has received very generous treatment from Congress. During the past 10 years the Rock Island Arsenal received in the various acts for the sundry civil expenses of the Government, for repairs and improvements, the magnificent sum of approximately $975,000, whereas during the same period the Frankford Arsenal received only approximately $350,000. The Rock Island Arsenal has been provided with magnificent buildings, and only recently $250,000 was appropriated to equip one of them for the manufacture of war material. The buildings of the Frankford Arsenal are congested and many of them are merely frame buildings, which are insanitary, unsafe, and totally inadequate for the purposes for which they are being used. Some years ago the Rock Island Arsenal received a large appropriation for an armory, which is now shut down, and while this armory was in operation it shared with the Springfield Armory, in Massachusetts, in the manufacture of small arms for the Government. Apparently the congressional friends of Rock Island Arsenal now desire that it share with the Frankford Arsenal in the manufacture of ammunition, which has heretofore been confined solely to the latter arsenal.

ENORMOUS SAVING AT FRANKFORD ARSENAL.

8. It is a matter of record that the Frankford Arsenal saved $250,000 in 1912 on the introduction of improved shop management in manufacturing rifle ammunition. Its savings on existing orders for the present year in the manufacture of artillery ammunition over what the cost would have been had it been procured from outside manufacturers amounts to nearly $800,000, and had it been able to handle all the orders which had been given to outside manufacturers it would have made an additional saving of over $300,000. The Frankford Arsenal points with pride to the manufacture of rifle ammunition at $27 per thousand when it has been purchased from outside manufacturers at $38 per thousand, making a saving annually of at least $500,000 in this respect, and if the orders given to the outside manufacturers had been given to the Frankford Arsenal there would have been an additional saving of about $80,000. The Frankford Arsenal in the utilization of old materials during a period covering 18 months returned to the War Department about $700,000, and which arose from the skill of that arsenal in utilizing old, surplus, and scrap materials in manufacturing operations. Can the Rock Island Arsenal point to such a magnificent record of savings? Should these savings be made a basis for increasing the manufacturing plant at the Rock Island Arsenal when there is no evidence that similar savings would be affected there? The friends of the Frankford Arsenal know that if the Frankford Arsenal plant is increased to meet the increased demands for artillery ammunition, these savings will be made

as heretofore, but in larger quantity proportionate to the larger output, for its location and organization will remain the same as heretofore, and these are the factors that have attributed to its remarkable savings.

COMPARISON OF EXPENDITURES.

9. The value of the Frankford Arsenal plant is estimated to be $3,500,000, and this includes the value of the land not at its purchase price but at its present valuation. It is doubtful if the United States has expended for the purchase of the land, construction of buildings, and installation of machinery as much as $4,000,000. The expenditures made at the Rock Island Arsenal for the development of the water power, for extraordinary repairs made to it, and for the construction and repair of the bridges since the arsenal was established have amounted to at least $3,200,000, or very nearly the cost of the entire Frankford Arsenal plant. It has been stated that Congress has appropriated for the Rock Island Arsenal in all about $9,000,000. When it is considered that at the present time the value of the annual manufactures of the Rock Island Arsenal and the Frankford Arsenal are very nearly the same, it requires no such detailed information as is given in the preceding paragraphs to convince any business man that the Frankford Arsenal, producing the same value of manufactured articles annually at less than one-half of the capital investment, must be decidedly a more economical manufacturing institution, assuming that the management is equally skillful at both establishments.

Acts of Congress making appropriations for the development of the water power at the Rock Island Arsenal.

Act of June 27, 1866	$100,000
Act of June 8, 1868	80,000
Act of March 3, 1869	130,000
Act of July 15, 1870	200,000
Act of March 3, 1871	200,000
Act of June 10, 1872	110,000
Act of March 3, 1873	18,000
Act of June 23, 1874	5,400
Act of March 3, 1881	50,000
Act of August 7, 1882	100,000
Act of March 3, 1883	20,000
Act of July 7, 1884	18,500
Act of October 2, 1888	275,000
Act of August 30, 1890	101,000
Act of July 1, 1898	45,000
Act of March 3, 1899	21,350
Act of March 3, 1901	130,500
Total	1,624,750

Acts of Congress making appropriations for extraordinary repairs to the Rock Island Arsenal water power.

Act of October 2, 1888	$25,000
Act of August 18, 1894	30,000
Act of March 2, 1895	37,500
Act of June 4, 1897	28,150
Act of June 6, 1900	97,000
Act of May 27, 1908	28,500
Total	246,150

Acts of Congress making appropriations on account of the bridges at the Rock Island Arsenal.

Act of March 2, 1867	$200,000
Act of July 25, 1868	100,000
Act of March 3, 1869	500,000
Act of July 15, 1870	300,000
Act of March 2, 1889	35,000
Act of March 28, 1896	96,000
Act of June 11, 1896	10,200
Act of May 27, 1908	9,350
Act of March 4, 1909	60,000
Total	1,310,550

Naval Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. WILLIAM J. CARY,

OF WISCONSIN,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 23, 1914,

On the bill (H. R. 14034) making appropriations for the naval service for the fiscal year ending June 30, 1915, and for other purposes.

Mr. CARY. Mr. Speaker, Congress should allow the Navy Department to sell the battleships *Idaho* and *Mississippi* to Greece for any reasonable price they may be able to obtain; but I am strongly opposed, and I think this House should insist to the uttermost on rejecting the Senate provision that the money obtained from the sale of these two ships would be used for the building of one new ship of the dreadnaught type.

The reasons why the House should insist so strongly on rejecting this provision are of the most commanding and decisive character, and because of them the House should not yield upon any consideration.

The construction of the dreadnaughts we already have is known to every well-informed person on naval affairs to have been a great blunder; the building of any more such ships at this time may prove a disaster to the country.

England and Germany, who by their fierce rivalry for supremacy are driven to the necessity of having the best there is in battleships, are already beginning to substitute in their new construction the building of swift battle cruisers with the largest-caliber guns and high-explosive shells in place of the slow, cumbersome, costly, dreadnaught type which our Steel and Armor Trusts insist we should build, not for the national defense but for their profit.

It is high time the direction of the naval policy and the naval construction of the United States should be taken away from the Steel Trust and the Armor Trust. Apparently there is no other power in this country able to do this; hence it becomes the duty of Congress, and now is the time, right here, for Congress to put its foot down to make the change, by rejecting this part of the Senate amendment and instructing our conferees that the House will give no further sanction to the building of any more obsolete dreadnaughts until a thorough and competent investigation is made to disclose the true facts as they exist in our Navy at this time.

I am convinced, and I believe many of the other Members of this House are convinced, that both the Congress and the people of the United States have been deliberately deceived, through the machinations of the Steel and Armor Trusts, as to what the true facts are in regard to our naval situation. I am further convinced, and I believe other Members of this House are convinced, from facts that have come to their knowledge, that foreign Governments and foreign experts know far more about our Navy and its strength, or rather its weakness, than does our Congress, which appropriates from the Public Treasury the millions of money to build this Navy, or than do our citizens, who bear the burden of taxation to pay for its construction.

Witness the following from one of the greatest naval experts of Europe, Gerard Finnes. He says in an article published in the London Graphic:

There are a hundred indications which show that a collision between Japan and the United States is approaching. The Americans live in a fool's paradise in this matter.

The Japanese are full of contempt for American brag and bounce for the lack of national spirit or even of true nationality. They have a profound disbelief in the war-worthiness of the American Navy and an acute realization of the fact that the strategical situation is overwhelmingly in their favor.

It is objected that the Japanese are too poor to fight. When will people realize the fact which all history teaches—that it is the poor nations which fight? Japan is rich enough to afford war, because, directly or indirectly, she will make war pay for itself. Japan will fight very much for the same reason that prompted Bismarck to fight France.

The war will be for the consolidation of the yellow peoples. The Chinese despise force, but readily yield to the fear of it. Japan has beaten the most aggressive of the white powers already; victorious over another, she will appear to her huge neighbor invincible. The United States offers at once the most practicable and the surest prey.

In addition to the instructions given our Secretary of the Navy by the Senate amendment, modified as I have proposed, we should also incorporate in this bill strict instructions to the Attorney General to begin an immediate prosecution of the Steel Trust and Armor Trust to recover from them the damage and loss which the Government has suffered as a result of the frauds and conspiracies in violation of the law which they have practiced against this Government, much evidence of which is already in the hands of the Government; and absolutely conclusive evidence can be easily produced through the passage by the House and Senate of the witness-bill amendment which I proposed to the naval bill in this House only a short time ago.

In dealing with military affairs and matters of the national defense there is no time for hesitation and doubt, "lest we wake the drumming guns that have no doubts."

We have too long permitted our subservient and spineless Attorney General to shield these treasonable criminals from the stern punishment their acts deserve.

The Secretary of the Navy has admitted in his letter to the Senate in June, 1913, and in his testimony before the House committee in January, 1914, that he has full knowledge of the treasonable and plundering conspiracy by which the Steel Trust and the Armor Trust are robbing the Government and endangering the safety of the country in time of war; yet he goes on squandering several hundreds of thousands of dollars daily of

the Government's money on a program directed by these criminal trusts instead of doing his duty in asking Congress for authority to produce and protect witnesses and insisting that his colleague, the Attorney General, proceed with the prosecution of the Armor Trust criminals.

I therefore repeat my demand that the Attorney General should either attend to his duty to prosecute the Armor Trust or resign. We do not need new trust laws; we need a Secretary of the Navy who will act and a new Attorney General who attends to his duty and enforces the existing antitrust laws.

The Psychological Conditions of Democracy.

Every day since this Democratic administration went into power mills and factories have closed.
Every day the number of the unemployed has increased.
Every day more than 10,000 men have been forced into idleness.
Every day the wage earners of this Nation are losing more than $5,000,000.
Every hour that Woodrow Wilson has been in the White House the business of this Nation has decreased more than a million dollars.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HUMPHREY,

OF WASHINGTON.

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, June 23, 1914.

Mr. HUMPHREY of Washington. Mr. Speaker, in my speech in New York June 18, 1914, in discussing the present Nation-wide business depression, I said:

"PSYCHOLOGICAL" CONDITIONS.

The Democratic Party went into power upon the general promise that they would better conditions that had existed in this country under Republican rule. For years they had preached that labor was oppressed, that business was shackled, and that if the Democratic Party once went into power it would reduce the cost of living, increase wages, bring business expansion, and widen our markets. They went into the campaign joyfully preaching the doctrine of the "new freedom." The President declared that what the men of this Nation needed was to sharpen their wits in competition with the rest of the world; that what was needed was to break down the tariff wall and go out and conquer the earth.

Well, we have had now a little more than six months' experience under a Democratic tariff law and the "new freedom," and what is the result? Will any man in this Nation outside of a padded cell or a Democratic office say that he would not like to change the conditions that exist to-day for the conditions that existed for 16 years under Republican rule?

Remember, that while the Democratic Party went into power on the 4th day of March, 1913, that the Underwood tariff law did not go upon the statute books until the 3d day of October, 1913. However, the shadow of Democracy had its effect upon business even before President Wilson was inaugurated. Here are some of the results of a Democratic administration that was to bless the Nation with unexampled prosperity:

I compare 1913 and 1912, although during 1913 we had but 3 months of the Democratic tariff law and 10 months of Democratic administration, but even that much Democracy is strikingly different in the results.

The bank clearances in 1912 were $4,175,000,000 greater than in 1913.

The number of corporations recorded in 1912 was $713,000,000 more than those recorded in 1913.

On the last day of January, 1913, the United States Steel Corporation had orders for 7,850,000 tons of steel. On January 1, 1914, it had orders for 4,250,000 tons. On the 1st day of this month it had orders for 3,998,000. What could tell a more distressing story?

Steel is one of the great business barometers of the Nation. To-day more than one-third of the steel mills in the entire country are closed.

To-day the steel production in this country is 40 per cent below normal.

To-day there are $150,000,000 invested in idle steel mills.

To-day there are a million idle men in the iron and steel and associated industries, representing a daily pay roll of more than $2,000,000.

To-day there are 275,000 miners in this country out of work that in Republican times were earning $750,000,000 annually.

To-day there are 242,000 idle freight cars, the largest number in the history of this Nation. When the Republican Party went out of power there were none.

To-day there are more than 500,000 railroad men out of employment that were receiving more than a million dollars a day in wages when Woodrow Wilson was inaugurated.

To-day the wage earners of this Nation are losing more than $5,000,000 every 24 hours.

In six months the Democratic administration has wiped out an annual pay roll of more than $800,000,000.

This $5,000,000 each day has been taken from the ordinary channels of trade. This has brought depression and financial ruin to every business and to every section of the country. This $5,000,000 in wages daily taken from the working people of this Nation means that the workmen of this country are spending $5,000,000 less each day for bread and clothes and the other necessaries of life than they did a year ago.

There are 300,000 idle men in New York, 200,000 idle men in Chicago, 100,000 idle men in Pittsburgh, 25,000 idle men in San Francisco. We are facing the awful problem of unemployed everywhere. There are more idle men in this Nation to-day than ever before.

Every day that the Democratic Party has been in power we have bought more from the foreigner and sold him less.

Every day we have lost in our foreign trade more than half a million dollars.

Every day the Nation has gone in debt half a million dollars.

Every day the number of unemployed has increased.

Every day mills and factories have closed.

Every day since this Democratic administration went into power more than 10,000 men have been forced into idleness.

Every day the wage earners of this Nation are losing more than $5,000,000.

Every hour that Woodrow Wilson has been in the White House the business of this Nation has decreased more than a million dollars! This is the price of Democracy. This is the price that the people pay to have the affairs of this Nation controlled by academic doctors and efficiency experts, by gowned theorists and scholarly dreamers, by pedantic pundits and Chautauqua performers, by learned illusionists and grape-juice statesmen.

But we are told that all this is merely psychological. The President has assured the country that what it needs is more legislation. He has assured the country that there is nothing wrong with Democratic administration or with Democratic laws. The only difficulty is that the business men of the Nation are too stupid to appreciate the blessings that have been bestowed upon them. The only remedy proposed is to give them more of what they have already received. The President has served notice on the country that Congress is to be kept in session all summer to enact further legislation that will practically destroy what little business is left.

It may be psychological, but it is a truth that no candid man can deny that every day that Congress stays in session that business grows less. The greatest blessing that this Congress could possibly bestow upon the country would be to adjourn and never meet again. What this Nation needs is more prosperity and less law. There is this slight consolation, however, that while Congress is in session destroying the business of the country they are also destroying what remains of the now discredited Democratic Party. The business men of the Nation have appealed in vain to the President to stop further legislation, but his reply has been that they simply imagine that they are being injured.

Business men see their markets gone, their factories closed, but they should not complain. Let them read a chapter on the New Freedom.

They see the foreigner with his products made by foreign cheap labor coming into this country and driving them from the market, but why should they complain. Let them read an essay on "free trade."

The business men of this country are daily selling less abroad, are daily selling less at home; daily the foreigner is increasing his sales in this country; but why should our business men complain? Let them listen to a lecture on "efficiency."

The business man looks upon the closed factory, the dying fires, the idle men, the poverty, upon the vast army of unemployed, but let him be of good cheer, let him read our new "constitution of peace" and be comforted.

What the hungry want is not bread but more law.
What the naked want is not more clothes but more statutes.
What the idle need is not work but more legislation.
What capital needs is not investment but legal confiscation.
What the Nation needs to-day is not prosperity but a cheerful state of mind.

What the people of this country need is the faith cure. They took it last election, and it cured their faith in the Democratic Party forever.

Poverty, want, hunger, idleness, and rags. These are not pitiful facts; these are not awful realities; these are but the figment of a fevered and uncultured imagination unable to grasp the eternal verities of the "new freedom" and the splendid truths of the new "constitution of peace."

Surely this Nation to-day is reaping the reward of being directed by the impractical, the dreamer, the reformer, the uplifter, the scholar, and the theorist.

This is the day of the triumph of the "intellectual unintelligent."

Yes; all our troubles are "psychological." But is death by fear any more delightful than when the terror comes in any other form?

"Psychological" is a blessed word. There is none with which it can be compared. "Charity covers a multitude of sins," but "psychological" in its beneficent elasticity covers the measureless multitude of Democratic blunders.

CAPTURING THE MARKETS OF THE WORLD.

Under the Underwood tariff law that brought to us the benign blessings of the "new freedom" we were to go forth and capture the markets of the world. We have had our wits sharpened by competition with the rest of mankind. It would appear to be the part of wisdom to stop and see how the Democratic tariff law has worked.

In my own State the new Democratic tariff law immediately closed more than 60 per cent of our shingle mills—threw 8,000 men out of employment—and these mills are closed to-day. It immediately opened the mills of British Columbia that for months had been closed, and they have been running full capacity ever since; and 95 per cent of their output is sold in the United States. The price of shingles has not been reduced to the consumer. We now pay the same price for foreign shingles that we paid for those produced in this country.

More than $2,000,000 in wages each month is now being taken from the American workman in this country and given to the Chinaman, the Japanese, and the Hindu in British Columbia.

During the first six months of the present Democratic tariff law 33,000,000 pounds of tin plate, valued at $1,034,000, was imported into this country, ten times as much as was brought into this country during the last six months of the Republican tariff law.

This Nation during the six months under a Democratic tariff used less tin plate than it had during the last six months under a Republican tariff. This means $1,000,000 in work and wages taken from the men who work in industries of this country and given to foreign labor.

Thousands of tons of foreign steel manufactured by foreign cheap labor are going into San Francisco and Seattle.

Thousands of tons of pig iron are coming into these ports from China produced by labor paid from 6 cents to 8 cents per day.

LABOR TAKEN FROM THE AMERICAN AND GIVEN TO THE FOREIGNER.

Thousands of tons of cotton ties are going into the ports of Galveston, New Orleans, and Savannah to be used by the southern cotton planter.

During the last month of the Republican tariff law the Pittsburgh Steel Co., that manufactures cotton ties, paid to its workmen $194,000 every two weeks. Now it pays to these workmen $14,000 every two weeks. The rest of this pay roll—$180,000 every two weeks—has been taken from them and given to the foreigner. More than 3,000 men that worked for this company are out of employment wondering how they are going to earn their daily bread.

Only a few days ago the National Tube Co., of McKeesport, Pa., closed, throwing out of employment 2,500 men. Their work and their wages have been taken from them and given to the foreigner.

During the first three months of 1914, under a Democratic tariff law, our sale of cotton goods to the foreigner decreased $1,200,000. Our purchases during the same period increased $2,100,000, or a balance in favor of the foreigner of $3,300,000.

During the first three months of 1914 our imports of woolen and worsted goods were $7,664,370 under a Democratic law.

During the first three months of 1913 they were $2,254,010 under a Republican tariff, or a balance of $5,410,360 in favor of the foreigner in three months.

In three months after the Underwood law went upon the statute books Bradford, the great woolen and worsted center of England, increased its sale of these goods to the United States 280 per cent.

Comparing this year with last year, during the month of March, the amount sold abroad at the port of New York alone decreased $11,000,000.

During the month of April at the same port it decreased $12,000,000, or a loss in our foreign markets of $23,000,000 in two months at this one port.

Imports increased for the same two months in the port of New York alone over $26,000,000. In other words, during March and April of this year under this Democratic tariff law that was to give us the markets of the world the balance in favor of the foreigner at the port of New York alone was $46,000,000, or to put it in another way, the Democratic tariff law now upon the statute books we are losing our foreign markets at the rate of $276,000,000 per year through this one port.

Our tremendous loss of trade is shown more strikingly still when you remember that our imports of material used in manufacturing has decreased in the first six months under the Underwood law more than $48,000,000. Each month since then the figures show a still greater loss of foreign trade.

During April, 1914, the last month for which figures are available, as compared with April, 1913, we bought from the foreigner $36,000,000 more and sold him $37,000,000 less, or a balance in favor of the foreigner in a single month under the Democratic law that was to give us the markets of the world of $73,000,000.

During the first six months of the Underwood law our foreign trade decreased more than $100,000,000 as compared with the first six months under the Payne law.

Our imports since the Underwood law has gone upon the statute books in six months has increased 37 per cent. Our exports during the same six months under the Underwood law have decreased 31 per cent. Our loss to the foreigner in six months of 68 per cent. This shows how we are capturing the markets of the world under the "new freedom." This shows the result of sharpening our wits in competition with the cheap labor of foreign nations.

Let it not be forgotten that the people of this country are not buying any more than they did a year ago. In fact they are buying less, so that all this increase in imports means that much less work done at home, and all our loss of exports means that much less work done at home.

It is estimated that every million dollars' increase in imports and every million dollars' decrease in exports means a thousand idle men in this country.

How can anyone look upon these figures and see how we are increasing our purchases from abroad and decreasing what we sell abroad and fail to understand the reason for closed mills, idle factories, and the millions of unemployed? Who but the President can look upon these conditions and contend that they are simply "psychological"?

Let us look upon the new tariff for a few moments as a revenue producer. I find that during the first six months of the new tariff law, as compared with the old tariff law, that our revenue has decreased $25,000,000. During the same period the excess of expenditures over receipts has been $37,000,000. During the same period last year, under a Republican tariff, the excess of receipts over expenditures was $7,500,000, or a balance in favor of a Republican tariff law in six months of $44,500,000.

Every day this Democratic Congress is expending more money than the Nation is receiving. I predict that it will be but a few months more until we will have to again issue bonds to raise money to pay the running expenses of the Government, a thing that has not been done since the last Democratic administration under Grover Cleveland. A Democratic administration and an empty Treasury! What memories of the past those words recall. History again repeats itself.

Resolutions Relative to Mexican Policies.

EXTENSION OF REMARKS

OF

HON. JAMES B. ASWELL,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 22, 1914.

Mr. ASWELL. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing resolutions indorsing the President's Mexican policies, a letter from Gen. John Floyd King transmitting the resolutions, and the President's reply to same.

Mr. Speaker, no body of men ever defended the principles in which they believed with greater courage and daring; no body

of men on earth are now more ready to defend the flag of this united country and to give themselves in her service. In case of war they and their sons would be among the first to go to the front. This House honors itself by giving these heroes this recognition.

[United Confederate Veteran Association. Gen. Bennett H. Young, Louisville, Ky., commander in chief.]

LOUISVILLE, KY., *May 18, 1914.*

HON. WOODROW WILSON,
President of the United States, Washington, D. C.

MY DEAR MR. PRESIDENT: At the twenty-fourth reunion of the United Confederate Veterans, held at Jacksonville, Fla., on the 6th, 7th, and 8th of May, 1914, the following action was taken, and the committee on resolutions, Gen. W. B. Haldeman, of Kentucky, being chairman, reported this resolution:

"Whereas the present unsettled condition of the Commonwealth of Mexico appears likely to involve some action on the part of the United States: Be it

"*Resolved*, That this convention of United Confederate Veterans recognizes the great wisdom and discretion of the President of the United States, and will heartily support such action as he shall take, in every possible way; and be it

"*Further resolved*, That a copy of this resolution be transmitted to the President by the commander in chief of the United Confederate Veterans."

By Gen. John Floyd King.

I have directed Gen. King, the author of the resolution, to deliver this communication to you.

With assurances of my profound respect and regard, I am,

Very truly, yours,

BENNETT H. YOUNG,
Commander in Chief, United Confederate Veterans.

—

[United Confederate Veterans. Charles Broadway Rouss Camp, No. 1191, United Confederate Veterans, Col. Samuel E. Lewis, commander.]

WASHINGTON, D. C., *June 8, 1914.*

HON. WOODROW WILSON,
President of the United States.

MR PRESIDENT: As directed by Gen. Bennett H. Young, commander in chief of the United Confederate Veteran Association, I have the honor to deliver to you in person the accompanying communication from Gen. Young, embracing a series of resolutions unanimously adopted by the Confederate veterans, in convention at their reunion held recently at Jacksonville, in the State of Florida, indorsing your attitude toward the Republic of Mexico.

In order that the importance and far-reaching force of the foregoing organization may be more clearly seen and more fully appreciated, I will state, on authority, that it embraces practically all soldiers and sailors of every rank and grade of the Confederate States now living. These number some 45,000, and are all of those renowned warriors that remain on earth. For valor, endurance, and fidelity, writers tell the world they have never been surpassed in annals of history.

In the serious condition which confronts you in dealing with the Republic of Mexico in her present state of internecine strife, bloodshed, and war these men, tried and true, come forward unsolicited, and pledge you, the President of the United States, in all they have, to support you "in every possible way."

In addition to the "veterans" themselves, there are the Sons of Confederate Veterans, the United Daughters of the Confederacy, and the Confederated Southern Memorial Association, junior cooperative organizations, bringing up the total number under the direct influence and in sympathy with the veterans to hundreds of thousands, all in support of you, Mr. President.

But this is not all; these veterans at this critical moment pledge you the sympathy and support of their wives and daughters and the support of their sons, and all within the orbit of their lives—home and abroad. In the latter they have many scions, all loyal and devoted to the cause which you represent—the cause of our country.

The United Confederate Veteran Association covers the States of Virginia, North Carolina, South Carolina, Georgia Florida, Alabama, Mississippi, Louisiana, Arkansas, Tennessee, Kentucky, West Virginia, Missouri, Maryland (District of Columbia), Oklahoma, Texas, north and west divisions, and the Pacific division. It consists of 1,790 camps, divided into 18 divisions and 54 brigades, composed strictly of soldiers of an army of imperishable fame.

These, with their powerful auxiliaries set forth above, constitute the controlling moral and intellectual and, consequently, the physical control of the public judgment of the whole South and beyond. And in your dealing with the Republic of Mexico in her present unhappy, distracted, and desperate state, Mr. President, these vast forces of our country united pledge you their unqualified, their undying support.

In this connection, it may be well to mention here that the United Confederate Veteran Association is a national organization, the purposes of which are wholly benevolent, historic, and patriotic, all subjects that may be considered political being inhibited by constitutional provision, a provision adhered to rigidly.

Wishing for your administration all the glories of triumphial success, Mr. President, and for you and the members of your household every blessing of health, I have the honor to be, sir, with greatest respect,

Your humble and most obedient servant,

JOHN FLOYD KING,
United Confederate Veterans.

Address: P. O. Box 126, Washington, D. C.

—

THE WHITE HOUSE,
Washington, June 17, 1914.

GEN. JOHN FLOYD KING,
P. O. Box 126, Washington, D. C.

MY DEAR GEN. KING: Thank you sincerely for your letter of June 8 inclosing the letter from Gen. Young, transmitting the resolutions of the reunion of the United Confederate Veterans. Such things are enough to hearten any man, and I am deeply appreciative of the patriotic action taken at the meeting.

Cordially and sincerely, yours, WOODROW WILSON.

Sundry Civil Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. AUGUSTUS P. GARDNER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
Monday, June 22, 1914,

On the bill (H. R. 17041) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. GARDNER. Mr. Speaker, on December 8, 1913, I introduced the following resolution:

Resolved, That the Secretary of the Department of Labor be directed, if not incompatible with the public interests, to send to the House of Representatives a statement showing the number of aliens arriving at ports or places in the United States during the month of October, 1913, who were certified by the surgeons of the Public Health Service as being physically or mentally defective; also a statement showing the nature of the defects so certified; also a statement of the final disposition of the cases as to admission or exclusion.

By arrangement with the chairman of the Committee on Immigration this resolution was submitted informally to the Department of Labor instead of being acted upon in the House. In response to this resolution, the table which follows was prepared by the Bureau of Immigration and transmitted to Mr. BURNETT, of Alabama, chairman of the Committee on Immigration and Naturalization. The month of October was specified at random in my resolution. My object was to get statistics for a sample month which would show the average number of times that the examining medical officer is overruled by the Secretary of Labor in the case of appeals taken by physically defective aliens seeking admission to the United States.

As a member of the Committee on Immigration when the immigration law was remodeled in 1906–7, I have no hesitation in saying that the understanding as to the meaning of section 10 has been distorted not only by this administration of the Bureau of Immigration but by previous administrations as well. Section 10 of the act of February 20, 1907, reads as follows:

That the decision of the board of special inquiry, hereinafter provided for, based upon the certificate of the examining medical officer, shall be final as to the rejection of aliens affected with tuberculosis or with a loathsome or dangerous contagious disease or with any mental or physical disability which would bring such aliens within any of the classes excluded from admission to the United States under section 2 of this act.

The Bureau of Immigration has construed the word "solely" into this section between the word "based" and the word "upon." Under rule 17 of the Immigration Bureau, when the examining medical officer certifies that an alien is physically defective, that alien is permitted to take an appeal to the Secretary of Labor unless he was excluded solely on account of the certificate of the examining medical officer or unless he is afflicted with tuberculosis or a loathsome or dangerous contagious disease or is mentally defective.

Three thousand seven hundred and fifty-nine aliens who were certified by the medical officers as suffering from physical defects which must exclude them under the law had their cases acted on last October. Of this number the Secretary of Labor landed the incredible number of 2,650.

Now, who is to blame for this state of affairs? Why has the wish of Congress and the people of the United States that physically defective aliens should be excluded been set aside? Why have appeals been granted when the laws forbids appeals in the case of physically defective aliens seeking admission into the United States?

Individual Congressmen are to blame in the first instance, and I acknowledge my own share of the guilt. We pass stringent laws and then we hurry around to the Bureau of Immigration and try to get the stringent laws relaxed to meet the wishes of some constituent who seeks to land a member of his family in defiance of the certificate of the medical examining officer. This has been going on for years, and I am afraid that the evil practice of overruling examining medical officers is growing.

The first step in the wrong direction was made a good many years ago when the Bureau of Immigration construed the words "solely" into section 10 or the corresponding section of some previous immigration law. Since that time more and more it has become the custom for aliens to appeal against an exclusion decision based on the certificate of the examining medical officer, and more and more it has become the custom for Congressmen to back up these appeals. At least such has been my personal experience.

I should have no objection to these appeals if they were all decided on the same principle and were all decided in compliance with the spirit of the law. The fact is that such is far from being the case. One appeal may be decided by the Secre-

tary. The next appeal may be decided by the Assistant Secretary. The next appeal may be decided by the Solicitor, acting as Secretary. These gentlemen's views are extremely divergent as to the general question of the restriction of immigration. Unquestionably their decisions are biased by their personal views and sympathies. The same state of affairs has obtained in previous administrations. What is the result? The result is that every kind of bad precedent in the way of handling an appeal is now a matter of record. If Secretary Wilson, for instance, is inclined to disapprove an appeal, he is confronted at once with a parallel case in which the certificate of the examining medical officer has been overruled either by one of his predecessors or by one of their subordinates acting in his name. The following is the table for the month of October prepared by the Bureau of Immigration:

Statistics of aliens arriving in the United States during the month of October, 1913, who were certified as being physically or mentally defective to a degree to exclude them under the law.

	Defects listed in 24 general classes.	Certified during month.	Remaining from previous month.	Total to be accounted for.	Deported.	Landed.	Remaining at end of month.
1	Senility	720	46	766	37	703	26
2	Poor physical development and deformities	990	200	1,190	280	834	96
3	Hernia	306	83	389	192	157	40

The Late Representative Sullivan, of New York.

MEMORIAL ADDRESS

OF

HON. HERMAN A. METZ,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, June 21, 1914,

On House resolution (H. Res. 549) paying tribute to the memory of Hon. TIMOTHY D. SULLIVAN, late a Member of the House from the State of New York.

Mr. METZ. Mr. Speaker, TIMOTHY D. SULLIVAN was a self-made man, therefore an imperfectly made man. It is God alone who can make man in His own image, though many a worse man than SULLIVAN has plumed himself on having done the job in his own complacent person. SULLIVAN got only so far as the sympathies—these he did develop until they became and continued a fountain of good. Is it not said that much must be forgiven of him who loved much?

This deep tenderness of heart was a main trait of his. I remember that in 1905 we were fellow passengers on the *Campania*. It was his first trip abroad. Night was falling as we approached the coast of Ireland. Already the home lights twinkled against the shadow of the land. He came up behind me and laid his hand on my shoulder, and stood silently gazing. At length he said, "I would give all I have in the world if my mother could be here in my place to see old Ireland."

SULLIVAN was the child of an unknown country, though situated in the very heart of the metropolis of the Western Hemisphere; of a far country, more remote from Fifth Avenue than Paris, though distant but a few blocks away. He was the child of the East Side of New York, that dense, ignorant, heterogeneous district of every people and every tongue and yet the melting pot, the forcing ground, whence issues stalwart Americanism; and yet the spot where the flag is saluted with intensest fervor and the ideals of liberty receive the most devout adoration.

In its stifling heat, its piercing cold, its pervasive penury, its dearth of comforts which to so many mean civilization, SULLIVAN grew from a rough boyhood into a burly manhood, always developing along the lines of his environments, until he became a very part of them, a very type of them—master of the masses with whom he lived through his perfect understanding and his absolute sympathy. He knew and could act, while they could only feel. And there, as everywhere else in this country, it is attributes and not advantages that make American success.

And he had the striking, winning attributes of his environments, had TIMOTHY D. SULLIVAN. He was handsome of countenance, stalwart of frame, gracious of manner, ready of wit, as quick in comprehension as he was responsive in action. Those diverse people, so pressed and oppressed by need and want, too often dumbly endured, as their European forefathers had been trained to do. Ignorance made them doubtful and suspicious. Heredity and experience made them fearful of civic authority. The law—it was not for them, except to persecute and punish. In their stress they turned to SULLIVAN as to their natural leader, bone of their bone, flesh of their flesh, a very part, but a superior, potent part; relying unreservedly on his knowledge, his wisdom, his generosity, his power, and, above all, on his loyalty. They believed with supreme faith that whatever the trouble he would remedy it, bringing to it the swift, competent attention of that go-after-it, do-and-get-done-with-it spirit which I venture to assert is a characteristic of the much-maligned New Yorker.

And he never failed them, did TIMOTHY D. SULLIVAN. He gave bread, he found work, he paid the rent, he cared for the sick, he buried the dead, he protected the unfortunate, he sought mercy for the criminal. He was a little father, a tribune of the people, a feudal chieftain. We often hear of the hopelessness of the submerged tenth—the men who are down and out. Well, SULLIVAN always had hope for the least of these. They might be down in the lowest depths, but there was always a way out through him.

Of course he got his reward—the implicit obedience, the unfaltering following; but it was a willing, a glad reward. Of course such autocratic leadership, such extralegal, if not lawless, power, such an imperium in imperio, in fine, was anomalous to our institutions and repugnant to our ethics; but it was practicable; it ameliorated conditions that otherwise would have remained heart-rending. Of course, too, as public and private agencies have become more effective and far-reaching, the crying but unheeded needs that made him and his career possible now receive organized attention. A change for the better this—yes; though the quick heart of the unfortunate turns more readily to the publican than to the Pharisee.

Thus TIMOTHY D. SULLIVAN has no successor; he was the end of his line. Yet in a sincere, if narrow, sense he was a true Representative. He stood for his people every time.

And every time his people stood for him; nor has death slackened the tenseness of their affectionate allegiance. Already he is the hero of a legend, immortalized in folklore. The good that he did lives after him; the evil is interred with his bones. The highest memorial of TIMOTHY D. SULLIVAN is the love of the multitudes who came to him for help, and who never came in vain.

Democracy in Banking.

EXTENSION OF REMARKS
OF
HON. FRANK PARK,
OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 25, 1914.

Mr. PARK. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD on the Federal reserve act, and to incorporate the instructive utterance delivered by the Comptroller of the Currency, Hon. John Skelton Williams, on May 13, 1914, before the annual convention of the North Carolina Bankers' Association, at Raleigh, N. C.

DEMOCRACY IN BANKING.

[Address of John Skelton Williams, Comptroller of the Currency, delivered before the annual convention of the North Carolina Bankers' Association, in the house of representatives at the capitol at Raleigh, May 13, 1914.]

Mr. President and members of the North Carolina Bankers' Association, about a week from now those of you who believe in the Mechlenburg declaration of independence will celebrate it. Maybe some of those who will celebrate will have doubts, and I shall not undertake to change those doubts to full faith or to confirm them. The Government assumes that I am to do a certain amount of work for it, and experience proves that he who becomes thoroughly involved and interested in discussion of the Mechlenburg declaration, whether for the affirmative or the negative, will have no time left for other matters. Whether Thomas Jefferson, of Virginia, borrowed his declaration from the work of a talented North Carolinian may be left, like that other question between the two States—of which sent to the front the gallant soldier whose lifeblood flowed highest on the heights of Gettysburg—for each man to decide for himself. In both those great events of American history there is honor enough for all the participants.

My purpose is to talk to you of a new declaration of independence, involving no shock of arms, no shedding of blood, no severance of ties, yet mighty in its consequences for the present and the times to come after. Nowhere in the world could such a theme be presented more appropriately than in the capital of a people who from the beginning of their history on this continent have been foremost in protest against error, evil, and oppression, most restless under injustice, most energetic in demand for freedom and the rights conferred by freedom and constituting it.

The new banking law, of which I, as Comptroller of the Currency, am asked to talk to you North Carolina bankers, is not only a declaration but a guaranty of the freedom of the financial and commercial interests of our country from the possibility of the rule of a small group of men, sometimes unknown, sometimes too well known.

It is a plan of decentralization and distribution, demanded by the expansion and growth of our Republic. It is not intended to injure anybody, and it will not injure any but those who insist on being injured; and let us hope that there will be none such. There is strength in voluntary and accepted unity, but there is none in servitude of units enforced by law. There is vigor irresistible in the willing combination of many for a common purpose. There is weakness and inevitable and infinite corruption in the concentration of power, which means tyranny on one side and enslavement on the other. We have been living in swaddling clothes, which have become fetters—tightened or loosened by a few strong hands. Alternately business has been stimulated to feverish and sometimes wild exertion, and given knock-out drops, reducing it to helplessness and the very appearance of death. We have grown, but the growth has been uneven and, therefore, sometimes unhealthy. Too often our prosperity has been of the kind that shows in statistics splendid aggregates, but is not felt or enjoyed by the average individual citizen.

The system we have endured through half a century hampered us, because it checked our growth and was unequal to our needs. It was dangerous—deadly dangerous—not only because it compressed control of our increasing resources and wealth into the keeping of a small number of individuals at certain great centers, but because it aided in the heaping up of vast fortunes, inciting discontent and resentment, the parents of revolution, the forerunners of destruction.

Poverty is not always felt acutely until contrasted with riches. Inequalities vividly evident are the worst foes of any Government, the surest evidence of its inadequacy, the urgent signals for its amendment. When nobody is swollen abnormally with riches, nobody feels pinched or is made angry or desperate by lack of them.

This new measure is part of a general and deep movement for a new life, new standards, new methods for the United States. A change is necessary and is coming, and common sense tells us to prepare ourselves and our affairs for it. When loans and discounts of the national banks in the 50 reserve and central reserve cities increase, as they have done, from $1,800,000,000 in 1903 to more than $3,000,000,000 in 1914, we surely need a banking and currency system with the capacity to stretch and give.

When a dozen men own among themselves $1,600,000,000, and through a system of interlocking directorates control as much more, directing an amount equal to the total currency supply for a hundred million people, we should realize that such power is a peril not only to our commerce and to the people at large but to the Government itself. I have heard it said those men have held this huge Republic by the throat; but if that statement is strong, we do know that under the conditions which have existed they could precipitate a panic or force artificial and injurious activity at their will. Working from ambush, seen by none, felt by all, they could have shaken the credit of the country so as to paralyze and make, in time of peace, ruin and desolation worse than war. There is no need to quarrel with these men. Considering what they could and might have done, we may say, as was said of Warren Hastings in India, we are astonished at their moderation.

Some of these commanders in chief of finance and captains of industry have proved that they had high patriotic instincts and came to the help of the Government and people in time of stress. Others had the sound wisdom to realize that their real prosperity and the stability of their great possessions were best promoted by reasonable prosperity and hopefulness among the masses of the people. Yet it is not right or safe that the happiness and hope of all these scores of millions of our citizens should depend on the mercy, the caprice, or the opinions of any 12, or 50, or a hundred men.

Some of the greatest fortunes, the magnitude of which takes the breath of the ordinary man and strains his imagination, are results of our system of banking and finance, of a protective tariff taxing many for the benefit of the few, and of laxity in the enforcement of laws, inadequate and feeble at their best. They are dangerous not only to the general body of the people but to their possessors, and it must be remembered that a huge mass of money does not always either prove or supply wisdom, and to the contrary sometimes upsets it.

There is a suggestion of cynical satire in the mythological story that King Midas, whose touch changed to gold everything upon which it fell, was given at last the ears of an ass. He prayed to the gods to relieve him of the rich but deadly faculty which forbade him even from eating food possible to digest. So men with the genius, the faculty, the instinct, whatever it is, for what we call making money, may well pray for a law, or dovetailing plan of laws, forbidding them from piling up money in quantities greater than any man can use comfortably or can be intrusted with safely.

There is no natural limit to greed and the ambition to acquire. If we can not provide artificial limitations, we can at least devise and provide plans to prevent centralization and to protect the public. As we have seen within the last few years men who have learned arrogant confidence in the overwhelming power of gathered gold have been led, perhaps almost imperceptiby to themselves, to use it for the mastery of politics and legislation. The man of the most ordinary mind must know that secret partnership between private capital and the machinery of government is far more destructive to both than could be any assault of either on the other. An open wound may be healed and a direct attack may be repelled; but hidden rot in the vitals will kill the strongest living thing, and poison saps the sources and roots of life.

We were led unseeing from the concentration of financial power to the concentration of political by the aid of financial power; from the interlocking directorates to the interlocking of the interests and influence of the concealed controllers of money, and the known leaders of political parties. We lived beneath a potent despotism we could not see or touch or quite understand, but which every man of us could realize and feel every day of his life.

We could see things done; effects were before us plainly. But we could not know how nor by whom they were done nor the processes by which the effects were produced. We stood on a gathering volcano of unrest. Observing men could note the symptoms and threats, but were bewildered in seeking causes.

No sane or patriotic man or party or administration desires to seek vengeance, to destroy, overthrow, or uproot. All sane and patriotic men will understand that the time has come to reconstruct, to rebuild on a better and broader plan than we have used heretofore. We need to replace the foundation, to discard the patchwork and false work on which we have operated. The strongest, surest, the deepest foundation possible for our financial structure is the confidence and assured safety and contentment of the people who do the voting, with whom rests the final decision—the ultimate giant power, which, blinded and strong, would pull away the pillars of the temple; which, seeing and working intelligently and hopefully, will help in our work of building those of us who are trying to build.

We have grown and prospered in spite of an imperfect, repressing, and perilous banking and currency system. We have grown as a vine sometimes forces its way through a crevice in a wall, our very growth inviting disaster and death, our wonderful vitality hastening catastrophe; because the more brilliant the flower and the more abundant the fruit the sooner must the withering be when the roots are among stones and can gather no new life. Over 50 years of growth under the old banking act has been forced by the generosity of the soil of a new land, by the unconquerable energy and resiliency of a virile and courageous people; yet it has been interrupted by periods of business depression and stagnation; our progress punctuated by panics, discreditable, appalling, to many ruinous. These have usually come at intervals of about 10 years, more or less, sometimes preceded by long months of sickening apprehension, sometimes foreseen by the farseeing, sometimes bursting upon us with dreadful suddenness. The immediate results, seen by all, have been crashing of banks and trusted commercial houses, the wholesale stoppage of industries, the wiping away or cruel draining of the results of honest thrift, denial to willing and hungry labor of the opportunity to earn bread and shelter.

We believe one of the most valuable and beneficial effects of this new banking bill will be to make such panics as we have had in the past virtually impossible. When there is confidence there can be no panic. The panic is, as its name signifies, fear, distrust. When the people know that their financial institutions are stable, that behind them stands a Gibraltar of solid assets, that checks will be honored on presentation, and that their deposits are safe, there is no fear or doubt. It is a familiar maxim that a bank is like a woman's reputation, likely to be injured by the faintest whisper. When the banks have behind them substantially the combined strength of all other banks, and supplies of currency ready to answer their needs, limited practically only by their valid values, malice can not invent nor credulity or ignorance accept reports to hurt or drag them down.

Nor will their credit or their lives any longer be held at the mercy of any so-called Money Trust. Help for their just needs will be theirs by right, by requirement of law; they can ask with high confidence of receiving aid, instead of depending for it on the doubtful answer to their supplications. They will not know, as many of them have known, the misery of begging vainly for the use of their own money held by reserve or central reserve banks, and of suffering impairment or disaster because of being denied return of what they had intrusted for safekeeping. A leading banker of Seattle, vice president of the clearing house, testified before the reserve bank organization committee, sitting in that city a few weeks ago, as follows:

"Let us go back," said he, "for a moment to the panic of 1907. If we could have drawn our money in this district from Chicago, New York, and St. Louis we would not have known that there was a panic in existence. Conditions were all right out here, but our resources were simply tied up and we were helpless."

Understand it is not assumed or promised that this new law will perform the functions of Divine Providence—shower blessings on everybody or establish universal prosperity. Nor will it bolster up or save banks improvidently, recklessly, or corruptly managed. It is intended to enable banks honestly and sagaciously conducted to enjoy the legitimate results of their own integrity and sagacity. Its purpose is to enable the natural and just laws of trade, beautiful, symmetrical, and sane, when undisturbed—as is the law of gravitation—to work to their results naturally and smoothly. It will provide no artificial stimulant or prop. It will remove artificial barriers to prosperity, unnecessary burdens, perils, and impediments. It can not provide immunity from such disasters as short crops, great fires or earthquakes, or disorders at home, or complications abroad. It will, we think, restrain the effects of these within the limits of the unavoidable and prevent them from being exaggerated and wantonly magnified in their effects.

It will save prudence and good faith from sharing the punishment earned by imprudence and bad faith, perhaps a thousand miles away. It will guard straight and open business against the evils brought by crooked and crafty business. It will protect sturdy conservation and well-intended enterprise from the violence, the cupidity, and the mastery of dollars assembled and used for brigandage; establish barricades about capital properly employed against what a distinguished traveler and expert has described as "predatory wealth." It is hoped and believed that this law will prevent the alternating money gluts and money famines daily reported in the newspapers, by providing supplies of money to flow automatically, responsive to need. We can not see how it is possible with this law that we can undergo again the dismal, man-killing, heart-racking conditions of 1907 and 1893 and other "panic years," when money could not be borrowed for any emergency or on any collateral or terms, or that it will hereafter be within the power of any group or confederation of financiers, however ravenous, cruel, or crazed, to force a panic or conditions to cause one; for the money supply may not hereafter be impounded, locked up, or deviated from its channels, but should rise irresistably to the level of the necessity.

The history of commerce teaches us that the business man can provide against every danger that may come in the natural course of things; he is overwhelmed by manufactured explosions or insidious attacks coming suddenly from rear or flank. We are told that for every disease, loss, or pain nature inflicts she provides a remedy; that for every sorrow and trouble permitted by Divine Providence to come upon the sons of men there is alleviation. It remained for the rapacious ingenuity, or blundering blindness, of man, or the two in diabolic combination, to devise hurts for which there is no relief but comprehensive changes of systems and machinery.

New York has become the commercial capital of the country, the great citadel of the money power, the reservoir of money supply. It is the walled city from which the barons have levied tribute on a territory and population vaster than any lord or king of the Middle Ages dreamed of, yet sometimes using methods ruthless and savage as those of the fiercest of the robber nobles—forays and levies devastating by scientific, artful method; pillaging under form of law, smiting with swords which bite deep, although we can not see them, consuming with fire which comes invisible and unsuspected. The simile seems strong, but it is justified by facts.

No sudden swoop by a feudal magnate on his peaceful neighbors was a more cruel or shameless plundering expedition than some of the transactions which have been brought to light by which the shareholders of railways and other great enterprises, established to build up the country and to promote the public interests, were despoiled. Their property and money were taken from them by the might of masses of money working stealthily. The raids had none of the attractions of the picturesque or the merit of courage. They were cold-blooded, relentless seizure of other men's goods by plots, treachery, and betrayal of trusts which should have been held sacred.

Yet it would be foolish, unjust, and wicked to hold New York as a community or her leading citizens generally, among whom are men as high and honorable as any country contains, responsible for the misdeeds, treachery, and lawlessness of certain conspicuous offenders. Without doubt the overwhelming majority of the citizens of our great cities, as of our people generally, have viewed such violations of laws, legal and moral, with as great abhorrence as any of us, and have felt the blush of shame that such crimes are possible in this enlightened age and under the form of government which has also produced our long procession of heroes, patriots, and statesmen.

Every thinking and patriotic American must exult in New York's splendid achievements, in the glories she has built, which have made her the wonder and admiration of the world. The people of the South would be ungrateful if they forgot the generosity of her people when trouble had come upon them from fire, earthquake, and pestilence, and her purse has been opened wide to every appeal from any part of the land.

The purpose should be to change the relation of New York to the country generally from an attitude of dominating ownership to friendly partnership. Big as New York is, it is not big enough to direct the destinies of this continent. Fast as it has grown, it has not grown so fast as the United States has grown in wealth, capacity, population, thought, and aspiration.

No one reservoir is wide or strong enough to hold and control the money supply for the inconceivably tremendous activities in which we are engaged, for our endless variety of industries and enterprises, our different climates, seasons, and products, our requirements sometimes crowding and conflicting with each other. No group of men at any center, however broad in mental grasp or earnest in intent to seek the best results for all, can be intrusted safely with the unlimited and unrestrained control and

direction of the flowing and recall of supplies of currency for the needs of the present and the increasing needs that will come with the near future.

In our political affairs we impose on those to whom we intrust authority the most careful and elaborate restrictions. We draw lines beyond which no Government or representative of Government is permitted to step. We have decreed that the humblest home shall not be invaded by State or Federal officials, the smallest bit of property shall not be seized, the most obscure man shall not be deprived of his liberty, without due process of law. Yet we have permitted to grow up what is aptly called an "invisible government," more powerful in many respects than the visible Government, touching our daily lives more intimately and immediately than any Government can do, reaching into the vaults of our banks, the safes of our merchants, the cupboards of our housewives. On the power of this we have set no limit. We have left it unrestrained. We have allowed it omnipotence without responsibility; permitted its operations to be conducted, too often, without possibility of appeal or redress.

We demand of a township constable, the pettiest officer of the law, that he give bond for faithful performance of his duties; that he shall oppress no citizen, shall faithfully return the few dollars he may collect. Under our laws control of millions and billions of dollars, power to confiscate or destroy railway systems, great manufacturing industries, towns and cities, are forced to the keeping of unknown men who give no security, are responsible to nobody, who remain undiscovered, and act frequently through acknowledged "dummies," until some accident, some chance question by an investigating Congressman, or inquiry by a newspaper reporter, brings them and their transactions into the light. Even then usually there is no provision for recovery by the injured or for punishment of the wrongdoer, no bond on which anybody can sue.

Beneath his skin every American citizen of every station and avocation, and whatever party name he may wear, is a Democrat in all the essentials and fundamentals; that is, he is attached passionately to the principles of local self-government, of the widest individual liberty compatible with the general weal and order of society. This new currency measure is democratic essentially. It looks to decentralization of direct financial control, to financial local self-government so far as is consistent with stability and the general safety; to a currency which will be worth its face value everywhere, which will be based on the actual values it purports to represent, as well as the faith and credit of the General Government, and which yet will be elastic, expanding to meet needs where and when they develop, receding when not needed; a system fitted to meet any emergency; moving smoothly and noiselessly for the ordinary uses of business in tranquil times.

It looks to decentralization of direct financial control, to financial local self-government so far as is consistent with stability and the general safety; to a currency which will be worth its face value everywhere, which will be based on the actual values it purports to represent, as well as the faith and credit of the General Government, and which yet will be elastic, expanding to meet needs where and when they develop, receding when not needed; a system fitted to meet any emergency, moving smoothly and noiselessly for the ordinary uses of business in tranquil times.

Too much money and too little money are alike evil and dangerous. Opinions differ as to which is the worse. Probably one is as bad as the other. The design of the new law is to supply just enough money or credit when and where business needs it; to create for our commerce, as has been said, foundations so even, so broadly laid and so deeply planted that they can not be shaken.

As it is, the country bleeds and sweats to the big financial centers. Take the South as an instance—and the conditions with which you here in North Carolina are familiar exist everywhere in the country. Most of our railway systems are controlled—frequently through the trust known as the voting trust—by men who are interested in the great banks in the three central reserve cities. So it happens that the large deposits of the railways, their collections from the southern people, as also from the western people, are sent on largely to those banks. The same is true of the telegraph and telephone companies, the life and fire insurance companies, and of many of the larger manufacturing enterprises. The merchants and manufacturers of North Carolina pay their freight bills to the railways. The money goes largely and promptly to New York, and is lent out and used there in stock-market operations, or as the directors of the banks, who are also often the directors of the roads and other corporations, may elect. Of course there is no law which provides for the carrying of the reserves and bank balances of railways and industrial corporations in the central reserve cities where the national banks of the country have also been accustomed to keep their reserves.

When North Carolina needs money to move the cotton crop her banks must call on New York for money which should be in their own vaults, for the return of money paid in here in freight bills, insurance premiums, and otherwise, and your banks sometimes think themselves lucky if they can be allowed the use of any part of it. Let us illustrate more concisely: In February last the national banks of New York and Chicago held on deposit from the banks and trust companies throughout the United States more than a thousand million dollars—an amount equal to nearly one-third of the total money in circulation in the entire country. No wonder you and the financial business men of the country shook with violent ague whenever New York chose to show indications of having cold feet. Of this thousand million dollars placed with the New York and Chicago national banks by the banks and trust companies throughout the country, less than eighty-five million in January last was being loaned back to the banks and trust companies of the United States. Of the balance of the money sent to the national banks of New York and Chicago, about two hundred millions was invested in bonds and securities; about three hundred millions had been loaned to noncustomers of these banks—that is to say, to borrowers who kept no accounts with them—on "bought paper" and loans secured by stock exchange and other collateral; this is, of course, in addition to hundreds of millions which the banks were lending their own customers on stock exchange and other similar securities.

These deposits of one thousand million dollars placed with the national banks of New York and Chicago by other banks and trust companies are exclusive, it should be observed, of the huge balances sent on to them by the trusts and great corporations located everywhere, but controlled largely in the big cities. As you know, and as the Seattle banker I have quoted testified, there have been times when your banks were frightened or crippled because you could not get back from the banks which carried your reserves the money you had intrusted to them, at 2 per cent interest, to keep for you.

It is not hard to see how centralization of financial resources and money supply and concentration of financial power has been forced and the invisible and irresponsible despotism created by acts of Congress and policies of government made necessary by those acts.

Now, we do not propose to use violence to force disintegration and decentralization, to do anything with a jolt and a jerk. It is understood clearly that to rush headlong and at full speed over an evil or an obstacle may cause derailment or jarring, uncomfortable and bad for passengers. The thought or plan, as I understand it, is to invite decentralization, to encourage it, to give opportunity for it, to make local self-government possible, to remove the influences which draw to a few centers the money that is paid out to the corporations and deposited in the local banks.

Real science is the exploration of the secrets and hidden forces of nature and intelligent application of them when they have been discovered. This new system has been drawn with infinite pains and care on that principle—the exploration, discovery, and application of the natural laws of trade and human nature—the conditions in our own country and our relations with other countries.

Of course, absolutely free banking is as impossible as it would be to leave to each individual the regulation of his own conduct according to his own impulses or conclusions. You would realize this more clearly than you do if you could be behind the scenes in the comptroller's office. You would learn that the banking business is one of the safest as well as one of the most worthy in the world when conducted with close compliance to the laws and regulations and the demands of honesty. Defalcations, excessive loans, and concentration of credits to single or allied interests are the three most fatal maladies.

It would do no harm if every president of a national bank would read over and study his oath of office at least once a month. I venture the assertion that some of them—present company excepted, of course—do not know what they have sworn to do and not to do. On one occasion a Member of Congress, now past history, complained personally to a Comptroller of the Currency of criticism of excessive loans made by the bank of which he was president—loans far beyond the legal limit he had sworn should not be exceeded. He did not understand really his obligations and legal limitations.

Another bank in the West that came under the observation of the comptroller's office had a board of directors composed of the president, his wife, son, daughter, and son-in-law, and

reported that directors' meetings were held each morning at the breakfast table. Rather different was another bank in which the cashier and president refused to call a meeting of the directors until emphatically required by the examiner to do so. The directors appeared, rejoicing, and it was discovered that by a by-law they were entitled to $10 each for every meeting attended. The directors urged the bank examiner to call again soon, but the president was not at all hospitable.

I have taken advantage of the privilege of being the only speaker to talk to you at some length. It is an unusual and happy experience to have no competition or limitation in oratory—with the knowledge that I shall escape the criticism by taking an early train for Washington. It is delightful for a speaker to have an audience at his mercy—makes him feel quite like a New York financial potentate. Now, I will detain you just a little longer to tell you certain details of the practical operation of the new law which may be of special interest to you.

The law does not require a single business man to change his account from the bank with which he has kept it, or any business man or bank to suspend dealings with the bank or banks in the central reserve or reserve cities with which they have in the past been doing business. It does offer to banks freedom of choice. It says to the banker that he can follow his preferences, sentiments, or habit in selecting the source of his borrowing; and the member banker of any Federal reserve district may feel free and peaceful and at ease when he knows that he has in his portfolio notes, drafts, and bills of exchange arising out of actual commercial transactions which he can convert into money at his Federal reserve bank with greater ease and promptness than it has sometimes been possible for him to withdraw his cash balances from his reserve agents, and almost with as much ease as it has ever been possible to draw on credit balances with any correspondent. He is not dependent on the whims or fortunes of any other bank. He need not shiver at the prospect of abundant crops for fear he may not have available the funds with which to meet demands for moving them. He will know that if he needs money to accommodate the bank's customers he can, as a matter of right, call on his Federal reserve bank.

Secretary McAdoo last summer met with admirable foresight and wisdom the annual crop-moving scare by putting the resources of the Federal Treasury at the service of the farmers and bankers of the country, just when there were evidences of a purpose to make money scarce and high and to bring on trouble. The country is under endless obligations for that, but we can not depend on having always in command of the Treasury Department a man so courageous, so ready, so careful of the public needs, and so careless of the wishes of a selfish money power.

Among other benefits, the new currency law, by its direct system of clearances, will release and make available for purposes of trade and commerce hundreds of millions of dollars, which, under the old system, have been tied up in tedious processes of collection. It will also save to banks and to merchants and business men generally some millions of dollars which they are now paying, directly and indirectly, for the collection of country checks and checks on outside cities.

To refer more particularly to your own district, the fifth, I will try to explain to you how the new method will work in transactions of domestic exchange.

In this district, embracing the States of North and South Carolina, Virginia, West Virginia (except four counties), the District of Columbia, and Maryland, there are some 475 member banks.

A cotton mill at Columbia, S. C., under the old plan sends its check on its Columbia bank for a shipment of coal to the coal company at Bluefield, W. Va. The local bank at Bluefield forwards this check to its correspondent in Richmond. This correspondent sends the check to its own correspondent in Columbia, who makes the collection from the Columbia bank and then draws a check on New York for New York exchange, which it remits to Richmond. The Richmond bank thereupon notifies the Bluefield bank of the collection of the item. The collection and exchange charges on distant country banks amount usually to from one-tenth to one-fourth of 1 per cent, or possibly more, and probably a week or more elapses between the remittance of the South Carolina check to the Bluefield bank and the time when the Bluefield bank gets its report that the item has been collected and placed to its credit in Richmond.

Under the new currency act "every Federal reserve bank shall receive on deposit at par from member banks * * * checks and drafts drawn upon any of its depositors." That means that the Bluefield bank receiving the check on the Columbia, S. C., bank mails it to the Federal reserve bank at Richmond. The Federal reserve bank at Richmond thereupon charges the Columbia bank with the amount of the check, credits the Bluefield bank with the proceeds, and notifies the two banks accordingly.

The Federal reserve act also provides that each Federal reserve bank shall receive at par, and credit accordingly, all checks and drafts drawn upon any of its member banks from every other Federal reserve bank; that all checks and drafts drawn by any depositor—that is to say, by any member bank—on any Federal reserve bank shall be received and credited at par by every other Federal reserve bank. This means that the checks of the member banks in the country towns throughout these five States are worth their full face value, without deduction for exchange or collection charges, to every other member bank, and that the amount of each check may be cashed at par immediately, without following the devious and roundabout courses now observed in the collection of checks. Virtually every bank in the fifth district is only one night distant from Richmond, and a check mailed one afternoon in the most distant portions of the district should reach Richmond the following day in time to be included in that day's operations of the Federal reserve bank.

Let us now consider another aspect of the new law. Under the old national-bank act, a national bank with a capital of, say, $200,000, deposits of, say, $1,500,000, bills receivable amounting to $1,200,000, and $300,000 reserve, would only be permitted to borrow a total of $200,000, the amount of its capital. If a run should start on such a bank the amount which it could raise by loans, if strictly held to the old law, would be but $200,000, the amount of its capital, which might be quite inadequate to meet a run, and the bank, though thoroughly solvent, might be forced to suspend.

Under the new law, however, if a bank with $200,000 capital and deposits of $1,500,000 should have loaned $1,200,000 to its customers on commercial paper and should encounter an unexpected run, in addition to borrowing $200,000, the amount of its capital, such a bank would have authority to rediscount with the Federal reserve bank of which it is a member notes, drafts, and bills of exchange issued or drawn for agricultural, industrial, or commercial purposes, having not more than 90 days to run, to any reasonable extent which may be approved by the Federal reserve bank to which application for such rediscounts may be made. In other words, if such a national bank as we have used in this illustration should have loaned the entire amount of its deposits, less the 15 per cent which it is required to keep as reserve, to its customers on acceptable commercial paper, and for any unexpected reason should be subjected to a run, the Federal reserve bank of its district would have the authority to rediscount for the member bank the entire amount of its bills receivable, as represented by its commercial paper, thus enabling the bank to pay its depositors immediately and in full.

We can not overestimate the value of the additional security which this provision of the act confers upon every honestly, capably managed member bank, and the relief from strain and anxiety and from the fear and apprehension of panics and unreasoning runs which it gives to the officers of every member bank.

Another important change provided for by the Federal reserve act is the new arrangement for the compensation of national-bank examiners. Under the present law the compensation of national-bank examiners is based, except as to reserve cities, on the capital stock of the bank examined. Under the operations of this law a national-bank examiner has been receiving for the examination of a certain national bank in the fifth district, with over $9,000,000 of assets and many thousands of accounts, the munificent sum of $25. It is, of course, clear that an examiner could make only an imperfect examination of such a bank in the space of three days, at a compensation of, say, $8 per day, out of which $8 allowance he has to pay his own railroad fare, hotel expenses, as well as clerical assistance. It is not unnatural that but few examiners would willingly spend the 10 days or 2 weeks which it might require to make a thorough examination of such a bank when he is running personally in debt in doing so.

Under the new currency law the Federal Reserve Board, upon the recommendation of the Comptroller of the Currency, is given authority to fix the compensation of bank examiners on the basis of annual salary, so that those banks which need additional time and attention from the examiner may receive the careful, close scrutiny which the case may call for. It is believed that the new system of bank examinations will reduce materially the number of bank failures and enable the department to check up many abuses and correct many evil situations

which in the past have been ignored or glossed over by examiners in their hasty and incomplete investigations.

I thank you, gentlemen, for the opportunity to address you. Approaching the study of this new and revolutionary measure with the caution natural to every man trained in banking under the system with which we have grown up, I have become more thoroughly aroused to its merits and more deeply impressed as I have watched the methods of construction, the processes of growth, and have considered the underlying principles directing those who did the work.

It would be unjust, in congratulating ourselves upon the benefits and blessings we are to receive from this epoch-marking piece of legislation not to acknowledge the obligations we owe, for the splendid results achieved, to the patient and untiring labors, resourcefulness, and constructive genius of the distinguished chairmen of the Banking and Currency Committees of the Senate and House of Representatives, and to the Secretary of the Treasury, whose counsel, skill, and support in the shaping and enactment of this great measure were of inestimable value.

Here in North Carolina the records show magnificent natural progress and you have special interest in changes in the banking system which are so surely destined to promote and encourage your growth and expansion.

In the triumphs of peace and industry, as in the glories won on battlefields, and in the domain of statesmanship, all classes of your people have done full and honorable parts; have united in making the name of your State stand high and shine bright in the roll of the States in building and maintaining this mighty Republic of ours. You are living true to your record, have furnished to the Cabinet two of its ablest and most useful members, North Carolinians, tireless, faithful, and courageous, the strong supporters of huge responsibilities.

I invoke your aid to promote the success of this new system in which your calling gives you special interest and opportunity. It is a system designed to distribute the benefits and blessings of ever-increasing resources and wealth equitably among your people of all stations who have done so well their respective parts toward creating your greatness. I believe this new system for which we are indebted, in a great measure, to the patient guidance and masterly leadership of the scholar and statesman chosen to the Presidency will bring new strength, new scope, new assurance to our entire commercial system; and for your State and my State and all the States and the people, as a whole, mean deliverance from dangers that beset us, and a new career of advancement based on the solid foundation of real substance, honesty, justice, and democracy in its highest meaning and purpose.

Legislative, Executive, and Judicial Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. CHARLES H. BURKE,

OF SOUTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 26, 1914,

On the conference report on the bill (H. R. 15279) making appropriations for the legislative, executive, and judicial expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. BURKE of South Dakota. Mr. Speaker, I regret that the gentleman from South Carolina, in charge of this bill, was unwilling to give me an opportunity to make some observations with reference to the provision providing mileage for the Members of the House before it was disposed of, and that he refused not only my courteous request for time, but that of our distinguished minority leader, Mr. MANN, who asked for me, and that he made it impossible for me to be heard by moving the previous question. I think by this time the gentleman has learned that he can not gain any advantage by resorting to such tactics and applying the gag rule as he did with reference to this matter to-day. I hope he will profit by the experience and that hereafter he will be more courteous and fair and be, as he usually has been heretofore, reasonable in allowing debate on amendments.

Mr. Speaker, I am one of those who voted in the Fifty-eighth Congress to provide an appropriation to pay the mileage of Members for the second or regular session of that Congress. In doing so I was not expressing any opinion with reference to the mileage allowance, but simply voting to appropriate the money that the law authorized to be paid to Members of Congress as mileage. It would not be in order under the rules of the House as they obtained at that time to offer an amendment changing the law and providing for some other rate less than the rate then in existence. It was, therefore, a question of either voting for the appropriation or against it, which latter vote would mean that the Members would be deprived of what was then regarded under the law as a part of their compensation.

It never has been incumbent on any Member of Congress to draw his mileage if he did not wish to do so, and I presume no Member would take what he did not believe he was entitled to under the law. During a period of 70 years or more the mileage rate has been what it is at present, and there is no record that any Member either of the House or the Senate has ever declined to draw his mileage or that he has returned it or any part of it to the Treasury. Speaking for myself, there never has been a year since I have been in Congress that I have not expended more money for traveling than my mileage allowance. It has been my practice, as I presume it is the general practice of Members, to travel from my home to some place in my State or to Washington during the recess of Congress whenever requested to do so by a community or some of my constituents; to illustrate, I will say that in one recess of Congress between March and December I traveled from my home at Pierre, S. Dak., to Washington and returned five different times, and on each occasion on public business or matters concerning my constituents. Never has anyone reimbursed me for a cent of expense incurred on account of traveling, my theory being that the mileage provided by law was part of the compensation allowed to a Member for the purpose of in a measure reimbursing him for expenses that he necessarily would be put to by reason of being required to travel, not only to and from the sessions, but on account of the public business and looking after the interests of his constituents, and for that reason I have always refused to be reimbursed for any expenses so incurred.

As before stated, it has been the general opinion that mileage under the law is a part of the Members' compensation, and it was so held by two very distinguished Members of this House presiding in Committee of the Whole when a point of order was raised in the Fifty-eighth Congress when the item for mileage was under consideration.

The Fifty-eighth Congress did not appropriate for the mileage of the Members for the second or regular session of that Congress, and a suit was brought in the Court of Claims by John F. Wilson, who was a Delegate in that Congress from the Territory of Arizona, for the mileage claimed to be due him. This case is entitled "John F. Wilson versus The United States." I am only going to briefly refer to the decision of the court and mention the substance of the decision. It is held that the mileage as provided is not a part of the compensation, but it is intended as an allowance for the expenses of travel in discharge of the duties of the Member, according to the number of miles traveled, and the court says:

> In short, under all the authorities that mileage means an allowance for actual travel about the public business, and mileage and travel are thus inseparably connected.

The court held that Mr. Wilson, having received mileage for the first session of the Fifty-eighth Congress and not having returned to his home between the first and second sessions, was not entitled to any mileage for that session. As a result of this decision and the agitation that has been constantly going on there has, in my opinion, arisen a general opinion that the mileage rate of 20 cents a mile, fixed at a time when the mode of travel was by stagecoach, horseback, or by boat, is greater than it ought to be, and especially in view of the fact that the salary paid to Members of Congress has been materially increased.

When the legislative bill was considered in Committee of the Whole and an amendment was offered striking out the provision reported by the committee to pay for actual traveling expenses incurred by Members and their immediate families, and proposing to insert the old rate of 20 cents per mile, I voted against it, and I am not one of those Members who voted for 20 cents a mile in Committee of the Whole, and then in the House, when there was a record vote, voted against it, but was consistent and voted both times against continuing the 20-cent rate. I regretted that no opportunity was afforded at that time to have offered an amendment fixing a definite rate of mileage rather than to have the matter as reported by the committee adopted, which provided for the actual traveling expenses incurred by Members of Congress and expenses of immediate and dependent members of their families going to and returning from each session of Congress, as I believed that if that should become the law it would result in great inequalities in the amount that Members might expend, and that it would prove generally unsatisfactory.

The universal mileage rate paid to public officials throughout the country is 10 cents per mile. The constitution of my State fixes the compensation allowed members of the legislature, and in addition to the per diem they are allowed, quoting from the constitution, "10 cents for every mile of necessary travel in going to and returning from the place of meeting of the legislature on the most usual route." The sheriffs, under our law, receive for travel 10 cents per mile, and, as already stated, my information is that 10 cents is the universal mileage rate, in nearly all the States, allowed public officials who are required to travel in the discharge of their duties.

Since this bill went into conference I have discussed the Senate amendment which proposes to restore the old mileage proposition with the gentleman from South Carolina in charge of the bill and his coconferees and other prominent Members on that side of the House, including the distinguished gentleman from Indiana [Mr. Cox]. I expressed the opinion that we ought to try to secure a compromise, and that we ought not to consent to the Senate amendment; and I think it was commonly understood that a 10-cent rate would not only be reasonable but fair, and an allowance that the country would say was proper.

Following my conversation with the gentlemen on the other side of the aisle, I mentioned the matter to a number of Members on this side, endeavoring to bring about the adoption of a 10-cent proposition, which was to be offered either by the gentleman from South Carolina or some Member on that side. When the item providing the mileage for the Senate was considered yesterday the gentleman from South Carolina [Mr. JOHNSON], in accordance with what I believed to be the understanding, yielded to the gentleman from Indiana [Mr. Cox] to offer an amendment and concur in the Senate amendment with an amendment fixing the rate at 10 cents per mile. He frankly stated the situation, and said that while he had been in favor of a less rate, he believed it would be impossible to have his way, and that after consideration and conference with other Members he had offered the 10-cent proposition, believing that it represented the opinion of a large majority of the House. Had the amendment offered by the gentleman from Indiana been voted upon, it would have been adopted by an overwhelming vote, in my judgment, and I think right at that point the gentleman from South Carolina [Mr. JOHNSON] did not keep faith when he yielded to his colleague [Mr. BYRNES of South Carolina] to offer an amendment making the rate 5 cents instead of 10.

The gentleman from Wyoming [Mr. MONDELL] having offered a motion to recede and concur in the Senate amendment which provided for 20 cents per mile, the first vote was upon his motion. The next vote, being on the Byrnes amendment, was adopted, not because it expressed the sentiment of the House as to what the rate should be, but because a number of those who favored the 20-cent rate were "peeved" and voted for the Byrnes amendment. This is another point where the gentleman from South Carolina and his associates, in my opinion, did not keep faith, because if they had voted against the Byrnes amendment it would have been defeated and an opportunity would have been afforded to vote on the amendment offered by the gentleman from Indiana [Mr. Cox] for the 10-cent rate. I voted against the Byrnes amendment, because I do not believe that 5 cents per mile is enough, and rather than have that rate I would vote to cut off mileage entirely.

I have the honor to represent an intelligent constituency, and they do not want or expect me to live or travel in any cheap manner, but do expect me to move in keeping with the dignity of the office that I hold as their representative, and I know that they will say that the mileage allowance for a Senator or Representative in Congress should not be less than that paid to a member of the State legislature or a county sheriff, and that they will also say that a 10-cent mileage allowance is just and fair and reasonable.

I want to now say to the House conferees that I hope when this bill is returned to the House there will be an agreement and a provision fixing the mileage rate at 10 cents per mile, and that it will be accepted and become the law, so that the matter will be finally settled.

I regret again, in conclusion, that I was not permitted to have made these observations before the provision for mileage of Representatives was acted upon, as it would have been more satisfactory to have discussed it then rather than now after the matter has been sent back to conference, with the House insisting upon its disagreement to the amendment of the Senate, and thereby again declaring for the mileage of Representatives provision as it originally was passed by the House. I think whatever the amount is to be that it ought to be definitely fixed by law.

Stock-Raising Homesteads.

EXTENSION OF REMARKS
OF
HON. HARVEY B. FERGUSSON,
OF NEW MEXICO,
IN THE HOUSE OF REPRESENTATIVES,

Monday, June 15, 1914,

On the bill (H. R. 15799) to provide for stock-raising homesteads, and for other purposes.

Mr. FERGUSSON. Mr. Speaker, a momentous question is brought to the attention of Congress in this bill, H. R. 15799, to wit, the future use of the vast area of undisposed of and unreserved public lands lying in the semiarid States of the West which can not be reclaimed by irrigation.

It is shown in the hearings before the Committee on the Public Lands on this subject that this area amounts, in round numbers, to 330,000,000 acres, and in the same States, in addition to that, 165,000,000 acres are included in forest and other forms of Government reservations. In the State of New Mexico such undisposed of and unreserved public land amounts to 31,000,000 acres, and 9,000,000 acres are included in that State in the various forms of Government reservations.

It is conceded that the promiscuous use of this land in the past has been a failure and has resulted in the reduction of the stock-raising and meat-producing capacity of the West by more than one-half. At the same time it has resulted in real suffering to the poor homesteader with a family, who, because of the exhaustion of the better public land under the existing homestead laws, has attempted in vain to support his family on the insufficient quantity of such land allowed under the 160 or 320 acre homestead laws. The plowing up and destruction of the valuable native grasses were required by law to the lessening of the grazing capacity of his homestead. Such of these poor farmers as have survived have done so by fencing and improving his tract of 160 or 320 acres with Soudan grass, feterita, and other kinds of dry-land forage crops furnished by the Department of Agriculture and pasturing his few head of stock on neighboring Government land. This last resource will soon be gone as other settlers come in, and it has always been precarious, as his cattle trespassed on the big cattle owners, who resented the intrusion of the farmers and small stock raisers on what they had long enjoyed—the free use of the public grazing domain.

Two plans have been proposed for the correction of these evils and the future lawful use and disposition of this vast domain—the one plan is embodied in H. R. 10539, Sixty-third Congress, and the other in H. R. 15799, Sixty-third Congress. The advocates of each plan were accorded hearings by the Committee on the Public Lands. The advocates of the plan set forth in H. R. 10539 were also heard by said committee on H. R. 19857 of the Sixty-second Congress. All of these hearings have been printed and are now accessible. The hearings in this Congress were held upon bills H. R. 10539 and H. R. 9582, the latter being superseded by H. R. 15799.

A reading of said bills, H. R. 10539, Sixty-third Congress, and H. R. 19857, Sixty-second Congress, known as the leasing bills, and the said hearings, will show that the leasing system proposes the withdrawal of all said semiarid lands still unappropriated and unreserved from further private or individual entry in the first instance, and the creation from time to time, by Executive proclamation, as in the case of forest reservations, of grazing reservations, with the privilege of leasing such lands in large bodies and for long terms for stock-raising purposes. The lessees are to have the right to inclose such leased areas within fences, or to protect them by drift fences, as local boards of stockmen may decide. The proposed system further provides that the right to enter homesteads, under the homestead laws, within such leased tracts shall not be abridged; but that entrymen shall have the right to enter upon such leased lands under the homestead laws.

Obviously, it is incompatible, this attempted subjection of the same body of land at the same time to such antagonistic uses. It suggests the old time wars between the owners of herds of tens of thousands of cattle using, without lawful right, the public range, and the adventurous poor homesteader, who dared also to place a few cattle on this public range near his homestead. This intrusion was bitterly resented by the big cattle owners, who had acquired a practical monopoly of the public range by homesteading the springs and other watering places, generally in 40-acre tracts, and thus, by controlling the watering places for their cattle, monopolizing vast areas of public grazing lands. Certainly under the proposed leasing

system the homesteader, coming into a leased and fenced area, would be at a hopeless disadvantage, since the leasing bills provide that the local boards given control of the reservation shall consist of five persons—four local stockmen of those holding leases in the reservation and one representative of the department in Washington. The right of appeal from the decision of such board, only to the Secretary at Washington, would too often be a mockery to the poor homesteader unable to pay the traveling expenses, legal fees, and so forth.

Moreover, can one home be reasonably established in a cattle pasture, the children to go through fences and herds of cattle to school or church in some distant neighborhood? Or can a community of homes, with schools and churches, exist in such leased area, without destroying the value of the leasehold estate to the lessee? Or if, as some propose, the exclusive use of the leased reservation be accorded to the stockmen for a term of 10 years, what is that but the absolute prohibition of the further making of homes in the semiarid States of the West, especially as the plan accords to the lessee the preference right of renewal of the lease for a like period?

The homesteading plan is proposed in H. R. 15799. It is to provide for a stock-raising homestead of 640 acres on such of this semiarid, nonirrigable domain as the Secretary of the Interior may, from time to time, designate as suitable for grazing homesteads. The prime object is to restore and promote the live-stock and meat-producing capacity of the semiarid States, and at the same time, on the same tract, to furnish homes to landless and homeless citizens of our country.

The advocates of both plans agree that immediate legislation is necessary; the small rancher, with his homestead of 160 or 320 acres and a few cattle or sheep, admits that he can not succeed on that amount of such land, unsuitable for farming, and not sufficient to support the number of live stock necessary for a man with a family, especially as, if he attempts to graze his few cattle on adjoining public land, he is at ceaseless war with the neighboring herds and flocks of the big live-stock man.

The large live-stock owners claim, as the basis of their demands for the leasing system, that the stock-carrying capacity of the public grazing lands has been reduced more than one-half, and will be practically destroyed if left to continue without legal regulation; and they admit that this destruction has been wrought by the greed to appropriate the free grass—too many cattle to the acre—with the frequent intrusion of flocks of sheep that roam from section to section in search of the best grazing; and the inevitable intrusion of the needy homeseeker, ready to take any chance to establish a home for his family.

It is established by experience that a homestead of 160 or 320 acres on many millions of acres of such land, with the requirements as to cultivation, is not sufficient to support a family, as shown to the committee by hundreds of homesteaders on the small tracts, who testify from actual experience.

Much can be left to the pioneer spirit, to the needy but resolute home seeker, and his adaptability to new conditions. This is strikingly shown in the history of the settlement of the State of Kansas, for instance. In 1860 all of Kansas west of the longitude of Topeka, it is said, was considered hopeless of settlement from the agricultural standpoint. The first invasion of homesteaders was a failure; but a few survived. More of the succeeding pioneers, as a result of experience, made a success; and the persistence of the movement westward of population has made of Kansas one of the very foremost agricultural, live stock, and dairying States of the Union.

That farming and stock raising may be successfully carried on on the same homestead is shown by the State of Iowa, a State whose soil, climate, and rainfall enabled it to be settled under the original 160-acre homestead laws. She is one of the foremost of the agricultural States, and also a large raiser of high-grade live stock and dairying products.

Moreover, the 640-acre homestead law, combining stock raising with farming, has been vindicated in the State of Nebraska, just west of Iowa. Western Nebraska, as long as it was subject only to the 160 and 320 acre homestead laws, remained unsettled and useless. But several years ago our able colleague in this House, Judge KINKAID, of Nebraska, secured the enactment of a 640-acre homestead law, applicable only to the western and semiarid portion of that State; and the statement of Judge KINKAID in the hearings on the bill now before the House shows that such grazing-homestead law has been markedly successful. It has induced immigration and arid-land farming and stock raising, with the by-products from dairying, and has resulted in a large accretion to the taxable property in the State of Nebraska.

The correct solution of this question is of vital importance to the Nation at large. The crowded countries of the Old World are seeking for foreign lands to colonize as an outlet to their surplus population, while the United States, with hundreds of millions of idle acres awaiting adequate laws for their settlement, leaves the surplus population in our crowded cities and congested industrial centers to fret and struggle for existence or to go to Canada, where the lands are offered to immigrants in sufficiently large tracts and on easy and practicable terms of getting title to them.

A far more vital interest than the country as a whole have the individual States of the Far West in the proper solution of this question. Each of these States needs the lands within its borders for taxation purposes; and it needs a land-owning citizenship to develop the land up to its highest possible use and value to make it easy to bear the burden of taxes. Under the leasing system, the title remaining in the Government, the land can never be taxed by the States, and the lessee has not the same self-interest and inducement as the owners of the soil to raise the land to its highest possible development and value. The home owner will be careful to conserve and increase the productiveness of his land. He will not overgraze, and thus destroy the native grasses, but will so stock his farm as to conserve and promote the yearly increase of its grazing capacity. He will avail himself of and experiment with the imported dry-land grasses and forage crops, which our most useful Department of Agriculture is bringing to the semiarid West. He will build silos and preserve his forage crop for winter use, his limited number of live stock enabling him to practice winter feeding, which can not be done for large herds on the open range. He will also sink wells on his homestead to get water for domestic use and for irrigating a garden, at least. Some surprising results have followed from sinking such wells on the semiarid domain. The city of Deming, in southwestern New Mexico, is now surrounded by square miles of rich, productive farms. Thirty years ago the same land was considered fit only for grazing, as there was no water for irrigation. The transformation was brought about by the discovery in one of these wells that an abundance of water was near the surface after water was reached.

The land is underlaid with an immense underground lake of unknown extent as yet, and is so near the surface that irrigating the land by pumping is both possible and profitable. Near the city of Portales, in eastern New Mexico, a somewhat similar condition exists. The surface, generally speaking, of this rocky mountain region consists of a succession of mountain ranges running west of north and east of south with vistas of sloping valleys and plains between, the soil of these valleys being many feet deep and very fertile. The water referred to accumulates from rains and snows and mountain springs and settles on the bedrock of these valleys and plains beneath the porous soil. Farming is highly profitable on these valleys and plains without surface water where the water is found in wells not too deep. Under great quantities of this land water can be reached in deep wells, and will be pumped from great depths by the homesteader for domestic use and to water his small herd.

The leasing system, as applied to the public grazing lands, is vastly different from the leasing system as applied to the Government-owned coal, oil, timber, and phosphate lands, and water-power sites. The private ownership and exploitation of the latter has been shown by actual experience to be vastly detrimental to the public interests in that it has resulted in the creation of private monopolies of such wealth and power for evil as to seriously menace the public welfare and to have rendered necessary the retention of the ownership of all such natural resources in the Government, with Government supervision of their future development and use, under a system of leasing and strict public supervision. The system of leasing the grazing lands under Government ownership and control, on the other hand, would be a species of special legislation for a special class to the detriment, if not to the destruction, of the policy of furnishing homes to our citizens.

Nobody is fighting the large cattle interests, as such. The fight is for the development, as far as practicable, of the semiarid States into populous, prosperous, and happy States or privately owned homes. That fight was started in the Sixty-second Congress by the National Live Stock Association under bill H. R. 19587, above described, and the homestead bill here advocated shows the extent and character of the opposition to the National Live Stock Association and its plans. The record in this case further shows a general acquiescence in the practical monopoly which such interests now have of the grazing privileges on the 165,000,000 acres of Government reservations under a system of leasing, with strict regulation intended to protect and increase the grazing capacity of such reservations. And, in addition to all that, if, as claimed, there are to be found large areas of this semiarid domain impossible of use under the homestead system, there is a general sentiment, certainly in the Committee on the Public Lands of the House, to subject such

areas where homes can not be made to regulation under some leasing system to promote the usefulness of such areas.

In conclusion I insert here, at the risk of slight repetition, an extract from the report of the Committee on the Public Lands on said bill H. R. 15799, as follows:

The committee does not hesitate, as far as may be practicable, to adhere to the time-honored plan of using the public domain to furnish homes to the citizens of our country. The fact that the State of Iowa, where 160 acres proved sufficient to support, even to enrich, an industrious citizen, is in the front rank as a producer of agricultural products, and, at the same time, is near the front in the production of beef and mutton and dairy products shows that farming and stock raising may be successfully combined on the same homestead, and the printed hearings on H. R. 9582 are replete with statements by many citizens of large experience on these semiarid lands that, by combining the farming of dry-land forage crops and the raising of cattle or sheep, 640 acres will support a family. Mr. I. S. Bartlett, of Cheyenne, Wyo., in his statement beginning at page 316 of the hearings, uses these words:

"A grazing homestead bill giving 640 acres, or even 2 sections, to each settler would soon add 200 per cent to the live-stock production of the public-land States and solve the beef problem for the next half century. Not only that, it would break down the high prices of beef, pork, and mutton, as well as dairy products.

"Better than all, it would settle up the vast area of waste lands in the Nation with a hardy, intelligent, and progressive American citizenship.

"Think for a moment what our desert or grass ranges will produce, situated, as they are, in an environment of mountains and plains and flooded with sunshine.

"Here are some purely range products: Cattle, sheep, horses, hogs, goats, hides, wool, butter, cheese, milk and dairy products, poultry, and eggs. All these can be produced in our native grass regions without any plowing or land cultivation.

"The irrigated and dry farms in the same section will supplement all the needed fattening and forage crops, and both the farming and stock-raising interests will be mutually and correspondingly benefited.

"The range homestead proposition can be easily worked out. Instead of the requirements of plowing up the land and crop cultivation; the law should require expenditure for sinking wells, building of sheds and corrals, the possession of a certain number of animals, etc. The residence requirements should be the same as in other homestead acts.

"In nearly every section of the grass ranges water can be found at depths varying from 20 to 500 feet. In many cases artesian water and flowing wells are obtained, giving a sufficient supply of water for irrigating many acres and raising fine crops. With the passage of a grazing homestead bill the so-called desert lands would be penetrated with wells and the whole landscape dotted with windmills and improvements in the form of houses, barns, corrals, and fences.

"In a very few years a wonderful transformation scene would be enacted in the vast cattle ranges of the West, now practically uninhabited by settlers. That this is no dream has already been demonstrated by the results of the Kinkaid 640-acre homestead act, which applied to the desert wastes of western Nebraska. That entire section is now settled up with a high class of prosperous and successful farmers. Five million acres of arid lands have been reclaimed there, and the wave of incoming settlers has overflowed into Wyoming in the search for dry-farming lands.

"Even under the late repressive land administration the Commissioner of the General Land Office advocated the 640-acre homestead for the semiarid West, and in so doing stated that 'the largest part of the unappropriated public domain would never pass to private ownership under smaller allotments.'

"Local bills are good enough so far as they go, but the whole subject should be treated from a national point of view and a bill passed applicable to all the States having public lands."

Representative KINKAID, referred to by Mr. BARTLETT, appeared before this committee, and his statement appears in the hearings, beginning at page 334.

This plan of providing homes is best for the Nation as a whole, because it tends to increase the supply and at the same time to lower the price of meat, a universal necessity, especially to the laboring classes; and because it affords an outlet to the congested civic and labor centers of our population without driving homeseekers to take advantage of the liberal land laws of Canada. Moreover, the Nation as a unit needs more States like, for instance, Kansas and Iowa, where each citizen is the sovereign of a portion of the soil, the owner of his home and not tenant of some (perhaps) distant landlord, a builder of schools and churches, a voluntary payer of taxes for the support of his local government.

Of course, the homestead plan is best for the individual States of the semiarid West. It takes homes to insure permanent settlers and taxpayers; it takes homes to bring schools and churches; it takes homes to build cities and towns that attract and support laborers and mechanics. Population invites railroads, which in turn bring more immigration and capital to develop the barely touched resources of this great semiarid West.

This subject has been under consideration in previous Congresses. In the Fifty-eighth Congress, third session, a bill creating a 640-acre homestead for a portion of the State of South Dakota was reported favorably (Rept. No. 4013), and from said report we quote from the President's message to Congress at the beginning of the second session of the Fifty-seventh Congress, as follows:

"Moreover, the approaching exhaustion of the public ranges has of late led to much discussion as to the best manner of using these public lands in the West which are suitable chiefly or only for grazing. The sound and steady development of the West depends upon the building up of homes therein. Much of our prosperity as a nation has been due to the operation of the homestead law. On the other hand, we should recognize the fact that in the grazing region the man who corresponds to the homesteader may be unable to settle permanently if only allowed to use the same amount of pasture land that his brother the homesteader is allowed to use of arable land. One hundred and sixty acres of fairly rich and well-watered soil or a much smaller amount of irrigated land may keep a family in plenty, whereas no one could get a living from 160 acres of dry pasture land capable of supporting at the outside only 1 head of cattle to every 10 acres."

We quote further from the same report, as follows:

"Hon. Charles D. Walcott, present Director of the United States Geological Survey, in a communication to the Secretary of the Interior concerning the Kinkaid bill, which became a law at the last session of this Congress, said in part as follows:

"'The central idea of this bill is that of enlarging the area of homestead entry to suit the conditions of the semiarid West. There is general recognition of the fact that the present land laws, designed for the humid region, are not applicable to the arid region. Attention has been called to this matter many times by various individuals, and in particular by the writings of Maj. J. W. Powell, the former Director of this Survey, who devoted much of his life to the exploration and study of the West. In his report prepared in 1878 entitled "Lands of the Arid Region," Maj. Powell suggests that the farm unit where water is scanty should be not less than 4 square miles, the divisions of such farms being controlled by topographic features.

* * * * * * *

"'The arbitrary limit stated by the present land laws of 160 acres for a homestead does not suit existing conditions in the arid regions. If the water supply is ample, 160 acres is usually far too much, and would support two, three, or four families; on the other hand, throughout 90 to 95 per cent of the vast extent of remaining public land 160 acres is so small as to be useless for a homestead.

"'No general rule as to what shall constitute a homestead can be laid down. In order to determine this matter, local knowledge must be had and exercised in the same manner as it is under the reclamation projects. The question is one largely of altitude, climate, and water supply, rather than extent of land.

* * * * * * *

"'After cutting out the irrigable lands there are left great areas where it is known that water can not be had in any considerable amount and where the homestead area must be very large to furnish support for a family. In short, it is practicable after eliminating the irrigable land for the Geological Survey, through its organic act and through the Reclamation Service, to classify the remaining public land and obtain information upon which to base the disposal of these lands to actual settlers in tracts sufficient for the support of a family.

"'Under the operation of the present laws the securing of a tract of land large enough to support a family in the arid region is a cumbersome and expensive process. The nucleus of the home farm may be a 160-acre tract, which the law allows as a homestead.

"'All persons admit that this nucleus is only the first step, and that the man who actually desires to make a home there by stock farming must proceed to resort to various expediencies to secure control of additional land in order to support himself. To do this requires either capital to purchase the lands of other homesteaders, or the stock farmer must secure some form of title through the desert-land law, timber and stone act, etc. In the majority of cases the practices absolutely necessary to secure an adequate area are open to the charge of fraud or collusion. It should not be necessary for a man desiring a homestead upon vacant public land to resort to indirect or possibly fraudulent means. On the contrary, he should be allowed and encouraged to take up as much land as he actually needs and be given every facility for so doing.

"'The development of the arid West has reached a point where it is now possible to see the ultimate character of settlement and utilization of the land. Where, as above stated, water can be had, the irrigable lands may be cultivated in the most intensive fashion. With favorable climatic conditions several crops a year will be raised, and a 40-acre farm will more than furnish support for a family. The average size of an irrigated farm in Utah is, for example, less than 30 acres.

"'Assuming that there are 600,000,000 acres in the arid and semiarid West, not to exceed 10 per cent of this, or 60,000,000 acres, will be utilized for irrigation. Most of the remainder is useful for stock-raising purposes, a portion being devoted to forest reserves, within which grazing may be largely permitted. In round numbers 500,000,000 acres of land will have its highest use in the raising of cattle and sheep. Most of this is still in public ownership, and it is for the interest of the Nation to have the land subdivided into the smallest tracts which will support a family and have these pass gradually into private ownership, so that the land may in time bear its share of taxation.'"

The Public Lands of the United States.

EXTENSION OF REMARKS

OF

HON. JOHN M. EVANS,

OF MONTANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, June 25, 1914,

On the bill (H. R. 17041) making appropriations for the sundry civil expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. EVANS. Mr. Speaker, a few days ago while this House had under consideration the sundry civil appropriation bill, an effort was made by myself and a number of other western Members to increase the appropriations for surveys of public lands. Upon one occasion, when our efforts had met with success, one of the appropriations being increased by a considerable amount, a member of the committee indulged in some rather acrid criticism because the Congressmen from the public-land States made such determined and persistent efforts in that respect.

I am led to believe, Mr. Speaker, that the people of the East and South have little or no conception of the method and manner of the administration of the public-land laws, and no conception whatever of the hardships endured by the sturdy people who settle upon the public domain. In reaching this conclusion I am supported by a remark made by one of the leading Members of this body, when a few days ago my colleague from Montana [Mr. STOUT] was attempting to secure the passage of a bill designed to grant leaves of absence to settlers on unsurveyed lands. A gentleman who has served in this House for some years objected to such a bill, and expressed the opinion

that people had no right to settle upon public lands until they are surveyed. Such a statement shows such an utter lack of knowledge of the true situation in all the public-land States as to make an attempt by me to enlighten this House and the public mind seem almost hopeless. I am gratified to say, however, that the author of the above remark joined with us to secure additional funds for the survey of undisposed-of public lands.

The land laws of this country need revision in many respects, but I earnestly believe that if the present laws were administered in a humane manner and in conformity with the spirit rather than the letter of the law oftentimes the almost unbearable hardships unnecessarily imposed upon a people attempting to reclaim a home from the forest or wilderness would be removed or, at least, lessened. The reduction by Congress of the five-year residence clause of the homestead act to a period of three years, which was enacted only a few years ago, has been a boon to the homesteaders and a step in the right direction. But I am still of the opinion that the requirements of the homestead laws are too harsh and oppressive. That law, you will recall, compels a residence of three years, at the same time requiring a fixed and definite amount of cultivation. I have pending now before the House a bill reducing the amount of the annual cultivation required, and also providing that the entryman may receive credit for the improvements made, the construction of fences and buildings, and by slashing, clearing, and otherwise preparing the land for cultivation, making the homestead habitable and capable of production. A recent case which was brought to my attention convinces me of the necessity and fairness of such an amendment.

A man entered a homestead the land of which was covered by small timber and underbrush. Without being cleared this land was not susceptible of cultivation. The man in question was a high-class mechanic, very capable, and at that time earning from five to six dollars a day. He could hire a man for $2.50 or $3 a day to fence and clear the ground, which he did, while the entryman himself worked at a sawmill nearby. During a period of about four years this entryman caused to be placed on this land $3,500 to $4,000 worth of improvements. But when he submitted his final proof the Commissioner of the General Land Office determined that this homesteader had not resided upon the land the required number of days, and on that ground the entryman's proof was rejected. The case was appealed to the Secretary of the Interior, where the commissioner's decision was promptly reversed and the land awarded to the entryman. The Secretary of the Interior, grasping the spirit rather than the letter of the law evidently realized how much better it was that this entryman be permitted to earn his $6 a day by working at his trade and at the same time employ some one in his stead who could accomplish the same results upon this land for $3 a day, and thus allow both the entryman and his employee to profit in their particular line of endeavor.

ESPIONAGE SYSTEM.

Mr. Speaker, during the past 10 or 15 years there has grown a feeling in the hearts of the officials who have administered the public-land laws that every man who goes upon the public domain is a thief; that his purpose in going there is to filch something from the Government. As a result a system of espionage has sprung up in the Interior Department, a system which is as distasteful to the homeseekers as it is detrimental to the progress and development of the Western States. Congress is to-day employing a large corps of special agents whose general duties seem to be that of detectives to spy upon the humble homesteader and others who settle upon the public lands. My experience has taught me that some at least of these special agents feel that their tenure of office depends upon the number of adverse reports they may be able to file against these people. In justice, however, to all parties, I am inclined to believe that during the past three or four years these special agents have gained a higher and better conception of their duties and responsibilities, and that the system of espionage is on the wane.

The harshness with which the land laws have been administered has discouraged bona fide settlers and has driven from our borders across the Canadian line hundreds of thousands of industrious, honest, law-abiding citizens. This same practice of harshness has deprived thousands of good citizens of the fruits of three or four years of labor, privations, and hardships, leaving them in many instances impoverished and poorer than before. Such administration of these laws does not help the Government, but rather retards the development and growth of the country. It is grossly unjust not alone to the individual but to the public at large.

I have no patience whatever with the doctrine that every man who enters upon the public domain is dishonest and desires to acquire something from the Government for nothing. There are no more patriotic, home-loving people in the world than those who are now attempting to acquire title to 160-acre tracts of land in the great arid West. Only a few years ago the lands which are now being used for homestead purposes were considered unsuitable for cultivation, and were used for grazing purposes only by the cattle king and sheep baron. Located far from the center of civilization, the homesteader has no benefits of companionship, schools, or churches. He is oftentimes compelled to haul water not alone for himself and family, but for his stock. It is, therefore, the duty of the Government of the United States to proceed upon the assumption that these men are law-abiding citizens, imbued with a laudable ambition to honestly acquire homes for themselves and their families; and they should be treated as law-abiding citizens, not as outlaws. The average man who now attempts to reclaim 160 acres from the arid lands of the West has the courage, zeal, and fortitude of the crusader.

NATION'S FOOD SUPPLY.

There is another view of this matter which may well engage the kindly consideration of Congress and the thinking people of the country. The lands that have for years been considered unsuitable for cultivation, under improved scientific methods of farming, commonly known as dry farming, are yearly producing millions of bushels of wheat, thus abundantly contributing to the food supply of the world. Upon this question I take the liberty of reading an excerpt from an article recently written by Senator T. J. WALSH, of Montana, as follows:

The capacity of the great plains of Montana for the production of wheat is a recent revelation of which few, even among those most familiar with the country, dreamed 10 years ago. It was the well-nigh universal opinion that the climate was too arid for successful cultivation and that the grain-producing area would always be restricted to the regions, relatively inconsequential in extent, adjacent to the streams so situated as to invite or permit artificial irrigation.

A glance at a map on which are depicted the regions being irrigated or which it is expected will be irrigated by the Government projects reveals them as narrow strips, the aggregate area of which is pitifully small compared with the vast expanse that must rely on the ordinary precipitation for its moisture.

The comforting possibilities of our soil for the production of cereals by proper cultivation is revealed in the steady increase in our output of wheat, practically all of which is raised by the dry-farming system. In 1909 we produced 6,252,000 bushels; in 1912, 19,346,000; in 1913, 20,673,000. Flax is another dry-farm crop. We produced 120,000 bushels in 1909 and 5,520,000 in 1912, Montana ranking next in order to North Dakota in respect to that cereal, second among the States of the Union. Our acreage in wheat increased from 350,000 in 1909 to 870,000 in 1913, and in flax from 10,000 in 1909 to 400,000 in 1913. During the year ended June 30, 1913, over 19,000 homestead filings were made in Montana, and in the 10 months following 13,438 are reported—more than one-half of all entries of like character in all the public-land States. We still have 20,000,000 acres of unreserved and unappropriated public lands, at least half of which are capable of tillage, the mountainous regions being within the forest reserves. If that area were in wheat, only one-half of it producing annually under the system of summer fallowing in vogue with us, Montana would stand second among the States of the Union in the production of that grain; 75,000,000 bushels would furnish bread for 10,000,000 people.

A report just issued by the Department of Agriculture exhibits in a startling way how rapidly we are becoming dependent upon foreign field for bread. Obviously the subjection of the lands of Montana available for the production of breadstuffs is of the highest public concern.

Those 19,000 homestead entries in Montana in 1913 signify that our people seeking new homes in a country offering inducements to tillers of the soil are going to Montana instead of to the Dominion Provinces. For the past 10 months of the current fiscal year the Canadians coming to the United States to remain permanently exceeded in number those leaving for Canada with like intent by about 22,000, the first time in years that the balance has been in our favor. The number of our citizens that have thus expatriated themselves has diminished 30 per cent in the last year.

The transcendent importance of affording, so far as any Government agency can, a chance for success to the settlers who are now going to Montana in such unprecedented numbers to undertake the patriotic task of replenishing our relatively diminishing bread supply is too evident to require comment.

I am one of those who believe the public lands should be disposed of, but disposed of in such a manner that they may be put to their highest use. Lands which will produce bountiful crops of grain should not be used for grazing purposes alone; lands with scattering or worthless timber should not be held in forest reserves, but should be made to produce its maximum yield; lands with available water sites should not be held undeveloped, but should be either developed by the Government or allowed to go into the hands of people capable and anxious that the water shall not continue to run to the sea without turning some wheels on its course. Franklin K. Lane, Secretary of the Interior, has, in my judgment, grasped the true situation, for in his last annual report he says:

There has slowly evolved in the public mind the conception of a new policy—that land should be used for that purpose to which it is best fitted, and it should be disposed of by the Government with respect to that use. To this policy, I believe, the West is now reconciled. The West no longer urges a return to the hazards of the "land is land" policy. But it does ask action. It is reconciled to the Government making all proper safeguards against monopoly and against the sub-

version of the spirit of all our land laws, which is in essence that all suitable lands shall go into homes and all other lands shall be developed for that purpose which shall make them of greatest service. But it asks that the machinery be promptly established in the law by which the lands may be used. And this demand is reasonable.

SURVEYS.

Mr. Speaker, reference has heretofore been made to the question of surveys of public lands and the necessity for ample appropriations by Congress that this work keep pace with the demands of the settlers. Whether from lack of funds or because hindered by circumlocution and the system of red tape which has grown up in the management and conduct of these affairs, I am unable to say, but the delay in the surveys of public lands is, in instances, at least, absolutely discouraging to the man who attempts to acquire title. The recital of one instance, which, I think, is characteristic of many, will serve to acquaint you with some of the conditions pertaining to applications for surveys of public lands in the Western States.

A few years ago a case came under my observation where two young men had settled upon 160 acres of unsurveyed land, each claiming 120 acres of the tract. They built houses on separate 40-acre tracts of this quarter section and both made application to have the same surveyed, one of them at least offering to advance the money. You will understand that no filing could be made upon these lands until they are surveyed and no adjudication could be made of the rights of the respective parties until after survey. It was therefore important to these young men that a prompt and speedy survey be made. As above stated, application was made by them in person, which seemed to meet with no success. My assistance was then sought by these young settlers. Fifteen months ago this matter was taken up with the proper authorities and referred to the Field Division for investigation and report. The land in question is situated 7 or 8 miles from one of the oldest towns in the State of Montana, a town traversed by two transcontinental railroads. It is within two hours' ride from the State capital, where is situated the office of the United States surveyor general. The land is surveyed on one side, at least, and possibly two. I am confident the work of surveying this tract in the field could be done by two men in two days. And yet more than 15 months have elapsed since it was referred to the Field Division for report. My latest advices are that it will probably be included in the surveys to be made during the year of 1914. If that should be the case, the land will probably be surveyed during the fall months of this year. It will then take, in all probability, 6 months to a year to prepare and approve the plat of survey. Assuming that the matter goes on with reasonable expedition, as such matters are now conducted it will be the middle of 1915 before these young men can offer filing for this land and initiate proceedings to determine their respective rights. It will then take, under the régime of the contest department, probably a year to get a decision on the merits of the case. One or the other of these young men must lose. You will therefore observe that one of them will have spent three or four years of the best part of his life trying to determine whether or not he was entitled to a piece of the public land, when the whole matter, with reasonable expedition, might have been determined within a period of 6 or 8 months.

Such delays, such procrastination, is a blot upon our method of conducting the public business and should bring the blush of shame to all parties intrusted with the disposition of the public lands of this country. They are intolerable and inexcusable, and any people or party that condones and permits such delays to continue is, in my judgment, unworthy of the trust reposed in them.

DELAY IN ISSUING PATENTS.

Another source of annoyance and complaint on the part of the homesteader is the fact that after he has complied with the law and made his final proof, it is customary to allow months and sometimes years to elapse before his certificate of patent is handed to him. The laws should be so framed and so administered that within a period of 30 days after a man has submitted his final proof his deed of patent should forthwith issue to him from the Government. I do not think the present laws are deficient in this particular, but I do think a system of red tape has grown up in the department. And I do not think it unbecoming of me to suggest that the heads of that department could not render a greater service to the country than by cutting and disposing of this traditional red-tape system. No doubt it would cause something of a revolution in the department if such a proceeding were brought about; but if the same method of dilatoriness were practiced by any commercial house in the country that prevails in the Land Department of this Government, such a commercial institution would be in the hands of a receiver in less than 12 months. Without indulging in invidious comparison, I feel that I can in justice say that the causes of this last complaint are diminishing in the department at the present time. But I am convinced there is yet ample room for much more progress and improvements along this line. In this connection, Mr. Speaker, I want to read an editorial from the Montana Daily Record, one of the leading newspapers in my State, on this subject:

[From the Montana Daily Record, June 16, 1914.]

RED TAPE IN THE LAND OFFICE.

An interesting and instructive circular letter has just been issued by the Helena Commercial Club dealing with the question of the long delay in issuing patents in the public-land States to homesteaders. It is a subject which has been a live one for a great many years, and this effort of the Commercial Club to remedy the grievance is the first organized one with the object of bettering conditions. The present system which results in the delay is not one of the sins of omission or commission that can be charged up to the present Democratic administration; it is the outgrowth of a system which has been long in vogue in the General Land Office; and the Commercial Club, evidently of the opinion that there is a chance for the Democratic administration to make a record in the matter, is giving it the opportunity.

Some time ago the Helena Commercial Club adopted a resolution urging the Commissioner of the General Land Office to act more promptly on the issue of patents after the receipt of final proof. Senator MYERS presented the resolution to the commissioner, and one of the subordinate officials in the General Land Office made a rather lengthy reply, in which he said, in essence, if the system was changed it "would very badly disturb the orderly conduct of the office."

To disturb "the orderly conduct of the office" might be, under some circumstances, a very grave offense, but that is just what the people who are vitally interested want to do; in plain English, they want the Land Office to "get a move on." The Canadian land department has a system under which it issues patents in a tenth of the time required by the Land Office at Washington, and it would seem the Yankee should be able to get up as much speed in the matter as the Canadian.

The whole correspondence is printed in the circular issued by the Commercial Club, and it is most illuminating. If Commissioner Tallman will take this matter up personally, as is suggested by the club, there is no question but he has sufficient executive ability to remedy conditions, even if some of the red-tape artists under him are of the opinion a change "would badly disturb the orderly conduct" of the General Land Office.

Mr. Speaker, we are all disposed to become complacent with the practices of long usage, but because for years there has been such abnormal delays in the issuance of homestead patents is not convincing that such conditions must always continue.

The delays are evident, and so manifestly burdensome, unjust, and unfair to a large class of worthy citizens that no one can longer find justification for the same. Nor should a perfunctory, listless endeavor, on the one hand, or a supine indifference on the other, longer characterize those charged with the administration and disposition of the public-land laws.

The Late Representative Timothy D. Sullivan, of New York.

MEMORIAL ADDRESS

OF

HON. PETER J. DOOLING,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Sunday, June 21, 1914,

On House resolution (H. Res. 549) paying tribute to the memory of Hon. TIMOTHY D. SULLIVAN, late a Member of the House from the State of New York.

Mr. DOOLING. Mr. Speaker, TIMOTHY D. SULLIVAN was in every way a product of New York City, and in his life and character was typical of the city in which he passed his life and fought his way against overwhelming odds from poverty and obscurity to wealth and eminence.

The tributes of loving memory that have been paid to him since his tragic death by every class that makes up the great metropolis prove that not even death could separate him from the affectionate regard of the people who had known him through the long years that he lived amongst them, sharing their joys and sorrows, mingling in their pleasures, fighting side by side with them in their battles of life, and comforting and aiding them in their days of trouble and distress.

It was my great good fortune to know TIMOTHY D. SULLIVAN personally and well. For over a quarter of a century he was my friend and I his, and in common with everyone who knew him well I realized the greatness of his nature, the magnificent courage and ability that made him such a formidable antagonist in political struggles; but, above all, we who knew him most of all understood the generous warmth of his great heart, the unfailing love of his fellow man, and his faith and trust in the poorest and the humblest of his neighbors, a trust which was repaid by them with a loyalty and devotion which has rarely been equaled in the history of the city he lived in.

Everywhere that TIMOTHY SULLIVAN went he made a host of friends. It was my fortune to serve in the Senate of New

York State after he had ceased to be a member, and the memories of his genial personality were to be found in every part of the State capitol and among all kinds and conditions of men.

He realized in its absolute and literal meaning the immortal phrase of Jefferson that "all men are created equal" and lived up to the principle with a sincerity and consistency not often seen. To him the newsboy, the bootblack, the laborer, were brothers and friends and received the same unfailing and innate kindly courtesy that he bestowed on the man of wealth or eminence.

He was in his personal relations one of the most lovable men I ever met. His affectionate solicitude for his widowed mother is so well known that it is not necessary to repeat the touching story of those brave years of his early childhood when at the age of 8 he started to help her fight the hard struggle of existence with her children after her husband's death. Devoted to his family, his early manhood was spent in working for their comfort and support and the filial devotion that characterized his childhood remained with him through all of his busy, eventful life.

He had many enemies, as all successful men have. He was abused by those who could not understand his motives nor appreciate his work; but amid all the hard and bitter strife that attends success in business and politics in a great city like New York he never lost his unfailing good nature nor his kindly spirit to all mankind.

Loved by his friends, respected by his enemies, to the older men who knew him he was a tried and trusty comrade; to the younger men who knew him he was a helpful guide and leader; to all who knew him a constant, loyal, and beneficent friend; and in the days to come when the history of the great city of New York in the latter part of the nineteenth and early years of the twentieth century are written there will be no brighter name in the list of names who helped to make New York the greatest city of the greatest country in the world than the name of him to whom we pay to-day our last tribute of respect and admiration; than this man, the friend of the oppressed, the foe of the oppressor, the benefactor of his fellow men, TIMOTHY DANIEL SULLIVAN.

Address of the President of the United States on Antitrust Legislation.

EXTENSION OF REMARKS

OF

HON. J. THOMAS HEFLIN,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, June 26, 1914.

Mr. HEFLIN. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address by the President of the United States before the Virginia Editorial Association, the White House, June 25, 1914.

The address is as follows:

"I think it is appropriate, ladies and gentlemen, in receiving you, to say just a word or two in assistance of your judgment about the existing conditions. You are largely responsible for the state of public opinion. You furnish the public with information, and in your editorials you furnish it with the interpretation of that information. We are in the presence of a business situation which is variously interpreted. Here in Washington, through the Bureau of Commerce and other instrumentalities that are at our disposal, and through a correspondence which comes in to us from all parts of the Nation, we are perhaps in a position to judge of the actual condition of business better than those can judge who are at any other single point in the country; and I want to say to you that as a matter of fact the signs of a very strong business revival are becoming more and more evident from day to day.

"I want to suggest this to you: Business has been in a feverish and apprehensive condition in this country for more than 10 years. I will not stop to point out the time at which it began to be apprehensive, but during more than 10 years business has been the object of sharp criticism in the United States, a criticism growing in volume and growing in particularity; and, as a natural consequence, as the volume of criticism has increased business has grown more and more anxious. Business men have acted as some men do who fear they will have to undergo an operation and who are not sure that when they get on the table the operation fill not be a capital operation. As a matter of fact, as the diagnosis has progressed it has become more and more evident that no capital operation was necessary; that at the most a minor operation was necessary to remove admitted distempers and evils. The treatment is to be constitutional rather than surgical, affecting habits of life and action which have been hurtful; for on all hands it is admitted that there are processes of business, or have been processes of business, in this country which ought to be corrected, but the correction has been postponed, and in proportion to the postponement the fever has increased—the fever of apprehension.

"There is nothing more fatal to business than to be kept guessing from month to month and from year to year whether something serious is going to happen to it or not and what in particular is going to happen to it, if anything does. It is impossible to forecast the prospects of any line of business unless you know what the year is going to bring forth. Nothing is more harmful, nothing has been declared by business men to be more unfair, than to keep them guessing.

"The guessing went on; the air was full of interrogation points for 10 years and more. Then came an administration which for the first time had a definite program of constructive correction—not of destructive correction, but of a constructive correction of admitted evil—a very clear program, disclosed, so far as possible in a general program, in its particulars as well as in its general features. And the administration proceeded to carry out this program.

"First, there was the tariff; and business shivered. 'We do not like to go in; the water looks cold.' But when the tariff had been passed it was found that the readjustment was possible without any serious disturbance whatever. So that men said, with a sense of relief, 'Well, we are glad to get that behind us; and it was not bad, after all.'

"Then came the currency reform. You remember with what resistance, with what criticism, with what systematic holding back, a large body of bankers in this country met the proposals of that reform; and you know how, immediately after its passage, they recognized its benefit and its beneficence, and how ever since the passage of that reform bankers throughout the United States have been congratulating themselves that it was possible to carry out this great reform upon sensible and solid lines.

"Then we advanced to the trust program, and again the same dread, the same hesitation, the same urgency that the thing should be postponed. It will not be postponed, and it will not be postponed because we are the friends of business. We know what we are doing. We purpose to do it under the advice—for we have been fortunate enough to obtain the advice—of men who understand the business of the country; and we know that the effect is going to be exactly what the effect of the currency reform was—a sense of relief and of security.

"Because when the program is finished it is finished; the interrogation points are rubbed off the slate; business is given its constitution of freedom and is bidden to go forward under that constitution. And just as soon as it gets that leave and freedom there will be a boom of business in this country such as we have never witnessed in the United States.

"I as a friend of business and a servant of the country would not dare stop in this program and bring on another long period of agitation. Agitation longer continued would be fatal to the business of this country, and if this program is delayed there will come agitation with every letter in the word a capital letter. The choice is a sober and sensible program now completed or months upon months of additional conjecture and danger. I for one could not ask this country to excuse a policy which subjected business to longer continued agitation and uncertainty; and, therefore, I am sure that it is beginning to be evident to the whole press of this country, and by the same token to the people. that a constructive program is at last not only to be proposed, but completed, and that when it is completed business can get and will get what it can get in no other way—rest, recuperation, and successful adjustment. I can not get rest if you send me to bed wondering what is going to happen to me in the morning; but if you send me to bed knowing what the course of business is to be to-morrow morning I can rest. How much better is certain justice to the men engaged in business.

"It is a matter of conscience as well as a matter of large public policy to do what this Congress, I am now certain, is going to do—finish the program. And I do not think that it is going to take a very long time. I believe that the temper of those engaged in this great thing is admirable; that the various elements sometimes in antagonism in the Congress of the United States are drawing together, and that we shall witness an early statesmanlike result, for which we shall all have abundant reason to be thankful."

Agricultural Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. JAMES B. ASWELL,
OF LOUISIANA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, June 26, 1914.

Mr. ASWELL. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following letter:

MAY 5, 1914.

DEAR SENATOR KENYON: Thank you very much for your letter. I wish that I might long ago have had a full talk with you about the General Education Board from every standpoint. I could have told you many things that it seems to me it is proper for you to understand, in view of the fact that you are now put in the position throughout the United States of making attacks upon this board and of intimating that its gifts to educational objects have not been made wisely or with good motives.

I had long ago become interested in the great need of the South for educational advancement in all directions, and had therefore attended the earliest of the now famous yearly conferences on education in the South. Out of those early conferences grew the Southern Education Board, of which the late Robert C. Ogden, of New York, and the late Hon. J. L. M. Curry, for many years the chief agent of the Peabody Fund in the South, were the most conspicuous founders. Mr. Ogden remained president of this board until his death last year. I was made a member of the board at the beginning, and am still one of its members. I have never been associated with a more able, a more unselfish, or a more statesmanlike group of educational leaders than the men who have belonged to the Southern Education Board.

The work of this board obtained the recognition and support of various men who were interested in the cause of education, and among them, in particular, was Mr. Rockefeller, who had for a long time been a large supporter of various schools and educational enterprises in the South. Among the most active members of the Southern Education Board were the late William H. Baldwin, president of the Long Island Railroad, who had lived for years in the South as a railroad official; Mr. George Foster Peabody, who had originally come to New York from Georgia; Mr. Walter Page, originally from North Carolina; and various others. The Southern Education Board had demonstrated the educational opportunities and needs in the South, and had enlisted the hearty good will of the friends and leaders of the education of both races, as well as the support of State officials and the heads of institutions.

The idea of another board, which should have a large income at its disposal and be able at once to help supply some of the most urgent educational needs of the South, as well as those of other parts of the country, became impressed upon the minds of those who were influential with Mr. Rockefeller and were his advisers in matters of education and philanthrothy. When it was decided to form such a board Mr. Rockefeller offered an initial support, which assured it a considerable income for a brief term of years; and its members were appointed largely from the membership of the Southern Education Board, Mr. Baldwin becoming the first chairman. Since the board in its ultimate purposes was to be national in its scope, it was thought desirable to obtain for it a congressional charter. It could, indeed, have done its work just as well under a State charter, but there seemed reasons why it would be desirable to obtain a charter at Washington.

Among the men brought into the new board were the late Daniel C. Gilman (president of Johns Hopkins University), Mr. Morris K. Jesup, of New York, Mr. Frederick T. Gates, and Mr. E. Benjamin Andrews (chancellor of the University of Nebraska). Dr. Wallace Butterick was at once made secretary and chief executive officer of the board.

After several years' observation of the board's methods and achievements, Mr. Rockefeller felt that he could trust it with increasing sums, and as a result of several successive gifts the board came into the control of the large funds now intrusted to it, due report of which is made annually to the Secretary of the Interior.

The board has helped to advance educational progress in so many ways, particularly in the South, that I could hardly enumerate them to you in a letter. It has succeeded in strengthening a number of the best colleges and universities, and it has been active in helping to establish high schools throughout the South, and to give better training to the teachers needed for the rural common schools. This work has been done always in cooperation and harmony with the educational forces of the States where money has been contributed. There has never, anywhere in the South, been the slightest thought of spending any of the money of the General Education Board with a view to political influence or to creating any kind of tendency as respects public opinion upon economic or social questions.

The board became interested in agricultural progress very largely through its deep perception of the fact that in the Southern States it was almost impossible to secure proper local support of common schools until neighborhoods had become sufficiently prosperous to pay school taxes. Agricultural prosperity seemed even more urgent than improved schools; or, rather, each of these reforms needed the help of the other, and both problems were to be considered as phases of a single larger one—that of the real progress and prosperity of the people.

The late Dr. Seaman Knapp, formerly president of the Iowa State Agricultural College, had been brought to Washington by Secretary Wilson, of the Department of Agriculture, and placed at the head of a Government "farm demonstration" service in the Bureau of Plant Industry. Dr. Knapp's methods with the cotton growers, who had suffered such great losses through the ravages of the boll weevil, had been of great value, as showing not only how to raise more and better cotton, but also how to diversify southern crops and improve local conditions.

This work of Dr. Knapp's, under the guidance of Secretary Wilson, had greatly appealed to the General Education Board as of immense value and importance. Mr. Baldwin meanwhile had died and Mr. Gates had become chairman of the board. Mr. Gates and Dr. Buttrick (as also Mr. Page, who served on the country life commission with your distinguished veteran farm editor of Iowa, Henry Wallace) had become so greatly impressed with Dr. Knapp's work that they wished to see it largely applied in the South. The whole board was unanimous in adopting their views. But the appropriations made by the Government for the farm-demonstration work were not large enough to extend that work very rapidly or to carry it at all outside of the districts infected by the boll weevil.

The General Education Board proposed to have the farm-demonstration methods extended, in advance of the boll weevil, to the South Atlantic States and to be tried here and there farther north than the cotton belt. Secretary Wilson and Dr. Knapp were prepared to appoint additional local farm-demonstration agents in the South and to supervise the work, with the General Education Board appropriating such sums from year to year as were agreed upon. These appropriations grew larger, because the department felt great interest in the spread of the work under Dr. Knapp's direction and because the General Education Board was so well pleased on its part with the kind of supervision and direction that the Government was giving.

There was no interference upon the part of the General Education Board at any point. There was, on the contrary, entire harmony between the officers of the board on the one hand and the Secretary of Agriculture upon the other. We in New York had regarded it as perfectly well understood by the Agricultural Committees of both Houses of Congress, just as it was understood throughout the South, that the General Education Board was cooperating in this work of extending farm demonstration quite rapidly.

It would, indeed, have been quite possible for the board to have carried on this work under its own direct management; and at all times it would have been possible to have it directed by the State authorities and the local agricultural colleges, which looked upon it at first with indifference, but afterwards with convinced admiration.

But the most efficient way to secure results, and to convince localities of the worth of this method of practical farm demonstration, seemed to be to have the work directed from Washington and carried on in a unified way under the direction of Dr. Seaman Knapp, and afterwards—Dr. Knapp having died at a great age, with his energy and his power unabated until the end—under the direction of his son, Mr. Bradford Knapp, who now directs the work efficiently under the present administration.

It had not been expected by the General Education Board that this cooperation with the department for the sake of farm demonstration in the South was to be other than a comparatively temporary arrangement. The boll weevil and other conditions created something like a great sectional emergency. The Government constanty cooperates with private donors to Red Cross funds in times of great public calamity, involving loss of life and suffering—as floods, fires, and so on.

I am in a position to know the spirit of the General Education Board in its relation to this farm-demonstration work; and I can assure you it has been patriotic in the truest sense.

There were certain reasons why this farm-demonstration work was more immediately necessary in the South than in other parts of the country; but the General Education Board has already, in the course of a number of years, contributed toward that work a million dollars or more, and it is probably true that the time has come when the board's funds ought to be made free for other forms of effort.

If Congress is so convinced of the value of this work that it is ready to carry it on, as you now propose, it would seem to me that this is a substantial tribute to a kind of work that the board has done so much to encourage and develop.

I can hardly believe, however, that if you had really understood the intelligent enthusiasm and the perfectly unselfish zeal with which the board has cooperated in all this business, you would not have wished to stand before the country as disparaging the board. Nor, indeed, as a Senator from the State of Iowa, would you wish to attack a work which had been carried on under the full direction of two such distinguished Iowa statesmen and veteran farmers as Secretary Wilson and Dr. Knapp. It was largely because of the value of this work and their appreciation of it that the farmers of the South clamored for the retention of Secretary Wilson when Mr. Taft formed his Cabinet. It was wholly on account of the value of this work that in its great new teachers' college, at Nashville, which bears the name of George Peabody, there will be a department forever known as the Seaman A. Knapp School of Country Life, thus perpetuating the memory of the man who was president of Iowa's State College of Agriculture.

You are quoted in the newspapers as having reflected, by inference, upon the colleges and educational institutions throughout the United States that have been helped in their endowments by the General Education Board. It is true that this board has given a great deal of money to colleges and universities. I should think the amount of such gifts must by this time be $12,000,000 or thereabouts. But in no case has the amount given to an institution been large enough to carry with it any suspicion of an endeavor to obtain any influence over the management or the teaching of the institution. For example, five colleges in your own State have had a share in these appropriations. The college in your State that has received most aid from the General Education Board is your own college (as it is also mine), namely, the institution at Grinnell. But whereas the General Education Board has helped Grinnell College in three successive campaigns for funds, its subscriptions have amounted only to a total of $200,000, as against about four times as much contributed by the friends and supporters of the college.

It is always the aim of the General Education Board to help those who help themselves, and to do it in such a way as to stimulate and strengthen each college's proper and natural constituency. For instance, your college at Grinnell has just completed a new campaign to raise $500,000 for necessary objects—chiefly endowment—and the General Education Board has subscribed one dollar in five. There is no college in the country which is regarded as more independent in its spirit or more wholly free from undue influence in its teaching and in its control than the college at Grinnell, which has pride in you as one of its students and in your colleague, Senator CUMMINS, as one of its trustees. You, I am sure, know well that neither the trustees on the one hand, nor the president and faculty on the other hand, could be persuaded to give up any degree of the full measure of freedom that Grinnell has always enjoyed. And what you know in this regard is also well known by the General Education Board.

I can assure you, from my own constant observation, that the General Education Board in its subscriptions to colleges and universities throughout the United States has shown no motive except that of promoting and strengthening the cause of education. If I could have discovered in the board any other motive or tendency, I could not with good conscience have remained a member.

It would seem to me impossible to attempt to discuss the General Education Board's work except as its membership has managed its affairs and appropriated its income.

The board believes that the investment and, from time to time, reinvestment of its funds have been managed with due regard to the safety of the principal and the yielding of a proper average percentage of income, in order that it might have resources with which to promote the carefully selected objects of its support or aid. I have not served on its finance committee, but each member of the board has been duly informed from time to time of the status of the board's investments. It is natural that business men in New York should invest educational and trust funds in the securities of railroads and industrial enterprises with which they are acquainted.

The work of this board has become well known to the educational people of the country. The board has been brought into close relationship with the presidents of colleges and universities and the other leaders in the cause of education. There is hardly any university or college in the country, great or small, which has not come into relationship with this board, either through application for a subscription to some endowment effort or in some other way.

The board has made it its business to encourage good standards and careful management wherever its influence extended. I do not believe any college president or educational leader in the United States will come forward to say that the board has ever, to his knowledge, tried to exert any kind of influence except a wise and helpful one—as respects, for example, good business management, avoidance of improper diversion of permanent funds to current expenses, thorough educational standards, and truth instead of fiction in college statistics.

The good opinion the board has earned among the educational men of the country is the more remarkable because it has steadfastly refused to buy popularity by distributing doles to all seekers. While it has helped many colleges it has refused to help vastly more, because it had rules and standards to which they could not conform. Yet even these hundreds of institutions which have not secured aid from the board have seldom failed to appreciate the impartiality and sincerity of the motives governing the board's decisions.

As the board is now constituted, its chairman is Mr. Frederick T. Gates, and its secretary and chief executive officer is Mr. Wallace Buttrick, with Drs. E. C. Sage and Abraham Flexner as his assistants, these secretaries all three being educational experts of rare ability, and two of them are members of the board. Besides these officers the board includes, in the order of seniority of membership, the following names: John D. Rockefeller, jr., Walter H. Page (now ambassador, etc.), Albert Shaw, Starr J. Murphy, Edwin A. Alderman (president of the University of Virginia), Hollis B. Frissell (president of Hampton Institute), Harry Pratt Judson (president of the University of Chicago), Charles W. Eliot (president emeritus of Harvard University), Andrew Carnegie, Edgar L. Marston (New York financier), Wickliffe Rose, Jerome D. Greene, and Anson Phelps Stokes.

Messrs. Rose, Greene, and Stokes are educational experts of great ability and experience—the first chiefly identified with southern educational work, the second formerly with Harvard, and the third with Yale.

The entire board is keenly interested in all the work that is carried on. Members like Dr. Eliot, for instance, are not merely nominal or perfunctory members, but give long days and their most thorough attention to the board's work. In this regard, indeed, there has perhaps never been an educational board having large funds to expend which has been made up of men so minutely intelligent about all of its efforts and so keenly alive to the opportunities and responsibilities of the trust reposed in them. The board has done its work in harmony—not the harmony of mere acquiescence, but that of intelligence and of conviction after free and full discussion.

Since I am writing this long letter to you entirely of my own accord and without consultation with anyone whatsoever, I believe that my statements must to some extent result in your obtaining a new and better light upon the spirit and methods of this board. I could have had no reason through all these years for remaining a member of the General Education Board if I had not been fully and at all times convinced of the value of its work. I have felt that, as a member of the board, I was connected with an enterprise that was performing a noble public service, with freshness of ideas, with immense vitality, and under guidance and direction that has always surprised and delighted me by its sagacity as well as by its energy.

I can not feel that your attacks upon the board are just to us who have through these years constituted its membership, and have thus been responsible for its actions. It is true that the funds directed by the board are inconsiderable, excepting for those very great gifts received from Mr. John D. Rockefeller, although the board has at all times been prepared to receive and to administer money put in its hands for educational purposes by other donors. Mr. John D. Rockefeller, jr., has from the beginning been a member of the board. I am sure that everyone who has served with him on this board would testify to Mr. Rockefeller's conscientiousness as a member and to the qualities, both of mind and of character, exhibited by him in the board, which would have made him a most desirable member quite apart from the fact that the board was dispensing the income of funds contributed by his father.

I must not for a moment question your intention in a matter of this kind, as in all other things that affect your action as a Senator, to be guided by a sense of public duty. I must ask you to be equally careful not to reflect upon the motives or the labors of those of us who have given of our time and effort as members of this board, impelled by a great sense of the opportunity given us to serve the best ends of American progress.

I believe that this board has made a remarkable record for usefulness and efficiency. I believe that if you could have known the spirit of its members, the thoroughness with which they have studied the educational needs of the country, and the considerations that have actuated them in their different undertakings you would wish to compliment the board, because you also are a man who by nature and by training are in full sympathy with all the different things that this board has tried to do or to help others in doing.

This letter, long as it is, merely summarizes what I should like to have said to you in conversation some time ago, in order that you might at least have had the advantage of my point of view and of my information.

I, for my part, am quite willing to have the board's support of farm demonstration entirely taken over by the Government. But if you had known as fully as I have known the history of this cooperation I think that you would have been glad to pay the board a generous compliment for its timely helpfulness in this field while proposing to relieve its funds and to take over the work as worthy of full governmental support.

As for the charter of the board, I am inclined to hold strongly to the view that an organization of this kind, not having a local object in view, but dispensing its educational funds throughout all portions of the country, may better operate under a congressional charter than under that of an individual State. You might, indeed, find it desirable to prepare and introduce a bill providing a wise and well-restricted form of Federal charter for educational funds and endowments of this character rather than to have such enterprises incorporated singly and under separate and special forms.

Believe me, with great regard,

Sincerely, yours,

ALBERT SHAW.

Hon. WILLIAM S. KENYON,
United States Senate, Washington, D. C.

The Tariff.

EXTENSION OF REMARKS
OF
HON. GEORGE A. NEELEY,
OF KANSAS,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, June 24, 1914.

Mr. NEELEY of Kansas. Mr. Speaker, it is a truism that "he who sows the wind reaps the whirlwind." This is abundantly proven by the experience of the American people who sowed the wind of special privilege under Republican administration and have made it necessary that we should enact legislation to correct these great mistakes. The trades-commission bill and the antitrust program of this administration are proof not only of necessity of this legislation, but their enthusiastic reception upon the part of business and professional men throughout the entire country, as well as their frank indorsement by farm and labor organizations, are ample proof that there is practically a unanimous demand for legislation to check the encroachments of monopoly and restore legitimate competition in every line of human endeavor. It is proof also that the people of this country have been brought to the realization of the fact that if we safeguard the interests of the average man, the great producing classes—the farmer, the laborer, the mechanic, and the artisan—that these interests are so closely interwoven with the general welfare of our people that their success means the prosperity of the Nation as a whole.

THE TARIFF IN KANSAS.

Prior to the passage of the Underwood tariff bill our Republican and Progressive friends were wont to predict bankruptcy to the agricultural interests of the country, and recently a very distinguished Kansan has been shedding crocodile tears for the Kansas farmer's wife because of a natural drop in the price of butter and eggs due to the return of the summer season.

I have been greatly interested in the statements of this gentleman, and since he is the publisher of the Salina Daily Journal, I took the trouble to compile a comparative statement of the prices received for the staple products of cattle, hogs, corn, wheat, butter, and eggs, compiled from the records of this paper, for the Republican years of 1898, 1902, and 1910, as follows:

Salina prices.

1898.

	Mar. 23.		Mar. 23.
Hogs	[1]$3.45–$3.80	Wheat, No. 2 hard	$0.88–$0.90
Corn (cash)	[1].26– .26½		
	July 20.		**July 20.**
Cattle (steers)	$3.40 –$5.55	Wheat, No. 3 hard	$0.64 –$0.66
Hogs	3.00 – 4.05	Butter, fancy (creamery)	.13½– .15½
Corn	.29 – .33½	Butter, dairy	.12
Wheat, No. 1 hard	.68 – .70	Butter, store packed	.09½
Wheat, No. 2 hard	.66 – .69½	Eggs	.08

1902.

	Mar. 20.		Mar. 20.
Wheat, hard	$0.60	Eggs	$0.12
Wheat, soft	.63	Butter, creamery	.28
Corn	.70	Butter, country	$0.15– .20
	July 23.		**July 23.**
Wheat, No. 2	[2]$0.59	Butter, country	$0.12–$0.18
Butter, creamery	.23	Eggs	.12½

[1] Figures based on Kansas City markets.
[2] Figures based on Salina markets.

Salina prices—Continued.

1910.

	Mar. 23.		Mar. 23.
Cattle (choice beef)	$4.50-$5.75	Butter, creamery	$0.35
Hogs	10.10	Butter, dairy	$0.25-$0.28
Corn (cash)	.60	Eggs	.16
Wheat, No. 2 hard	.98		

	July 27.		July 27.
Cattle	$5.50-$7.50	Butter, creamery or separator	$0.33
Hogs	8.40	Butter, dairy	$0.20- .25
Corn (cash)	.55	Eggs	.12
Wheat, No. 1 hard	.91		

[1] Figures based on Kansas City markets.
[2] Figures based on Salina markets.

We have also heard some criticisms from the lips of another very distinguished Kansan, likewise connected with the Wichita Eagle, and so I have taken the trouble to make a few comparisons from the files of this paper, as follows:

Wichita prices.

1898.

	Mar. 16.		Mar. 16.
Cattle (choice beeves)	[1]$3.90-$5.35	Wheat, No. 3 hard	$0.83½-$0.84½
Hogs	[2]3.00 - 3.65	Butter, creamery	[1].15 - .18½
Corn (cash)	[1].26½- .26½	Butter, dairy	[1].14 - .16
Wheat, No. 1 hard	[1].88	Eggs	[1].07½
Wheat, No. 2 hard	[1].85 - .87		

	July 6.		July 6.
Cattle	[2]$2.50-$3.75	Wheat, No. 3 hard	[1]$0.77-$0.80(old)
Hogs	[2]3.10 - 3.65	Butter, creamery or separator	[1].12- .14½
Corn (cash)	[1].31 - .32	Butter, dairy	[1].12
Wheat, No. 1 hard	[1].75 (new)	Eggs	[1].08½
Wheat, No. 2 hard	[1].83 (old)		

1902.

	Mar. 5.		Mar. 5.
Cattle (choice beef)	$2.00-$4.75	Wheat, No. 3 hard	$0.72½
Hogs	4.50 - 6.10	Butter, creamery	$0.21 - .25
Corn (cash)	.61 - .64½	Butter, dairy	.20
Wheat, No. 2 hard	.72½	Eggs	.17½- .18

	July 16.		July 16.
Cattle	$2.65-$4.00	Butter, creamery or separator	$0.19½
Hogs	7.15 - 7.70	Butter, dairy	.18
Corn (cash)	.66½- .69	Eggs	.14
Wheat, No. 2 hard	.70		
Wheat, No. 3 hard	.66½- .67		

1910.

	Mar. 16.		Mar. 16.
Cattle (choice beef)	$2.75-$8.00	Wheat, No. 3 hard	$1.11½-$1.13½
Hogs	7.75 -10.45	Butter, creamery	[2].26 - .31
Corn (cash)		Butter, dairy	[2].22 - .27
Wheat, No. 2 hard	1.14½- 1.14½	Eggs	[2].19 - .21½

	July 7.		July 7.
Cattle	[2]$2.75-$7.25	Butter, creamery or separator	[2]$0.19½
Hogs	[2]8.60 - 9.15	Eggs	[4]3.75
Corn (cash)	[1].59½- .63½		
Wheat, No. 2 hard	[4]1.01		

[1] Figures based on Kansas City markets.
[2] Figures based on Wichita markets.
[3] Figures based on Chicago markets.
[4] Case.

From these comparisons it can be seen that there has never been a time in the history of this country when we were at peace when the prices of these products were so advantageous to the farming interests of Kansas as to-day. With cattle bringing from 7½ to 8½ cents per pound; hogs from 7 to 8 cents per pound; corn, from 75 to 90 cents per bushel; wheat, from 75 to 85 cents per bushel; butter, from 18 to 30 cents per pound; and eggs, from 15 to 20 cents per dozen, we have completely answered the fallacious argument of our opponents who have so long posed as the friends of the farmers, and have proven to the world that the farmers of Kansas and the United States have nothing to fear from this legislation.

THE INCOME TAX.

For years the people of this country have been clamoring for an income tax and it has remained for this Democratic Congress, marching in the van of progress, to fulfill that demand with the income-tax clause inserted in the Underwood tariff bill. This law levies a tax of 1 per cent per annum upon the income of every person whose income does not exceed $20,000 annually; 2 per cent on incomes exceeding $20,000, but not more than $50,000 per annum; 3 per cent on incomes not less than $50,000 or more than $75,000; 4 per cent on incomes not less than $75,000 or more than $100,000 per annum; 5 per cent on not less than $100,000 or more than $250,000 per annum; 6 per cent on not less than $250,000 or more than $500,000 per annum; and 7 per cent on all incomes exceeding $500,000 per annum.

It is estimated that this income tax levied upon swollen fortunes will produce a revenue in excess of $50,000,000 annually, and the only regret the country can have is that it has not been in effect during that period of time when the people of this country have been overburdened with excessive taxation immediately prior to the advent of this Democratic administration. Experience will doubtless suggest changes and amendments to the existing law, and it is to be hoped that these changes may be so made that swollen fortunes will contribute to the whole people at least a part of the exactions levied by reason of the special privileges enjoyed under Republican administrations.

THE NEW CURRENCY SYSTEM.

Pursuant to the terms of the new currency bill, provision has already been made for the establishment of 12 regional banks, each one with a subscribed capital stock in excess of $4,000,000. The plan of organization is rapidly proceeding to its completion, and before the period of crop movement begins we will have quietly accomplished the greatest financial change in the history of this country, without panic or thought of panic.

As finally adopted the bill contains five features commending it to the country's support. They are (1) complete governmental control of the Federal Reserve Board; (2) the retirement of national-bank notes and the substitution of Federal reserve notes issued directly under the authority of the Government; (3) the prohibition against rediscounting paper executed for the purpose of speculating and gambling on the stock exchange; (4) the recognition of agricultural paper by directing its discount at the central reserve bank on the same basis as commercial paper; and (5) authorizing national banks to make farm loans for not exceeding five-year periods.

I am very glad indeed to have been a member of the committee that framed this bill and to have actively participated in the proceedings resulting in this splendidly constructive piece of legislation. That the business men of Kansas have not shared in the pessimistic predictions of our Republican and Progressive friends is evident from the fact that over 99⅜ of the eligible banks within the State of Kansas have been admitted to membership under the terms of the bill, while many State banks have, or soon will, file applications either to increase the amount of their capital stock to come within the terms of the bill or else to become national banks, in order that they may be able to accommodate the business demands of their customers.

With the inauguration of this system only one thing more will be necessary to give us complete financial independence, and that is the establishment of a farm-loan system commensurate with the needs of the country and articulating with the currency system recently established.

THE ALASKAN RAILROAD BILL.

This bill provides for the location and building of lines of standard-gauge railroad to connect one or more of the open Pacific harbors on the southern coast with the navigable waters of the interior and with the coal fields yielding coal in quality and quantity sufficient for naval use, so as best to aid in the development of the agricultural and mineral resources as well as to aid in the settlement of the public domain.

This is not a new departure in our Government. Up to June 30, 1912, the 16,239.10 miles of Government-aided railroads in the United States have received land grants amounting to over 115,000,000 acres, and of this amount the 1,654 miles of Government-aided railroads in Kansas have received their share. The difference between the old way and this, however, is that the old grants were usually straight gifts, whereas this bill authorizes an issue of $35,000,000 of 3 per cent bonds, free from all manner of taxation, for the construction of this road by the Government, the title to remain in the Government, and pro-

vides for the payment of these bonds by creating what is known as the Alaskan railway redemption fund, in which shall be paid 50 per cent of all money received from the disposal of public lands in Alaska or the coal or minerals therein or timber thereon, and into which fund shall be paid the net earnings of the railroad above operating expenses, to meet the payments on the bonds when due.

This bill is based on the report of the Alaskan Railroad Commission, the result of hearings before the Committee on Territories and the recommendations of the Department of the Interior. It is justified both from the standpoint of aiding in the development of the great Territory of Alaska and furnishing an inexhaustible supply of coal for use of the American Navy. The comparative production of Alaska is greater than that of any State in the Union. It has produced, since the time of its acquisition from Russia, in 1867, approximately $430,000,000 of mineral, sea, and fur products, the annual production of the Territory at this time amounting to about $40,000,000. It has within its borders an inexhaustible supply of the best firing coal.

The Pacific coast section of our Navy consumes, approximately, 160,000 tons of this coal each year, while a fleet operating on the Pacific coast in time of war is estimated to consume 200,000 tons of coal each month. The present supply of coal for our Pacific Coast Fleet is freighted from Newport News, Va., at a rate of from five to eight dollars per ton. Even with the construction of the Panama Canal, it is estimated that in case of war the freight on the coal for a year's supply of the Pacific Fleet would amount to over nine and one-half million dollars, nearly all of which will be saved by the construction of this railroad, without any expense to the Federal Government itself and to the great and general benefit of this mighty empire in the north.

PANAMA CANAL TOLLS.

There are two propositions involved in the Panama Canal tolls matter that, to me, appear decisive. The first is the treaty itself, and the second is the economic question involved.

With whether or not the treaty should have been made we have no concern. Wise or unwise, the fact remains that on February 22, 1902, President Roosevelt, acting through his Secretary of State, John Hay, executed the treaty. If it was made in good faith, then we are in honor bound to obey its terms, and the position of President Wilson that the Nation is actuated by the same honorable impulses as an individual is absolutely sound, and it is our duty to abide by the letter of the contract without regard to the wisdom or lack of wisdom displayed in its execution. Section 1 of article 3 of the treaty, and the only section in it that refers to the toll proposition, reads as follows:

The canal shall be free and open to the vessels of commerce and of war of all nations observing these rules, on terms of entire equality, so that there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic, or otherwise. Such conditions and charges of traffic shall be just and equitable.

The condition is, therefore, what did we mean when we agreed that "there shall be no discrimination against any such nation, or its citizens or subjects, in respect of the conditions or charges of traffic or otherwise"? If we meant what we said and intended to do as we agreed, the matter is comparatively easy, and it only remains for us to comply with our agreement. Suppose my friend CONNELLY and I should make a contract for sale and purchase of a piece of real estate. We agree in writing that he shall sell to me a specific property for $5,000. The next day my friend HELVERING offers Mr. CONNELLY $10,000 for the same property already contracted to be sold to me. Does the fact that Mr. CONNELLY could make a more advantageous bargain with Mr. HELVERING justify his breach of the covenant made with me? Is he not bound both in law and morals to carry out the terms of his contract, and does not the same principle apply between nations as between individuals?

Now for the economic feature. The United States has expended nearly $400,000,000 in the construction of this canal. This was contributed in taxes by the people from every section of the United States, and all except about $135,000,000 raised from the sale of Panama Bonds was money taken directly from the Federal Treasury. It is estimated that it will cost approximately $4,000,000 annually for upkeep of the canal, interest on the investment, repairs, improvements, and other necessary incidental expenses. Is it a fair proposition that the whole 100,000,000 people of the United States shall be taxed this enormous sum of money just to benefit some 12 or 15 individuals who are so fortunate as to have control of the coastwise shipping traffic?

Would it not be as reasonable to ask the whole people of the United States to spend $400,000,000 in the construction of a transcontinental line of railroad and then provide that everybody should pay freight and passenger fare on this railroad except 12 or 15 individuals, who should ride free?

FARM LOANS.

The subcommittee of the Banking and Currency Committee engaged in considering this subject has its bill ready for the action of the full committee. On May 27, when the Democratic members of the committee were called in conference to consider this measure, I made a motion that the entire committee proceed forthwith to consider H. R. 16478, known as the Bulkley bill, taking it up section by section for amendment and adoption, and that when we were through with its consideration we vote to determine whether or not it should be reported to the House for passage. This motion was defeated, but the committee decided that as soon as the antitrust bills were disposed of in the House that they would take up the farm loan bill in this manner for final disposition.

The bill provides in substance for the organization of farm-loan associations along lines very similar to building and loan associations except that they are under the immediate supervision of the Government. Loans may be made to bona fide residents, or persons soon to become bona fide residents, for the purpose of liquidating indebtedness on land mortgages, to improve land, to purchase equipment and live stock with which to conduct farm operations, and to purchase and erect a farm home.

The bill also provides that these loans may be made to within 50 per cent of the actual value of the land and 25 per cent of the actual value of the building, the rate of interest to be fixed by a governing board, and not to exceed the legal rate of the State wherein the land is located. The loan may run from 5 to 30 years with annual or semiannual amortization payments, no loan to exceed $4,000 in amount and all mortgages to be exempt from national, State, and local taxation. The bill then provides an appropriation of $50,000,000 annually from the Federal Treasury with which to purchase surplus farm-loan bonds not previously issued or sold to private individuals or concerns.

I concede that the bill is not a perfect one, and that it can and doubtless will be so amended as to strengthen and broaden its purpose, and as a member of the committee having the bill in charge, I shall leave nothing undone that this measure, with any necessary amendments, be enacted into law at the earliest possible date and before the end of this Congress.

CLEANING UP THE CAPITAL.

For over 50 years the Federal Government had been in partnership with sin and vice in Washington. Each month this great Government of ours sent the officers of the law down into the vice-ridden districts of the Nation's Capital to gather in the derelicts of society and exacted a contribution of their ill-gotten gains for the privilege of conducting dens of prostitution in this city.

Year in and year out, through the administrations of President after President, this great cankering, festering sore existed almost within the very shadow of the Capitol's dome and within six blocks of the White House itself. The new President was inducted into office—this great Democrat, who rules the destinies of this mighty Nation and who believes that a nation has a conscience the same as an individual—and under his splendid leadership a law was passed forever ending this partnership between a Christian Government and prostitution, and never again will a slimy dollar find its way into the Federal Treasury.

Nor is this all. After the passage of this law and after 300 women had been driven from their haunts of sin and shame, the good women of this city banded themselves together to redeem the fallen ones back to the paths of virtue and rectitude, and acting upon the advice of the good wife of this just and righteous President, 126 of these women have been given decent and honorable employment and are now leading lives of usefulness. What a glorious example of lawgiving that tempers justice with mercy.

THE VOTERS TO JUDGE.

The people of Kansas are not my debtors. They have honored me without stint of measure, and in return I have endeavored to show my appreciation by rendering unto the people of my district and State the most loyal service of which I am capable, and it is for them to determine whether or not it has been satisfactory.

As a candidate for United States Senator I base my case upon the achievements of this Democratic administration, the first in 16 years. It has been my great privilege to give enthusiastic and earnest support to every important measure that has been enacted into law since President Wilson was inaugurated, and I am immeasurably proud to have been a Member of the Congress

that has enacted more progressive legislation in 15 months than any other Congress in the history of this Republic. If the people of Kansas believe that the part and interest I have taken in the enactment of this legislation has redounded to their benefit; that my work and utterances have been in keeping with the best thought of an intelligent and progressive people; that my three years of legislative experience in the House of Representatives is an asset that may be used for their benefit; that in upholding the hands of the ablest President who has occupied the Executive chair since the days of Lincoln, upon each and every occasion, I have contributed my mite in behalf of the average person, and that I measure up to the full stature of the demands of this important position, then I shall deeply appreciate their splendid support; but if they should decide the issue against me I will neither sulk in my tent nor intrigue against the successful nominee, but will continue to do in the future as I have done in the past and render unto my party the full measure of my service.

Labor Union Exemptions.

EXTENSION OF REMARKS

OF

HON. J. HAMPTON MOORE,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 22, 1914.

On the bill (H. R. 17041) making appropriations for sundry civil expenses of the Government for the fiscal year ending June 30, 1915, and for other purposes.

Mr. MOORE. Mr. Speaker, there has been so much discussion of the bills exempting labor and agricultural unions from the operation of the Sherman antitrust law that under leave to extend my remarks I shall submit certain data which may aid to a better understanding of the question. It has been very generally asserted that the antitrust law was not intended to apply to labor unions, and a long fight has been waged by Samuel Gompers, president of the American Federation of Labor, and other labor leaders to specifically exempt combinations of labor from the provisions of that law. Mr. Gompers's attitude is well stated in his own language before the Judiciary Committee, December 16, 1913, when he said:

"Under the interpretation placed upon the Sherman antitrust law by the courts, it is within the province and within the power of any administration at any time to begin proceedings to dissolve any organization of labor in the United States and to take charge of and receive whatever funds any worker or organization may have wanted to contribute or felt that it is his duty to contribute to the organization.

"Mr. WEBB. Are there any suits pending in the courts now looking to this end, Mr. Gompers?

"Mr. GOMPERS. There are no suits now pending, but an organization of workingmen—the window-glass workers—was dissolved by order of the court under the provisions of the Sherman antitrust law, charged with conspiracy as an illegal combination in restraint of trade. And while that organization was dissolved by action of the court, yet it created no furore, for this reason: I have no desire to reflect upon the men who are in charge of that organization as its officers and representatives, but it was, in my judgment, supine cowardness for them not to resist an attempt of the dissolution of their associated effort as a voluntary organization of men to protect the only thing they possessed—the power to labor."

Prior to making this statement, in answer to Mr. CARLIN, a Democratic member of the Judiciary Committee, Mr. Gompers said:

"The labor interests opposed particularly the reelection of Mr. Taft; and, in order to accomplish that the best we could, we aided in every way in our power the election of Mr. Wilson."

Mr. Gompers then suggested that the organization had been "very patient" while the President was having the tariff and currency questions considered, and had "permitted Congress, without any objection or any agitation, to proceed at the special session."

POLITICAL PREFERENCES STATED.

In explanation of his appearance before the committee on this occasion, and by way of suggestion as to the methods that had been pursued to secure the action desired at the hands of Congress, Mr. Gompers said:

"In pursuance of that purpose we have opposed certain Members of Congress; that is, the men whom we knew were opposed to the legislation we sought and believed essential to our very existence as organized bodies of citizens engaged in laudable work. We announced to all whom it might concern that we should oppose and we have opposed certain gentlemen for reelection to Congress because we differed from them and they differed from us; whether they were right or we were right is not the question, but we believed they were wrong, and, as a matter of political duty, as well as duty to ourselves, we sought their retirement as Representatives or Senators.

"We have also undertaken to advocate the election of men whom we believed to be more sympathetically inclined and more regardful of the rights or to the justice which we, as organized workers, are entitled. We have gone into many of the districts and States to be helpful in them in order that the legislation might be passed which, we are firmly convinced, is necessary to our existence as associated working people. And we have gone further. We have gone to the various national conventions of the great political parties in our country, and we have endeavored to persuade these conventions to declare in favor of the legislation which we were seeking. While I am sure it is not new to you gentlemen, yet I think it necessary that I should read the declarations of the political parties bearing upon the legislation under consideration before your committee this morning, which we believe is best expressed in H. R. 1873. If I should read a few lines more than is contained in the declarations specifically bearing upon the subject, I trust that I may be pardoned, because there are some of the lines in the general declaration which seem to have little connection with the specific subject, and yet probably in the next line or two the matter is again referred to. Let me say in explanation that we appeared upon this subject the first time before a national convention of a political party at Chicago in 1908—before the Republican National Party convention, before the committee on platform—and submitted our requests for declarations to be incorporated in the platform. That party convention gave no heed to the subject; on the contrary, what the convention declared was practically a reaffirmation of the wrongs and the injustice against which we were protesting, so that we had nothing—no comfort, no sympathy, no promise of any sort, from that convention. From there we went to the Democratic national convention at Denver, and the party there made a declaration. Because that declaration is reaffirmed in the party platform of the Democratic national convention of 1912, it will not be necessary to read the declaration of 1908. The declaration of the Republican Party convention of 1912 was practically nil upon the subject.

"Mr. CARLIN. When you say the Republican Party, whom do you mean?

"Mr. GOMPERS. The regular Republican Party.

"Mr. CARLIN. Then, by that do you mean to distinguish the others as irregular?

"Mr. GOMPERS. Hardly. Why not take a man at his own wording? They call themselves Progressives.

"Mr. CARLIN. You were not referring to them just a moment ago?

"Mr. GOMPERS. I have not yet, not up to this moment, but I intend to. The Democratic Party's platform of 1912 contained these declarations."

SPECIAL PRIVILEGE INSISTED UPON.

Now, what Mr. Gompers and his associates demanded at the hands of Congress was to be freed from proceedings brought or that might be brought against labor organizations engaged in picketing, boycotting, and so forth, or raising and using funds for that purpose, which proceedings under the antitrust law could be brought against other combinations of men for transactions in restraint of trade. They demanded exemption from the power of the Federal courts to issue injunctions in certain cases and from punishment for contempt of court in certain cases, in effect limiting the staying hand of the law to the State courts and rendering powerless the Federal courts where interstate labor disputes arise. These were the purposes aimed at, in consequence, largely, of certain suits, notably the Danbury Hat case and others, involving the secondary boycott, or the practice of injuring persons not engaged in the controversy, and other recourses of certain organizations from which the aggrieved parties can now seek protection at the hands of the courts. When one phase of this question was being discussed in Congress by the present Secretary of Labor, Hon. William B. Wilson, a staunch friend and member of the labor unions, he admitted that the total number of wage earners in this country was about 30,000,000 and that of that number only 3,000,000 were organized, so that it is patent that 27,000,000 wage earners would not come under the excepted class and could not be exempted unless conforming to the requirements of the union. This is what has given rise to the contention that the legislation asked for by Mr. Gompers is "class legislation," and that it tends to give to a certain body of men a charter right to form combi-

nations for offensive or defensive purposes in such manner as to deprive a greater number of men of the protection of the law.

CHAIRMAN HENRY'S PARTY PROMISE.

In bringing in the rule for the consideration of the Clayton-Webb antitrust bill, which was presumed to legalize the exemption of labor unions, with the farmers' unions as an adjunct, Mr. HENRY, of Texas, chairman of the committee, made this announcement:

"Mr. HENRY. Mr. Chairman, there has been so much controversy about what was intended when the original Sherman antitrust law was passed that I think we should make clear just what we intend by this law. Some of us did not believe section 7 as originally written by the Committee on the Judiciary expressed exactly what should be in this bill. Therefore we took exception to the language of the first part of the paragraph in section 7 and insisted there should be additional language. Among those who agreed that the language was not plain enough were the gentleman from North Carolina, Mr. KITCHIN, the gentleman from Illinois, Mr. HINEBAUGH, the gentleman from Illinois, Mr. GRAHAM, the gentleman from Iowa, Mr. TOWNER, the gentleman from Maryland, Mr. LEWIS, and myself. We met to confer, and concluded that we ought to make the language more explicit. In that conference held in the committee room of the Committee on Rules on the evening of May 21, 1914, we agreed that this language should be added at the end of the first paragraph of section 7, to wit, after the word "thereof":

"Nor shall such organizations, orders, or associations or the members thereof be held or construed to be illegal combinations or conspiracies in restraint of trade under the antitrust laws.

"This language I have read is exactly the verbiage used by the gentleman from North Carolina [Mr. WEBB] in the amendment offered by him and is the amendment agreed upon by Mr. KITCHIN and our conferees in my office. The Committee on the Judiciary courteously accepted the language as prepared by the gentlemen in the conference, believing, I assume, that we were correct and that the original language used by them was not quite explicit. So we came to a satisfactory agreement with the House Judiciary Committee about this addition to the first part of section 7, and, as far as I am concerned, we are standing squarely with the committee for that paragraph with our added language.

MR. GOMPERS CALLED IN AND SATISFIED.

"We called into the conference with us the heads of the American Federation of Labor, and submitted this amendment to them, and said to them that we believed its adoption as an addition to section 7 would clearly exempt labor organizations and farmers' organizations from the provisions of the antitrust laws.

"They agreed with us; they called their counsel into conference with them and with us, and we all concurred that this amendment added to the paragraph of section 7 would give these organizations what they have desired so long, and all they have been struggling for since the original enactment of the Sherman antitrust law.

"In my judgment, when Congress was dealing with 'combinations in restraint of trade' it never intended that the law should apply to labor organizations or farmers' organizations without capital and not for profit. The courts took a different view of it and construed the act as it was never intended that it should be interpreted. The time has come when we can correct that error and write the language in the law as those gentlemen insist that it should be and should have been.

"I am glad of the opportunity of espousing their cause to-day and standing with them in accord and agreement. The Judiciary Committee has acceded to their position to the extent indicated by me, and so has the President. This is entirely a satisfactory solution of the question. [Applause.]"

INTENT TO PASS THE EXEMPTION.

Mr. HENRY, Mr. BARTLETT, of Georgia, and a number of other gentlemen, including Mr. Gompers, in many of his able and lawyer-like arguments submitted to Congress, contended with very great earnestness that the Sherman antitrust law was not intended to regulate labor organizations, and they drew a distinction between property rights and individual rights, disregarding the money power of the unions or the rights of individuals not belonging to the unions, who might be made to suffer at the hands of other individuals if the offending individuals or any combination of them could not be kept within the operation of the law. As Mr. FLOYD of Arkansas, a member of the committee, put it:

"In other words, recognizing and believing as a committee that the plea made by Samuel Gompers, the head of the great American Federation of Labor, was a just plea, well founded, in the light of past decisions, and that those great organizations of workingmen ought not to be considered and classed as unlawful combinations per se and ought not to be subjected to be dissolved by court decree, we have incorporated section 7 in this bill, declaring legal labor and other organizations named therein."

PROGRESSIVES WOULD GIVE "REAL" EXEMPTION.

These quotations are cited in order to lay the foundation for the introduction of certain material which will be useful in considering the course and development of the agitation so successfully conducted thus far by Mr. Gompers and his associates. A Democratic Congress had faced the question as it was presented in the sundry civil bill prior to the retirement from office of President Taft. It had provided that labor organizations should be exempt from prosecution by the Attorney General for any acts committed in violation of the Sherman antitrust law. After the labor-organization proviso had gone through the House a proviso exempting farmers' organizations was also brought forward and passed. These exemptions had to do with any combinations that might be effected by labor organizations to win wage disputes, or by the farmers' organizations to maintain or enhance the price of food supplies, or as in restricting the production of cotton, tobacco, or farm products. When these provisos were incorporated in the Clayton-Webb antitrust bill, which was brought into the House under the rule by Mr. HENRY, of Texas, Mr. MURDOCK, the leader of the Progressive Party in the House, contended that the Republican Party had failed to exempt the labor unions, and that the Democratic Party, in an effort to comply with its Baltimore platform, concerning which Mr. Gompers had testified before the Judiciary Committee, was so ambiguous as to still leave Mr. Gompers and his associates up in the air. Mr. MURDOCK declared that the Progressives stood for genuine exemption, and that if given a chance they would pass legislation that would exempt. I quote that portion of the RECORD of June 2 which relates to this subject:

GETTING THE RECORD STRAIGHT.

"Mr. MURDOCK. Mr. Chairman, the gentleman from Pennsylvania [Mr. MOORE] this morning took occasion to drive up to my front door and leave a bouquet. [Laughter.] I want to make acknowledgment of the fact.

"Mr. MOORE. There were some thorns among the roses. [Laughter.]

"Mr. MURDOCK. If the gentleman will permit me to go on, I will yield to him later. The gentleman from Pennsylvania makes a general charge of cowardice against the membership of Congress. When asked the simple question how he would have voted yesterday had he been here, he followed the characteristic Republican attitude, and dodged. How would the gentleman from Pennsylvania have voted in the house yesterday? Will the gentleman answer the question and stop dodging?

"Mr. MOORE. If I had thought that a vote 'aye' would have meant to specialize a certain class of the 30,000,000 of workers in this country, I would not have voted 'aye,' nor would I have played the game of buncombe which has been played since this agitation began.

"Mr. MURDOCK. The gentleman from Pennsylvania typifies the political situation that prevails in the country. 'Truth is mighty and will prevail.' There is talk in New York and in Washington, with the aid of the press, in San Francisco and St. Louis, of amalgamation between the Progressive Party and the Republican Party. Do you think there is any chance of amalgamation between a set of men who want to go forward and a set of men, typified by the gentleman from Pennsylvania, who evade, dodge, and side-step on everything? [Laughter and applause.]

"Mr. MOORE. Mr. Chairman——

"Mr. MURDOCK. The gentleman from Illinois [Mr. MANN] also demonstrates this morning, I think, the situation of the country, and proves that there is no prospect of harmony between the Progressive and Republican Parties. The gentleman from Illinois typifies by his charge against me—facetious enough in its way—precisely what has been the matter with him in the last six or seven years with respect to the political situation. He did not consult Col. Roosevelt enough. By having consulted Col. Roosevelt a little more he and his party would be—well, somewhere else than on the road to destruction and decay, as it is. [Laughter.] Col. Roosevelt can not be justly accused of dodging or evading any public question.

DEMOCRATS AMBIGUOUS, SAYS MR. MURDOCK.

"The CHAIRMAN. The time of the gentleman from Kansas has expired.

"Mr. MURDOCK. I would like just two minutes more.

"Mr. WEBB. I will give the gentleman two minutes more.

"Mr. MURDOCK. The three parties are shown precisely as they stand before the Nation in the attitude of the gentleman from Pennsylvania [Mr. MOORE], that of the gentleman from

Illinois [Mr. MANN], and that of the gentleman from North Carolina [Mr. WEBB] and the Progressives on this floor. For a matter of four or five years, to my knowledge, under the leadership of Mr. Taft, backed up by the gentleman from Illinois [Mr. MANN], the reactionaries here and at the other end of this building absolutely locked away in committee every bit of remedial legislation that labor wanted. Every man within the sound of my voice knows that that is true.

"In those days every time we succeeded in getting an amendment in favor of the exemption of organized labor we had to do it by revolution, over the protest and veto of the Republican leader in this country, Mr. Taft, and I think sometimes over a rather serious protest from the gentleman from Illinois [Mr. MANN], although I am not certain about that.

"The Democrats came into power with a plain pledge in their platform to exempt labor, after a record of amendments in the House and Senate which gave in terms exemption. And what did the Democrats do? Why, they have followed their usual plan of action and have brought into the House for the indorsement of the Members an amendment that is ambiguous. If you put the Progressives in power, Mr. Chairman, we will not dodge as the Republicans have dodged, we will not be ambiguous as the Democrats have been ambiguous; we will bring in an exemption clause that will mean business."

Whether the gentleman from Kansas [Mr. MURDOCK] had carefully read the declarations of Col. Roosevelt upon the subject of class legislation I do not know, but I questioned very much then, as I do now, whether he recalls the famous interview between President Roosevelt and Mr. Gompers and his associates from the Washington headquarters of the American Federation of Labor, when they called to discuss their demands and to ask the support of the President for a redress of their grievances. This petition was laid before the President March 21, 1906, more than eight years ago, and in response to it President Roosevelt made a reply which is well worth repeating.

PRESIDENT ROOSEVELT TO MR. GOMPERS.

As to whether President Roosevelt believed in the exemption of labor unions from the operation of the law which Mr. MURDOCK seemed to hold, we may quote in advance this paragraph addressed to Mr. Gompers himself:

"But understand me, gentlemen, if I ever thought it necessary, if I thought a combination of laborers were doing wrong, I would apply for an injunction against them just as quickly as against so many capitalists."

The President's statement in full was as follows:

THE PRESIDENT'S REPLY.

The President's statement was as follows:

"Mr. Gompers, if your body objects to the passage of the proposed anti-injunction bill, I have no question that you can stop it, for there is not a capitalist concerned who simply as a capitalist is not against it, though I believe that a goodly number, both of capitalists and wageworkers, who are concerned primarily as citizens favor it.

"The law was worked over and substantially whipped into shape at a number of conferences between representatives of the railroad organizations, of the Department of Justice, and of the Bureau of Corporations, with me. It goes as far as I personally think it should go in limiting the right of injunction; at any rate, no arguments have hitherto been advanced which make me think it should go further. I do not believe it has any chance of passing, because there has been great criticism in both Houses of Congress against the attitude of the administration going as far as we have gone; and if you think it is not far enough, why, you will have no earthly difficulty in killing the bill.

"Personally I think the proposed law a most admirable one, and I very sincerely wish it would be put through. As for the right of injunction, it is absolutely necessary to have this power lodged in the courts, though, of course, any abuse of the power is strongly to be reprobated. During the four and a half years that I have been President, I do not remember an instance where the Government has invoked the right of injunction against a combination of laborers. We have invoked it, certainly a score of times, against combinations of capital; I think, possibly, oftener. Thus, though we have secured the issuance of injunctions in a number of cases against capitalistic combinations, it has happened that we have never tried to secure an injunction against a combination of labor.

"But understand me, gentlemen, if I ever thought it necessary, if I thought a combination of laborers were doing wrong, I would apply for an injunction against them just as quickly as against so many capitalists."

WOULD ALLOW NO WRONG.

"Now I come to the general subject of your petition. I wish, in the first place, to state my regret that you did not divorce so much of the petition as refers to the action of the legislative branch, because I can not consider any petition that you may make that reflects upon the coordinate branch of the Government, or that makes any charge whatever against it. I would not even receive it, save for the fact that in part it affects the Executive. Therefore in what I have to say I shall limit myself solely to what you assert in reference to the acts of the Executive.

"You speak of the eight-hour law. Your criticism, so far as it relates to the Executive, bears upon the signature of the appropriation bill containing the money for expenditure on the Panama Canal, with the proviso that the eight-hour law shall not there apply. If your statement is intended to mean that no opportunity was given for a hearing before me, then the statement is not in accordance with the facts. There was ample opportunity that anyone could; but not a single request for such hearing came to me. I received, however, some hundreds of telegrams and letters requesting the veto of the entire appropriation bill because it contained that proviso.

"Frankly, I found it difficult to believe that you were writing and telegraphing with any kind of knowledge of the conditions in the case. I believe emphatically in the eight-hour law for our people in our own country. But the conditions of labor, such as we have to work with in the Tropics, are so absolutely different that there is no possible analogy between them, and an eight-hour law for the Panama Canal is an absurdity. Every one of you knows that we can not get white labor, can not get labor of the United States to go down to Panama and work.

"We are driven to extremities in the effort to get any kind of labor at all; just at this moment we are working chiefly with negro labor from the West Indies. The usual result in the employment of these men is that Monday and Tuesday they work fairly well, Wednesday and Thursday there is a marked falling off, and Friday and Saturday not more than half, sometimes less than a fourth, of the laborers will be at work.

CONDITIONS DIFFER.

"The conditions that make the eight-hour law proper here have no possible reference to the conditions that make the eight-hour law entirely improper there. The conditions are so utterly different on the Isthmus as compared to here that it is impossible to try to draw conclusions affecting the one from what is true about the other. You hamper me in the effort to get for you what I think you ought to have in connection with the eight-hour law, when you make a request that is indefensible, and to grant which would mean indefinite delay and injury to the work on the Isthmus.

"As to the violations of the eight-hour law, Mr. Morrison, you give me no specifications. At your earliest convenience, please lay before me in detail any complaints you have of violations of the eight-hour law. Where I have power I will see that the law is obeyed. All I ask is that you give me the cases. I will take them up, and if they prove to be sustained by the facts I shall see that the law is enforced.

PERTAINING TO THE CHINESE.

"Now, about the Chinese exclusion. The number of Chinese now in this country is, if I remember aright, some 60,000 or 70,000. So far from there being a great influx of the Chinese, the fact is that the number has steadily decreased. There are fewer Chinese than there were 10 years ago, fewer than there were 20 years ago, fewer than there were 30 years ago.

"Unquestionably some scores of cases occur each year where Chinese laborers get in either by being smuggled over the Mexican or Canadian borders or by coming in under false certificates, but the steps we have taken, the changes in the consuls that have been made within the last few years in the Orient, and the efforts to conduct examinations in China before the immigrants are allowed to come here, are materially reducing even the small number of cases that do occur.

"But even as it is, the number of these cases is insignificant. There is no appreciable influx of Chinese laborers, and there is not the slightest or most remote danger of any. The whole scare that has been worked up on the subject is a pure chimera. It is my deep conviction that we must keep out of this country every Chinese laborer, skilled or unskilled—every Chinaman of the coolie class. This is what the proposed law will do. It will be done as effectively as under the present law, and the present law is being handled with the utmost efficiency. But I will do everything in my power to make easy and desirable for the Chinese of the business and professional classes, the Chinese travelers and students, to come here, and I will do all I can to secure their good treatment when they come, and no laboring man has anything to fear from that policy.

LABORING MAN SHOULD DO WHAT IS RIGHT.

"I have a right to challenge you as good American citizens to support that policy, and in any event I shall stand unflinch-

ingly for it, and no man can say with sincerity that on this point, or indeed on any other point, that he has any excuse for misunderstanding my policy.

"You have spoken of the immigration laws. I believe not merely that all possible steps should be taken to prevent the importation of laborers under any form, but I believe, further, that this country ought to make a resolute effort from now on to prevent the coming to the country of men with a standard of living so low that they tend, by entering into unfair competition with, to reduce the standard of living of our own people. Not one of you can go further than I will go in the effort steadily to raise the status of the American wageworker so long as while doing it I can retain a clear conscience and the certainty that I am doing what is right. *I will do all in my power for the laboring man except to do what is wrong, and I will not do that for him or for anyone else.*

SHOULD ENACT IMMIGRATION LAWS.

"We must not let our natural sentiment for succoring the oppressed and unfortunate of other lands lead us into that warped moral and mental attitude of trying to succor them at the expense of pulling down our own people. Laws should be enacted to keep out all immigrants who do not show that they have the right stuff in them to enter into our life on terms of decent equality with our own citizens. This is needed, first, in the interest of the laboring man, but, furthermore, in the interest of all of us as American citizens, for, gentlemen, the bonds that unite all good American citizens are stronger by far than the differences which, I think, you accentuate altogether too much between the men who do one kind of labor and the men who do another. As for immigrants, we can not have too many of the right kind, and we should have none at all of the wrong kind, and they are of the right kind if we can be fairly sure that their children and grandchildren can meet on terms of equality our children and grandchildren, so as to try to be decent citizens and to work together for the uplifting of the Republic.

"Now, a word as to the petitioning of employees to Congress. That stands in no shape or way on a par with the petitioning of men not employed by the Government. I can not have and will not have when I can prevent it men who are concerned in the administration of the Government affairs going to Congress and asking for increased pay without the permission of the heads of the departments. Their business is to come through the heads of the departments. This applies to postmasters, to Army and Navy officers, to clerks in the Government departments, to laborers; it applies to each and all and must apply as a matter of simple discipline."

GOMPERS ASSAILS THE COURTS.

But more to the point than this, and especially as it applies to Mr. MURDOCK'S attack upon President Taft and to the pretended friendship of the Democratic Party for labor organizations, is the letter of President Roosevelt to Senator Knox, dated October 21, 1908. President Gompers was not satisfied with President Roosevelt or with the Republican standard bearer, Mr. Taft, and under date of October 12, 1908, fiercely assailed the Republican Party as it then existed. He was particularly severe upon the judges and the courts, and flatly declared for Mr. Bryan, the Democratic candidate, as against Mr. Taft. Calling upon labor everywhere to support him in this politico-labor propaganda, Mr. Gompers said:

"Despotic power under the ermine is as dangerous as despotic power under the crown. To stay its progress, some remedy must be had, and we therefore appealed to the Republican convention at Chicago and were given the same answer in still more insulting language, if that were possible. We asked for bread, and they showed us a whip; and in order to be certain that the whip will be effectually used the Republican Party nominated as its standard bearer Mr. William H. Taft, the originator and specific champion of discretionary government; that is, government by injunction. In passing I may say that his nomination under the circumstances was logical. It would have been impossible for the party to find a more effective representative of its policy.

"Labor's representatives then went to the Democratic Party. That party made labor's contentions its own. It pledged its candidates for every office to those remedies which labor had already submitted to Congress. The standard bearer of the Democratic Party, Mr. William J. Bryan, entered fully into the essence of this struggle and declared that the real issue in this campaign is, 'Shall the people rule?'"

"The Republican Party and its candidate stand for upholding and further extending into our country a despotic government vested in the judiciary.

"The Democratic Party and its candidate stand for government by law vested in the people.

"As an American citizen, in view of these facts, I have no choice—I have only duty. Duty to preserve with my voice, pen, and ballot that form of government for the preservation of which Lincoln said, 'Men died at Gettysburg.'"

ROOSEVELT'S LETTER TO SENATOR KNOX.

President Roosevelt's defense of Mr. Taft, his denunciation of Mr. Bryan, and his discussion with Mr. Gompers of the labor-exemption question are all set out in the letter to Senator Knox, which is appended hereto:

"WASHINGTON, *October 21, 1908.*

"MY DEAR SENATOR KNOX: In your admirable speech of yesterday you speak of the action of Mr. Bryan and certain gentlemen claiming to be the special representatives of organized labor, foremost among them Mr. Gompers, to secure the support of laboring men for Mr. Bryan on consideration of his agreement to perform certain acts nominally in the interests of organized labor, which would really be either wholly ineffective or else of widespread injury not only to organized labor but to all decent citizens throughout this country. You have a peculiar right to speak on labor questions, for it was you who as Attorney General first actively invoked the great power of the Federal Government on behalf of the rights of labor when for the first time in the history of the Government, you, speaking for the Department of Justice, intervened in a private lawsuit which had gone against the widow of a brakeman and by your intervention secured from the Supreme Court a construction of the safety-appliance act, which made it a vital remedial statute, and therefore has secured to hundreds of crippled employees compensation which they would not otherwise have obtained.

LETTER FROM GOMPERS.

"The daily papers of October 13 contain an open letter from Samuel Gompers, president of the American Federation of Labor, appealing to workingmen to vote for Mr. Bryan.

"In that letter are certain definite statements which interest the wider American public quite as much as those to whom Mr. Gompers makes his appeal. These statements warrant all you have said in your speech, and they would warrant you in asking Mr. Bryan to say publicly whether Mr. Gompers states correctly the attitude of his party and himself on a subject that is of vital concern to every citizen, including every business man, as well as every farmer and every laboring man, who looks to the courts for the protection of his rights.

"Mr. Gompers in his letter asserts that the judiciary of this country is destroying democratic government and substituting therefor an irresponsible and corrupt despotism in the interests of corporate power, and he further makes clear that the means by which he believes this alleged despotism has been set up in the place of democracy is by the process of injunction in the courts of equity.

"Mr. Gompers in his letter states that his appeal to the Republican convention at Chicago for remedy against the injunction was denied, and he then goes on to state not only that the Democratic Party promised a remedy, but promised him the particular remedy that he had already asked of Congress.

"His words are:

"'Labor's representatives then went to the Democratic Party. That party made labor's contentions its own. It pledged its candidates for every office to those remedies which labor had already submitted to Congress.'

"The last sentence in this quotation indicates very definitely the specific remedies to which Mr. Gompers understands Mr. Bryan's party has pledged itself.

"His statement now makes perfectly clear an important plank in the Bryanite platform which has heretofore seemed puzzling to a vast number of earnest-minded, thinking people who are sincerely interested in the steady advance and the legitimate aspirations of labor, and who carefully read both platforms to know precisely what hopes each held out for the improvement of the conditions of wage earners.

"That plank reads as follows:

"'Questions of judicial practice have arisen, especially in connection with industrial disputes. We deem that the parties to all judicial proceedings should be treated with rigid impartiality, and that injunctions should not be issued in any cases in which injunctions would not issue if no industrial dispute were involved.'

REMEDY PROMISED.

"This is the plank that promises the 'remedy' against injunctions which Mr. Gompers asked of Mr. Bryan's party. In actual fact it means absolutely nothing; no change of the law could be based on it; no man without inside knowledge could foretell what its meaning would turn out to be, for no man could foretell how any judge would decide in any given case, as the plank apparently leaves each judge free to say when he issues an in-

junction in a labor case whether or not it is a case in which an injunction would issue if labor were not involved. Yet this plank is apparently perfectly clear to Mr. Gompers, and in his letter to his followers he indicates beyond question just what he understands it to mean. He asserts that he has the requisite inside knowledge. His statement that it was Mr. Bryan's party (for it was Mr. Bryan who dictated the platform) pledged itself 'to those remedies which labor had already submitted to Congress' is a perfectly clear and definite statement.

"The 'remedies' which Mr. Gompers has already submitted to Congress are matters of record and the identification of his 'remedy' against injunctions in labor disputes is easy and certain. This 'remedy' is embodied in House bill No. 94 of the first session of the Sixtieth Congress, the complete text of which is hereto appended.

"The gist of the bill, as can be seen by referring to the complete text, is this:

"First. After forbidding any Federal judge to issue a restraining order for an injunction in any labor dispute, except to prevent irreparable injury to property or a property right, it specifically provides that 'no right * * * to carry on business of any particular kind, or at any particular place, or at all, shall be construed, held, considered, or treated as property or as constituting a property right.'

"Second. It provides that nothing agreed upon or done by two or more parties in connection with a labor dispute shall constitute a conspiracy or other criminal offense or be prosecuted as such unless the thing agreed upon or done would be unlawful if done by a single individual.

"The bill here described is not only the 'remedy' that Mr. Gompers has 'already submitted to Congress' but it is the one and only remedy which he and those associated with him in his present movement have announced that they will accept in the matter of his grievance against the courts on the injunction issue.

FEDERATION ON RECORD.

"The counsel for the American Federation of Labor and Mr. Gompers, its president, are both on record to this effect.

"At a hearing before the House Committee on the Judiciary the counsel for the American Federation of Labor, on February 5, 1908 (as appears from the printed hearings), stated:

"'The bill was considered by at least two sessions of the executive council of that organization and unanimously approved. It was considered by two of its national conventions—the two latest—and by them unanimously indorsed. And in the face of many propositions to amend it, in the face of many proposed substitutes, in the face of pressure from every direction, from high sources and sources not so exalted, the organization has stood by and is to-day standing by this bill without amendments.'

"Mr. Gompers himself, in discussing this bill before the same committee on February 28, 1908 (as appears from the printed hearings), went on record as follows:

"'Events have demonstrated clearly to my mind that there is only one bill before the committee that can at all be effective to deal with this abuse, with this invasion of human rights, and that is the Pearre bill.'

"Further on in the same page of the hearings Mr. Gompers states:

"'I will say this, that I think I will try to make my position clear that the American Federation of Labor has so declared itself that it must insist upon the principles involved in the Pearre bill, and that I explained as best I could the position of labor—that we would rather be compelled to bear the wrongs which we have for a longer period than to give our assent to the establishment of a wrong principle, believing and knowing that time would give the justice and relief to which labor—the working people—are entitled.'

DEMAND OF GOMPERS.

"This bill, then, and none other represents exactly the relief that Mr. Gompers demands in the way of anti-injunction legislation; and if the statement in his letter is correct, this bill represents what Mr. Bryan and his party are pledged to in the matter of anti-injunction legislation.

"The injunction plank in the Bryanite platform may sound vague and hazy, but there is nothing vague or hazy about this bill.

"It is more than a bill; it is a program of the most fixed and definite kind; and if Mr. Gompers is correct, this bill becomes, as it were, an authorized appendix to Mr. Bryan's platform or a footnote explaining in detail the briefer and vaguer injunction plank in that platform.

"Does Mr. Bryan accept it as such?

"Mr. Bryan should state publicly whether he, in fact, accepts the principle of this bill, which is the official program of Mr. Gompers and those who stand with him.

"Mr. Gompers announces publicly that Mr. Bryan's party has made this program its own. Is Mr. Gompers correct in this statement?

"Either Mr. Gompers is mistaken as to what Mr. Bryan's party has promised him in this matter of anti-injunction legislation or those who drafted his party's platform in their haste failed to make the promise so clear that the general public would understand it precisely as Mr. Gompers understood it.

"Mr. Bryan failed in his letter of acceptance to discuss this labor plank of his party's platform. So far as I am aware, he has failed to discuss it since.

"There should be such discussion as a matter of common fairness, not only to labor but to all citizens alike. On a question of such grave consequence the people are entitled to know where Mr. Bryan stands.

"Mr. Taft has repeatedly explained exactly where he stands in this matter of regulating injunctions.

"Are we not entitled to know with equal clearness exactly where Mr. Bryan stands?

"Mr. Gompers's public statements as to what his party has promised make it imperative that Mr. Bryan declare himself.

"This bill, to the principle of which he says Mr. Bryan is pledged, declares that the right to carry on a lawful business in lawful way shall not be regarded as a property right or entitled to the protection of a court of equity through the process of an injunction and that the right to such protection, which admittedly now exists under the law, shall be taken away.

WHAT GOMPERS PLANNED.

"The counsel for the American Federation of Labor in his argument before the House committee on February 5, at which Mr. Gompers himself was present, gave a very frank illustration of what he and Mr. Gompers perceived to be the consequences of that provision of this bill which says that the right to carry on business shall not be entitled to protection as a property right.

"His words are: 'Suppose that workingmen by some operation or proceedings in the community (let us say by violence or persuasion or picketing away from the premises) reduce those works to a state of utter helplessness and there was not a wheel moving nor a process in operation and this company had no help at all—that would be an interference with his right to do business, and for that I say he has no right to be protected by injunction.'

"Is Mr. Bryan in reality pledged to this point of view?

"Will he definitely say, either in writing or in public address, whether he believes with Mr. Gompers that the protection heretofore afforded by the courts of equity to the right to carry on a lawful business in a lawful way is despotic power, and that the judges who exercise that power are irresponsible despots?

"So far as the second section of this bill is concerned, it is perfectly clear that it would legalize the blacklist and the sympathetic boycott carried to any extent. It would legalize acts which have time and again been declared oppressive, unjust, and immoral by the best and most eminent labor leaders themselves.

"Does Mr. Bryan believe that Mr. Gompers—that he and that part of the labor movement that agrees with him—has the right morally, and should be given the right legally, to paralyze or to destroy with impunity the business of an innocent third person against whom neither he nor they have any direct grievance simply because the third person refuses to join with them aggressively in a labor controversy with the real merits of which he may be utterly unacquainted; because he refuses to class as his enemy any and every other employer whom they point out as their enemy; because he refuses merely upon their peremptory order to excommunicate some other employer by ceasing all business relations with him? The black list and the secondary boycott are two of the most cruel forms of oppression ever devised by the wit of man for the infliction of suffering on his weaker fellows.

DESPOTIC POWER.

"No court could possibly exercise any more brutal, unfeeling, or despotic power than Mr. Gompers claims for himself and his followers in the legislation which would permit them without let or hindrance of any kind to carry on every form and degree of the secondary boycott.

"The anthracite strike commission, as fair-minded and distinguished a body of men as ever passed judgment on an industrial question, thus refers to the secondary form of boycott; that is, the boycott of innocent third persons for refusing to take an aggressive part in a controversy with which they have no concern:

"'To say this is not to deny the legal right of any man or set of men voluntarily to refrain from social intercourse or business relations with any persons whom he or they, with or without

good reason, dislike. This may sometimes be unchristian, but it is not illegal. But when it is a concerted purpose of a number of persons not only to abstain themselves from such intercourse but to render the life of their victim miserable by persuading and intimidating others so to refrain, such purpose is a malicious one, and the concerted attempt to accomplish it is a conspiracy at common law and merits and should receive the punishment due to such a crime.'

"The commission further states that this boycott can be carried to an extent 'which was condemned by Mr. Mitchell, president of the United Mine Workers of America, in his testimony before the commission, and which certainly deserves the reprobation of all thoughtful and law-abiding citizens.'

"Does Mr. Bryan agree with Mr. Gompers that all existing legal restraint on the enforcement of every degree of the boycott should be withdrawn, that the industrial excommunication of the innocent merchant who refuses to render unquestioned obedience to the orders of Mr. Gompers should be legalized and encouraged, or does he believe with us and with Mr. Mitchell and other labor leaders who differ with Mr. Gompers in this matter that this form of the boycott is morally wrong; that labor at war should fight with its enemies and respect the rights of neutrals; that innocent third parties should not be coerced into taking sides in industrial disputes to which they are in no sense parties, under penalty of having their business attacked and destroyed?

"Mr. Taft is perfectly definite on this proposition.

"Where does Mr. Bryan stand?

"The citizen who votes for or against Mr. Taft on this proposition does so with his eyes open and with a clear understanding from Mr. Taft himself of his position. He has frankly discussed this subject time and again with workingmen themselves, both in this campaign and prior to his nomination. He has been willing to express his position clearly and to assure workingmen that to protect them in their rights he is willing to go to the limits of what he considers justice, but that he will not go further. His definition of justice to labor does not, as we understand it, include either of the principles contained in Mr. Gompers's program, as set forth officially in this bill.

"Does Mr. Bryan disagree with Mr. Taft on these propositions?

"Will he state publicly, definitely, categorically, whether he accepts the program outlined in this bill, as Mr. Gompers in his letters has assured the public that he does?

TRIBUTE FROM BRYAN.

"Mr. Bryan's party platform paid a high tribute to our courts of justice. It stated:

"'We resent the attempt of the Republican Party to raise a false issue respecting the judiciary. It is an unjust reflection upon a great body of our citizens to assume that they lack respect for the courts.'

"The 'great body of our citizens' to whom this platform refers is admittedly Mr. Gompers and his followers.

"Mr. Gompers, now Mr. Bryan's open and avowed ally, has, in the letter quoted, attacked the Federal courts in unmeasured terms of reproach because by a long line of decisions the equity courts have refused to make an outlaw of the business man, because his right to carry on a lawful business under the peace of the law has been protected by the process of injunction, because, in a word, one of the most vital and most fundamental rights of the business world, the right of a business man to carry on his business, has been sustained and not denied by the processes of the courts of equity. This sweeping attack of Mr. Gompers upon the judiciary has been made in a frank and open effort to secure votes for Mr. Bryan.

"Are these attacks made with Mr. Bryan's consent?

"Do they meet with his approval?

"Does he indorse them or does he repudiate them?

"Mr. Bryan has frankly questioned Mr. Taft during the progress of this campaign, and very properly so, and has asked him to make clear his personal stand on public matters upon which the public was entitled to be enlightened.

"In turn, with equal frankness and with equal propriety, Mr. Bryan should be asked to break a long-continued silence and make definite and certain his own position in regard to a matter that concerns not only business men and every decent law-abiding citizen, whether a wageworker or not, just as much as it concerns Mr. Gompers and that part of organized labor that stands with him.

"There is no need of generalities, of vague expressions of sympathy for labor. Let Mr. Bryan simply confine himself to the anti-injunction plank of his own platform and tell us publicly, definitely, and clearly whether he accepts or rejects the statement of Mr. Gompers that this plank pledges him to the principles of the bill for which Mr. Gompers stands, and whether, if elected, he will endeavor to have this proposal enacted into the law. This is asked honestly in the interest of that large voting public which believes sincerely in the promotion of every legitimate right and interest of labor; but which believes also that from the standpoint of the best interest of labor it neither requires nor is entitled to more than justice, and that the right to destroy business should not be formally recognized in the law of the land.

REALIZES RIGHT TO SPEAK.

"I feel that I have the right to speak frankly in this matter, because throughout my term as President it has been my constant object to do everything in my power, both by administrative action and by endeavoring to secure legislative action, to advance the cause of labor, protect it from unjust aggression, and secure to it its legitimate rights. I have accomplished something; I hope to accomplish more before I leave office; and I have taken special and peculiar interest in Mr. Taft's candidacy, because I believe that of all the men in this country he is the man best qualified for continuing the work of securing to the wageworkers of the country their full rights. I will do everything in my power for the wageworkers of the country except to do what is wrong. I will do wrong for no man; and with all the force in my power I solemnly warn the laboring man of this country that any public man who advocates doing wrong in their interests can not be trusted by them, and this whether his promise to do wrong is given knowing that it is wrong or because of a levity and lack of consideration which make him willing to promise anything without counting the cost if thereby support at the moment is to be purchased.

WILL FIGHT ABUSES.

"Just as I have fought hard to bring about in the fullest way the recognition of the right of the employee to be amply compensated for injury received in the course of his duty, so I have fought hard and shall continue to fight hard to do away with all abuses in the use of the power of injunction. I will do everything I can to see that the power of injunction is not used to oppress laboring men. I will endeavor to secure them full and equal justice. Therefore in the interest of all good citizens, be they laboring men, business men, professional men, farmers, or members of any other occupation, so long as they have in their souls the principles of sound American citizenship, I denounce as wicked the proposition to secure a law which, according to the explicit statement of Mr. Gompers, is to prevent the courts from effectively interfering with riotous violence when the object is to destroy a business, and which will legalize a blacklist and the secondary boycott, both of them the apt instruments of unmanly persecution.

"But there is another account against Messrs. Bryan and Gompers in this matter. "Ephraim feedeth on wind." Their proposed remedy is an empty sham. They are seeking to delude their followers by the promise of a law which would damage this country * * * but which would be utterly worthless to accomplish its avowed purpose. I have not the slightest doubt that such a law as that proposed by Mr. Bryan would, if enacted by Congress, be declared unconstitutional by a unanimous Supreme Court—unless indeed Mr. Bryan were able to pack this court with men appointed for the special purpose of declaring such a law constitutional. I happen to know that certain great trust magnates have announced within the past few weeks, in answer to the question as to why they were openly or secretly favoring the election of Mr. Bryan, that the laws that Mr. Bryan proposed, including especially this law, would be wholly ineffective because the court would undoubtedly throw them out and that the promises to enact them could therefore be safely disregarded. * * *

"Sincerely, yours,

"THEODORE ROOSEVELT."

I commend particularly to the Progressive leader [Mr. MURDOCK] that portion of President Roosevelt's letter in which, in his promise to secure to all laboring men "full and equal justice," he says:

"*I denounce as wicked the proposition to secure a law which, according to the explicit statement of Mr. Gompers, is to prevent the courts from effectively interfering with riotous violence when the object is to destroy a business, and which will legalize a blacklist and the secondary boycott, both of them the apt instruments of unmanly persecution.*"

THE EXEMPTION PROVISO UP AGAIN.

That remarkable letter would seem to make Col. Roosevelt's position on the subject of class legislation perfectly clear; but members of the Progressive Party in the House continued to misunderstand it, as evidenced by the attitude of Mr. BRYAN (Progressive), of Washington, who took part in a colloquy between the gentleman from Georgia [Mr. BARTLETT], author of one of the exemption bills, and the gentleman from Pennsyl-

vania [Mr. MOORE], when the exemption clauses were again under consideration in the sundry civil bill, June 22, 1914. The CONGRESSIONAL RECORD of that date discloses the following:

"The CHAIRMAN. The Clerk will read.

"The Clerk read as follows:

"Enforcement of antitrust laws: For the enforcement of antitrust laws, including not exceeding $10,000 for salaries of necessary employees at the seat of government, $300,000: *Provided, however,* That no part of this money shall be spent in the prosecution of any organization or individual for entering into any combination or agreement having in view the increasing of wages, shortening of hours, or bettering the conditions of labor, or for any act done in furtherance thereof, not in itself unlawful: *Provided further,* That no part of this appropriation shall be expended for the prosecution of producers of farm products and associations of farmers who cooperate and organize in an effort to and for the purpose to obtain and maintain a fair and reasonable price for their products.

"Mr. MOORE. I move to strike out the proviso.

"The CHAIRMAN. The gentleman from Pennsylvania offers an amendment, which the Clerk will report.

"The Clerk read as follows:

"Page 115, beginning with line 16, strike out the following words: 'Provided, however, That no part of this money shall be spent in the prosecution of any organization or individual for entering into any combination or agreement having in view the increasing of wages, shortening of hours or bettering the conditions of labor, or for any act done in furtherance thereof, not in itself unlawful: *Provided further,* That no part of this appropriation shall be expended for the prosecution of producers of farm products and associations of farmers who cooperate and organize in an effort to and for the purpose to obtain and maintain a fair and reasonable price for their products.

DOES IT OFFEND THE CONSTITUTION?

"Mr. BARTLETT. A parliamentary inquiry. I understand the gentleman moves to strike out the proviso.

"Mr. MOORE. I move to strike out the two provisos which have been read by the Clerk, beginning with line 16 and continuing to the end of the paragraph.

"This matter has been fought over in the House before, and if the trust legislation recently passed through the House means anything, this paragraph is unnecessary. The two provisos which we have here have something of a history. If we are to believe the statements of certain of our friends who assume to speak for the organized-labor movement of the United States, they have been contested for for 20 or 25 years. They appear to establish class legislation, and to set aside from the operation of the law certain men who by reason of their exemption would have privileges under the law which are not accorded to other men, contrary to the spirit of the Declaration of Independence, of the Constitution of the United States, and of all that we have ever been taught with regard to the equal rights of men.

"Mr. BARTLETT. Will the gentleman point out what part of the Constitution of the United States either of these provisos would contravene?

"Mr. MOORE. I think the spirit of the Constitution, as well as the letter of it, provides for the equality of man, so far as the protection of the law is concerned. I call the gentleman's attention to the fourteenth amendment——

"Mr. BARTLETT. The fourteenth amendment does not affect Congress. That simply restrains the States.

"Mr. MOORE. Oh, I think it establishes a principle believed in by almost everybody in the United States, that before the law all men are equal; and the gentleman from Georgia [Mr. BARTLETT], who is interested in this paragraph, and who has introduced a bill to set aside from the operation of the law certain men engaged in certain kinds of business——

BARTLETT AMENDMENT INSERTED IN ANTITRUST BILL.

"Mr. BARTLETT. I have got the principles of my bill incorporated in the antitrust bill which has passed the House.

"Mr. MOORE. If that is true, it is absolutely unnecessary here.

"Mr. BARTLETT. But if the gentleman will permit me——

"Mr. MOORE. Of course, but I have not very much time.

"Mr. BARTLETT. I apprehend the gentleman can get more time if he wants it. I was interested in knowing what provision of the Constitution this legislation contravenes. The gentleman suggested the fourteenth amendment, and I suggested——

"Mr. MOORE. The gentleman asked for something specific. You will find something in the fourteenth amendment about every man having an equal right to the protection of the law.

"Mr. BARTLETT. In the States.

"Mr. MOORE. The gentleman will also find a great deal in the preamble——

"Mr. BARTLETT. The fourteenth amendment provides that the States shall not deprive anyone of the equal protection of the laws.

"Mr. MOORE. I am trying to answer the gentleman's question.

"Mr. BARTLETT. The fourteenth amendment simply restrains the States. There is nothing in the Constitution that restrains Congress in this respect.

"Mr. MOORE. If the gentleman takes the ground that there is nothing in the Constitution that gives a man protection before the law——

"Mr. BARTLETT. I never took any ground of that sort.

CALLING UPON THE DEAD TO WITNESS.

"Mr. MOORE. I make the statement that this would appear to be class legislation, and that the bill which the gentleman introduced, which is voiced by these provisos, contemplates the exemption of a certain class of our citizens from the operation of laws which apply to other citizens. Either that, or these provisos are innocuous. Now, I was about to say that these provisos have a history. They have been advocated here for a great many years upon the ground that certain organizations ought to be privileged from the operation of the so-called antitrust laws. It has been said that the act of 1890, the Sherman antitrust law, contemplated that farmers' organizations and labor organizations should be excluded from the operation of that act.

"It has been so stated on the floor. It is constantly stated in the literature that comes to Members of Congress. These statements are usually attributed to one or two men who are dead—Senator Hoar and Senator Sherman. It happens that Senator Edmunds, of Vermont, one of the great lawyers of those times, one of the great men who had to do with the passage of the Sherman antitrust law, is still alive, and out of his mouth we have it that there was no exemption such as has been suggested contemplated in the passage of this law, and that it would have been absurd to say that Congress intended to pass a law excepting a class of citizens from its operation.

"The gentleman from Georgia has his own opinion and I have mine. It should not worry a Member of Congress to go before his constituents and say that he did not vote to except any one man from the operation of the law that he held another to, but it would be safe and right to say that he did stand for equal rights for all men before the law. I think the gentleman from Georgia in advocating the Bartlett bill took the other side—that a few men would thus be picked out of millions of others and made exempt from the operation of the law.

"The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

"Mr. MOORE. Mr. Chairman, I ask for five minutes more.

"The CHAIRMAN. The gentleman from Pennsylvania asks that his time be extended five minutes. Is there objection?

"There was no objection.

CONGRESS SHOULD NOT HESITATE TO DO WHAT IS RIGHT.

"Mr. MOORE. Now, I am not a lawyer with the fine constitutional capabilities of the gentleman from Georgia and many other of the lawyers in this House. But I think I have the common-sense view of it, and I think I have the patriotic view of it. It is not a question of courage at all. It is a question of doing what is right. I believe that if we stand here for legislation that means equality before the law, we are doing exactly what is right; and when we stand for legislation that specializes certain men, takes them out from the operations of the law, we are doing what is contrary to the oath we take when we come here and swear that we will support and defend the Constitution and the laws of this country.

"I am not alone in this view of it. Many of our great lawyers take the same view of it. The other day it was said that Mr. Roosevelt had a different thought on this proposition, and that when he and his party came into power there would be an exemption, not such as the Democratic Party proposed here, which is said to be innocuous, but an exemption that would be a real exemption.

"Now, we have it from the mouth of Mr. Roosevelt himself that he was opposed to this kind of legislation, and he so told the leaders of the labor organization when they called upon him. There was no hesitation on his part. The gentlemen who assumed to speak for him on this floor have entirely misconstrued and misinterpreted what he said if they say that Mr. Roosevelt ever favored exemption of a certain class from the laws of this country.

"Mr. BRYAN. Will the gentleman yield?

"Mr. MOORE. For a question.

"Mr. BRYAN. Can the gentleman point to any statement of Mr. Roosevelt wherein he has said that he was opposed to this?

"Mr. MOORE. I certainly can. I am glad the gentleman asked the question, because I thought he probably would. I assume now that the gentleman is speaking for the Progressive Party.

"Mr. BRYAN. I am speaking for myself.

"Mr. MOORE. President Roosevelt was speaking to Mr. Gompers, president of the American Federation of Labor, when he said in regard to these efforts to obtain special privileges for special classes of workingmen:

"But, understand me, gentlemen, if I ever thought it necessary, if I thought a combination of laborers were doing wrong, I would apply

for an injunction against them just as quickly as against so many capitalists.

"Mr. BRYAN. But he never said it was wrong to do the things mentioned in this act.

LOOKS LIKE A SOP TO LABOR.

"Mr. MOORE. When I get leave to extend my remarks I will put a good deal more in the RECORD that Mr. Roosevelt said, which controverts the statement made by the Progressives that they would give "real exemption to labor" when they came into power. The Democratic Party may not intend to give exemption to labor by this proviso. It may or may not be antitrust legislation. I question whether it is effective, because at the close of the first proviso it throws an anchor to windward, whether or not it satisfies the labor leaders, by saying that that thing that shall be exempt from the operation of the law 'shall not in itself be unlawful.' What is the use of putting this on the statute books at all?

"Mr. Roosevelt was not in favor of this kind of legislation. Mr. Taft vetoed the bill with this paragraph in it when it came before him, and your President, Mr. Woodrow Wilson, held it up for a long time, giving the general public the impression that he did not propose to stand for this legislation; finally he permitted the bill with the exemption clause to pass with a statement to the public which is not of record—a mere statement to the newspapers—that this not being substantive legislation, he did not think himself warranted in vetoing the bill. You are now going to send it back to him in the form of substantive legislation, as you lawyers call it, as it appears in the antitrust bill. There is no necessity of sending it back again in this appropriation bill, because this is an innocuous paragraph, if that line 'not in itself unlawful' means anything. It may be a sop to labor, but——

"The CHAIRMAN. The time of the gentleman from Pennsylvania has expired.

"MR. BRYAN SPEAKS FOR COL. ROOSEVELT.

"Mr. MONDELL. I yield five minutes to the gentleman from Washington [Mr. BRYAN].

"Mr. BRYAN. Mr. Chairman, a few minutes ago the gentleman from Pennsylvania [Mr. MOORE] quoted from Theodore Roosevelt—

"If there is a word I hate
"It is 'amalgamate.'"

and if there is anything that makes me hate that word more than anything else it is to have a standpatter attempt to quote Theodore Roosevelt on behalf of his principles and ideas. [Applause.]

"Mr. MOORE. I can give the gentleman a lot more quotations.

"Mr. BRYAN. Well, you have not quoted him in favor of your position yet. It is said that the devil quoted Scripture, and so, when these standpatters get up before this House and attempt to quote Theodore Roosevelt on a proposition of this kind they make about as much of a success at it as the devil did when he attempted to quote Holy Writ."

ROOSEVELT'S LABOR MESSAGE TO CONGRESS.

Thus a great leader suffers at the hands of his friends.

But to remove all doubt about Col. Roosevelt's position, which some of the Progressives have insisted was in favor of Mr. Gompers's present attitude, I refer to his message as President, communicated to the second session of the Sixtieth Congress. In that message, contrary to the recollection of the present-day Progressives, President Roosevelt said:

"At the last election certain leaders of organized labor made a violent and sweeping attack upon the entire judiciary of the country, an attack couched in such terms as to include the most upright, honest, and broad-minded judges, no less than those of narrower mind and more restricted outlook. It was the kind of attack admirably fitted to prevent any successful attempt to reform abuses of the judiciary, because it gave the champions of the unjust judge their eagerly desired opportunity to shift their ground into a championship of just judges who were unjustly assailed. Last year, before the House Committee on the Judiciary, these labor leaders formulated their demands, specifying the bill that contained them, refusing all compromise, stating they wished the principle of that bill or nothing. They insisted on a provision that in a labor dispute no injunction should issue except to protect a property right, and specifically provided that the right to carry on business should not be construed as a property right; and in a second provision their bill made legal in a labor dispute any act or agreement by or between two or more persons that would not have been unlawful if done by a single person. In other words, this bill legalized blacklisting and boycotting in every form, legalizing, for instance, those forms of the secondary boycott which the anthracite coal strike commission so unreservedly condemned; while the right to carry on a business was explicitly taken out from under that protection which the law throws over property. The demand was made that there should be trial by jury in contempt cases, thereby most seriously impairing the authority of the courts. All this represented a course of policy which, if carried out, would mean the enthronement of class privilege in its crudest and most brutal form, and the destruction of one of the most essential functions of the judiciary in all civilized lands."

WORKINGMAN IN THE HANDS OF HIS FOES.

"The violence of the crusade for this legislation, and its complete failure, illustrate two truths which it is essential our people should learn. In the first place, they ought to teach the workingman, the laborer, the wageworker, that by demanding what is improper and impossible he plays into the hands of his foes. Such a crude and vicious attack upon the courts, even if it were temporarily successful, would inevitably in the end cause a violent reaction and would band the great mass of citizens together, forcing them to stand by all the judges, competent and incompetent alike, rather than to see the wheels of justice stopped. A movement of this kind can ultimately result in nothing but damage to those in whose behalf it is nominally undertaken. This is a most healthy truth, which it is wise for all our people to learn. Any movement based on that class hatred which at times assumes the name of 'class consciousness' is certain ultimately to fail, and if it temporarily succeeds, to do far-reaching damage. 'Class consciousness,' where it is merely another name for the odious vice of class selfishness, is equally noxious whether in an employer's association or in a workingman's association. The movement in question was one in which the appeal was made to all workingmen to vote primarily, not as American citizens, but as individuals of a certain class in society. Such an appeal in the first place revolts the more high-minded and far-sighted among the persons to whom it is addressed, and in the second place tends to arouse a strong antagonism among all other classes of citizens, whom it therefore tends to unite against the very organization on whose behalf it is issued. The result is therefore unfortunate from every standpoint. This healthy truth, by the way, will be learned by the Socialists if they ever succeed in establishing in this country an important national party based on such class consciousness and selfish class interest.

"The wageworkers, the workingmen, the laboring men of the country by the way in which they repudiated the effort to get them to cast their votes in response to an appeal to class hatred, have emphasized their sound patriotism and Americanism. The whole country has cause to feel pride in this attitude of sturdy independence, in this uncompromising insistence upon acting simply as good citizens, as good Americans, without regard to fancied—and improper—class interests. Such an attitude is an object lesson in good citizenship to the entire Nation.

COURTS SHOULD TREAT RICH AND POOR ALIKE.

"But the extreme reactionaries, the persons who blind themselves to the wrongs now and then committed by the courts on laboring men, should also think seriously as to what such a movement as this portends. The judges who have shown themselves able and willing effectively to check the dishonest activity of the very rich man who works iniquity by the mismanagement of corporations, who have shown themselves alert to do justice to the wageworker and sympathetic with the needs of the mass of our people, so that the dweller in the tenement houses, the man who practices a dangerous trade, the man who is crushed by excessive hours of labor, feel that their needs are understood by the courts—these judges are the real bulwark of the courts; these judges, the judges of the stamp of the President-elect, who have been fearless in opposing labor when it has gone wrong, but fearless also in holding to strict account corporations that work iniquity, and far-sighted in seeing that the workingman gets his rights, are the men of all others to whom we owe it that the appeal for such violent and mistaken legislation has fallen on deaf ears, that the agitation for its passage proved to be without substantial basis. The courts are jeoparded primarily by the action of these Federal and State judges who show inability or unwillingness to put a stop to the wrongdoing of very rich men under modern industrial conditions, and inability or unwillingness to give relief to men of small means or wageworkers who are crushed down by these modern industrial conditions; who, in other words, fail to understand and apply the needed remedies for the new wrongs produced by the new and highly complex social and industrial civilization which has grown up in the last half century.

JUDICIAL SYSTEM SOUND AT THE CORE.

"The rapid changes in our social and industrial life which have attended this rapid growth have made it necessary that, in applying to concrete cases the great rule of right laid down in our Constitution, there should be a full understanding and

appreciation of the new conditions to which the rules are to be applied. What would have been an infringement upon liberty half a century ago may be the necessary safeguard of liberty to-day. What would have been an injury to property then may be necessary to the enjoyment of property now. Every judicial decision involves two terms—one, an interpretation of the law; the other, the understanding of the facts to which it is to be applied. The great mass of our judicial officers are, I believe, alive to these changes of conditions which so materially affect the performance of their judicial duties. Our judicial system is sound and effective at core, and it remains, and must ever be maintained, as the safeguard of those principles of liberty and justice which stand at the foundation of American institutions; for, as Burke finely said, when liberty and justice are separated, neither is safe. There are, however, some members of the judicial body who have lagged behind in their understanding of these great and vital changes in the body politic, whose minds have never been opened to the new applications of the old principles made necessary by the new conditions. Judges of this stamp do lasting harm by their decisions, because they convince poor men in need of protection that the courts of the land are profoundly ignorant of and out of sympathy with their needs, and profoundly indifferent or hostile to any proposed remedy. To such men it seems a cruel mockery to have any court decide against them on the ground that it desires to preserve 'liberty' in a purely technical form by withholding liberty in any real and constructive sense. It is desirable that the legislative body should possess, and wherever necessary exercise, the power to determine whether in a given case employers and employees are not on an equal footing, so that the necessities of the latter compel them to submit to such exactions as to hours and conditions of labor as unduly to tax their strength; and only mischief can result when such determination is upset on the ground that there must be no 'interference with the liberty to contract'—often a merely academic 'liberty,' the exercise of which is the negation of real liberty.

CERTAIN DECISIONS DETRIMENTAL TO LABOR.

"There are certain decisions by various courts which have been exceedingly detrimental to the rights of wageworkers. This is true of all the decisions that decide that men and women are, by the Constitution, 'guaranteed their liberty' to contract to enter a dangerous occupation, or to work an undesirable or improper number of hours, or to work in unhealthy surroundings; and therefore can not recover damages when maimed in that occupation and can not be forbidden to work what the legislature decides is an excessive number of hours, or to carry on the work under conditions which the legislature decides to be unhealthy. The most dangerous occupations are often the poorest paid and those where the hours of work are longest; and in many cases those who go into them are driven by necessity so great that they have practically no alternative. Decisions such as those alluded to above nullify the legislative effort to protect the wageworkers who most need protection from those employers who take advantage of their grinding need. They halt or hamper the movement for securing better and more equitable conditions of labor. The talk about preserving to the misery-hunted beings who make contracts for such service their 'liberty' to make them is either to speak in a spirit of heartless irony or else to show an utter lack of knowledge of the conditions of life among the great masses of our fellow countrymen, a lack which unfits a judge to do good service just as it would unfit any executive or legislative officer.

"There is also, I think, ground for the belief that substantial injustice is often suffered by employees in consequence of the custom of courts issuing temporary injunctions without notice to them and punishing them for contempt of court in instances where, as a matter of fact, they have no knowledge of any proceedings. Outside of organized labor there is a widespread feeling that this system often works great injustice to wageworkers when their efforts to better their working condition result in industrial disputes. A temporary injunction procured ex parte may, as a matter of fact, have all the effect of a permanent injunction in causing disaster to the wageworkers' side in such a dispute. Organized labor is chafing under the unjust restraint which comes from repeated resort to this plan of procedure. Its discontent has been unwisely expressed and often improperly expressed; but there is a sound basis for it, and the orderly and law-abiding people of a community would be in a far stronger position for upholding the courts if the undoubtedly existing abuses could be provided against.

LABOR SEEKS INJUNCTIVE PROCESS.

"Such proposals as those mentioned above as advocated by the extreme labor leaders contain the vital error of being class legislation of the most offensive kind, and, even if enacted into law, I believe that the law would rightly be held unconstitutional. Moreover, the labor people are themselves now beginning to invoke the use of the power of injunction. During the last 10 years, and within my own knowledge, at least 50 injunctions have been obtained by labor unions in New York City alone, most of them being to protect the union label—a 'property right'—but some being obtained for other reasons against employers. The power of injunction is a great equitable remedy which should on no account be destroyed. But safeguards should be erected against its abuse. I believe that some such provisions as those I advocated a year ago for checking the abuse of the issuance of temporary injunctions should be adopted. In substance, provision should be made that no injunction or temporary restraining order issue otherwise than on notice, except where irreparable injury would otherwise result; and in such case a hearing on the merits of the order should be had within a short fixed period, and if not then continued after hearing it should forthwith lapse. Decisions should be rendered immediately and the chance of delay minimized in every way. Moreover, I believe that the procedure should be sharply defined and the judge required minutely to state the particulars both of his action and of his reasons therefor, so that the Congress can, if it desires, examine and investigate the same."

TAFT VETOES THE GOMPERS AMENDMENT.

Here, then, we have the presidential denunciation of the Gompers amendment as "class legislation," and also an expression of doubt by Col. Roosevelt as to whether such legislation would be held constitutional. It will be recalled that in spite of Mr. Gompers's appeal to the labor vote to support Mr. Bryan in the campaign of 1908 the Republican candidate, Mr. Taft, was elected, and this with the cordial indorsement and support of Col. Roosevelt. The Democrats subsequently obtained control of the House of Representatives and forced the Gompers amendment as a rider upon the sundry civil bill. Enthusiastic friends of certain of the farmers' organizations in the South, seeing an opportunity to tack the farmers' organizations onto the Gompers labor-union proviso, took advantage of their opportunity. Then the bill went to President Taft, and, in a message sent to Congress March 4, 1913, he vetoed it. I append that message:

MESSAGE FROM THE PRESIDENT OF THE UNITED STATES, TRANSMITTING TO THE HOUSE OF REPRESENTATIVES, WITHOUT APPROVAL, HOUSE BILL 28775, "AN ACT MAKING APPROPRIATIONS FOR THE SUNDRY CIVIL EXPENSES OF THE GOVERNMENT FOR THE FISCAL YEAR ENDING JUNE 30, 1914, AND FOR OTHER PURPOSES."

"*To the House of Representatives:*

"I return without my approval the bill H. R. 28775, being 'An act making appropriations for the sundry civil expenses of the Government for the fiscal year ending June 30, 1914, and for other purposes.'

"My reasons for failing to approve this important appropriation bill are found in a provision which has been added to that appropriating $300,000 for the enforcement of the antitrust laws in the following language:

"*Provided, however,* That no part of this money shall be spent in the prosecution of any organization or individual for entering into any combination or agreement having in view the increasing of wages, shortening of hours, or bettering the condition of labor, or for any act done in furtherance thereof not in itself unlawful: *Provided further,* That no part of this appropriation shall be expended for the prosecution of producers of farm products and associations of farmers who cooperate and organize in an effort to and for the purpose to obtain and maintain a fair and reasonable price for their products.

"This provision is class legislation of the most vicious sort. If it were enacted as substantive law and not merely as a qualification upon the use of moneys appropriated for the enforcement of the law, no one, I take it, would doubt its unconstitutionality. A similar provision in the laws of the State of Illinois was declared by the Supreme Court to be an invasion of the guaranty of the equal protection of the laws contained in the fourteenth amendment of the Constitution of the United States in the case of Connelly *v.* Union Sewer Pipe Co. (184 U. S., 540), although the only exception in that instance from the illegality of organizations and combinations, etc., declared by that statute, was one which exempted agriculturists and live-stock raisers in respect of their products or live stock in hand from the operation of the law, leaving them free to combine to do that which, if done by others, would be a crime against the State.

"The proviso is subtly worded so as in a measure to conceal its full effect by providing that no part of the money appropriated shall be spent in the prosecution of any organization or individual "for entering into any combination or agreement having in view the increasing of wages, shortening of hours, or bettering the condition of labor, * * * etc.' So that any organization formed with the beneficent purpose described in the proviso might later engage in a conspiracy to destroy by force, violence, or unfair means any employer or employees who failed to conform with its requirements, and yet because of its orig-

inally avowed lawful purpose it would be exempt from prosecution so far as prosecution depended upon the moneys appropriated by this act, no matter how wicked, how cruel, how deliberate the acts of which it was guilty. So, too, by the following sentence in the act, such an organization would be protected from prosecution "for any act done in furtherance" of "the increasing of wages, shortening of hours, or bettering the condition of labor," not in itself unlawful. But under the law of criminal conspiracy acts lawful in themselves may become the weapons whereby an unlawful purpose is carried out and accomplished. (Shawnee Compressed Coal *v.* Anderson, 209 U. S., 423-434; Aikens *v.* Wisconsin, 195 U. S., 194-206; Swift *v.* United States, 196 U. S., 375-396; U. S. *v.* Reading Co., Dec. 16, 1912.)

RAISING THE PRICE OF FOOD PRODUCTS.

"The further proviso that the appropriation shall not be used in the prosecution of producers of farm products and associations of farmers who cooperate and organize in an effort to obtain and maintain a fair and reasonable price for their products is apparently designed to encourage or, at least, to discourage the prosecutions of organizations having for their purpose the artificial enhancement of the prices of food products, and thus to avoid the effect of the construction given to the antitrust law in the case of United States against Patten, decided January 6, 1913.

"At a time when there is widespread complaint of the high cost of living it certainly would be anomalous to put on the statute books of the United States an act in effect preventing the prosecution of combinations of producers of farm products for the purpose of artificially controlling prices; and the evil is not removed, although it may be masked, by referring to the purpose of the organization as "to obtain and maintain a fair and reasonable price for their products."

"An amendment almost in the language of this proviso, so far as it refers to organizations for the increasing of wages, etc., was introduced in the Sixty-first Congress, passed the House, was rejected in the Senete, and after a very full discussion in the House failed of enactment. Representative Madison, speaking in favor of the amendment which struck out the proviso, characterized it as an attempt 'to write into the law so far as this particular measure is concerned, a legalization of the secondary boycott. * * * The laws of this country,' he pointed out, 'are liberal to the workingman. He can strike, he can agree to strike, he can act under a leader in a strike, and he can apply the direct boycott; but when it comes to going further and so acting as to impede and obstruct the natural and lawful course of trade in this country, then the law says he shall stop. And all in the world that this antitrust act does is to apply to him that simple and proper rule that he, too, as well as the creators of trusts and monopolies, shall not obstruct the natural and ordinary course of trade in the United States of America. 'I believe,' he added, 'in the high aims, motives, and patriotism of the American workingmen and do not believe that rightly understanding this amendment they would ask us to write it into the law of this Republic.' (CONGRESSIONAL RECORD, p. 8850, 61st Cong., 2d sess.)

"It is because I am unwilling to be a party to writing such a provision into the laws of this Republic that I am unable to give my assent to a bill which contains this provision.

"WM. H. TAFT.

"THE WHITE HOUSE, *March 4, 1913.*"

"UNJUSTIFIABLE IN CHARACTER AND PRINCIPLE," SAYS PRESIDENT WILSON.

Mr. Chairman, the issue was presented to Congress again when President Wilson took the reins of office. The Gompers proviso reappeared in the sundry civil bill which President Wilson was called upon to sign shortly after he took his seat. There was much public interest in his decision in view of the Democratic platform promising Mr. Gompers and his associates what they wanted. Numerous protests against signing the bill were forwarded to President Wilson, but on June 23, 1913, he made the following announcement to the newspapers:

"I have signed this bill because I can do so without limiting the opportunity or the power of the Department of Justice to prosecute violations of the law by whomsoever committed.

"If I could have separated from the rest of the bill the item which authorized the expenditure by the Department of Justice of a special sum of $300,000 for the prosecution of violations of the antitrust law, I would have vetoed that item, because it places upon the expenditure a limitation which is, in my opinion, unjustifiable in character and principle. But I could not separate it. I do not understand that the limitation was intended as either an amendment or interpretation of the antitrust law, but merely as an expression of the opinion of Congress—a very emphatic opinion, backed by an overwhelming majority of the House of Representatives and a large majority of the Senate, but not intended to touch anything but the expenditure of a single small additional fund.

"I can assure the country that this item will neither limit nor in any way embarrass the actions of the Department of Justice. Other appropriations supply the department with abundant funds to enforce the law. The law will be interpreted, in the determination of what the department should do, by independent, and I hope impartial, judgments as to the true and just meaning of substantive statutes of the United States."

It will thus be seen that President Wilson permitted this important appropriation bill, which President Taft had vetoed, to go through with great reluctance. "*I would have vetoed that item,*" he said, referring to the exemption clause, "*because it places upon the expenditure a limitation which is, in my opinion, unjustifiable in character and principle.*"

THE THREE PRESIDENTS AGREE.

Therefore, in all essentials, so far as Mr. Gompers's proviso is concerned, the three Presidents, representing the three political parties—Messrs. Roosevelt, Taft, and Wilson—have taken substantially and ethically the same position—that Mr. Gompers and his associates were wrong and that the legislation they demanded was class legislation, and therefore repugnant to the doctrine of equal rights. Whether anything substantive has been yielded thus far to Mr. Gompers and his associates or not, the Democrats are claiming to have given them what was demanded, and the Progressives are insisting that the grant was half-hearted and ambiguous. But the inference to be drawn from claims thus far made in behalf of Mr. Gompers and his associates is that they will be permitted to enjoy something in the nature of special privilege and exemption under the law that is not to be enjoyed by the people as a whole. We may quote Mr. Secretary Wilson, of President Wilson's Cabinet, as to this, when, in presenting the bill creating the $500,000 Industrial Commission that is now adding to our Government expenses by touring the country and taking volumes of testimony that may never be read, he was asked if the commission would have any power to adjust labor disputes and enforce its decree. He answered that that was not the purpose of the commission, and that it ought not to have any such power. Pressed for an opinion as to the value of arbitration, Mr. Wilson, in demanding the passage of the bill, said:

"The gentleman from Massachusetts [Mr. Curley] and I can not agree on the idea of compulsory arbitration. Many of us, in fact most of us, are perfectly willing that compulsion should be used, provided that it is used on the other fellow and that we are the beneficiaries of it."

What Congressman Wilson, now the Secretary of Labor, had to say about the right of those for whom he spoke to be exempt from compulsory arbitration was oddly in line with what President Gompers had been telling the Committee on the Judiciary a few months previously about the rights of labor.

THE GOMPERS DEMANDS AGAIN ASSERTED.

"We want the right to exercise our natural, normal, and constitutional activities—the activities and the rights accorded to the people of nearly ever civilized country on the face of the globe," said Mr. Gompers, the inference being that only (?) in America are such activities curtailed.

Further than this—I am quoting from the hearing of the Clayton Committee on the Judiciary, January 17, 1912—Mr. Gompers said:

"And let me say here, now, and I do not know whether I shall have opportunity for another hearing or not, but the Germans have a phrase for which I scarcely can find the English. It is Bange Machen gilt nicht, a fair, literal translation of which is, 'frightening does not go.'

"You may put some men in jail for contempt of court. You may stifle the voice of a few men, but their silence will be more potent than any language which they can employ, and which you have throttled. The masses of the people are going to have their rights as American citizens, as guaranteed by the Constitution of our country. Putting in jail a few men, or doing anything else with them, is not going to stop it. These are the sentiments of the men and women of toil of the United States.

"At the hearing last week this committee did the honor to accord me, I read to you the instructions which came from the convention of the American Federation of Labor by a unanimous vote. Never in the history of the organization of the working people or the masses in any country, at any time, here or elsewhere, have there been more direct instructions given as to the policy which should be pursued. *We are going to get this legislation.* We hope for it at the hands of this Congress and at this session. We are entitled to it. We ask nothing which is improper. I deny that we are asking to be

accorded any privilege or any right which is not equally enjoyed by every other citizen of our country."

ANTHRACITE COAL STRIKE COMMISSION.

Perhaps no labor dispute of recent years attracted such world-wide concern as the great anthracite coal strike of 1902. The "rights of labor" about which Mr. Gompers speaks so earnestly were more deeply involved in that disastrous outbreak possibly than in any other of recent years. President Roosevelt appointed a strike commission, consisting of representatives of capital and labor, the clergy and the law, who inquired into every phase of the difficulty from the viewpoint of the laboring man and of his employer, as well as of the consumer of coal. The result of that commission's work was to bring about a better understanding between both sides to the controversy. The public was satisfied with the work done by that commission and approved of its report. The men who composed the commission had the confidence of all concerned. They included Justice George Gray, of Delaware, Labor Commissioner Carroll D. Wright, Gen. John M. Wilson, Bishop John L. Spalding, Edgar E. Clark, Thomas H. Watkins, and Edward W. Parker. The witness who commanded more attention than any other before that commission was John Mitchell, president of the United Mine Workers of America and vice president of the American Federation of Labor. William B. Wilson, secretary of the United Mine Workers of America, and now Secretary of Labor in the Cabinet of President Wilson, united with President John Mitchell in arranging with President Roosevelt for submitting "all the questions at issue between the operators and mine workers of the anthracite coal regions for adjustment to the commission."

THE RIGHTS OF MEN WHO LABOR.

These facts are cited because they have an important bearing upon the "rights of men," including their protection by the court, as found by the commission. No matter whose toes are trodden upon it is important to have the facts upon which to base our view of the wisdom or unwisdom of passing national laws which exempt certain classes of our citizens from the operation of the law and deny to others the right of their protection. For that reason I incorporate herewith the very illuminating chapter of the bulletin of the Department of Labor (May, 1903), relating to "Discrimination, lawlessness, boycotting, and blacklisting":

IX.—DISCRIMINATION, LAWLESSNESS, BOYCOTTING, AND BLACKLISTING.

"In the letter of the operators, which forms the basis of the submission of issues to this commission, the signatory parties state 'that they are not discriminating against the United Mine Workers, but they insist that the miners' union shall not discriminate against or refuse to work with nonunion men.' The testimony proved that some discrimination, on the part of both operators and union men, was made, before and after the strike was inaugurated, and even, to some extent, after it had been declared off. It is difficult, of course, to determine just how far the employers declined to reemploy miners simply because they were members of the union or just how far the miners themselves refused to work with nonunion men. In the above-mentioned letter it is stated that the understanding is that 'the miners will return to work and cease all interference with or persecution of any nonunion men who are working or shall hereafter work.'

"The testimony does not reveal any considerable amount of interference on the part of members of the union with nonunion men after work had been resumed—that is, after the 23d of October. Nevertheless, it is evident to the commission that discrimination, whether on the part of the operators or of any of their employees, is a serious menace to the discipline of the mines. There is no industry in which discipline is more essential than in mining. The hazardous nature of the work calls for the best discipline; it it to the interest of the employer and the employee to see that it is maintained. Each should aid the other, not only in establishing the best methods for securing discipline, but in efforts to preserve it. Discrimination and interference weaken all discipline.

MURDERED ASSERTING THEIR RIGHT TO WORK.

"Although some reflections on the general subject have been made, no discussion of the conditions prevailing in the anthracite region during the continuance of the late strike would be adequate that did not fully deal with the disorder and lawlessness which existed to some extent over the whole region and throughout the whole period. It is admitted that this disorder and lawlessness was incident to the strike. Its history is stained with a record of riot and bloodshed, culminating in three murders, unprovoked save by the fact that two of the victims were asserting their right to work and another, as an officer of the law, was performing his duty in attempting to preserve the peace. Men who chose to be employed or who remained at work were assailed and threatened and they and their families terrorized and intimidated. In several instances the houses of such workmen were dynamited or otherwise assaulted and the lives of unoffending women and children put in jeopardy. The armed guards employed to protect the collieries and the men who worked them appear not to have been an unnecessary precaution, and the governor of the State was, as the evidence before the commission shows, justified in calling out the citizen soldiery of the Commonwealth to preserve its peace and vindicate its laws.

"The resentment expressed by many persons connected with the strike at the presence of the armed guards and militia of the State does not argue well for the peaceable character or purposes of such persons. No peaceable or law-abiding citizen has reason to fear or resent the presence of either.

"It is true that exaggerated accounts of the disturbances were published, and there was testimony from reputable witnesses tending to minimize them and vouching for the good order of the communities in which such witnesses lived; but these were mainly in the localities where the operators made no attempt to work the collieries. It is also true, and justice requires the statement, that the leaders of the organization which began and conducted the strike, and notably its president, condemned all violence and exhorted their followers to sobriety and moderation. It would seem, however, that the subordinate local organizations and their leaders were not so amenable to such counsels as to prevent the regrettable occurrences to which reference has been made.

THE WELL DISPOSED INFLUENCED BY DISORDERLY ELEMENT.

"In making this arraignment we are not unmindful of what appears to be the fact that the mine workers of the anthracite region are, in the main, well disposed and good citizens of the Commonwealth of Pennsylvania, and that it is in the power of a minority of the less responsible men and boys, together with the idle and vicious, unless properly restrained, to destroy the peace and good order of any community. Absence of protest and of active resistance on the part of the better element means encouragement and license to the class above described. It has been declared by some persons that this state of things is no more than was to be expected in communities where such large numbers of men and boys were idle for so long a time. If this be so, and it is not necessary for our present purpose to traverse the truth of this statement, it affects seriously the responsibility of those leaders of a labor movement who are, in the main, responsible for the inauguration and conduct of a strike.

"There can be no doubt that without threats, intimidation, and violence toward those who would otherwise be willing to remain at work or take the places of those who had ceased to work the coercion of employers, which a strike always contemplates, would be less potent in compelling acquiescence in its demands. *This is the danger point of the whole matter. The law, which governs all citizens of a free country alike, can make no exception. The beneficence of labor unions is acknowledged. Their development, as we view it, has been one of real, though of slow and intermittent, progress to the betterment of labor conditions and to improvement in the relations between employer and employed. All combinations of men, however, to achieve a common purpose have potencies for evil. Such combinations are more than mere aggregations of the rights and powers of the individuals composing them. They become new and powerful entities and factors for good or ill according to the wisdom or unwisdom with which they are managed and controlled.*

RIGHT TO STRIKE UPHELD, BUT COERCION ILLEGAL.

The strike ordered by a trade union, which compasses no more than the enforcement of demands previously made, for the supposed benefit of its members, by the cessation from work in the event that those demands are not complied with, transgresses no law of a free society, and, whether wise or unwise in inception and purpose, is an exercise of no more than the legal rights that belong collectively or individually to its members.

"It is true that the stress thus placed upon employers may constitute a kind of coercion, resulting in some cases in an enforced compliance with the demands of the association or union. Such coercion, however, is not illegal and does not come within the condemnation of the law. It is the indirect consequence of the legal exercise of the right to work, or to cease to work belonging to all men.

"But a strike set on foot with the view to the accomplishment of its purpose by intimidation or violence, exercised against those who choose to remain at work violates the law from the beginning. Where, however, the strike itself is separable from the illegal violence and intimidation, which in many

cases accompany it, the legal liability for such violence and intimidation rests alone upon the individuals who commit the act, and those who aid, encourage, and abet them. Though no illegality of purpose is imputable to those inaugurating a strike, its existence, if it involve large numbers of men in a single community, tends of itself to produce disorder and lawlessness.

"As has been said, the idle and vicious, who are in no way connected with the purpose or object of the strike, often unite with the less orderly of the strikers themselves, in creating the deplorable scenes of violence and terror, which have all too often characterized the otherwise laudable efforts of organized labor to improve its conditions. Surely this tendency to disorder and violation of law imposes upon the organization, which begins and conducts a movement of such importance, a grave responsibility. It has, by its voluntary act, created dangers, and should, therefore, be vigilant in averting them. It has, by the concerted action of many aroused passions, which, uncontrolled, threaten the public peace; it therefore owes society the duty of exerting its power to check and confine these passions within the bounds of reason and of law.

DUTY OF LABOR UNIONS TO SOCIETY.

"Such organizations should be the powerful coadjustors of government in maintaining the peace and upholding the law. Only so can they deserve and attain the respect due to good citizenship, and only so can they accomplish the beneficent ends, which for the most part they were created to attain.

"*A labor or other organization, whose purpose can only be accomplished by the violation of law and order of society, has no right to exist.*

"*The right to remain at work where others have ceased to work or to engage anew in work which others have abandoned is part of the personal liberty of a citizen, that can never be surrendered, and every infringement thereof merits and should receive the stern denouncement of the law.* All government implies restraint and it is not less but more necessary in self-governed communities than in others to compel restraint of the passions of men which make for disorder and lawlessness. Our language is the language of a free people and fails to furnish any form of speech by which the right of a citizen to work when he pleases, for whom he pleases, and on what terms he pleases, can be successfully denied. The common sense of our people, as well as the common law, forbids that this right should be assailed with impunity. It is vain to say that the man who remains at work while others cease to work or takes the place of one who has abandoned his work helps to defeat the aspirations of men who seek to obtain better recompense for their labor, and better conditions of life. Approval of the object of a strike or persuasion that its purpose is high and noble can not sanction an attempt to destroy the right of others to a different opinion in this respect or to interfere with their conduct in choosing to work upon what terms and at what time and for whom it may please them so to do.

ATTACKS UPON INDIVIDUAL RIGHTS AND LIBERTIES.

"The right thus to work can not be made to depend upon the approval or disapproval of the personal character and conduct of those who claim to exercise this right. If this were otherwise, then those who remain at work might, if they were in the majority, have both the right and power to prevent others who choose to cease to work from so doing.

"This all seems too plain for argument. Common sense and common law alike denounce the conduct of those who interfere with this fundamental right of the citizen. The assertion of the right seems trite and commonplace, but that land is blessed where the maxims of liberty are commonplaces.

"It also becomes our duty to condemn another less violent, but not less reprehensible, form of attack upon those rights and liberties of the citizen, which the public opinion of civilized countries recognizes and protects. The right and liberty to pursue a lawful calling and to lead a peaceable life, free from molestation or attack, concerns the comfort and happiness of all men, and the denial of them means destruction of one of the greatest, if not the greatest, of the benefits which the social organization confers. What is popularly known as the boycott—a word of evil omen and unhappy origin—the following-named States have laws which may fairly be construed as prohibiting boycotting: Alabama, Connecticut, Florida, Georgia, Maine, Massachusetts, Michigan, Minnesota, Mississippi, Missouri, New Hampshire, New York, North Dakota, Oklahoma, Oregon, South Dakota, Texas, Utah, Vermont, and Wisconsin—is a form of coercion by which a combination of many persons seek to work their will upon a single person or upon a few persons by compelling others to abstain from social or beneficial business intercourse with such person or persons. Carried to the extent sometimes practiced in aid of a strike, and as was in some instances practiced in connection with the late anthracite strike, it is a cruel weapon of aggression, and its use immoral and antisocial.

CRUEL EFFECTS OF THE SECONDARY BOYCOTT.

"*To say this, is not to deny the legal right of any man or set of men voluntarily to refrain from social intercourse or business relations with any persons whom he or they, with or without good reason, dislike. This may sometimes be un-Christian, but it is not illegal. But when it is a concerted purpose of a number of persons not only to abstain themselves from such intercourse but to render the life of their victim miserable by persuading and intimidating others so to refrain, such purpose is a malicious one, and the concerted attempt to accomplish it is a conspiracy at common law, and merits and should receive the punishment due to such a crime.*

"Examples of such 'secondary boycotts' are not wanting in the record of the case before the commission. A young schoolmistress of intelligence, character, and attainments, was so boycotted, and her dismissal from employment compelled for no other reason than that a brother, not living in her immediate family, chose to work contrary to the wishes and will of the striking miners. A lad, about 15 years old, employed in a drug store, was discharged, owing to threats made to his employer by a delegation of the strikers on behalf of their organization, for the reason that his father had chosen to return to work before the strike was ended. In several instances tradesmen were threatened with a boycott—that is, that all connected with the strikers would withhold from them their custom, and persuade others to do so, if they continued to furnish the necessaries of life to the families of certain workmen who had come under the ban of the displeasure of the striking organizations. This was carrying the boycott to an extent which was condemned by Mr. Mitchell, president of the United Mine Workers of America, in his testimony before the commission, and which certainly deserves the reprobation of all thoughtful and law-abiding citizens. Many other instances of boycott are disclosed in the record of this case.

"IT IS TYRANNY, PURE AND SIMPLE."

"In social disturbances of the kind with which we are dealing, the temptation to resort to this weapon oftentimes becomes strong, but is none the less to be resisted. It is an attempt of many, by concerted action, to work their will upon another who has exercised his legal right to differ with them in opinion and in conduct. It is tyranny, pure and simple, and as such is hateful, no matter whether attempted to be exercised by few or by many, by operators or by workmen, and no society that tolerates or condones it can justly call itself free.

"Some weak attempt was made at the hearings to justify the boycotts we have been describing, by confusing them with what might be called, for convenience sake, the primary boycott, which consists merely in the voluntary abstention of one or many persons from social or business relations with one whom they dislike. This indeed might amount to a conspiracy at law, if the ingredient of malicious purpose and concerted action to accomplish it were present, but whether this be so or not, the practical distinction between such a boycott and the one we have been reprobating is clear.

"It was attempted to defend the boycott, by calling the contest between employers and employees a war between capital and labor, and pursuing the analogies of the word, to justify thereby the cruelty and illegality of conduct on the part of those conducting a strike. The analogy is not apt, and the argument founded upon it is fallacious. There is only one war-making power recognized by our institutions, and that is the Government of the United States, and of the States in subordination thereto, when repelling invasion or suppressing domestic violence. War between citizens is not to be tolerated, and can not, in the proper sense, exist. If attempted, it is unlawful, and is to be put down by the sovereign power of the State and Nation.

THE BLACKLIST AS REPREHENSIBLE AS THE BOYCOTT.

"The practices, which we are condemning, would be outside the pale of civilized war. In civilized warfare women and children and the defenseless are safe from attack, and a code of honor controls the parties to such warfare which cries out against the boycott we have in view. Cruel and cowardly are terms not too severe by which to characterize it.

"Closely allied to the boycott is the blacklist, by which employers of labor sometimes prevent the employment by others of men whom they have discharged. In other words, it is a combination among employers not to employ workmen discharged by any of the members of said combination. This system is as reprehensible and as cruel as the boycott, and should be frowned down by all humane men. Happily there was little evidence of its existence among the operators in the anthracite

region, one case only having been distinctly proved, and in that the refusal to employ the tabooed men continued but for a short time. Wherever it is practiced to the extent of being founded upon an agreement or concerted action, it, too, comes within the definition of the crime of conspiracy, and as such should be punished. (The United States and the following-named States have laws which may fairly be construed as prohibiting blacklisting: Georgia, Michigan, New Hampshire, New York, Oklahoma, Oregon, Rhode Island, and South Dakota.) There is also a civil remedy open to one who suffers from having been blacklisted, in an action against those who are a party to it, to recover damages compensatory of the injury received.

"The commission is fully aware of the difficulties inherent in this subject. It is a psychological matter beyond rules and awards unless the lawmaking power of the community fix a penalty upon boycotting and blacklisting. Even then, the various degrees to which the two can be carried elude the enforcement of a statue. The commission is of opinion, however, that there should be a positive utterance on its part relative to discrimination, interference, boycotting, and blacklisting, and this opinion it has put in the form of an award, as follows:

"*It is adjudged and awarded: That no person shall be refused employment, or in any way discriminated against, on account of membership or nonmembership in any labor organization; and that there shall be no discrimination against, or interference with, any employee who is not a member of any labor organization by members of such organization.*"

A LIVING WITNESS OF THE SHERMAN LAW'S INTENT.

There is one other phase of the question which I shall add to the foregoing group of significant statements. It has been asserted time and again by Mr. Gompers, or his friends in Congress, that Senators Sherman, Hoar, George, and others, all of whom have departed this life, had declared that the Sherman antitrust law was not intended to include labor organizations. The statement which I shall incorporate is that of a living witness, one of the great statesmen of the period referred to, and still one of the active legal minds of the Nation. I refer to former United States Senator George F. Edmunds, of Vermont, who was chairman of the Judiciary Committee which had the Sherman antitrust bill of 1890 in charge, and whose statement, published in the New York Evening Post of June 17, 1914, I have been able to confirm:

"'The old law,' Mr. Edmunds said, 'does not require a particle of change. No phase of business is outside the reach of the law, if we want to have equal rights under the law. As it is, we have gone as far as constitutional rights and justice will permit in the recognition of such things as now are under discussion. All that you hear about "legislation being necessary" is a fuss over details which the courts are already able to decide, and have decided.'

"Mr. Edmunds was asked his judgment on the labor amendment exempting 'fraternal, labor, consumers', agricultural, or horticultural organizations, orders, or associations' from the provisions of the antitrust law. He pointed out first that a substantially identical amendment was proposed to the original bill in the debate of 1890 was thoroughly discussed in the Senate, and was finally dropped on the ground that it was opposed to the entire spirit of the bill.

SENATOR EDMUNDS ON THE EQUALITY OF RIGHTS.

"Referring then to the recent unanimous vote of the House of Representatives for the 'labor amendment,' the ex-Senator continued:

"When two or three or a half dozen men come to a conclusion on what to them seems expedient, they usually are feverish enough, but when you multiply the number, the more feverish becomes the body and the greater the emotion. What influenced the Members of the House, comprising all parties, to vote in the manner they did, may have been, however, not mere emotion or excitement. The impulse may have come from party tactics or political motives, the House Members entering upon a race to gain advantage with the great bodies of voters. It does not appear to have depended upon reflective judgment or regard for the Constitution. This is not a good way to make laws.

"The seventh section of this act (the 'labor amendment') is evidently intended to exempt the classes named from the prohibition of the act of 1890, against conspiracies in restraint of interstate trade, and conspiracies to create monopolies, and to authorize the particular classes named to violate the provisions of that act. If these operations are not in restraint of trade they need no special protection. If they are, why should they be permitted when all other classes of the community are subject to the equal law? Equality of right before the law is the fundamental principle and the very foundation stone of republican and democratic government.

A REVERSAL OF CONSTITUTIONAL LIBERTY.

"This question was fully considered and deliberated upon when the act of 1890 was under consideration and upon passage. Labor unions, farmers' unions, and consumers' unions are already, and always have been, perfectly free and proper. It is only when they are guilty of misconduct in their actions that they are liable, like all other classes of the community, to restraint and punishment.

"It will be a singular spectacle in Republican or Democratic legislation to provide that labor unions, for illustration, may combine to stop the work of their employers, while if their employers should combine by the same means to avert such a stoppage they are forbidden to do so and punished if they do; or if the farmers' unions should combine to raise the price of their wheat, while the bakers are forbidden to raise the price of the bread they make from the same wheat.

"Such legislation would be so absolutely unjust and unequal and such a complete reversal of constitutional liberty and equal rights that even discussion of it would seem to be absurd."

Mississippi Choctaw Claim.

EXTENSION OF REMARKS

OF

HON. CHARLES D. CARTER,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 2, 1914.

Mr. CARTER. Mr. Speaker, rights are claimed for the Mississippi Choctaws in the language which is in italic in the following print of the fourteenth article of the treaty of 1830, commonly called the "Treaty of Dancing Rabbit Creek":

ART. 14. Each Choctaw head of a family being desirous to remain and become a citizen of the States shall be permitted to do so by signifying his intention to the agent within six months from the ratification of this treaty, and he or she shall thereupon be entitled to a reservation of one section of 640 acres of land, to be bounded by sectional lines of survey; in like manner shall be entitled to one-half of that quantity for each unmarried child which is living with him over 10 years of age and a quarter section to such child as may be under 10 years of age, to adjoin the location of the parent. If they reside upon said lands, intending to become citizens of the State, for five years after the ratification of this treaty, in that case a grant in fee simple shall issue. Said reservation shall include the present improvements of the head of the family, or a portion of it. *Persons who claim under this article shall not lose the privilege of a Choctaw citizen, but if they ever remove are not to be entitled to any portion of the Choctaw annuity.*

Their rights under this language have been adjudicated by the courts, as follows:

The Indian appropriation act of June 7, 1897 (30 Stat. L., 83), directed the Dawes Commission to determine these rights in the following language:

That the commission appointed to negotiate with the Five Civilized Tribes in the Indian Territory shall examine and report to Congress whether the Mississippi Choctaws under their treaties are not entitled to all the rights of Choctaw citizenship except an interest in the Choctaw annuities.

The decision of the Dawes Commission was to the effect that the Mississippi Choctaws were entitled to no rights of Choctaw citizenship in the Choctaw Nation in Indian Territory unless they removed to and established bona fide residence on that reservation. This case was appealed to the United States district court in the central district of Indian Territory, and the decision of the Dawes Commission affirmed. In concluding that decision, Judge Clayton said:

To permit men with, perchance, but a strain of Choctaw blood in their veins, who 65 years ago broke away from their kindred and their nation, and during that time, or the most of it, have been exercising the rights of citizenship and doing homage to the sovereignty of another nation, who have borne none of the burdens of this nation and have become strangers to the people, to reach forth their hands from their distant and alien home and lay hold of a part of the public domain, the common property of the people, and appropriate to their own use, would be unjust and inequitable.

It is therefore the opinion of the court that absent Mississippi Choctaws are not entitled to be enrolled as citizens of the Choctaw Nation.

The action of the Dawes Commission is therefore affirmed, and a decree will be entered for the Choctaw Nation.

Judge W. H. H. Clayton, who tried the case under equity proceedings, also called attention to the fact that the provisions of both the treaty of 1830 and of the fee simple patent which the Federal Government had given the Choctaws to lands in Indian Territory guaranteed this land to the Choctaws only "so long as they existed as a nation and lived upon it," and held that actual residence of the individual as well as of the tribe was a necessary condition precedent to an interest in the estate.

An appeal was taken to the Supreme Court of the United States by the attorneys for the Mississippi Choctaws in the case of Stephens *v.* Cherokee Nation (174 U. S., 445) and Jack Amos et al *v.* Choctaw Nation (see Decisions of United States Courts in Indian Territory on Citizenship Cases, pp. 458, 19; Supreme Court Report, p. 873).

The United States Supreme Court rendered a decision in the Stephens case, holding that the decision of United States district court was final, and since the issues involved in the Jack Amos case were identical, the Amos case was afterwards dismissed upon motion of the attorneys for the Mississippi Choctaws.

The absence of legal or equitable rights of the Mississippi Choctaws to any division of the property of the Western Choctaws was therefore finally decided by these decisions, which were rendered in February, 1899, and the status is now res judicata.

As to the moral rights, so often spoken of, I call attention to article 41 of the supplemental agreement:

ART. 41. All persons duly identified by the Commission to the Five Civilized Tribes under the provisions of section 21 of the act of Congress approved June 28, 1898 (30 Stat., 495), as Mississippi Choctaws entitled to benefits under article 14 of the treaty between the United States and the Choctaw Nation concluded September 27, 1830, may at any time within six months after the date of their identification as Mississippi Choctaws by the said commission, make bona fide settlement within the Choctaw-Chickasaw country, and upon proof of such settlement to such commission within one year after the date of the said identification as Mississippi Choctaws shall be enrolled by such commission as Mississippi Choctaws entitled to allotment as herein provided for citizens of the tribes, subject to special provisions herein provided as to Mississippi Choctaws, and said enrollment shall be final when approved by the Secretary of the Interior. The application of no person for identification as a Mississippi Choctaw shall be received by said commission after six months subsequent to the date of the final ratification of this agreement, and in the disposition of such application all full-blood Mississippi Choctaw Indians and the descendants of any Mississippi Choctaw Indians, whether of full or mixed blood, who receive a patent to land under the said fourteenth article of the treaty of 1830, who had not moved to and made bona fide settlement in the Choctaw-Chickasaw country prior to June 28, 1898, shall be deemed to be Mississippi Choctaws entitled to benefits under article 14 of the said treaty of September 27, 1830, and to identification as such by said commission, but this direction or provision shall be deemed to be only a rule of evidence and shall not be invoked by or operate to the advantage of any applicant who is not a Mississippi Choctaw of the full blood, or who is not the descendant of a Mississippi Choctaw who received a patent to land under said treaty, or who is otherwise barred from the rights of citizenship in the Choctaw Nation. All of said Mississippi Choctaws so enrolled by said commission shall be upon a separate roll.

This agreement was negotiated in the early part of 1902 between the Choctaws and Chickasaws and the United States, three years after the rights of the Mississippi Choctaws had been decided adversely to them. It will be noted that this agreement reopened the rolls to the Mississippi Choctaws, giving six months after the ratification of said agreement to file application for identification, six months after identification to locate in Indian Territory, and one year after identification to make proof of such settlement or location.

Moreover, it has never been the practice of any of the Five Civilized Tribes, or any other tribe so far as I know, to grant citizenship rights to absentees, or those not living within the confines of the reservation.

Seventy-seven years elapsed between the treaty of 1830 and March 4, 1907, the time of the final closing of the rolls of the Choctaw and Chickasaw Nations, and at any time during these 77 years any Mississippi Choctaw could have been enrolled by simply making application, provided he moved to Indian Territory prior to July 1, 1903, as set forth in the supplemental agreement. More than that, a standing invitation was held out to him by the Choctaws in Indian Territory during all this time, as is evidenced by the many acts of the Choctaw Council. Indeed, numerous appropriations were made by the Choctaw Council to pay for the expense of bringing these people to Indian Territory, and never prior to the final closing of the rolls was any Mississippi Choctaw denied enrollment who had established a legal, bona fide residence on the reservation in Indian Territory.

The closing of the tribal rolls is agreed to in section 21 of the act ratifying the Atoka agreement, approved June 28, 1898 (30 Stat. L., 495), and in sections 27, 30, and 35 of the supplemental agreement, approved July 1, 1902 (32 Stat. L., 641); also by sections 1 and 2 of the so-called Curtis Act of April 26, 1906.

The only distinction made by any of these acts between the Mississippi Choctaws and the Western Choctaws was that the Western Choctaws were required to be on the reservation in Indian Territory not later than June 28, 1898, while the Mississippi Choctaws were given until July 1, 1903, in which to establish such residence, a clear favor by which the Mississippi Choctaws were given five years longer than the native Choctaws in which to establish this residence.

Section 29 of the Atoka agreement (30 Stat. L., 495) provides that a division of all tribal funds shall begin not later than March 4, 1907, and section 14 of the supplemental agreement (32 Stat. L., 641) also provides for a division of these funds. These provisions directing a division of these tribal funds per capita, together with that providing for allotment of lands, were the principal benefits guaranteed to the Choctaws and Chickasaws by such treaties and the impelling force which secured the number of votes necessary to their ratification by the Choctaw and Chickasaw people. If these two provisions had not been in these two treaties, they would never have received one-twentieth the number of votes necessary to their ratification. Indeed, without some provision for a division of tribal funds per capita I doubt if the ratification of these treaties would have received one single favorable vote.

The Western Choctaws have never objected to the Mississippi Choctaws becoming citizens of their community if they would but move to the reservation. Now, since they have surrendered their tribal government, all their tribal privileges, even delivering the schools and all tribal funds into the hands of the Federal Government for division, and permitting the State of Oklahoma to be formed, they think they are entitled to their peace and that division of their property guaranteed to them by treaties cited above, to begin not later than March 4, 1907.

The Western Choctaws and Chickasaws are in full sympathy with the Mississippi Choctaws, and they agree that this great Federal Government should entertain a philanthropic view toward all the aborigines who have been by various and sometimes devious methods deprived of ownership of all the domain of this great Republic. They think that the Federal Government should deal liberally with the Mississippi Choctaws, but at the same time this great Government can not afford to deal unjustly with the Western Choctaws. This great Government has no right to exercise philanthropy and liberality toward the Mississippi Choctaws at the expense of the funds of the Western Choctaws, who the courts have already decided are under no obligations, either in law or in equity, to provide for the Mississippi Choctaws.

Creek Equalization Payment.

EXTENSION OF REMARKS

OF

HON. WILLIAM H. MURRAY,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, June 29, 1914.

Mr. MURRAY of Oklahoma. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD upon the Creek equalization payment. I have heretofore called attention to the justice of equalizing the payment in the Creek Nation and of completing the sale of tribal property and the payment to the Creek Indians and to all other tribes of all funds whatsoever now in the hands of the Government and which belongs to them and the final settlement of Indian estates. All of the Five Civilized Tribes should be paid all their money, and let these governments go out of existence, just as the Cherokee government goes out of existence at midnight on to-morrow. I believe it would be manifest justice to permit this payment provided for both to the new born and to others, and that especially they should be permitted to go to the Court of Claims to determine their rights in the matter. Certainly the Government should not object to try the question out with the Creek Indians, since they are willing to submit the question to the white man's court for its determination between the white man's Government and the Indians. I can do no better in this connection than to file herewith a letter upon the subject, explaining at considerable length, giving quotation of treaties, written to the chairman of our Indian Committee by Judge R. C. Allen, general attorney for the Creek Nation. Judge Allen has been for a number of years district judge in our State, and was offered the Creek attorneyship by Secretary Lane without his making application. His record as judge is a guaranty that he bears to the general public as well as the Indian a sincere desire to eliminate wrongdoing in the administration of these estates, and his letter, in my opinion, covers the laws and treaties and the arguments fairly and fully, and I offer it as a completion of my argument. His letter follows:

WASHINGTON, D. C., *June 25, 1914.*

Hon. JOHN H. STEPHENS,
Chairman Committee on Indian Affairs,
House of Representatives.

MY DEAR MR. STEPHENS: I desire to call your attention to an item adopted by the Senate as an amendment to the Indian appropriation bill, which is as follows:

"That to carry into effect the agreement between the United States and the Muskogee (Creek) Nation of Indians, ratified by act of Congress approved March 1, 1901, and the supplemental agreement of June 30, 1902, and other laws and treaties providing for a minimum allotment to each Creek citizen whose name has been placed on the roll by the Government of the United States under authority of said agreements and laws of the standard value of $1,040; and in order that the claim of said citizens of the Creek Nation who have received allotments in land and money of less value than the standard allotment of 160 acres of the standard value of $1,040 might be determined and finally adjudicated, jurisdiction is hereby conferred upon the Court of Claims, with right of appeal as in other cases, to hear, determine, and render final judgment against the United States for such amount, if any, as may be found due by the United States and as may be necessary to equalize all of such allotments up to the treaty standard value of allotments of $1,040. Said suits shall be begun by petitions filed within six months after the approval of this act, which petitions shall be verified and prosecuted by the national attorney for the Creek Nation."

This legislation has been sought by the representatives of the Creek Nation since 1906, and has since that time, at almost every session of Congress, been considered in either the House or the Senate.

In 1908 it was sought to foreclose this claim of the Creek Nation against the Government by a proviso to an item equalizing allotments in the Creek Nation upon a basis of $800 by which the Creek Indians were required to accept this sum in final settlement of all claims against the Government. This proposal was submitted to the Creek national council and by said council unanimously rejected.

In 1910 an amendment was proposed to the Indian appropriation bill authorizing the institution of this action. The matter was at that time referred to the Department of the Interior, and on the 20th day of April, 1910, the honorable the Secretary of the Interior made thereon the following report:

"DEPARTMENT OF THE INTERIOR,
"Washington, April 20, 1910.

"SIR: I have the honor to acknowledge your communication of March 25, 1910, inclosing a copy of Senate bill No. 7354 and requesting information thereon.

"This bill contemplates that the Court of Claims shall be authorized to determine whether the United States is liable to the Creek Nation for the amount which will be required to equalize Creek allotments and to render judgment in the matter, with authority to fix the fees of the attorneys representing the Creek Nation.

"In my letter to you of March 29, 1910, I furnished all the information at my command relating to the laws bearing upon this subject and to the administration of the same. I then recommended that Senate bill No. 5689, which was intended to recognize and satisfy the claim of the Creek Nation, should not be enacted into law.

Realizing, however, that the question is one of importance both to the United States and to the Creek Nation, involving the payment of upward of $3,000,000, and that there is much force in the contention of the Creek Nation that it is entitled to have a judicial determination of the matter, I feel that probably it would be better to submit it to the courts. I certainly have no objection to interpose to such action.

This bill as now worded contemplates that, if judgment results in favor of the Creek Nation, it shall be made to include the total amount which will be needed to equalize allotments, and that the funds now on deposit in the Treasury of the United States to the credit of the Creek Nation, except the sum of $50,000, shall be utilized and applied upon such judgment. In this connection I have to suggest that there will be other funds in addition to those mentioned which will be available for the equalization of allotments after the sale of the surplus lands and other property of the Creek Nation. In view of this fact, it will be seen that in arriving at a judgment the court should have authority to consider these additional funds as well as those mentioned in the bill.

I have therefore to suggest that the bill be so modified as to authorize the court to determine the general question involved affecting the liability of the United States and to prescribe a rule of calculation for the direction of the Secretary, to be applied after the total amount of money which may prove to be available for the purposes of equalization shall have been definitely determined.

Inasmuch as the original contract of the Creek Nation with the attorneys referred to in the resolution of the Creek Council of November 5, 1908, provided for a contingent fee dependent upon their success in prosecuting the claim of the Creek Nation, I am also of the opinion that the provisions in this bill authorizing the court to fix the compensation of said attorneys upon a quantum merult for all services rendered the Indians in the matter should be clearly to the effect that they are to receive nothing except in the event of their success.

Very respectfully,

R. A. BALLINGER, *Secretary.*

Hon. MOSES E. CLAPP,
Chairman Committee on Indian Affairs,
United States Senate.

Said item was favorably recommended by the Senate Committee on Indian Affairs.

The matter was again before Congress in 1912, and on the 29th day of May, 1912, Mr. CLAPP, from the Committee on Indian Affairs, after discussing at some length the merits of the claim of the Creek Nation, concluded as follows:

"The Creek Nation asks that the Government keep this agreement with the citizens of the Creek Nation, and that, as the Government questions its responsibility or liability, then the question of whether or not the United States is legally and equitably liable should be adjudicated in the courts of the United States. Your committee is therefore of the opinion that they should be accorded the right to have their claim adjudicated in the courts of the United States."

This matter was next before Congress in the form of a separate bill introduced in the House of Representatives by Hon. JAMES S. DAVENPORT, of Oklahoma, and referred to the Committee on Indian Affairs. In addition to providing for the authorization of this action, the bill introduced by Congressman DAVENPORT provided for an equalization of allotments, upon a basis of $900, with funds now to the credit of the Creek Nation. On the 4th day of April, 1914, the honorable the Secretary of the Interior made the following report upon the Davenport bill:

DEPARTMENT OF THE INTERIOR,
Washington, April 4, 1914.

MY DEAR MR. STEPHENS: In response to your request of February 21, 1914, for a report on H. R. 13608, introduced in the House of Representatives on February 19, 1914, by Mr. DAVENPORT, of Oklahoma, and entitled "A bill providing for equalization of the Muskogee (Creek) Nation of Indian allotments, and for other purposes," and to be advised whether there are Creek tribal funds available to make such equalization payment on the basis fixed in the bill, I have the honor to transmit herewith a statement showing that there was on deposit to the credit of the Creek Tribe in the United States Treasury on February 23, 1914, the sum of $2,784,797.93, and there had been deposited of Creek tribal funds in the nation and State banks of Oklahoma under the act of Congress approved March 3, 1911 (36 Stat. L., 1058–1070), with accrued interest, the sum of $1,100,256.85, making a grand total of $3,885,054.78 of Creek tribal funds.

The Creek tribal funds on deposit in the nation and State banks of Oklahoma under the above act may, under section 7 of the regulations approved October 27, 1911, as amended February 21, 1912, to carry into effect the above act, "be withdrawn at any time by direction of the Secretary of the Interior without prior notice thereof."

The Commissioner to the Five Civilized Tribes, Muskogee, Okla., under date of March 4, 1914, advised the Commissioner of Indian Affairs that $3,059,939 is required to equalize Creek allotments—excluding newborn children—to the value of $900, and under date of April 3, 1914, he further advised that to include newborn children—2,875 in number—on the same basis—$900—would require $1,413,565 additional, thus making a total of $4,473,504 required to equalize all Creek allotments to the value of $900, for which there are only $3,885,054.78 of Creek tribal funds available, leaving a deficit of $588,449.22. So it will be seen that there are not sufficient Creek tribal funds available for equalization of all Creek allotments to the value of $900. Therefore I suggest that the figures $900 occurring in line 5, page 2 of the bill, be changed to $800.

Out of a total of 18,704 Creek citizens, about 4,500 have already received land and money exceeding in value the sum of $800, which number includes 850 who have received allotments of 160 acres of the value of $1,040. Of this last number, under the provision that precluded the appraisal of land "not to exceed $6.50 per acre," 158 allottees received allotments in excess of $1,040, such excess being $1,600.69. Of the 15,784 persons enrolled under the original Creek agreement approved March 1, 1901 (31 Stat. L., 861), and the supplemental Creek agreement approved June 30, 1902 (32 Stat. L., 500), who may be called "agreement Indians," 11,263 of them have received allotments of 160 acres of land of less value than the standard value of $1,040, and additional payments in varying amounts to each, but totaling $1,826,633, will be required to equalize their allotments on the basis of $800 as now suggested, and not $900 as proposed in the bill.

Of the 2,930 persons enrolled under the subsequent acts of Congress approved March 3, 1905 (33 Stat. L., 1048), and April 26, 1906 (34 Stat. L., 137), and who may be termed "newborns," 2,858 of them have received allotments of 160 acres of land, but of less value than $800, for whom it will take $1,116,940 to bring their allotments up to a value of $800 each, thus making a total amount of $2,943,573 required to equalize all Creek allotments to the value of $800 each, which amount subtracted from $3,885,054.78 of Creek tribal funds will leave a balance of $941,481 available for current Creek tribal expenses. However, I suggest that of the $2,943,573 required to equalize all Creek allotments to the value of $800, that $1,116,940 required to equalize the allotments of "newborn" children be set apart and withheld from payment at this time until it is determined judicially that "newborn" children are entitled equally with "agreement Indians" to have their allotments equalized upon the same basis as "agreement Indians." If distribution be made only to "agreement Indians" upon the basis of $800, as suggested, and under the terms of this bill there will remain in the Treasury sufficient funds—$1,116,940—to answer an award of equal amount to "newborn" children and a balance of $941,481 to meet current Creek tribal expenses. The following table will show the amounts required on the basis of $800, instead of $900, as proposed in the bill:

For 7,277 citizens by blood	$1,244,500.00
For 3,986 freedmen	582,133.00
Total required for 11,263 citizens by blood and freedmen (excluding "newborns")	1,826,633.00
Total required for 2,858 "newborn" citizens by blood and freedmen	1,116,940.00
Total required for 14,121 "agreement Indians" and 2,858 "newborns"	2,943,573.00
Total amount in Treasury	3,885,054.78
Balance for current expenses	941,481.00

The question arises as to whether the United States guaranteed to all Creek allottees, including the "newborn" children, an allotment of land of the standard value of $1,040, as claimed by the Creek Tribe.

The original Creek agreement with the United States, negotiated March 6, 1900, approved March 1, 1901, ratified by the Creek Council May 23, 1901, and proclaimed by the President June 26, 1901, section 2 thereof (31 Stat. L., 861), after providing for the appraisal of lands belonging to the Creek Tribe of Indians in the Indian Territory at their true value, excluding only lawful improvements on lands in actual cultivation, provided further, in section 3 thereof, for an allotment of all tribal lands among the citizens of the Creek Tribe so as to give each an equal share of the whole in value, as nearly as may be, in manner as follows:

"One hundred and sixty acres of land, valued at $6.50 per acre, shall constitute the standard value of an allotment, and shall be the measure for the equalization of values.

"The original Creek agreement remained in force about one year, when it was superseded by the supplemental Creek agreement approved June 30, 1902 (32 Stat. L., 500), which was ratified by the Creek National Council on July 26, 1902, and proclaimed by the President on August 8, 1902, whereof section 2 changed the method of appraisement of the lands at their true value, as provided in section 2 of the original agreement, which was amended to read that all lands 'shall be appraised at not to exceed $6.50 per acre, excluding only lawful improvements on lands in actual cultivation.'"

Section 3 of the supplemental agreement amended paragraph 2 of section 3 of the original agreement to read:

"If any citizen selects lands the appraised value of which is $6.50 per acre, he shall not receive any further distribution of property or funds of the tribe until all other citizens have received lands and moneys equal in value to his allotment."

Creek tribal officials sought the enactment by Congress of the act of March 3, 1905 (Stat. L., 1048), under which 2,099 minor children, both blood and freedmen, born after May 25, 1901, and prior to March 4, 1905, and living on said latter date, were enrolled, and the later act of April 26, 1906 (34 Stat. L., 137), under which were enrolled 821 minor children, both blood and freedmen, living on March 4, 1906, whose parents had been enrolled, making a total enrollment of 2,920 newborn children enrolled under the above acts.

The Creek tribal officials claim that at the time they sought the enactment by Congress of the two above acts enrolling the newborn children they had not knowledge of the exact number of Creek allottees nor of the amount of land already allotted to them. Believing that there would be a surplus of unallotted tribal lands and that all of their children were equally entitled as allottees, they sought the enactment of the above acts enrolling their newborn children born after May 25, 1901, up to and including March 4, 1906, numbering 2,920 minor children, of whom 1,135 are Creek freedmen newborn minors. Had the enrollment been completed and stopped with the enrollment of minor children living on May 25, 1901, there would have been sufficient lands and tribal funds to equalize all allotments on the basis of $1,040, as provided in the original and supplemental agreements, to the 15,784 persons enrolled under the original and supplemental agreements.

An additional enrollment of 2,930 newborn minor children under the subsequent acts of March 3, 1905, and April 26, 1906, produce the deficiency of which the Creeks now complain and charge that the United States is liable to make good the deficiency, and ask that jurisdiction be conferred upon the Court of Claims to hear and determine whether the United States guaranteed that every Creek allottee, including newborn children, should have an allotment of the standard value of $1,040 and whether the United States is liable to the amount of $3,028,878.17 required to equalize all Creek allotments on that basis.

To settle the controversy, which has arisen at several sessions of Congress, I offer no objection to a reference of the matter to the Court of Claims for adjudication, and as this is a tribal and not an individual claim the Creek tribal attorney, who is capable, should alone appear on behalf of the Creek Tribe. I suggest that the words "principal chief" be inserted in lieu of the word "governor," appearing in line 19, page 2, of the bill, as the proper designation to be given the executive of the Creek Nation, and that after the words "Creek Nation," appearing near the beginning of line 20, page 2, of the bill, there be inserted this language, "and the Attorney General shall appear on behalf of the Government of the United States and defend the action herein authorized." I suggest further that in lieu of the words "subsequent agreements," appearing in line 7, page 1, of the bill, there be substituted the words, "the supplement Creek agreement approved June 30, 1902 (32 Stat., p. 500).

Inasmuch as section 34 of the Creek agreement approved March 1, 1901 (31 Stat. L., 861) provided that "the United States shall pay all expenses incident to * * * allotment of land made under the provisions of this agreement," it is believed that the expense of equalizing Creek allotments on a money basis, which will be in lieu of land, should be borne by the United States, and it is suggested that immediately after the figures "$1,040," occurring in line 6, page 2, of the bill, there be inserted the following language: "and the sum of $10,000 is hereby appropriated out of any moneys in the United States Treasury not otherwise appropriated to pay all the expenses incident to the equalization of Creek allotments under this provision."

To afford proper protection to restricted allottees from imposition I suggest that the bill be amended by adding thereto the following:

"That all payment hereunder to restricted Creek allottees shall be made by the United States Indian superintendent, Union Agency, Muskogee, Okla., under the same supervision as is now exercised over the payment of individual funds accruing from the sale of restricted lands of allottees."

With these suggested amendments I urge the enactment of the bill into law.

Very truly, yours,

A. A. JONES,
First Assistant Secretary.

The matter was next before Congress in the form of an amendment offered by Senator OWEN to the Indian appropriation bill pending before the Senate committee. This amendment was almost in the exact form of the amendment finally adopted by the Senate, the only change that was made was the elimination of the provision authorizing the Secretary of the Interior to approve certain contracts held by various firms of attorneys. The amendment proposed to the Indian appropriation bill was unanimously adopted by the Senate committee and was also reported with recommendation that it do pass as a separate bill by the Senate Indian committee.

The report upon the measure as a separate bill I am inclosing herewith.

Thus it will be seen that two Secretaries of the Interior have urged the enactment of this provision into law, and that this legislation has been approved by three different Senate Committees on Indian Affairs.

I call your attention to the observations made by the Senate Committee on Indian Affairs in 1912 and by the two Secretaries of the Interior, whose reports are set out herein that the affairs of the Creek Nation can not be wound up until this claim is determined.

As shown by the report of the present Secretary of the Interior $1,116,940 will have to remain in the Treasury of the United States to the credit of the Creek Nation until the question of whether or not the newborns are entitled to an equalization of their allotments upon any basis is adjudicated. All these matters will be finally determined in the action I am seeking authority to bring if this authority is granted.

I am not very strongly of the opinion that the Creek Nation will be able to win this claim if permitted to go to the Court of Claims. I do feel, however, that there is great merit in the contention that they are making, that the Government of the United States should accord to them the right to have the question of the legal liability of the Government adjudicated finally by the Supreme Court of the United States.

I am presenting the contention of the Creek Nation to you in this manner for the reason that my appointment having occurred after the Indian appropriation bill had passed the House I could not present the matter to your committee.

I would not now be so insistent in urging this legislation were it not for the fact, as stated in the committee report and by the Secretaries of the Interior, that every year that the authorization of Congress is withheld to the bringing of this action means a corresponding delay in winding up the affairs of the Creek Nation.

I will be much pleased to have your favorable consideration of this item.

Very respectfully,

R. C. ALLEN,
Attorney for the Creek Nation.

The President's Fourth of July Address at Philadelphia.

EXTENSION OF REMARKS
OF
HON. WILLIAM A. CULLOP,
OF INDIANA,
IN THE HOUSE OF REPRESENTATIVES,

Monday, July 6, 1914.

Mr. CULLOP. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by the President of the United States, delivered at Philadelphia on July 4, 1914.

The address is as follows:

THE PRESIDENT, AT INDEPENDENCE HALL, PHILADELPHIA, JULY 4, 1914.

Mr. Chairman and fellow citizens, we are assembled to celebrate the one hundred and thirty-eighth anniversary of the birth of the United States. I suppose that we can more vividly realize the circumstances of that birth standing on this historic spot than it would be possible to realize them anywhere else. The Declaration of Independence was written in Philadelphia; it was adopted in this historic building by which we stand. I have just had the privilege of sitting in the chair of the great man who presided over the deliberations of those who gave the Declaration to the world. My hand rests at this moment upon the table upon which the Declaration was signed. We can feel that we are almost in the visible and tangible presence of a great historic transaction.

Have you ever read the Declaration of Independence or attended with close comprehension to the real character of it when you have heard it read? If you have, you will know that it is not a Fourth of July oration. The Declaration of Independence was a document preliminary to war. It was a vital piece of practical business, not a piece of rhetoric; and if you will pass beyond those preliminary passages which we are accustomed to quote about the rights of men and read into the heart of the document you will see that it is very express and detailed; that it consists of a series of definite specifications concerning actual public business of the day. Not the business of our day, for the matter with which it deals is past, but the business of that first Revolution by which the Nation was set up, the business of 1776. Its general statements, its general declarations, can not mean anything to us unless we append to it a similar specific body of particulars as to what we consider the essential business of our own day.

Liberty does not consist, my fellow citizens, in mere general declarations of the rights of man. It consists in the translation of those declarations into definite action. Therefore, standing here where the declaration was adopted, reading its business-like sentences, we ought to ask ourselves what there is in it for us. There is nothing in it for us unless we can translate it into the terms of our own conditions and of our own lives. We must reduce it to what the lawyers call a bill of particulars. It contains a bill of particulars, but the bill of particulars of 1776. If we would keep it alive, we must fill it with a bill of particulars of the year 1914.

The task to which we have constantly to readdress ourselves is the task of proving that we are worthy of the men who drew this great declaration and know what they would have done in our circumstances. Patriotism consists in some very practical things—practical in that they belong to the life of everyday, that they wear no extraordinary distinction about them, that they are connected with commonplace duty. The way to be patriotic in America is not only to love America but to love the duty that lies nearest to our hand and know that in performing it we are serving our country. There are some gentlemen in Washington, for example, at this very moment who are showing themselves very patriotic in a way which does not attract wide attention but seems to belong to mere everyday obligations. Those Members of the House and Senate who stay in hot Washington to maintain a quorum of the Houses and transact the all-important business of the Nation are doing an act of patriotism. I honor them for it, and I am glad to stay there and stick by them until the work is done.

It is patriotic, also, to learn what the facts of our national life are and to face them with candor. I have heard a great many facts stated about the present business condition of this country, for example—a great many allegations of fact, at any rate, but the allegations do not tally with one another. And yet I know that truth always matches with truth, and when I find some insisting that everything is going wrong and others insisting

that everything is going right, and when I know from a wide observation of the general circumstances of the country, taken as a whole, that things are going extremely well, I wonder what those who are crying out that things are wrong are trying to do. Are they trying to serve the country, or are they trying to serve something smaller than the country? Are they trying to put hope into the hearts of the men who work and toil every day, or are they trying to plant discouragement and despair in those hearts? And why do they cry that everything is wrong and yet do nothing to set it right? If they love America and anything is wrong amongst us, it is their business to put their hand with ours to the task of setting it right. When the facts are known and acknowledged, the duty of all patriotic men is to accept them in candor and to address themselves hopefully and confidently to the common counsel which is necessary to act upon them wisely and in universal concert.

I have had some experiences in the last 14 months which have not been entirely reassuring. It was universally admitted, for example, my fellow citizens, that the banking system of this country needed reorganization. We set the best minds that we could find to the task of discovering the best method of reorganization. But we met with hardly anything but criticism from the bankers of the country; we met with hardly anything but resistance from the majority of those, at least, who spoke at all concerning the matter. And yet so soon as that act was passed there was a universal chorus of applause, and the very men who had opposed the measure joined in that applause. If it was wrong the day before it was passed, why was it right the day after it was passed? Where had been the candor of criticism not only, but the concert of counsel which makes legislative action rigorous and safe and successful?

It is not patriotic to concert measures against one another; it is patriotic to concert measures for one another.

In one sense the Declaration of Independence has lost its significance. It has lost its significance as a declaration of national independence. Nobody outside America believed when it was uttered that we could make good our independence; nor nobody anywhere would dare to doubt that we are independent and can maintain our independence. As a declaration of independence, therefore, it is a mere historic document. Our independence is a fact so stupendous that it can be measured only by the size and energy and variety and wealth and power of one of the greatest nations in the world. But it is one thing to be independent and it is another thing to know what to do with your independence. It is one thing to come to your majority and another thing to know what you are going to do with your life and your energies; and one of the most serious questions for sober-minded men to address themselves to in the United States is this, What are we going to do with the influence and power of this great Nation? Are we going to play the old rôle of using that power for our aggrandizement and material benefit only? You know what that may mean. It may upon occasion mean that we shall use it to make the peoples of other nations suffer in the way in which we said it was intolerable to suffer when we uttered our Declaration of Independence.

The Department of State at Washington is constantly called upon to back up the commercial enterprises and the industrial enterprises of the United States in foreign countries, and it at one time went so far in that direction that all its diplomacy came to be designated as "dollar diplomacy." It was called upon to support every man who wanted to earn anything anywhere if he was an American. But there ought to be a limit to that. There is no man who is more interested than I am in carrying the enterprise of American business men to every quarter of the globe. I was interested in it long before I was suspected of being a politician. I have been preaching it year after year as the great thing that lay in the future for the United States, to show her wit and skill and enterprise and influence in every country in the world. But observe the limit to all that which is laid upon us perhaps more than upon any other nation in the world. We set this Nation up—at any rate, we professed to set it up—to vindicate the rights of men. We did not name any differences between one race and another. We did not set up any barriers against any particular people. We opened our gates to all the world and said, "Let all men who wish to be free come to us and they will be welcome." We said, "This independence of ours is not a selfish thing for our own exclusive private us. It is for everybody to whom we can find the means of extending it." We can not with that oath taken in our youth, we can not with that great ideal set before us when we were a young people and numbered only a scant three millions, take upon ourselves, now that we are a hundred million strong, any other conception of duty than we then entertained. If American enterprise in foreign countries, particularly in those foreign countries which are not strong enough to resist us, takes the shape of imposing upon and exploiting the mass of the people of that country, it ought to be checked and not encouraged. I am willing to get anything for an American that money and enterprise can obtain except the suppression of the rights of other men. I will not help any man buy a power which he ought not to exercise over his fellow beings.

You know, my fellow countrymen, what a big question there is in Mexico. Eighty-five per cent of the Mexican people have never been allowed to have any genuine participation in their own Government or to exercise any substantial rights with regard to the very land they live upon. All the rights that men most desire have been exercised by the other 15 per cent. Do you suppose that that circumstance is not sometimes in my thought? I know that the American people have a heart that will beat just as strong for those millions in Mexico as it will beat or has beaten for any other millions elsewhere in the world, and that when once they conceive what is at stake in Mexico they will know what ought to be done in Mexico. I hear a great deal said about the loss of property in Mexico and the loss of the lives of foreigners, and I deplore these things with all my heart. Undoubtedly upon the conclusion of the present disturbed conditions in Mexico those who have been unjustly deprived of their property or in any wise unjustly put upon ought to be compensated. Men's individual rights have no doubt been invaded, and the invasion of those rights has been attended by many deplorable circumstances which ought some time in the proper way to be accounted for. But back of it all is the struggle of a people to come into its own; and while we look upon the incidents in the foreground let us not forget the great tragic reality in the background, which towers above the whole picture.

A patriotic American is a man who is not niggardly and selfish in the things that he enjoys that make for human liberty and the rights of man. He wants to share them with the whole world, and he is never so proud of the great flag under which he lives as when it comes to mean to other people as well as to himself a symbol of hope and liberty. I would be ashamed of this flag if it ever did anything outside America that we would not permit it to do inside of America.

The world is becoming more complicated every day, my fellow citizens. No man ought to be foolish enough to think that he understands it all. And therefore I am glad that there are some simple things in the world. One of the simple things is principle. Honesty is a perfectly simple thing. It is hard for me to believe that in most circumstances when a man has a choice of ways he does not know which is the right way and which is the wrong way. No man who has chosen the wrong way ought even to come into Independence Square; it is holy ground which he ought not to tread upon. He ought not to come where immortal voices have utttered the great sentences of such a document as this Declaration of Independence upon which rests the liberty of a whole nation.

And so I say that it is patriotic sometimes to prefer the honor of the country to its material interest. Would you rather be deemed by all the nations of the world incapable of keeping your treaty obligations in order that you might have free tolls for American ships? The treaty under which we gave up that right may have been a mistaken treaty, but there was no mistake about its meaning.

When I have made a promise as a man I try to keep it, and I know of no other rule permissible to a nation. The most distinguished nation in the world is the nation that can and will keep its promises, even to its own hurt. And I want to say parenthetically that I do not think anybody was hurt. I can not be enthusiastic for subsidies to a monopoly; but let those who are enthusiastic for subsidies ask themselves whether they prefer subsidies to unsullied honor.

The most patriotic man, ladies and gentlemen, is sometimes the man who goes in the direction that he thinks right, even when he sees half the world against him. It is the dictate of patriotism to sacrifice yourself, if you think that that is the path of honor and of duty. Do not blame others if they do not agree with you. Do not die with bitterness in your heart because you did not convince the rest of the world; but die happy because you believe that you tried to serve your country by not selling your soul. Those were grim days, the days of 1776. Those gentlemen did not attach their names to the Declaration of Independence on this table expecting a holiday on the next day, and that 4th of July was not itself a holiday. They attached their signatures to that significant document, knowing that if they failed it was certain that every one of them would hang for the failure. They were committing treason in the interest of the liberty of 3,000,000 people in America. All the rest of the world was against them and smiled with cynical incredulity at the audacious undertaking. Do you think

that if they could see this great Nation now they would regret anything that they then did to draw the gaze of a hostile world upon them? Every idea must be started by somebody, and it is a lonely thing to start anything. Yet if it is in you, you must start it if you have a man's blood in you, and if you love the country that you profess to be working for.

I am sometimes very much interested when I see gentleman supposing that popularity is the way to success in America. The way to success in this great country, with its fair judgments, is to show that you are not afraid of anybody except God and his final verdict. If I did not believe that, I would not believe in democracy. If I did not believe that, I would not believe that people can govern themselves. If I did not believe that the moral judgment would be the last judgment, the final judgment, in the minds of men as well as at the tribunal of God, I could not believe in popular government. But I do believe these things, and therefore I earnestly believe in the democracy not only of America but of every awakened people that wishes and intends to govern and control its own affairs.

It is very inspiring, my friends, to come to this that may be called the original fountain of independence and liberty in America and here drink draughts of patriotic feeling which seem to renew the very blood in one's veins. Down in Washington sometimes when the days are hot and the business presses intolerably and there are so many things to do that it does not seem possible to do anything in the way it ought to be done it is always possible to lift one's thought above the task of the moment and, as it were, to realize that great thing of which we are all parts, the great body of American feeling and American principle. No man could do the work that has to be done in Washington if he allowed himself to be separated from that body of principle. He must make himself feel that he is a part of the people of the United States; that he is trying to think not only for them but with them, and then he can not feel lonely. He not only can not feel lonely, but he can not feel afraid of anything.

My dream is that as the years go on and the world knows more and more of America it will also drink at these fountains of youth and renewal; that it also will turn to America for those moral inspirations which lie at the basis of all freedom; that the world will never fear America unless it feels that it is engaged in some enterprise which is inconsistent with the rights of humanity; and that America will come into the full light of the day when all shall know that she puts human rights above all other rights, and that her flag is the flag not only of America, but of humanity.

What other great people has devoted itself to this exalted ideal? To what other nation in the world can all eyes look for an instant sympathy that thrills the whole body politic when men anywhere are fighting for their rights. I do not know that there will ever be a declaration of independence and of grievances for mankind, but I believe that if any such document is ever drawn it will be drawn in the spirit of the American Declaration of Independence, and that America has lifted high the light which will shine unto all generations and guide the feet of mankind to the goal of justice and liberty and peace.

Constructive Public Opinion, or the Duty of the American Business Man.

EXTENSION OF REMARKS

OF

HON. RICHARD W. AUSTIN,

OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 3, 1914.

Mr. AUSTIN. Mr. Speaker, under permission to print I do not know of a more valuable contribution I can make to the CONGRESSIONAL RECORD—a greater service to the American business man—than to submit to the calm and dispassionate judgment of the Members of Congress and to the entire country the great address delivered a few days ago before the New Jersey State Chamber of Commerce, at Newark, by the Hon. F. V. Vanderlip, president of the National City Bank, of New York City, and an able and efficient Assistant Secretary of the Treasury under President McKinley.

I rejoice in the fact that I represent a district which believes in equal and exact justice to all men—a square deal to the business man, the wholesale and retail merchants, the manufacturers, professional men, miners, farmers, and wage earners.

In my judgment, when the lawmaking bodies of this country, National and State, cease to make unjust warfare upon the honest business man, refuse to listen to and heed dangerous demagogues and irresponsible muckrakers, it will be a glorious day for America—for the honor, prosperity, and happiness of our people.

The excellent advice of Mr. Vanderlip should be heeded by every business man in the United States.

The speech referred to is as follows:

CONSTRUCTIVE PUBLIC OPINION.

Gentlemen, there is special significance and promise in the character of this gathering. You have met as representatives of the many chambers of commerce organized throughout this State. These associations of business men have of late grown so numerous that there is hardly a commercial town of any importance in the State that does not have its chamber of commerce, forming a center for the exchange of commercial thought and a platform for the utterance of commercial opinion.

The movement is significant in indicating, as it does, that business men are coming to grasp the necessity for that kind of organization. This meeting to-night, bringing together representatives of the chambers of commerce throughout the State, is full of promise, for it indicates a recognition of the value of association among these organizations. It indicates an understanding of the good which will come from an interchange of views, and of the added power which will result from concerted effort.

There is reason enough why business men of this State, and why business men of the whole Nation, should see the need for such organization. There is necessity for the association of these business organizations into effective forums for the discussion of current affairs. There is need to band them together for the promulgation of unified views, that will help a right public opinion. I believe that business men are face to face with a peremptory necessity for taking a deeper interest in political affairs. It is no longer a time for platitudes about discharging one's duties by going to the polls. There is a much larger duty of citizenship. The polls are merely the place of registering the conclusions of political thought.

It is the duty of business men to think deeply enough upon these problems so that their conclusions will stand the test of open discussion. It is the obligation of business men to make effective political contributions, which will help to form a sound public opinion.

Viewed in this larger sense, I believe that nearly everything that business men have to complain of in the political tendencies of the day can be pretty directly traced to their own neglect of their political duties. I believe that such neglect has brought us to a point of gravest danger, danger that involves the very foundations of the present order. That there should have been such neglect is not an unnatural thing. The conduct of business requires a high specialization, a more complete specialization to-day, with all its complexities and its keenness of competition, than it ever before required. Specialists, whether they be business specialists or specialists of other kinds, are apt to be so wrapped in their own environment that they are unable to generalize. They are obtuse regarding matters outside of their specialty and are unable to detect the course of the larger currents of affairs. That is one reason why business men are not more widely awake to the true significance of the drift of political currents.

I firmly believe that if this Nation is to avoid disaster, a general awakening is necessary. We must recognize the probable effect of present day political tendencies upon business, upon property and upon property rights, and upon the course of industrial and commercial development. I believe that currents are developing to-day that may quickly become irresistible forces, and that, too, forces of adversity and ill fortune, if their dangers are not comprehended, their direction corrected, and their sources controlled.

The stake which business men have in the outcome is enormous. Great as it is, however, it is of no more concern to them, of no more import to the future happiness of their children, than it is to the condition and outlook of the humblest of workers.

A disaster to capital, a crippling and discouragement of directive ability, the disheartening of men of enterprise, will not have its effects confined to the class which you as delegates from the chambers of commerce represent. Its results will encompass the whole social body. There is no man so humble that his interest is not as great as yours in the outcome.

Brooks Adams, whose pessimism I do not altogether share, has forcefully set forth in his Theory of Social Revolutions the thought which I have in mind.

Administration—

He says—

is the capacity of coordinating many and often conflicting social energies in a single organism so adroitly that they shall operate as a unity. This presupposes the power of recognizing a series of relations between numerous special social interests, with all of which no single man can be intimately acquainted. Probably no very highly specialized class can be strong in this intellectual quality because of the intellectual isolation incident to specialization; and yet administration or generalization is not only the faculty upon which social stability rests, but is possibly the highest faculty of the human mind. It is precisely in this preeminent requisite for success in government that I suspect the modern capitalistic class to be weak. The scope of the human intellect is necessarily limited; and modern capitalists appear to have been evolved under the stress of an environment which demanded excessive specialization in the direction of a genius adapted to money-making under highly complex industrial conditions. To this money-making attribute all else has been sacrificed, and the modern capitalist not only thinks in terms of money, but he thinks in terms of money more exclusively than the French aristocrat or lawyer ever thought in terms of caste. * * * As the capitalist is more highly specialized than the soldier ever was, he is more helpless when his single weapon fails him. * * * It would seem to be almost mathematically demonstrable that the capitalist will in the near future be subjected to a pressure under which he must develop flexibility or be eliminated. * * * Meditating upon these matters, it is hard to resist the persuasion that unless capital can in the immediate future generate an intellectual energy beyond the sphere of its specialized calling, very much in excess of any intellectual energy of which it has hitherto given promise, and unless it can besides rise to an appreciation of diverse social conditions, as well as to a level of political sagacity far higher than it has attained within recent years, its relative power in the community must decline.

This is a brilliant portrayal of a depressing outlook. There may be too much pessimism mixed in the colors with which the picture is painted. Nevertheless, it is a picture, the general outline of which the business men of this whole country are beginning dimly to see, and it is that recognition which makes it only too true that the main reasons for the present business depression are psychological.

I wish there could be a clearer comprehension of what a disheartened business community really means; what it means to the whole people! If the directive forces of business life are to lose heart, if their courage for new enterprise is to ebb, if their willingness to take risk, to test the chances of the future, to venture present possession upon prospective development, is to fail, then the psychology of the business mind becomes a matter of the gravest import.

One may well stop to ask if anything resembling such a state of mind really exists, and, if it does exist, is there any substantial foundation for it? A large part of the business world is pessimistic; yet there is much in the situation that would seem to make pessimism unwarranted. Nature is smiling as rarely before, and holding out hands overflowing with plenty. The banking situation is peculiarly free from the results of errors of judgment, and nearly every community in the country has the advantage of an easy money market and a sound credit situation. We have had no blows from any extraordinary disaster. At many points, the statistical data of business shows that it is still in large volume; in some important particulars figures could be adduced that have rarely been exceeded.

In the face of such conditions it may well be asked, Are there just grounds for apprehension? Are the dangers that some of us think we see merely phantoms? Have we minds so inflexibly bound to tradition, to the old order, that we can not grasp the significance or the beneficence of change? Do we, therefore, perforce, find in prospective changes prospective disasters, while, in fact, our apprehensions have no substantial existence? Are industries running on half time merely examples of unrealized fears? Are the many illustrations of industrial distress that might be cited, of urgent need for financing that it is difficult to do, of new enterprise abandoned, of old enterprise left with plans for expansion grown cold, only the result of a blind and stiff-necked adhesion to the old order, of an inability to conform to new conditions, to new social and political ideals?

We seem to be without leaders wise enough to answer such questions so that their conclusions will convert those holding opposite views. Thus we have many conflicting opinions. For myself, I can only say that the political current upon which we are now beginning to travel with tremendous speed seems to me liable to land us in a thoroughgoing disorganization of business and industrial life. Those currents may be engendered and guided by forces partially sincere and honest, but only partially; and even when those forces are sincere and honest they are frequently ill informed as to facts and lacking in sound understanding of great economic principles.

In legislation there is a disposition to throw experience to the winds. We seem to have a new conception of the functions of government, of what legislation may be expected to accomplish. Indeed, we have gotten far away from the conception of the fathers of our Government in our views regarding the relative balance of its three coordinate branches.

It has been well said, not by a business man, but by a distinguished historian, that—

Where Jefferson looked upon government as a negative force which would be more useful the less it interfered with the life of the individual, the present tendency is to insist upon the positive, directive, formative influence the State may exert upon the lives of its citizens. We are agitating for corrective and regulative legislation on every conceivable subject from the public health and the public morals to the hours of labor and the minimum wage. The assistance of the community is to be invoked to settle all the perplexed issues between individuals or between groups of individuals. Gradually, too, we find the authority of the central Government gaining in the public estimation and believed to possess more adequate powers and to be better able than State or city to deal efficiently and promptly with most problems. The great increase of governmental authority, which the era of regulation demands, will apparently accrue almost entirely to the Federal Government, to the exclusion of State and local governments. And it will, furthermore, break another precedent of Democracy and accrue to the executive rather than to the legislative.

This seems to me a clear exposition of a most significant phase of our political life.

A distinguished Member of the United States Senate, that once "greatest deliberative body in the world," a few days ago impressively made this statement:

Every step of human progress is the abandonment or condemnation of that which went before!

There is the keynote of much of our loose political thinking:

Every step of human progress is the abandonment or condemnation of that which went before.

The man who holds that view, the political party that legislates in the light of that pronouncement, must believe that what is is bad; that in novelty, in untried experiment, in new theory, and in newer practice alone lie those measures of government that will be beneficial. So we have a legislative restlessness that is unparalleled, a searching for novelty that results in as startling productions, viewed in the light of anything known before, as has been reached in art by the schools of cubism and futurism. To the sober-minded, somewhat unimaginative, hard-working business man, to the man whose life has been a career dealing with facts, facts as they are, some of our recent legislative proposals are no more intelligible than that famous composition which bore the title "A nude descending a staircase." I admit there may be something of truth in some of the newer forms of art, although I have never reached a point where cubism is more than a huge joke, if it is not the work of a degenerated intellect. I can understand that a picture need not necessarily be a photographic reproduction of a fact. I am quite sure the great school of impressionism has added something of permanent value to the art of the world. Carrying the parallel into politics, I believe we should not be so bound to old forms as to close our minds to the consideration of new theories. We may well admit that there is a sound basis of economic facts back of many of the demands for novel legislation. Industry is in a novel situation. The changes wrought in our lifetime by new forms of power, of transportation, of communication, are revolutionary. Even greater have been the changes wrought by corporations. Let us, too, admit that the direction of these new forces have not always rested in the hands of men of great breadth of vision. Sometimes they have not been in the hands of men of honesty of purpose. All this, I believe, gives basis to a demand for what amounts almost to a new code of business ethics and for statutes that will support such a code.

But while admitting all of that, we should see that those facts are no warrant for giving unlimited legislative freedom to groups of political cubists and futurists who do not comprehend principles, who do not know history, and who will be guided neither by experience nor by common sense. To make a specific application of what I mean, let us consider the present legislative situation. Let us weigh what it would mean to current legislative proposals if we had a sound and well-informed public opinion, and if that public opinion was so crystallized that legislative and executive powers would be forced clearly to recognize it.

No previous Congress has enacted so much legislation of immediate, novel, and fundamental importance in its relation to business as has the present Congress. Now, with its first regular session still uncompleted, it has in hand further measures of still more far-reaching importance, representing still more novel theories of governmental supervision. We find this active Congress proposing additional legislation which promises to create between business and Government a relationship entirely new, which must proceed along paths heretofore unexplored.

Not only are the proposals in the pending legislation novel in their application to business, but there is another point of dissimilarity between these measures and any that we have had before. They are being discussed and in all probability will be passed by a Congress, a large majority of which is not in favor

of passing them at the present time, and they will be added to the laws of a Nation a large majority of whose citizens are not in favor of such laws being enacted at the present time.

I am aware that these are sweeping statements. I am aware, too, that, even though the honesty of my opinion may not be challenged, the correctness of my information might be. It may well be said that although my business relations cover, with a good deal of intimacy, the entire country, and while I have a rather extraordinary opportunity for obtaining the views of men from every section, the opinions which come to me may be highly colored by prejudice; they may come from a single class, and they may fail entirely to represent the true situation. I am not unmindful of all that, but I believe I have made full allowance for such probability in testing the information that reaches me, and after doing that I still unhesitatingly say that a majority of the people of this country are not behind Congress demanding the enactment of the further business legislation now proposed.

As to the statement that a majority of Congress itself is not favorable to the passage of these measures at the present time, I can say that I have personally talked with many of the leaders, including the leaders on the administration side, and they have told me unequivocally that a majority of both Houses would prefer to give the country a period of legislative peace and end the present session without further enactments.

I believe there is not a newspaper correspondent in Washington, familiar with the views of many individual Members of Congress, who will not verify that statement.

It has been charged that there is an effort to manufacture sentiment and in turn to have that sentiment impressed upon Congress by a chain of letter writers, and the endeavor has been termed a conspiracy. I can tell you that I know of cases where Democratic Congressmen have written to their constituents, begging them in turn to write to the President and endeavor to influence him to permit Congress to adjourn this session without further legislation affecting business. I do not regard this action on the part of Congressmen as a conspiracy, but rather an effort to bring out a true reflection of public opinion.

Let us consider for a moment how these measures, of vast import as they are to the business of this Nation, and, therefore, to the life of every citizen, whether business man or not, are being handled by Congress. There is no well-crystalized sentiment there as to their form. The House has passed one measure of the first order of importance under a caucus whip and with closure of debate, openly expecting the Senate to revise it into reasonable form. Is it not probable that under the pressure of great desire to end this session, with hazy ideas of just what legislation they wish and working in a field of practically untried experiment, with debate discouraged and legislative hearings cut short, the finished product will fail of its purpose?

Patrick Henry once said:

In proportion to the magnitude of the subject ought to be the freedom of the debate.

Surely the magnitude of the subject is great enough to warrant giving time to every Member of Congress to express his matured and deliberate opinion concerning both the principles involved in this legislation and the exact verbal form such novel enactments should take.

But of even more importance than time for discussion is assurance of freedom to register individual judgment, uncoaxed by patronage or unthreatened by power.

I will agree with the most progressive of politicians that changed times and conditions warrant changed statutes, but I still believe that when these statutes are intended to create a fundamentally new relationship between business and government, when they are designed to furnish novel curbs upon the freedom of commerce, they should have back of them a clear and certain opinion of a majority of Congress and of the citizens of the country.

You may say that I ask for delay merely in the hope of gaining avoidance; that finding proposed measures distasteful and being powerless to defeat them naturally the next step is to delay their enactment, and you may ask what good can be expected from mere delay if it is admitted that new conditions now make desirable new laws.

The proposal that I would like to see Congress agree to is this: I would by no means ask that Congress merely stop its legislative work because its Members are weary or because they hear domestic or political calls that are with great force attracting them homeward. I would ask that the two Houses go forward now with a full discussion of these several important legislative projects; that they permit free debate; and that they gather such information from hearings as they may feel will help them toward wise conclusions; that they finally, at as early a date as they can, agree upon the exact and specific form which these measures are to take on the statute books, and then, without enacting them definitely into law, that they go home and give the country three months' time in which to study their completed work. Give the voters three months' time in which to familiarize themselves with the exact terms of the law which Congress proposes to enact, give themselves three months' time in which to feel the reflection of public opinion, and if after that they are so minded let them return to Washington and enact these measures into law.

I would rest perfectly contented under such an arrangement.

I would not ask for a referendum to prove whether or not a majority of the voters actually want this legislation, which at present I doubt; I would only ask that citizens have an opportunity, for a brief 90 days, to study in its final form such important legislation as is proposed. I would ask that business men have this opportunity to discuss this legislation, which so vitally concerns not only their interests, but the interests of the whole country and of all the people for years to come. Is it too much to ask that with such a grave responsibility resting upon legislators that they permit, and not only permit but seek, such an analysis of their proposed acts and such a crystallization of sound opinion in regard to them?

We have gone through many years without this legislation; a delay of 90 days would not be fatal to the hope for beneficence from its effect.

A year ago we were told that the pending banking legislation had to be enacted at the special session. Failing that, there was finally brought to bear the greatest executive pressure to make it a law before the Christmas holidays. It is still unoperative, but the country is in no financial turmoil as a result. The Chief Executive took nearly six months to select the board which is to be responsible for its administration, and considering the admirable character of the selections made, the time may have been well spent.

It was on October 14, 1913, that the eastern roads made an application to the Interstate Commerce Commission for advance in rates. That body has felt that it was wise to take the months that have intervened for considering the matter, and has not yet made public its decision, although the general subject has been under consideration by them since the roads made application in 1910.

Why can not we, therefore, have a little patience, however strong our belief may be in the desirability of this pending legislation? Why ought we not to give the country time to study it in its specific and definite form before it is finally engraved upon the tablets?

If such a course were adopted, however, it is easy to see how important it would be that the public opinion which weighed these measures should be informed, right minded, constructive. My only fear, were such a course taken with pending legislation, would be that through the neglect by business men of their duty in helping create a well-informed public opinion, the reaction I anticipate might be delayed.

I have tried to give some hint of how important I believe it is that business men at the present time should take a wider interest in political affairs. I have no serious criticism of Congress. My criticism goes back of that to the constituency—back to a public opinion which I believe is not well informed, which does not fully grasp the force of great economic principles that are more potent than any laws that Congress can enact.

You have your full share of blame if public opinion is ill informed. As a class, you have been silent in the face of calumny. Gross misstatements in regard to business methods and aims of business men have gained credit by being confidently repeated and rarely or never answered. An important part of the public holds resentment against business men, because of the accumulation of the charges of misconduct that have been made and gone unanswered; because of the distorted pictures of your aims and methods which have gone unchallenged.

It seems to me time, if business men are men of honor, that they stand up and fight for their honor. You do not need to be told that in large part the motive back of the drudgery of business life is a motive, not of gain but of accomplishment, an idealism as pure and clear as any statesman can boast of; but the general public does not know that and will not believe it, while men bend cravenly to their tasks and never look up to answer detraction, misrepresentation, and slander.

For the comparatively rare examples of greed, of blindness to social obligations, of unfairness, and even of dishonesty we have all been made to suffer, because in the main we have silently submitted to generalizations drawn from these comparatively rare examples.

Now, it is useless to complain about a condition unless one can suggest a remedy. Fortunately, it seems to me, the remedy lies directly in our own hands.

I have tried to indicate how important it is to the future of business that we now have a background of sound and well-informed public opinion against which the new legislation which we need and are certainly going to have may stand out and be tested.

I can hardly overemphasize how important I believe that is to the business in which every one of you is engaged. With this in mind, you will not be surprised if I tell you that I believe the time will come when we should see made the most gigantic contributions that were ever made by business men to a political campaign. I do not care to which party the contributions are made, for the contributions that must be made, if you are to do anything that is effective, will not be contributions of money—they will be contributions of service; contributions of experience, of understanding, of truth; contributions in the way of an effective demand that the men whom you select as your representatives shall freely exercise their judgment, and contributions in the way of watchfulness that shall insure both honesty and intelligence in the exercise of representative obligations.

Now, all that is very well as a generalization; but we need something more specific, and I believe you have in the nature of this gathering the germ of specific action.

Let me make one more historical reference, and this time go back of the date of the foundation of the Nation and to those days when a public opinion was just beginning to form, which made our independence possible. There were a few men who saw clearly. The enactment of obnoxious laws had set many people "thinking with the eagerness and uneasiness of those who seek by some means to defend their liberties." James Otis, with his impressive eloquence, had said that he spoke in the name of 3,000 freemen "who counted upon being heard." But in truth there was no solidarity of opinion, no united front to present an irresistible resistance. The Colonies were scattered. Courage was not always equal to putting patriotism above immediate material well-being. There were "darkeners of counsel," and the need of the day was for something that would unify public sentiment. The proposal that accomplished that came from Samuel Adams when he suggested that in every Commonwealth, in every Colony, there be organized committees of correspondence. "If our design for these committees succeeds," he said, "there will be an apparent union of sentiments among the people of this province which may spread throughout the continent." The idea of the organization of these committees was popular; the members were indefatigable in their work. The result was the forming of a unified public opinion, upon which was built the independence of America.

Is there not here an idea that we could adopt to-day, and is there not in this gathering the illustration of how to do it? Let our committees of correspondence be the chambers of commerce of the United States. Let us unite them in the work of creating an informed and sound public opinion. Let the work of doing that be parceled out with the genius that you who know the value of organization, of cooperation, of the subdivision of labor, in the management of your own affairs, have proved you possess. See that the wisest and ablest men of your community are placed in the executive positions of your organizations. Make of yourselves such earnest and able lieutenants that the detail of organization may be complete and effective. Understand fully that this means self-sacrificing service; that it means an expenditure of time; and that it means constant, cooperative effort.

Through your organizations see to it that every misstatement of fact, whether made in Congress, in the press, or in any public utterance, is challenged. Let men understand that loose statement, that misstatement, can no longer go carelessly on. Have every page of the CONGRESSIONAL RECORD read, and every time a misstatement is printed there challenge the man who made it; challenge him so publicly that an answer will overtake a lie. If a man is a demagogue, if he clothes half-truths in language that appeals to prejudice, go into his district and answer and expose him. If a newspaper is ill informed, see to it first that it has every facility for correct information, and then if it is still unfair, publish its unfairness in a way which will make unfairness unprofitable, and you will have no more of it.

I do not need to elaborate this idea. You are all too familiar with what organization can do to need more than a suggestion. But I know that some of you will answer that your lives have not been lived in the forum; that you can not write; that you have not the power of speech so developed that you could with success publicly defend your views. In that I believe you are wrong. You do not know your latent powers. You can do it. You must do it. You need no tricks of rhetoric, no magic of eloquence. Just a plain, clear understanding of facts and principles and a frank exposition of them.

You may think that the contribution that I am asking is more difficult to give than have been other contributions that you have been more frequently asked to make, but I tell you the satisfaction of such contributions and the effectiveness of them will so far transcend anything you have ever done before in the way of participation in politics that you will find the blessedness of the wise giver is yours.

Such, then, is the appeal I would make for creating a constructive public opinion. The effort should include frankness to the public as to your own affairs, an appreciation of conditions outside of your own personal relationships, an active participation in political life that begins far back of the polls, begins at the beginning of the formation of public opinion—of that public opinion of which the result at the polls is only the final reflection—and I would ask that not only of the individual, but I would ask it of associations of individuals and the thorough cooperation of such associations in the work that is to be done.

I would see that there is banded together for effective, militant work, not alone every business man, but every citizen who could be induced to join these organizations. I would make special effort to bring into cooperative relationshsip those men who more than you are interested in prosperity, although their relation to it may be in the humblest capacity of laborers in those industries that you help to direct. I would especially invite representatives of labor organizations into your councils. I would ask newspaper writers and editors to join in your deliberations, in order that through the free exposition of your views and a free giving of information in regard to your acts and affairs these writers and editors may be in a better position to give facts to the public. Your organizations should be bureaus of facts. There must also be a national coordination of the work of these organizations—a national clearing house, a national executive committee. By making use of the organizations and facilities which we already have, and by giving to them thought and effort in unstinted measure, the work can be carried on with undoubted success.

But if the work is to be effectively done, you must yourselves make the contribution of service. You can not delegate the work. Do not try the plan of hiring others to promulgate your views. You can not discharge your duty by writing checks. Band yourselves together, first in small associations, and then see that these associations are united in a common effort to impress upon the country those views which are the best results of your experience, your judgment, your sympathy, and your righteousness.

Band yourselves together to make an appeal to the common sense of the people. That will not be conspiracy. Seek by your united efforts to build a public opinion that will promote the safety and happiness of posterity. Do not think only in days or in weeks, but think in decades. Realize the responsibility which is yours to turn present forces in right channels. Realize that patriotism means a submergence of self-interest. By a submergence of self-interest alone can you help to form a public opinion that will permit the creative genius of business to be recognized at its true worth, and thus give to that genius the position it should rightly have—a place where it will be above adverse criticism.

Such a course of action will create a public opinion that will be constructive, and not as now destructive, of the best sort of business activity. If you will do this, if all of us will unite to create such a movement, there need be little fear for the ultimate solution of our problems nor for the permanence of our prosperity and the preeminence of our country.

The Plan in Congress to Exempt Labor From Equal Laws.

EXTENSION OF REMARKS

OF

HON. FREDERICK H. GILLETT,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 6, 1914.

Mr. GILLETT. Mr. Speaker, under the leave granted to extend my remarks in the RECORD, I include an address by George W. Wickersham, formerly Attorney General of the United States.

The address is as follows:

THE PLAN IN CONGRESS TO EXEMPT LABOR FROM EQUAL LAWS.
(By George W. Wickersham, formerly Attorney General of the United States.)

The bill H. R. 15657, which passed the House of Representatives on June 5 provides in section 7:

That nothing contained in the antitrust laws shall be construed to forbid the existence and operation of fraternal, labor, consumers',

agricultural or horticultural organizations, orders, or associations instituted for the purposes of mutual help, and not having capital stock or conducted for profit, or to forbid or restrain individual members of such organizations, orders, or associations from carrying out the legitimate objects thereof; nor shall such organizations, orders, or associations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade under the antitrust laws.

"LEGITIMATE" AND "LAWFUL."

It will be observed that the language employed in this bill not only provides that nothing in any of the antitrust laws shall be taken to forbid the existence and operation of labor organizations for mutual self-help, but that they shall not be construed to forbid or restrain such organizations or their members from carrying out, not "the lawful objects thereof" but "the legitimate objects thereof." The legitimate object of an organization is the natural or logical purpose for which it is formed. As the organization of laborers for the purpose of mutual help is made lawful, any logical or natural means which they may adopt for the purposes of helping themselves are by this act given legality.

If the first clause of the section stood alone, the fact that labor organizations were declared lawful could not be construed to authorize them or their members to carry out the objects of their organization by unlawful means. But this consequence is expressly removed by the provision that the antitrust laws shall not be taken to forbid or restrain individual members of such organizations from carrying out the legitimate objects thereof. In general, the law punishes the carrying out of an unlawful purpose by any means, lawful or unlawful, and the carrying out of a lawful purpose by unlawful means. The natural meaning of the clause under consideration is to make lawful acts of members of these organizations done to carry out the purposes which this bill declares "legitimate," even if the acts in themselves are unlawful.

A SOP TO PUBLIC SENTIMENT.

Whatever doubts might otherwise exist on this point are removed by section 18 of the bill, which, after providing that no restraining order or injunction shall be granted in a case between employers and employees, and so forth, unless necessary to prevent irreparable injury to property, and so forth, enacts as follows:

> And no such restraining order or injunction shall prohibit any person or persons from terminating any relation of employment, or from ceasing to perform any work or labor, or from recommending, advising, or persuading others by peaceful means so to do; or from attending at or near a house or place where any person resides or works or carries on business or happens to be for the purpose of peacefully obtaining or communicating information or of peacefully persuading any person to work or to abstain from working; or from ceasing to patronize or to employ any party to such dispute, or from recommending, advising, or persuading others by peaceful means so to do; or from paying or giving to, or withholding from, any person engaged in such dispute any strike benefits or other moneys or things of value; or from peaceably assembling at any place in a lawful manner and for lawful purposes; or from doing any act or thing which might lawfully be done in the absence of such dispute by any party thereto; nor shall any of the acts specified in this paragraph be considered or held unlawful.

The words "peaceful," "peacefully," and "peaceably" emphasized in this paragraph constitute the sop to public sentiment which was intended to sugar this dose for the public consumption. The provision, in effect, legalizes the secondary boycott. To appreciate its full effect let us turn to the decision of the United States Supreme Court in the famous Danbury hat case (Loewe *v.* Lawlor, 208 U. S., 274) and see what was there decided and how this new law would operate in such a case.

THE DANBURY CASE CITED.

The facts set up in the complaint in that case, which the court held made out a cause of action within the Sherman law, were that the plaintiffs were manufacturers of hats in Danbury, Conn., having a factory at that place where they manufactured hats which they shipped to purchasers in some 20 States other than Connecticut, a very small proportion of their output being consumed in Connecticut. The defendants, according to the statement in the opinion of the court—

> were members of a vast combination called the United Hatters of North America, comprising about 9,000 members and including a large number of subordinate unions, and were combined with some 1,400,000 others into another association known as the American Federation of Labor, of which they were members, whose members resided in all the places in the several States where the wholesale dealers in hats and their customers resided and did business; that defendants were "engaged in a combined scheme and effort to force all manufacturers of fur hats in the United States, including the plaintiffs, against their will and their previous policy of carrying on their business, to organize their workmen in the departments of making and finishing, in each of their factories, into an organization, to be part and parcel of the said combination known as the United Hatters of North America, or as the defendants and their confederates term it, to unionize their shops, with the intent thereby to control the employment of labor in and the operation of said factories, and to subject the same to the direction and control of persons other than the owners of the same, in a manner extremely onerous and distasteful to such owners, and to carry out such scheme, effort, and purpose, by restraining and destroying the interstate trade and commerce of such manufacturers by means of intimidation of and threats made to such manufacturers and their customers in the several States of boycotting them, their product, and their customers, using therefor all the powerful means at their command, as aforesaid, until such time as, from the damage and loss of business resulting therefrom, the said manufacturers should yield to the said demand to unionize their factories."

That the conspiracy or combination was so far progressed that out of 82 manufacturers of this country engaged in the production of fur hats 70 had accepted the terms and acceded to the demand that the shop should be conducted in accordance, so far as conditions of employment were concerned, with the will of the American Federation of Labor; that the local union demanded of plaintiffs that they should unionize their shop under peril of being boycotted by this combination, which demand defendants declined to comply with; that thereupon the American Federation of Labor, acting through its official organ and through its organization, declared a boycott.

PEACEABLY TERRORIZED.

The complaint then went on to show that by means of threats and coercion, "peaceable" in its character, unaccompanied by any acts of violence, substantially all of the customers of the plaintiffs were terrorized into withdrawing their custom from them, until their business was absolutely destroyed. The Supreme Court decided that the acts of the defendants constituted a combination or conspiracy in restraint of the trade or commerce among the States in hats carried on by the plaintiffs, and that they were entitled to recover the damages inflicted upon them by the acts of the defendants.

The provisions in the bill under consideration are intended to prevent any employer from recovering damages in the future for loss or injury resulting to him by the destruction of his business by "peaceable" means, such as those adopted by the United Hatters of North America described in the Danbury Hatters case. The bill is an example of undisguised class legislation. If the "legitimate object" of an association of the character described in section 7 is to prevent any person from successfully conducting business unless he complies with the rules and requirements of that organization, this bill would make legal any act short of physical violence to which the organization may deem it expedient to resort for the purpose of compelling acquiescence in its requirements. It would be difficult to find an example of a clearer conflict between a law and the ideals of American freedom as expressed in the Declaration of Independence and the Constitution of the United States.

BILLS OF RIGHTS SHOULD BE FOR ALL.

Representative HENRY, of Texas, speaking in support of this bill in the House of Representatives on June 1, called section 18, above quoted, "a bill of rights establishing a 'new freedom' for labor," and he said it was "written into solemn law to endure as a Magna Charta for those who toil and produce for the balance of mankind." Bills of rights in the past have been enacted for the benefit of all the people, not for the benefit of restricted classes of the people. The "new freedom" gives to particular classes the right to terrorize over others. The old freedom, the freedom secured by Magna Charta and the Bill of Rights, endeavored to secure liberty to all the people under the law applying to all. The Declaration of Independence proclaimed that all men were endowed by their Creator—

> with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness. That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed. * * *

The "new freedom" proclaimed by Mr. HENRY and embodied in the legislation under consideration would modify this to read that all men are endowed by their Creator with certain inalienable rights, among which are life, liberty, and the pursuit of happiness, except in so far as labor organizations may conclude that such rights interfere with their purposes, and that to the extent that they do so interfere no one is entitled to them.

RIGHTS FOR SOME, BUT NOT FOR ALL.

In the Northern Securities case Mr. Justice Harlan said that the antitrust act forbade any combination which by its necessary operation destroyed or restricted free competition between those engaged in interstate commerce. The rule established by the bill under consideration expressly enacts that any combination of laborers or farmers, and anything which such a combination may do to carry out its purposes shall be lawful, even though its necessary operation destroys or restricts free competition among those engaged in interstate commerce. In other words, there is one law of combination for employers and another law of combination for employees; and thus is it sought to be erected in this land a rule of class foreign to every principle that has been laid down from the earliest colonial times, and which is expressly prohibited to the States by the fourteenth amendment, which forbids any State to deny to any person within its jurisdiction the equal protection of the laws.

THE SAME PROBLEM IN ENGLAND.

It is a matter of interest and importance to note that England was called upon a few years ago to face the same problem in regard to labor unions as that which is discussed in this article.

Up to the year 1901 it had been generally assumed in England that in respect of loss or damage inflicted by strikers the only remedy at law open to the sufferer was in the form of a suit against the individual offender. In the Taff Vale railway case, 1901, it was contended in court by counsel for the plaintiff that a trade-union could be sued for acts done by its agents within the scope of their authority, and that an execution against the funds of the union could be enforced for the recovery of any damages awarded to a plaintiff.

The case was carried on appeal to the House of Lords, and the above contention was upheld. The immediate effect of this decision was to stimulate the labor unions to extraordinary efforts to have the law changed, and in 1906, largely as a consequence of these efforts, the trades-disputes act was passed by Parliament.

This act covers innumerable points in relation to intimidation, picketing, and so on; but the broad principle underlying the law is stated in unmistakable terms in its fourth section, which expressly forbids any court to entertain any action against a trade-union as a body in respect of any wrongful act alleged to have been committed by or on behalf of the union.

Whatever may be the demerits of this prohibition, it has at least the merit of perfect frankness and clarity.

Affairs in Mexico.

EXTENSION OF REMARKS

OF

HON. LATHROP BROWN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, July 8, 1914,

On the bill (H. R. 8428) to codify, revise, and amend the laws relating to publicity of contributions and expenditures made for the purpose of influencing the nomination and election of candidates for the offices of Representative and Senator in the Congress of the United States, limiting the amount of campaign expenses, and for other purposes.

Mr. BROWN of New York. Mr. Speaker, the consideration of this bill, commonly known as the corrupt-practices act, to safeguard the conduct of elections and to secure publicity of campaign contributions invites attention to matters of a similar nature across our southern borders, in Mexico. On the Fourth of July, while attending various celebrations in my congressional district, I could not help but think how fortunate is our condition compared with that of the citizens of the Republic of Mexico. In this country when we become dissatisfied with a candidate we fail to return him by the exercise of the free ballot. In Mexico the citizens are obliged to resort to a revolution, because under the military despotism which has prevailed there for 40 years it has been impossible, with one or two exceptions, to obtain an honest nation-wide election.

One of the most remarkable documents that I have ever seen was the letter of instruction sent by Gen. Victoriano Huerta on October 22, 1913, to the governors of the various States under his control, with regard to the conduct of the election officials at the presidential election soon to take place. Before coming to this, however, I wish to review briefly the series of events which culminated in the seizure of the Mexican Government by Victoriano Huerta and some of the many reasons which justified President Wilson in not according to him the political recognition for which he had hoped. With events moving as rapidly as they now are in Mexico, what is written to-day may next week be ancient history. I shall not, therefore, endeavor to make this address as pertinent as newspaper articles which are published from day to day. I shall merely try to show the underlying motives behind the two political factions now striving for supremacy in that unhappy country. Before considering past events I wish to state that, whether or not mediation shall ultimately succeed, I believe that President Wilson has rendered to civilization the greatest service in recent years by his willingness, as the head of a great and powerful nation, to discuss international difficulties in a rational way with a weak and distracted nation.

On April 21, 1519, Cortez, with his Spanish cavaliers, landed at Vera Cruz. Shortly thereafter he started on his march to what is now Mexico City, and on the 13th of August, 1521, subjugated it and became governor, captain general, and chief justice of the conquered territories of new Spain. He subjugated a race which had attained a high degree of civilization, and which, except for its religious ceremonies, was essentially a race humane, peace loving, and proficient in the arts. Of its traditions we know little, because the vast collection of pictures, paintings, writings, and historical manuscripts contained in the national archives was destroyed by the Spaniards in 1527. From 1521 until 1810 the country was governed by an appointee of the King of Spain, who in turn appointed the governors of the various States, subject to the approval of the Spanish Crown, and during this long period of almost 300 years the conquered Mexicans were enslaved both bodily and mentally. There was no pretense at education; superstition was encouraged and the masses of the people were maintained in a condition of servitude almost incredible.

The Spaniards who were acceptable politically to the Crown received enormous grants of land, which they forced the native Mexicans to work for them, but deprived of the fruits of their labor, nor was there any land which a Mexican, however industrious, could secure for himself. The haciendas of the few were maintained at the expense of the labor of the many; communication between these great estates was difficult; illiteracy was almost universal; there were poor roads and no navigable waters for the transmission of information.

Under these circumstances it will always be a wonder to me how the seeds of our revolution in 1775 and the principles embodied in our Declaration of Independence were ever sown in a field so barren. Yet it is an undoubted fact that the principles "that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness," either directly or by way of the French Revolution, which was the result of very similar conditions, found their way little by little into the farthest corners of Mexico. In 1810 Miguel Hidalgo, in a small village in the south of Mexico, started a revolution against Spanish misrule; the cause triumphed marvelously for a year, when it received a temporary setback through the betrayal and capture of Hidalgo by the Spaniards. He was tried before a military court, and when asked if he had any statement to make, he replied as follows:

Our aim and purpose in arousing and furthering this revolution was to effect a popular election of congress, in which would be represented every individual in this country, whether he live in town or city, village or farm. It was our intention that this congress should promulgate laws for the welfare and happiness of the people and for the purity of religion in a spirit of humanity. By these laws it was our intention to establish the brotherhood of man, the destruction of poverty and ignorance, the prevention of the ruin of the nation, the progress of the fine arts, industry, and commerce, recognizing in everyone, without exception, the right to enjoy the bounteous production of our rich lands and the right to be happy.

Thereupon he was placed before a firing squad of Spanish soldiers and shot. The revolution, weakened for a time, gained additional strength, and in 1821 won for Mexico its independence from Spain.

This much having been accomplished, there was now begun the great struggle, which is still in progress, of the rights of the people against the rights of privilege. A few individuals, comprising mostly the large landowners, were loath to give up any of their prerogatives, as well as the control of the government and the army. Having controlled the revenues, they have always been able to keep control of the army, and by this means had, in one way or another, quelled almost every revolution—and there have been many—which was started in the interest of agrarian and educational reform. The century following the overthrow of Spain was chiefly notable, in so far as the United States is concerned, for the annexation of the State of Texas to the United States in 1845, followed immediately by the War with Mexico, which ended in the treaty of Guadalupe-Hidalgo in 1848. Owing, among other things, to the insolvent condition of the Mexican treasury, the French invaded Mexico in 1862, and a year later organized a government in Mexico City which elected Maximillian Emperor of Mexico. In 1865 the United States, just emerging from the Civil War, demanded the withdrawal of French troops from Mexico as being in violation of the Monroe doctrine, and in 1867 they were so withdrawn. In the same year Emperor Maximillian was executed and Gen. Porfirio Diaz, at the head of the victorious army, occupied the City of Mexico. From 1877, with the exception of one term, until May, 1911, Porfirio Diaz was the President of Mexico.

Now, in the 59 years prior to President Diaz's second term there had been no less than 52 Emperors, Presidents, or rulers of Mexico, so that President Diaz should have had ample opportunity during his presidency, or what might be called his military dictatorship, to have accomplished the various reforms so much needed by Mexico. He had accomplished the task of introducing foreign capital into Mexico and had very much stimulated the growth of the country from the outside, but for the citizens of Mexico, except for the privileged persons who were in possession of most of the land, he did absolutely nothing. He exploited his own country and paid no attention whatever to the one crying need of his people, which was and

is the distribution of the vast areas of the public domain in some such method as the public domain of the United States is open for settlement to any citizen of the country.

In 1896, if my recollection serves me, the Mexican Congress, under his direction, passed a law to the effect that any man who found that the title to land was not recorded upon the official books of the local district might seize that land from its owner in possession and obtain good title thereto. Now, in a country of scant means of communication, with illiteracy almost universal, it naturally followed that unnumbered acres of land which had been cultivated by the descendants of the original Mexicans had never been recorded as to their titles in the local offices. From the native point of view those who were lucky enough to have any land at all considered their title of possession running back in their family 300 years or more, sufficient for all purposes. Taxes had been levied on them and paid for many generations, and, according to any rules of justice, the land was owned by those in possession of it. Under the law to which I refer the rich landowners sought out these tracts of unrecorded acreage, dispossessed the rightful owners, and annexed them to their already vast estates, thereby aggravating the already terrible evil of peonage. This state of affairs could not last indefinitely. Even the brutal military power of Diaz was unable to keep in subjection the desire of mankind to own his home and to enjoy the fruits of his labor. As the leader of this revolution there appeared Francisco I. Madero, a resident of one of the northern States, where conditions were bettter than in most of the other States. Francisco I. Madero was splendidly educated, widely read, rich, and of a family long powerful and respected throughout the territory adjacent to the family estates. He realized the necessities of the situation, and, promising agrarian reform, education, and a free ballot, took possession of the country with but comparatively little bloodshed or resistance from the Diaz faction. Perhaps he was more philosopher than executive; but once elected President of Mexico he found himself surrounded at the capital by those very forces of special privilege which had kept his country in a state of semicivilization for centuries, and he was blocked and thwarted in every possible manner known to the masters of political manipulation.

And now we come to the part played by Victoriano Huerta in the recent drama. At this point it may be appropriate briefly to review Gen. Victoriano Huerta's record from 1875, when at the age of 21 years he graduated from the Military Academy, having attained special prominence in mathematics and astronomy. His first military service was under Porfirio Diaz against Lerdo de Jejada, then President of Mexico. Later, under President Diaz, he reformed the general staff and began the enormous task of making a military map of Mexico. In 1880 he was promoted to be a major, and in 1884 made a lieutenant colonel. His work during this period included a great deal of surveying and exploring, including geological reports. In 1890 he was made colonel of engineers, and for the next 10 years served on the general staff in charge of topographical work. In 1901 he successfully led troops into Guerrero. In the same year he was sent into Yucatan, where he spent the following two years, at the end of which time he had deported every native Mexican who was hostile to the Government to the jungles of Quintanama Roo. For this thorough work he was made brigadier general.

In 1911, the year of the Madero revolution, he was sent into Guerrero on behalf of Diaz, but found the revolutionary forces too strong for him. He returned to Mexico City to raise a stronger force. At this time all of southern Mexico was in a revolt. In May, 1911, after the election of President Madero, some of the southern revolutionists refused to support the Government, and Gen. Huerta was sent against them with a small column to cooperate with a force that was engaged in subduing the revolt. On this expedition it would seem that he suggested for the first time his disloyalty to President Madero. He delayed in carrying out his orders; he failed to move promptly to the relief of the division with which he was supposed to have cooperated, and although a victory was won, yet it was horribly costly in the loss of life. As a result of his poor performance he was ordered to Mexico City.

During the ad interim Presidency of De la Barra, Francisco Madero went to confer with Zapata, the revolutionary leader of the south. Huerta had been instructed not to move his troops against Zapata during the conference. He disobeyed his orders, moved against Zapata, jeopardized the negotiations, and was ordered back to Mexico City by Provisional President De la Barra on the suggestion of Francisco Madero. It is doubtful if Huerta ever forgave Madero for presuming to suggest the recall of a disobedient general.

Madero's negotiations having failed permanently to satisfy Zapata, Gen. Huerta was ordered against Zapata in cooperation with the 3,000 rurales under Gen. Figuero. For inexplicable reasons he was late in joining these forces, and a great loss of life resulted to the Government forces. Madero was properly disgusted at Gen. Huerta's inefficiency and failure in this campaign. He substituted Gen. Roblez, which, of course, again served to enrage Huerta against his President.

On March 31, 1912, Gen. Huerta was sent north to quell the Orozco rebellion after the first defeat of Madero's troops under Gonzales in the battle of Rellano. After making most elaborate preparations, he started on his campaign, moving his troops, with their enormous supplies and camp followers, up the railroad in special trains. Orozco slowly retreated in his railroad trains, tearing up the rails and burning the bridges behind him and keeping a few miles ahead of Huerta. In one engagement Huerta's superior cannon defeated the rebels, whose only guns had been made from car axles, with a total loss on both sides of 200. This Huerta reported as a desperate engagement. His advance was slow beyond description, and he at no time made any effort to send out a detachment to intercept Orozco's retreat by merely cutting across one of the numerous "8" loops which marked the railroad route. The expense of this campaign to Madero's new government was enormous, with no results of consequence.

It may be interesting here to note the first quarrel between Villa and Huerta. Villa had a good-looking horse which Huerta coveted, so he sent some of his men to take the horse from Gen. Villa. Villa naturally objected, whereupon Huerta had him arrested and sentenced him to be shot. He was reprieved by Madero just before the execution and sent to Mexico City, where he was released. This little incident, trifling as it was, stirred up anew the enmity between Huerta and President Madero.

So this expedition dragged on, culminating in what was announced by Huerta as the great victory of Bachimba, in which 14 rebels were killed. On his own statement of this victory Huerta was promoted to be major general. Guerilla warfare was continued until Gen. Huerta was recalled to Mexico City by President Madero. There he sulked and received leave of absence to have his eyes treated. For this reason he took no part in the first return revolution of Felix Diaz. During the second Diaz revolution Huerta was made the man of the hour and put in supreme command of the Madero troops. Whether or not he was in league with the Diaz party I can not say, but he permitted them to get possession of the citadel and arsenal, and then used shrapnel ammunition against tremendously strong fortifications. Urged to use solid shell, he absolutely refused. This was in February, 1913. Then came Gen. Blanquet with additional troops. Blanquet and Huerta made and laid a plot to arrest President Francisco Madero and his brother Gustavo. According to the plan which was successfully carried into execution, Gen. Blanquet was to arrest Francisco Madero, while Huerta was to capture Gustavo, which he did, at a dinner given by Gustavo Madero, at which he was a guest. Gustavo was shot to death the next night and Francisco Madero was done away with shortly after.

So much for Victoriano Huerta's military record. In his early years he showed ability and industry; in his later years he was inefficient, unreliable, and finally a traitor to the legally elected President of Mexico, to whom as a general he had taken his oath of allegiance.

Information regarding the population, area, climate, and resources of Mexico has been so widely disseminated of late that I do not propose to take up the time of the committee with these matters. I should therefore like to draw a brief picture of the life of the average peon in Mexico. Please bear in mind that the peons constitute about 85 per cent of the population. They range from full-blooded original Mexican Indians to every sort of cross. With the exception of some very few cases where the pure-blooded natives still live a communal life in some of the rich agricultural valleys, the peons are desperately poor and live under conditions which in this country would not be tolerated for a moment. The fault is not entirely theirs, because where opportunity has been given them they learn readily and make excellent workmen. The fault is not theirs so much as the fault of those governors of States and provinces, the owners of the vast haciendas, who have exploited the peons and kept them in material and mental slavery. What did it profit a very hard-working peon to earn 3, 6, 20, or even 30 cents a day, if he was obliged to buy the necessities of life for himself and his family from what I may term the "company store"? If he fell into debt, he could be transferred by his lord and master to some other vast landowner, there to spend the rest of his life endeavoring to work out his indebtedness to his former master under the same conditions which had driven him into debt. Of what use to get married, if the wedding ceremony cost as much as

two or three dollars? He could never pay half this much money. The fortunate peon is one whose shelter consists of one room, with walls of mud and roof of logs and boards. Most peons in tropical Mexico live in tiny huts made from stalks of sugar cane and roofed with the leaves of rubber plants. These one-room hovels contain not only a man and his wife and family but many relatives on both sides of his family. They have no furniture or conveniences, except an occasional sewing machine, or amenities of civilization. They have been degraded to the lowest depths.

Of course, above these comes the class of thrifty merchants who can afford to educate their children, and above these again the agrarian nobility and the military tyrants. It is the inevitable God-given law that for so long as man exists he shall rebel against such conditions as have prevailed and do prevail to-day in Mexico, and it is equally the practice that progress and civilization should be denied to others in every possible way by those who have received its benefits. Just as the Madero revolution was instigated to remedy these abuses, so was the plan to murder him and seize the reins of government instigated by Victoriano Huerta, acting on behalf of the very people who had caused the conditions against which the mass of the people were revolting.

Francisco Madero having been murdered at the instance of the commander in chief of his army, there still remained other refractory conditions to be met. The first was the lower house of the Mexican Congress. To the petition of 110 congressmen that their lives be protected in the performance of their duties, Huerta replied by throwing them into prison. Thereupon, having usurped the executive power, he proceeded to use the legislative power of the United States of Mexico, which has a constitution almost as beneficent as our own.

To show his total disregard of the very fundamental principle upon which a free government rests, the right of franchise, I will now read his instructions of October 22, 1913, to the governors of the various States regarding the election shortly to be held:

PRIVATE INSTRUCTIONS FROM THE FEDERAL GOVERNMENT TO GEN. JOAQUIN MASS, MILITARY GOVERNOR OF THE STATE OF PUEBLA, TO THE END THAT HE MAY TRANSMIT THE SAME TO THE JEFES POLITICOS OF THE STATE.

First. If any municipal president has entered into agreements with any of the militant political parties, his removal from office shall be discreetly sought; and in the case it should not be possible, cautious efforts shall be made to secure complete solidarity between said presidents and the jefes politicos.

Second. It is especially recommended that the persons in charge of the polls should be completely and absolutely reliable, so that they may follow the instructions given to them.

Third. If there should be sufficient time for it, strict orders should be given that polls for rural estates should not be established in the seat of the municipality or town, but in the estates themselves of the electoral division, this for the purpose of avoiding the attendance of those who are to take charge of the polls, the principal object being to prevent the elections in two-thirds, plus one, of the polls constituting the district. Therefore the greatest number of polls shall be ———. To meet the provisions of the law and conceal the above-mentioned commission, a complete list should be published, giving the names of the persons who are to have charge of the polls in accordance with article 13 of the electoral law of May 31, 1913, it being understood that only the appointments corresponding to the third part or less shall be sent to the sections, among which are to be included the polls in the urban wards.

Fourth. In all the polls which may operate, blank tickets shall be made use of in order that the absolute majority of the votes may be cast in favor of Gen. Huerta for President and Gen. Blanquet for Vice President.

Fifth. In spite of the fact that article 31 provides that the returns should be at once and directly sent to the chamber of deputies, the chairman of the polls shall be instructed that the returns be sent to the political prefecture, which returns shall be quickly examined by the jefe politico, and if the same are found to be in accordance with the instructions given therein, he shall return them to the chairman, informing them that they must send them directly to the chamber of deputies. If upon making the examination it should appear that the third part of the polls have not acted right, they shall fail to send the number of returns that may be necessary to the end that the chamber of deputies may receive only one-third or less of the total.

Sixth. Political parties and citizens shall be given full freedom in the polls which may operate, allowing them to make all kinds of protests, provided they refer to votes in favor of any of the candidates appearing before the people; but care shall be taken that such protests do not refer to the votes mentioned in paragraph 4 of these instructions.

Seventh. If upon examining the returns the jefes politicos should find that the votes do not agree with the instructions, before sending them they should fix them up to the end that the note of transmission, the minutes of the election, etc., should agree with the instructions.

Eighth. Persons shall be chosen who may inspire absolute confidence and may be well versed in the electoral law to make a quiet and reserved inspection of the polls which may be in operation and to present before them all sorts of protests, in accordance with article 30 of the electoral law, it being understood that all protests should refer to the candidates who may be in the field, but never in regard to votes mentioned in paragraph 4.

Ninth. After elections they shall make a quick concentration of the polls which were in operation and shall communicate this information to the Government if possible on the same day and in cipher and by special courier.

Tenth. Under their most strict responsibility the governor of a State who may receive these instructions shall comply with them under the penalty of discharge of office and other punishment which the Federal Government may see fit to apply.

MEXICO, *October 22, 1913.*

But fortune did not smile on him. Zapata in the south and Villa and Carranza in the north continued to make headway in their efforts to reestablish a constitutional government.

Mr. Speaker, the Members of this House will remember the famous telegram sent by Huerta to President Taft on February 19, 1913, which, if my recollection serves me, was as follows:

I have overthrown this Government. The forces are with me, and henceforth peace and prosperity will prevail.

Truly, he had overthrown the Government, but in so doing he had unloosed forces which will ultimately restore to the people of Mexico the very Government which he overthrew. Hemmed in on both sides, running short of ammunition, there was but one recourse open to this traitor to his country. Could he but embroil Mexico in a war with the United States there would occur one of two things—either Mexico would forget its internal grievances and unite against a common foe, as in the former war, or Huerta would be made a prisoner of the United States and take his chance of punishment at the hands of a civilized nation rather than at the hands of those leading the forces of constitutional government in a country depraved and debauched not merely by Huerta, but by three centuries of people who thought and acted as he thinks and acts. But, Mr. Speaker, that clear brain which presides over the destinies of the Nation in the White House was not to be induced into a war with Mexico by an insult from its temporary President. We all recollect well the Tampico incident; how a boat's crew of unarmed sailors from the U. S. S. *Dolphin* went peacefully ashore to buy some gasoline; how they were arrested, although in the uniform of the United States, and paraded through the streets of Tampico. For this insult to the flag the customary expression of regret and salute was requested. The expression of regret was made, but the salute was not made, and each hour there was drawing nearer to the port of Vera Cruz a merchant ship carrying a cargo of 250 machine guns and 2,000,000 rounds of ammunition. We all remember how the President requested the cooperation of Congress in a resolution which reads as follows:

That the President is justified in the employment of the armed forces of the United States to enforce his demand for unequivocal amends for certain affronts and indignities committed against the United States; Be it further

Resolved, That the United States disclaims any hostility to the Mexican people or any purpose to make war upon Mexico.

And how the House in a very few minutes almost unanimously adopted this resolution with its disclaimer of any hostility to the Mexican people or of any purpose to make war on Mexico. The purpose of this resolution was to obtain the approval of Congress of the President's plan to compel reparation for an insult to the flag and not to justify a war of invasion; and yet, Mr. Speaker, what happened to this resolution on the other side of the Capitol? The ranking Republican member of the Senate Foreign Relations Committee introduced a resolution reciting many grievances, and, as I read it, deliberately putting the Republican Party on record as desiring intervention, which means war. A war involving 400,000 young Americans, involving a death roll in the neighborhood of 10,000, and as an incident the expenditure of a million dollars a day for so long as the war should last. I read this resolution, and I think its meaning is sibility of securing protection or redress by diplomatic methods in the very clear:

That the state of unrestrained violence and anarchy which exist in Mexico, the numerous unchecked and unpunished murders of American citizens and the spoliation of their property in that country, the impossibility of lawful or effective authority, the inability of Mexico to discharge its international obligations, the unprovoked insults and indignities inflicted upon the flag and the uniform of the United States by the armed forces in occupation of large parts of the Mexican territory have become intolerable.

That the self-respect and dignity of the United States and the duty to protect its citizens and its international rights require that such a course be followed in Mexico by our Government as to compel respect and observance of its rights.

If I am correctly informed, under the recent Republican administration there were over double the number of Americans killed in Mexico by reason of the civil strife in that country than there have been since President Wilson assumed the reins of government. In spite of newspaper clamor it is interesting to note that the damage done American property was far greater under President Taft than it has been under the firm policy of this administration. For the lives unhappily sacrificed in this disturbed and strife-riven country, for the property destroyed or temporarily rendered useless, adequate compensation in so far as money can compensate will, I am confident, be made; but I rejoice that in this crisis of our foreign affairs there was in the White House a President who would not hurl 10,000 lives after those already lost, who would not destroy the happiness of 400,000 homes, while the sure, true moral forces which have emancipated this country and many another republic are working successfully for the accomplishment of free government.

Independence Day Celebration.

EXTENSION OF REMARKS
OF
HON. J. WASHINGTON LOGUE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 9, 1914.

Mr. LOGUE. Mr. Speaker, under the leave garnted to me to extend my remarks in the RECORD, I include an address delivered by our colleague from Ohio, Mr. FESS, at the Philadelphia Independence Day celebration last Saturday.

The address is as follows:

"Mr. Chairman, members of the committee of the greater Fourth of July, and fellow citizens, 38 years ago to-day the centennial celebration of the adoption of the Declaration of Independence was held in this city. While the historic document was being read, behind the reader, by the side of Gen. Grant, the President of the United States, sat a white-haired, white-bearded old gentleman with a faded parchment in his hands. As he followed the reading of the immortal document he frequently broke out, 'Wonderful document! Wonderful document!' Those near him noticed tears trickling down his cheeks as he thus spoke. Little did those who heard him think that in less than a dozen years the people over whom he was then ruling, who loved him passionately, but who knew that his presence in Brazil prevented a constitutional government, would say to him 'While we love you ardently, we love constitutional government better.' His own people banished him and pensioned him for life that they might translate into actual government the principles founded in the American Declaration of Independence. Hence Dom Pedro was banished, and Brazil, having gone to bed one night a monarchy, arose the next morning a republic. This was the effect of the principles of this document upon the people of the largest empire in South America in 1889.

"The Declaration of Independence adopted in this hall is properly regarded the greatest charter of human liberty known in history. It is not a form of government, but a mere announcement of a principle—greater than Magna Charta, greater than the Bill of Rights, greater than the petition of rights, greater than the plan of government. It is not an indictment against the people of the mother country, but against the tyranny of an English king, a despot. Of the 28 counts in this famous national indictment, all but 2 begin with the personal pronoun 'he,' referring to George the Third. The people of England generally believed in the majesty of the people as suggested by the power of the House of Commons, the elective body of representatives of the people.

"The greatness of this instrument must be viewed from similar documents in the past.

"In Greece, in her palmiest days, one-tenth of her people were citizens, nine-tenths were slaves. The citizens possessed all powers of government, the slaves no privileges whatever.

"It is difficult for us here to-day to realize that Greece, who gathered her students in the academic groves to be taught by her Platos and her Aristotles, was the nation whose mass of population were mere slaves, in which a mere tenth of the population had any participation in the government.

"In Rome a similar situation is noticed. When her conquering eagles perched in every quarter of the civilized world, Rome knew but two classes—the ruling and the ruled. Two entirely separate people. The patricians, one-tenth of the nation, held all power and privileges of government, while the plebeians, nine-tenths or the mass of the people, were without participation in government.

"Down to the thirteenth century all Europe was divided into two classes—the feudatory and the serf. The former owned the land, while the latter were a part of the land. The serf of medieval Europe was a rank higher than the slaves, as he could not be separated from the land of which he was a part, as a building is now regarded a part, while the slave could be sold as a chattel.

"In feudal Europe the serf possessed no privilege, no power, no participation in government to speak of.

"In modern Europe the people naturally divided themselves into the two classes known as the privileged, on the one hand, and the great middle class on the other. There has been but one current in all history, a gradual slipping away of power from the few toward the many.

"The power and privilege gradually slipped away from the one-tenth citizens of Greece, one-tenth patricians of Rome, one-tenth feudatories of medieval Europe, and the privileged few in modern Europe.

"A constant growth of influence is noticeably progressive in the slave of Greece, plebeian of Rome, serf of medieval Europe, and the great middle class of modern Europe.

"Another fundamental principle is noticed—reforms do not proceed from above as a rule, but from below. They come from the mass rather than from the class. The great middle population gave the world Magna Charta, the House of Commons in England. The same class gave the Bill of Rights and the English Commonwealth, with Cromwell at its head. The same element gave the petition of rights and the famous English Revolution of 1688, when the divine right to rule gave way to the voice of the people as heard through Parliament. It was during these days of mighty political reform that the New World was peopled, partly for the sake of religious freedom, but vastly more significant because of its political freedom.

"Out of this agitation our Nation was peopled. To New England came the Puritan with his democratic sympathies. To the Southland came the cavalier with his sense of religious and political liberty. To the central Colonies came the neutral, surcharged with the spirit of local government in which all should have a hand.

"Where this principle was contested by the mother country it was answered in the greatest document in history, written by the greatest Democrat of the age.

"Note its headlines.

"All men are created equal.

"They are endowed with inalienable rights, among which are life, liberty, and happiness.

"How would such utterances be taken in Greece, in Rome, in feudal Europe? How were they taken in modern Europe?

"Note further:

"To secure these rights governments are instituted among men.

"When they become subversive of these rights it is the duty of the people to change it, or even to abolish it, and build a new government upon the foundation that the right to govern must come from the consent of the governed.

"Here for the first time in the world's history of civil government was such an announcement made. It was fundamental here, for of all the people on earth this people, which was a picked people of Europe, was prepared for self-government.

"The Declaration of Independence is not an instrument of government, but a mere announcement of a fundamental principle of a government of the people by the people.

"On this hallowed day, here on this sacred spot, our citizenship should link to this world's famous document, our charter of liberty, that other equally historic and significant document, also adopted in this same building, the Constitution of the United States, the frame of the Government, without which the Declaration of Independence would have meant little to posterity.

"The declaration stood for liberty, while the Constitution stood for law and order.

"The first declared all men equal; the second demanded justice and general welfare.

"The first was signed by a notable group of statesmen, including Thomas Jefferson, John Adams, Benjamin Franklin, Roger Sherman, Charles Carroll, and others, while the second by George Washington, Alexander Hamilton, Benjamin Franklin, James Madison, James Wilson, and others.

"Both of these world-famous documents were drafted and adopted not only in this famous city but right here in this famous building, made sacred for all time to come.

"Well may your city be proud of this event. In future years, when the Nation shall recur to this annual occasion, may I bespeak for you a wider consideration of the real significance of the second document, the work of that immortal band of 56 statesmen unequaled by any similar group in the history of the world.

"Inspired by the authority vouchsafed them to translate the principles of the Declaration of Independence, through the power of the sword in the War of the Revolution, they couched an instrument of government in 7 short articles, of less than 40 sections, employing less than 4,000 words, thereby producing a document pronounced by Gladstone the most wonderful instrument ever stricken off by the brain or purpose of man.

"This instrument, without a parallel in history, has stood through the years of the most marvelous material development, during which a small Nation of but 13 seaboard States has grown to a Nation of a half a hundred empire States, and a mere 3,000,000 people to 100,000,000, and a war-stricken confederation to a Nation of $130,000,000,000, which is one and three-quarters times wealthier than the next wealthiest country on

the globe. Through all this growth the instrument of government has stood with less than half a dozen changes in all the Nation's life since the inauguration of its first President.

"These two historic documents, finding birth in the same building only 11 years apart, are worthy the admiration of all the world. It will be noted that the struggle in government throughout the past has been to assure a larger participation in its affairs by the individual, without regard to rank. Under these two great documents ours has become the land of opportunity. The toiler can whisper to his child in the cradle the inspiring note of future success, for avenues of distinction are open to him as to the children of the well-to-do. In America the child of poverty may become the man of eminence in many lines. This is the legitimate fruitage of the principles of the two famous instruments adopted at this historical place. Let us hold to this birthright of American liberty, justice, and common weal.

"You have done well here to-day to inaugurate the greater Fourth of July celebration. We should hold it sacred as the place and time to rededicate our lives to the service of our country, in order that we may insure to our people the security of an equal opportunity to all for the sake of justice, general welfare, and the blessing of liberty, preserved among our people to the latest posterity. Your celebration is significant in its purport. The President of the Nation has added to its meaning by his presence to address you as the head of the Nation. I congratulate you upon this one hundred and thirty-eighth anniversary of the Nation's birth."

Soldiers' Monument at Southbridge.

EXTENSION OF REMARKS

OF

HON. WILLIAM S. GREENE,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 9, 1914.

Mr. GREENE of Massachusetts. Mr. Speaker, I ask permission to extend my remarks in the RECORD by including an address delivered by the Hon. J. HAMPTON MOORE on the Fourth of July at the dedication of the Soldiers' Monument, Southbridge, Mass.

The SPEAKER. The gentleman from Massachusetts asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection? [After a pause.] The Chair hears none.

The address referred to is as follows:

FOUNDATIONS OF STABLE GOVERNMENT.

[Address of Hon. J. HAMPTON MOORE, M. C., of Pennsylvania, at the dedication of the Soldiers' Monument, Southbridge, Mass., July 4, 1914.]

Veterans, ladies, and gentlemen, all things conspire to make this a memorable day on the banks of the Quinebaug. The rain and clouds of the last few days have yielded to weather that approaches the ideal; the parade, with its marching men and its attractive floats, has been creditable and inspiring; the neighboring towns of Worcester County and other parts of Massachusetts have sent their representatives, and the patriotic citizens of Southbridge have turned out in numbers running far up into the thousands. Moreover, the beautiful monument that has just been unveiled is the product of the plans and the handiwork of one of your former citizens. Altogether, Southbridge may be congratulated upon the day and upon the spirit and the harmony of so splendid a celebration.

I was honored when your distinguished Representative in Congress, the Hon. CALVIN D. PAIGE, invited me, in your behalf, to make the address upon this occasion. Coming from the old third district of Pennsylvania, I am able to bring its greetings to the old third district of Massachusetts. Indeed, I bring you greetings from Independence Hall, the very shrine of American liberty, at which the President of the United States is this day, and perhaps this hour, addressing the multitude where 138 years ago the Declaration of Independence was adopted by the Continental Congress. It will be my purpose, as briefly as may be, to trace the progress of our Nation from the period of the Declaration to the present, and to speak of that document and the other foundations of stable government which have been the secret of our success as a people, for without the foundations of government be firmly laid and, if need be, stoutly defended, the rights and liberties of the people would be mere bywords in the land.

SOUTHBRIDGE PROMPT TO RESPOND.

When the first shot in the great Civil War was fired upon Fort Sumter April 12, 1861, Southbridge, with its less than 4,000 population, far removed from the scene of action, was ready to do its part to sustain the Union. Startled and stirred by the news of the Confederate assault upon the flag the people of Southbridge, according to the New England custom, assembled in town meeting and pledged themselves to the support of the President. Thus in two days after hostilities had opened Southbridge was in line with the foremost of her sister towns and cities, prepared to meet the call of the immortal Lincoln and the requirements of the Old Bay State. Throughout the four succeeeding years call after call was made upon her resources, and in no instance did she fail to respond loyally and with promptitude. The pride of her citizens spurred them on to fill up every quota, and to her eternal credit be it said she accomplished all that was expected of her by a determined but sorely tried nation. Not only did she yield up of the flesh and blood of the rich young manhood that was willing to "enlist, fight, bleed, and die for the honor and patriotism of Southbridge," but she raised funds to care for the families of those who enlisted.

THE WOMEN WHO BORE THE BURDEN.

Records differ as to the actual number of men credited to the town who went into the service; the number was not less than 246, and by reason of enlistments elsewhere than in Southbridge may have run up to 400, but it is known that of the fighting men who went forward for the honor of their town 11 were killed in action, 25 died of wounds or disease contracted in the service, and approximately 25 others sustained the wounds of battle. So generally were they distributed that it is said a Southbridge boy could be found in nearly every battle from Bull Run to Appomattox. What these men did for the honor of Southbridge they did in a broader sense for the Nation. The monument we here dedicate to their memory symbolizes the gratitude of a people made happy and prosperous by their valor; yea, it signifies more than that—it is a tribute as well to the patience and the sacrifices of the courageous women of that period, upon whom the burdens fell with cruel severity.

APPROPRIATENESS OF THE CELEBRATION.

It is appropriate that Southbridge should have chosen our national holiday upon which to celebrate the patriotism of her brave sons and the devotion of her good women. It serves in marked degree to accentuate the purposes for which the men of Southbridge offered up their services and their lives to their country's cause. On the 4th of July, 1776, after the liberties of the American people had been assailed, their loyalty and courage were put to the first great test. A war upon their rights as a free people had, in effect, been declared by the mother country. They resisted the indignities that were heaped upon them and gave to the world through the Continental Congress, at Philadelphia, the Declaration of Independence, which, while it asserted—

that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness—

concluded not in the spirit of warfare, but in the hope of enduring peace, that—

as free and independent States they have full power to levy war, conclude peace, contract alliances, establish commerce, and do all other acts and things which independent States may of right do.

And the signers of that immortal document, headed by your own John Hancock, of Massachusetts, with faith in the integrity of their course, appealing not to the god of war nor to the spirit of lawlessness, breathing the love of country and just government for all men, yet facing a crisis from which they could not shrink, closed their charge to the American people with these memorable words:

And for the support of this declaration, with a firm reliance on the protection of Divine Providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor.

THE AMERICAN REVOLUTION MEANT LIBERTY AND EQUALITY.

We are wont to refer to the war which was already upon us when the Declaration of Independence was proclaimed as "The War of the Revolution." In the only way they could do so as a civilized people our forefathers had chosen "to dissolve the political bands" which had connected them with Great Britain and had declared the causes which impelled them to the separation. They were not indulging in "revolution" to promote disorder or to undermine government; they were undertaking as a whole people—

to assume, among the powers of the earth, the separate and equal station to which the laws of nature and of nature's God entitle them.

And declaring—

that all men are created equal; that they are endowed by their Creator with certain unalienable rights; that among these are life, liberty, and the pursuit of happiness—

they looked forward to the organization of a new government which would assure our safety and our tranquillity. They were striving not for the overthrow of law and order, but, rather, for its observance freed from tyranny and oppression.

WEAKNESS OF THE CONFEDERATION.

The Articles of the Confederation, adopted in 1781, undertook to put into effect a form of government embodying these ideas. These articles were a confession of the dependence of the people upon organized effort, but they lacked the power essential to a complete and effective organization of the States. For that reason, and because of the conflicting interest of the States and the danger of quarrels between them, the Constitution of the United States was finally adopted in 1787. The very preamble of that Constitution provided for "a more perfect union"; that is to say, a better and more effective organization; and as an assurance of the desire of the people to overcome the tendency to war and disorganization, the reason for the adoption of the Constitution was explicitly declared to be to—

establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity.

In the Declaration of Independence, therefore, we had the expression of the spirit of the American people, and in the Constitution we had their general proclamation of the legal limitations by which they proposed to be bound.

THE CONSTITUTION WORTH PRESERVING.

On this historic day, when the flag of our country is unfurled to the breeze in every State and Territory of a Union made possible by the Declaration of Independence, and made "more perfect" by the Constitution, how appropriate it is, when we assemble to honor the citizen soldiery which fought and died to preserve the Union, that we should refresh our earlier studies of the two great documents to which reference has been made. Let us see how well the day and the occasion fit into the argument. If we could call by name the soldiers who went out from Southbridge and were to ask them for what they left their homes and firesides to engage in deadly combat, they would answer, "For the preservation of the Union." If we were to inquire whether they could recall the oath with which they bound their services to their country, they would tell us it carried the solemn charge, "To support and defend the Constitution of the United States." There we have the incentive, and there we link up the "Boys in blue" with the boys of '76. It was not for profit or hope of material reward that these men forsook their families for their hay mattresses under the open sky; it was because a blow had been struck at the Union of the States, at the Constitution, which guaranteed an equality of rights, and at the flag, which typified the purity and integrity of the Union. This was what these men fought for—the preservation of the very foundations of our Government—and this is what they achieved.

As Washington and his compatriots had made a Union of the States, they, under Lincoln, had defended and preserved it. That it was a good Union and worthy of preserving let these short facts attest. There were less than 4,000,000 Americans all told when the Union was established. Yet so successful was the country under that Union that there were 32,000,000 of people enjoying its blessings when the Civil War began. And if a Union of States grown in population to 32,000,000 was worth preserving at the expense of a four years' deadly war, what may we say of the work of the preservers of the Union now that its population has advanced to 100,000,000 souls?

DEVELOPMENT UNDER THE "MORE PERFECT UNION."

The half century that has passed since the close of the Civil War has witnessed marvelous changes in our progress as a Nation. Not only have we grown in numbers by the millions, now thriving upon every section of our vast area, but we have made this country under the Union the most comfortable place in which to live and labor upon the face of the globe. Since these veterans returned from their work of preserving the Union we have advanced materially more than any people in the history of the world. We have harnessed electricity and made it produce light, heat, and power cheaply and conveniently. We have invented and applied the telephone and the telegraph, thus adding to the domestic and business welfare of all mankind. We have devised and applied the typewriting machine and the automobile, both of them now a part of our daily life in commerce and utility. We have developed transportation facilities until every corner of our vast domain is accessible to the people. We have undertaken to conquer the air by the flying machine. Indeed, in science, in business, in medicine, in home comforts and conveniences, we have so widened and extended our influence and added to the value of human activities in peaceful occupations as to make startling any contrast with conditions prevailing before the war.

Wonderful as have been all these changes and all this progress, except for the Spanish-American War, peace has ruled our country and domestic happiness and prosperity have been her handmaidens. These are some of the practical, tangible results of the Declaration of Independence, of our Constitution guaranteeing an equality of rights, and of the Union of States for the perpetuation of which the Civil War was fought. There again we have the combination that made it all possible—the Declaration, the Constitution, and the preservation of the Union under the Constitution.

BARNACLES UPON THE SHIP OF STATE.

Surely what has been thus accomplished in personal and material progress by reason of "a more perfect Union" should not be lightly considered. It was attained at too great a cost of life and labor to be readily overthrown. To hold it cheap or to attempt its destruction would evidence an ignorance of the energy and sacrifice made in the upbuilding of it, as it would manifest the grossest ingratitude on the part of those who are its beneficiaries. And yet there are men assuming to speak for liberty who are this day preaching the doctrine of destruction with respect to the rights of life and property. The wave of anarchy, which periodically sweeps the centers of Europe, has had its occasional reflex in the United States. The makers and the administrators of the law have sometimes temporized with these unholy conditions, rather, we should hope, in the spirit of tolerance, than for personal or political reasons. The demagogue and the scheming agitator have increased in number as our population has increased, and are still able to obtain audience with the unthinking. The liberty of the press, guaranteed by the Constitution, and the right of free speech are often abused in the desire of ambitious or misguided men to attain their ends.

THE ABUSE OF FREE SPEECH.

An ever-present menace to our institutions also is the restless man or woman, educated above the gainful occupations, who is too proud to participate in them. These and the foolish fellows who hold that "the world owes them a living," and whose chief purpose in life is to prey upon the industrious and the successful, comprise a few of the clogs upon the body politic. They are the "unearned increment" of progress. Happily the veteran soldier who made is possible for them to exist, even as barnacles upon the mightiest ship or as fungi upon the sturdiest oak, is neither a part of them, nor in sympathy with their methods. On the contrary, the veteran soldier, having yielded up something for his country, is conscious of the advantages which a stable government has given to all the people. He knows what it meant to stand for "domestic tranquillity" and the "blessings of liberty," and his voice, like that of all good citizens, is ever raised in protest against the hand of sacrilege, whether it appear in high places or in low. "The blessings of liberty," for which the Civil War was fought, include that highest of privileges, "the right of the people to be secure in their persons, houses, papers, and effects," and if that be not sufficient to satisfy the restless, then let us remember that we have still the privilege guaranteed by the Constitution of "the equal protection of the laws." When men speak of "the right of free speech" or of that "personal liberty" which are made the excuse for violence, they offend not only against civilization but against the best and truest form of government that has ever been devised by mortal men.

JUSTICE AND EQUALITY SHALL RULE.

The problems to which reference has just been made are largely social problems affecting law and order and the right of the people to enjoy "domestic tranquillity" and the "blessings of liberty." And why should the people not enjoy "domestic tranquillity" along with liberty? The mistake which some of the agitators of unrest are constantly making lies in the propaganda for special consideration at the hands of the law. What right has any man to special consideration if he infringe upon the rights of others who desire "domestic tranquillity" along with the "blessings of liberty"? Surely that man, whether native born or foreign, whose thrift and industry have enabled him to acquire a home for himself and family, is entitled to the full enjoyment of them. To those agents of distrust and disorder who so frequently occupy a larger place in the public eye than the merit or the righteousness of their utterances deserve, we may justly say: "This is our country. Our forefathers founded it under the Declaration and the Constitution. We have made it a haven and a home for the oppressed.

We have established certain principles and rules of conduct by which we have chosen to be guided. We intend that you shall enjoy every privilege that we enjoy under those principles and rules. If this country is not good enough for you and you know of one which suits you better, it is your privilege to go where you please; but if you remain here, let it be understood that you stand equal with any other citizen in all your rights and responsibilities before the law. This is the standard of equality and of justice which we have set for ourselves. It is the way we prefer to live and be governed. We intend to maintain this system at any cost, and it shall not be changed or disregarded except as the people themselves decree."

GOOD SAMARITAN FOR OTHER NATIONS.

But, as I have indicated, these are domestic problems, to be dealt with as the conscience of the people and the laws of the land direct. During the half century of our greatest progress we have had unusual experiences in our foreign affairs. Indeed, amongst other things, we have established for ourselves the reputation of being the most generous of the nations. We have attached Hawaii, yonder in the Pacific, to our march of progress. We have taken over Porto Rico, and a million souls on that beautiful island of the West Indies are now looking forward to higher and better conditions of life through our influence and assistance. We have started the 8,000,000 of people in the Philippines on the road from savagery to civilization. We accepted the responsibility of their guidance not in a spirit of conquest but rather from a sense of duty to mankind. We have dealt liberally with those islands and have given them assurance of their freedom when they shall be able to take care of themselves. We struck a quick and forceful blow for the liberation of Cuba from a thralldom of which she had long complained, and enabled her to float her own flag over her own territory as a free land. Hundreds of millions of money we might have spent upon our own projects in our own country, amongst our own people, were dedicated to the peoples of these oppressed lands, so that they might be liberated, educated, and given a chance to attain "domestic tranquillity" and "the blessings of liberty." In these respects our Union has served as a good Samaritan, even though the beneficiaries of our bounty, led by agitators or reckless men within their own ranks, sometimes seem to disregard it.

THE PANAMA CANAL A WORLD BENEFACTION.

Our work upon the Panama Canal is another evidence of the bigness of the American people under the government of "a more perfect Union." It can not be said that we did not lessen our own resources and deny to ourselves much-needed internal improvements when we undertook the task which has made our Nation famous in the realm of construction. What other nations from the days of Balboa had hoped to do, what other nations had attempted and failed to do, the United States accomplished at the Isthmus. It conquered the disease and the other apparently insuperable obstacles, and finally brought together in bonds of holy wedlock the waters of the Atlantic and the Pacific, and, if we are to take cognizance of the modern trend of legislation and of treaty interpretation we have done all this at Panama, at the enormous expense of approximately $400,000,000, in order that all the nations of the earth may enjoy it on equal terms with our own. Who will say we have not been generous with the world at Panama?

OUR COMPLICATIONS IN MEXICO.

And if it be said we have been generous or even prodigal of our progress since the "more perfect union" was sustained by the Civil War, may we not also claim to have been tolerant? Witness the conditions that now confront us along the southern border of our country. We did not strike at Mexico even when the lives and property of Americans were at stake. Any old soldier North or South would go into battle promptly should the call come to support the flag in any righteous cause. But the call has not come, and we are not yet informed, even in Congress, as to the real merits of the controversy. Perhaps our diplomacy may be wiser and more farsighted than we know. We trust the President and his advisers are masters of the situation. We may not judge hastily, but we may at least be pardoned for expressing the hope that when American sailors lay down their lives, as many of them have already done at Vera Cruz, it will not have been done as the result of any uncertain diplomatic policy, but rather and surely for the honor and the glory of the Nation.

WAR DEPLORED, EXCEPT THP CAUSE BE JUST.

Only the fool wants war with Mexico, unless there be just cause for war. If the blood and treasure of the Nation are to be taxed to shield some adventurer who has borrowed the Stars and Stripes in which to shield his deviltry, we should know it and should be saved the mark. But if the humblest American has been wronged in Mexico, our honor there should be maintained at any cost. There are some who fear we have been drawn unduly into Mexico's internal affairs. Whether this be true or not, let us hope and pray for an early settlement of our Mexican relations, peacefully and justly, if peace and justice may be attained with honor. I am sure I voice the feeling of every old soldier and of every old sailor who has fought the battles of his country when I say "God grant there may be no war with Mexico, or with any other country," and I know I also breathe his sentiments when I say that if we are compelled to maintain the country's honor, once we ascertain and make it clear to the people, there will be no dearth of soldiers or of sailors, old or young, to take up again the dreaded implements of war, and "rally round the flag" as in days gone by.

PEACE AND ORDER RISE ABOVE THE CLOUDS.

Contemplating the wonderful advancement of our country, what shall we say of the few clouds, foreign and domestic, that drift across the horizon? Are they cause for worry or alarm? Are they so portentous as to make us cease our labors and abandon the fruits of the work of 138 years since the Declaration of Independence was proclaimed? Let the old soldier answer. What does he say? Did he not take upon himself the obligation to support and defend the Constitution? Has he forgotten that? No; a thousand times, no! Do the public servants from the highest in our land to the lowest, take that same pledge of loyalty merely to violate it? Do the millions of heads of families and owners of homes throughout this great country intend to stand by idle as the Constitution that guarantees protection and equal rights is shot from under them? It can not be. Neither in the North nor in the South nor in the East nor in the West. We can safely leave this question to the soldier and the sailor and abide the test. The soldier stands for peace. His loyalty to the country has been tested in the crucible of fire. Anomalous though it may seem, the fighting men of the Civil War, like those who went from the town of Southbridge, returned from the strife the sturdiest friends of peace. Experienced in war, they stand to-day for law and order, which is guaranteed by the Constitution, as they stood by their guns in 1861. They have "a more perfect Union" now, and they are going to preserve it. There may be changes of law, but there will be no change of the patriotism and spirit which led up to the Declaration of Independence and the Constitution. Our experiences in the Revolutionary War, in the War of 1812, in the Mexican War, and in the War against Spain give us no concern as to the mettle of our fighting men; if called upon to fight, they will fight again, and the legions of their loins will follow them; but when they fight it must be for good and worthy cause. The American soldier did not fight for spoils; his goal was neither conquest nor plunder. What he sought for himself and posterity was citizenship, that citizenship which typifies to-day, as it did in 1776 and 1787, "justice," "domestic tranquillity," and "the blessings of liberty for ourselves and our posterity." And to these, in common with his fellow man, he is fairly entitled.

THE GETTYSBURG REUNION AND ITS LESSON.

Veterans and friends, a last word. We are far enough removed from the bitterness engendered by the Civil War to speak dispassionately of those who fought upon the other side. We have come to better understand the people of the South and the purposes which animated them in defense of the rights of the States. After a lapse of 50 years they are again one with their former antagonists, one under the same Constitution and the same flag. It is no disparagement of a northern soldier to say that he fought "a foeman worthy of his steel." Such a foeman he did fight, and so much more, therefore, was the glory of the victory. When "Yank" met "Johnny Reb," it was not the impact of a superior and an inferior race; it was two strong men of one race, and they were both Americans. That these men were of the same type; that they and their forefathers imbibed together the same spirit of the Declaration and the Constitution; that they were men and brothers, was beautifully demonstrated a year ago to-day when on the field at Gettysburg, a full half century after the battle, the survivors of the two great armies met and in friendship and good will clasped hands across the stone wall at the Bloody Angle, the "Yank" in the thread-worn blue and the "Reb" in the tattered gray. In the thousands of tents which covered the great field from the Round Tops to the Ridges the grizzled survivors of the North and South exchanged experiences and established friendships such only as the American soldier can enjoy. It was notice to the world that the American soldier can fight and make up; that he can take and give a blow; and, better yet, that he can recognize and admire the manly and courageous qualities of his adversary. Yea, it was more than that. It was proof that

the American soldier cherishes peace, and that after all the home, the family, and the friends are more to be desired than dissension and the sword. He had made his sacrifices for his country, had the veteran who attended the last grand rally at Gettysburg; he had seen his comrades fall upon the one side or the other; but peace restored, the craving of the soldier heart was for that "domestic tranquillity" and those "blessings of liberty" which only a stable government founded on principles of equality and justice can assure.

A Perennial National Problem.

EXTENSION OF REMARKS
OF
HON. H. GARLAND DUPRÉ,
OF LOUISIANA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, July 10, 1914.

Mr. DUPRÉ. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article appearing in the current number of the North American Review, by CHAMP CLARK, entitled "A Perennial National Problem," which refers to the Mississippi River.

The article is as follows:

A PERENNIAL NATIONAL PROBLEM.

(By Speaker CHAMP CLARK.)

The farthest-seeing constructive statesman, the most masterful friend and champion of humanity in modern times, architect of our independence, seer of our national strength, prophet of our national progress, Thomas Jefferson, was the foremost genius of our national expansion.

When he got from Napoleon the grand domain of the Louisiana Purchase he bought for the United States the control and possession of the Mississippi River. There was nothing in this tremendous achievement of expansion westward, more than doubling the area of the young Republic, dearer to his heart, more inspiring to his imagination, than the embracing of the Mississippi River. Long before the consummation of the purchase his persuasive voice and potent pen were continually used to urge the importance of control for the citizens of the United States of the navigation of the Mississippi River. When its lower reaches were alternately in the hands of Spain and France, and disputes arose over the rights of passage by our citizens through to the Gulf waters, he ardently espoused the cause of his countrymen. The year 1801, when Jefferson became President, the area of the United States was but 827,000 square miles, all east of the Mississippi River, with all Florida and the area of the future Louisiana Purchase belonging to Spain. The possessions of that country in the Western Hemisphere amounted to over 7,000,000 square miles. Great Britain was next in New World possessions, with 3,719,000 square miles. Russia, holding Alaska, had 577,000 square miles. France, through the courage and genius of her missionaries and explorers, her soldiers and traders, had acquired a domain in North America scarcely second to that of Great Britain, but in the rivalry between the two here and in the Old World she was dispossessed of all but 29,000 square miles. It remained for Napoleon's prowess and genius to restore much of what France had lost through wresting from Spain all her possessions in the northern half of the Western Hemisphere which became known as the Louisiana Purchase. For a time Napoleon had dreamed of establishing on the western bank of the Mississippi—and controlling both sides of the lower river, with New Orleans as its seat—a great western world empire. But nearly all of the Old World got to fighting him, resisting the reckless ambition bent upon dominating the European Continent, making and unmaking kings at will to rule or caprice to play with nations as a master of the game would move the pieces on a chessboard. Great Britain was his formidable foe and was the one power that had most embarrassed his soaring fancy most effectually and most often blocked his designs. He conceived the idea of transferring by sale to the United States his embryo empire in the western world, and with it the control of the Mississippi River. He knew it was the severest blow he could deliver against the growing power of his English rival. "The accession of this territory," said Napoleon, "forever strengthens the United States, and I have just given England a maritime power that will sooner or later humble her pride."

Jefferson, with whom he negotiated the transaction, had been constantly agitating the vital importance to this Republic's safety and welfare of the complete control of the Mississippi from source to mouth. He wanted its great navigation resources and ultimate possession of the vast area drained by its waters. It can be imagined with what profound delight, with what thrilled anticipations he approached the consummation of the purchase. His cardinal principles of faith for the American people were the erection of a great structure of everlasting national commercial independence upon the four pillars of "agriculture, commerce, navigation, and manufacture." With him a most absorbing obsession was to own the Mississippi. With him it was a case of "must." "The navigation of the Mississippi," he declared as far back as 1790, "we must have." Again, a little later, and years before the Louisiana Purchase, he asserted: "The navigation of the Mississippi in full and unrestrained freedom is indispensably necessary, and must be obtained by any means it may call for."

Thomas Jefferson was the first publicity agent for the national ownership of the Mississippi River, as he had been the first publicity agent for the erection of the four pillars of our national prosperity, as he had been the first publicity agent of our national independence. As a publicity agent the world never saw his like, all for humanity, all for the progress of human liberty. He wrote much and ardently. His pen sped with a powerful unmatched enthusiasm and a fertile genius for persuasion unexcelled in any era of human forward development. His labor of love was at its best when his theme was the Mississippi Valley and the navigation of the Mississippi River.

A brilliant biographer of Napoleon said of his sale of Louisiana to the United States:

> It was an event second in importance to no other in their history, for it gave them control of the intercontinental river system, and later of the Pacific coast, while indirectly it prepared the way for the conflict of 1812, which finally secured their commercial independence.

Following the close of the Revolution, and up to the War of 1812, our American Republic was a feeble institution among the nations of the world, and might have been ignored, might, indeed, have been overwhelmed and absorbed, but for the international strife that was shaking all Europe and imperiling the foundations of empires in the Old World. We were nominally and politically independent; but not until the American victory at New Orleans did we attain American commercial independence. Jackson and his Kentuckians and Tennesseeans, the bulk of his forces coming from the States and Territories on the banks of the Mississippi River, backing the little Regular Army nucleus, rushed southward to drive the British from the lower valley and secured it forever from hostile foreign intrusion. And ever since the victory at New Orleans, with the expulsion from the Mississippi River of the great veteran British Army, with its fleet of transports and men-of-war, we have had a progressive Nation, a forward-moving, wide-expanding Republic—no longer grouped and hedged in between the Atlantic and the great water highway Jefferson vowed we must have, a set of comparatively little States, bickering among themselves about privilege and precedent, jealous of one another, and for the most part rivals only in aping England or Europe. Then, with the acquisition of Louisiana we began to be Americans; we had acquired a true center of national gravitation, the Mississippi River.

In his glorious old age Jefferson's thoughts often turned with delighted contemplation to the westward course of American empire, and he lingered with fond expectancy upon the future of the dwellers in the grand area drained by the Mississippi. "They are our sons and daughters," said he. "God bless them ever."

From the Mississippi's far reaches through its mouth across the Gulf of Mexico to the Isthmus of Panama must run a stream of commerce which will traverse the canal.

A Latin-American historian, one of the brightest of his race, F. Garcia Calderon, recently wrote:

> The canal sets a frontier to Yankee ambition; it is the southern line, the "south coast," of which a North American politician, Jefferson, used to dream. As early as 1809 he believed that Cuba and Canada would become incorporated States in the American Union, in the immense confederation. Anticipating the rude lyrics of Walt Whitman, he dreamed of founding an empire of liberty "so vast the like has never been seen." Heirs to Anglo-Saxon genius, the Americans of the north wish to form a democratic federation. They have succeeded in doing in Cuba what Japan has done in Korea; first, the struggle for autonomy, then the necessary intervention, then a protectorate, and perhaps next annexation. Thus the prophecy of Jefferson will be realized.

Humboldt, as soon as he had visited the New World in 1804, said of the destined Isthmian Canal:

> The products of China will be brought more than 6,000 miles nearer Europe and the United States; great changes will take place in the political conditions of eastern Asia, because this tongue of earth (Panama) had for centuries been the rampart of the independence of China and Japan.

The "great changes" have already set in, and mightier are yet to come. With the operation of the canal and commerce from the great American intercontinental river system converging for passage into the Pacific, bound for our western coast ports and distant oceanic and oriental marts, with this new route for international trade opened, what wondrous changes may not be wrought in the fortunes of mankind. China, Japan, India, the Philippines, Oceania, New Zealand, Australia brought thousands of miles nearer to our own and Europe's greatest shipping ports and centers of civilization would inevitably quicken human interests and universally stimulate human energy.

There will be no surer, stronger factor in this enlivening of human progress than that furnished by the life-giving commerce of the world's granary, the Mississippi Valley.

Is it any wonder, then, that the navigation and control of the Mississippi River is a perennial national problem in the United States? If there be one practical theme of common concern to enlightened Americans, to men of all political parties, it is this. The three great political parties at their national conventions two years ago, political parties which alone have representation in Congress, have vied with one another in emphasis of declaration for the improvement and maintenance of navigation of the Mississippi, the construction of an adequate system of levees, and the prevention of floods. It is recognized as a national problem, because the river is a national possession, with levees of interstate extent of necessity, and liable to overflows of waters pouring from the highlands of many States, inflicting national disaster. The Mississippi's transcendent importance as a great continental inland highway of commerce has been recognized all over the world ever since De Soto first looked upon the sweep of its majestic waters.

It is no novel proposition, no new thing that the Mississippi River imposes a continuous national problem. Jefferson's great idea was to get possession of the river. Having got it and learned something of what it was, American statesmanship took heed of the problem it presented. President John Tyler, in his message of 1844, June 11, declared of the river:

> It belongs to no particular State or States, but of common right, by express reservation, to all the States. It is reserved as a great common highway for the commerce of the whole country. * * * The United States, therefore, is charged with its improvement for the benefit of all, and the appropriation of governmental means to its improvement becomes indispensably necessary for the good of all.

Col. Thomas Hart Benton, the Pericles of the golden age of American statesmanship, lived in one of the greatest States on the Mississippi. He never saw the river, never crossed it, never thought of it, that his far-piercing intellect did not apostrophize the Mississippi. The following is an extract from a letter of his to the Chicago convention of 1847:

> Wonderful river, connecting with the seas by the head and by the mouth—stretching its arms toward the Atlantic and the Pacific—lying in a valley, which is a valley from the Gulf of Mexico to Hudson Bay—drawing its first waters not from rugged mountains, but from a plateau of lakes in the center of the continent, and in communication with the sources of the St. Lawrence and the streams which take their course north to Hudson Bay—draining the largest extent of richest land, collecting the products of every clime, even the frigid, to bear the whole to a genial market in the Sunny South, and there to meet the products of the entire world. Such is the Mississippi. And who can calculate the aggregate of its advantages and the magnitude of its future commercial results?

John C. Calhoun, opposed as he was, on strict constitutional constructive grounds, to internal improvement by the Government, in 1845 had recommended in a report to Congress an appropriation to build embankments to protect lands on the river from overflow.

Henry Clay, who never overlooked the interests of the great valley, suggested that its people would rise "en masse and tumble down your little hair-splitting distinctions about what is national and demand what is just and fair on the part of this Government in relation to this great interest. The Mississippi River, with its tributaries, constitutes part of a great system, and if the system is not national, I should like to know one that is national."

President after President has recognized the river's national scope and the national obligation due.

The old policy of river and harbor appropriations biennially or at longer intervals was a serious mistake of public conduct. The appropriations were inadequate, and consequently the public work was insufficient and inefficient. The too meager appropriation was often money wasted; it was a kind of foolish extravagance. It was like tossing gold and silver and currency into the flood as it raged on its destructive way. For these appropriations at long intervals were most flagrantly inadequate as provided for the Mississippi River, not so much in items for the improvement and maintenance of navigation as in the failure to provide for the control of the waters by the construction of an impregnable levee defense. The intervening years without appropriation by Congress witnessed the might of the waters undoing the work of previous appropriations. The flood demon was no respecter of the convenience of Congress, was reckless of policies and of the preachments of national economy. Yet, strange as it may seem, he had allies among human beings here among us in the demagogue and in a fatuous or ill-advised press. It was not until public opinion convinced Congress that annual appropriations was the wisest and, in fact, the necessary policy, not only for the improvement and maintenance of navigation but for the control of the river, that the waste was stopped and any material good accomplished, and it was recognized as a national project.

The States on the lower river had been struggling, unaided, without cessation against the ruthless enemy, while Congress was doing nothing. It was this waste and extravagance in the years that Congress furnished no help until disaster woke it, and then only to supply insufficient appropriations, resulting inevitably in frittered funds, futile talent, and vain energies. This pennywise folly provoked for river and harbor appropriations, and very naturally, too, the epithetical condemnation of "pork-barrel" legislation; it engendered suspicion and hostility outside of the Mississippi Valley, titillated pert paragraphists into saucy quips and grim jokes, and uninformed editors of provincial metropolitan newspapers of the East were kept busy upon a series of sarcastic and contumelious diatribes. Since its commencement, five years ago, the wisdom of the annual appropriation policy has been convincingly demonstrated and justified.

Floods have menaced always, and will always imperil, the integrity of the channel of the Mississippi and the homes and lives of the people on both its banks. This is so, year in and year out, that this enemy is to be contended against, an enemy far more persistent and dangerous than any foreign foe we ever had to face.

Since the Revolution we have had the War of 1812, the war of 1846–48 with Mexico, the great war of 1861–65 between the States; the War with Spain, just a part of 1898, followed by the Filipino insurrection, 8,000 miles away; and numerous little wars with Indians, whose prosecution required action of but a fractional part of our regular land forces. I need not give figures of what these few wars cost since the successful close of our war of independence, 132 years ago. The informed imagination will take care of the statistical idea. It is enough to say that by liberal annual appropriations we have taken good care of our military establishment. We have, indeed, strained every point to keep our Army and Navy up to date, ready, and equipped to meet any possible enemy at any possible time. Hundreds of millions of dollars are annually appropriated for our man-killing machinery, to say nothing of the billions that have gone for pensions, war claims, and the like. What pittance we have spent to protect property, to preserve life from a huge, ever-present menace, is a mockery of our national intelligence and a reproach to our national sense of humanity. For this flood demon and his devastating army of waters in the highlands of the States of the upper valley and in the fastnesses of the western mountains are ready every year to descend, with reinforcements from the whole drainage area of the river, upon the lands and people of the lower valley, and, unresisted, or inadequately opposed, spread destruction, desolation, and death. Out of the flood, plague, pestilence, and famine are left to garrison the melancholy sites of once happy homes and prosperous towns.

I believe in the Providence of God, the meaning of whose dispensations we may never perfectly know, that all affliction, all disaster, all calamity, whether to persons or nations, was designed to give mankind the lessons of experience. We know how swiftly travels bad news; we know it never failed to write its tragic story in the chronicles of men, preserving the treasures of experience for the heirs of all the ages.

I have thought this at the news of every flood on the Mississippi, as I did when the roaring waters wrought awful havoc in the Ohio Valley in the spring of last year. Had those Ohio torrents been joined to such floods from other parts of the Mississippi's drainage domain as have in recent years broken through the levees, there would have been disaster such as would have appalled the world.

> Sweet are the uses of adversity,
> Which, like a toad, ugly and venomous,
> Wears yet a precious jewel in his head.

Shakespeare did not need to say the "precious jewel" is experience. In the building of an adequate system of levees we have not only a common-sense dictated obligation to commerce and the general welfare, but a higher obligation, a moral obligation. We set out to improve navigation and to confine the waters in such way as to keep the channel unbroken, building levees and revetments. That is the business part of the proposition. Next is the moral obligation. No public work, however beneficent, should be undertaken and permitted that

does not guarantee that it shall be so constructed that property and life shall not be endangered thereby. The flood is the great enemy of progress to a large proportion of our people.

The Chinese built, more than a thousand years ago, a wall around the vast domain of their Cathay to fortify against their enemies. I would build a wall, if necessary, to hold the hostile floods where they would spend their might in dredging and scouring the bed of the Mississippi from Cape Girardeau to the deep waters of the Gulf, for within that extent of river reach, spreading from either bank, and subject to overflow, lie lands than which there is none richer in the world, none so near to profitable markets, none so versatile of production of necessities for the sustenance and luxuries for the enjoyment of mankind.

Much as this may mean for the future prosperity of the country, with the reclamation of the 16,000,000 acres of marvelously fertile lands that are subject to inundation, it is a minor consideration to the moral obligation of protecting lands already occupied, cultivated, and improved. Ever since the policy of annual appropriation was initiated there have been floods that have destroyed property and fortunes and lives worth more than all that has ever been spent upon the Mississippi.

We are appropriating this year, without an item in anticipation of hostilities with Mexico, $243,000,000 for our Military Establishment—$101,000,000 for the Army and $142,000,000 for the Navy. There is also $169,000,000 for pensions. The entire river and harbor bill, as it is pending, provides a little over $40,000,000, of which about $7,000,000 or $8,000,000 is for the Mississippi River. The amount given the Mississippi is less than we are spending for the construction of a single dreadnaught, or superdreadnaught for the Navy, a thing that with the advancement of naval war science and the achievement of genius in aeronautic invention, may in a year or two become obsolete and lapse into just so much for the junk heap. Levee fortification against floods is meant to endure, to save life and property from forces that will remain hostile while rains fall and waters flow.

With all our national boasting about our progress, when we are reminded of what we have done in recognition of the Mississippi River as a national institution, we must confess we are behind the advancement of other nations—nations inferior in wealth and resources. One city alone in the Argentine Republic, Buenos Aires, has just spent $83,000,000 improving her harbor, already nearly 25 feet deep, on the Rio de la Plata. On the same river, where it is half a hundred miles across, Montevideo, the capital of Uruguay, is spending $17,000,000 for harbor improvement. At Rio de Janeiro, where the harbor is one of the finest in the world, they have spent $100,000,000 for sanitation of the city and the land environing the harbor. And, strange as it may seem, the genius of our surgeons in Cuba and Panama taught them what to do to make their great ports immune from yellow fever. One hundred million dollars for preserving the health of one city in Brazil, and we doling a pittance to save life and property in the vast Mississippi Valley!

CHAMP CLARK.

The Swedish-American.

EXTENSION OF REMARKS

OF

HON. CHARLES A. LINDBERGH,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 10, 1914.

Mr. LINDBERGH. Mr. Speaker, at Ottumwa, Iowa, on June 24, 1914, Hon. C. O. LOBECK, a distinguished Member from Nebraska, made a speech on Swedish immigration to the United States. The speech, though brief, contains valuable statistics and information. It is certainly entitled to permanent record for use as reference. It is as follows:

"The Swedish-American, of whom I shall speak mainly to-day, has only been a factor in the immigration to our country for the last 65 years. The first important settlement in the United States during the nineteenth century was the Bishop Hill colony, in Henry County, Ill., 1845–46, and the Kassell settlement at New Sweden, Iowa, in 1846. It is true that in 1638 a Swedish colony was located on the west banks of the Delaware on the present site of the city of Wilmington, extending north to Trenton Falls. The Swedish settlers of that period lived peaceably with the Indians and prospered fairly well. Had Gustavus Adolphus, King of Sweden, lived, I have no doubt that he would have given the pioneers the support they needed, and their colony would have been a success. The succeeding Queen and King of Sweden were too busy attending to their European troubles to aid them, and the people of the colony could not defend themselves properly, and the settlements were taken over by the Hollanders. Their story is most interesting. They built churches and schools. The churches built by these pioneers still stand in Wilmington and Philadelphia, revered and protected.

"These Swedish colonists on the Delaware were a brave people, an industrious people, a peaceable people, and they lived in harmony with the Indian tribes with whom they neighbored. They believed that all men are created equal, so when the colonists declared themselves independent of British rule, we find among the signers of that noted document, the Declaration of Independence, the names of John Morten, of Pennsylvania, who had much to do with bringing Pennsylvania into the fold; John Hanson, of Maryland, another descendant of this Swedish colony, who during the time of the Revolution was one of the distinguished citizens of Maryland, and who was elected President of the First Colonial Congress in 1781. The State of Maryland has honored his memory by placing a bronze statute of him in the Capitol of the United States.

"Many instances are related of these pioneers and their descendants, and it is said that a man of Swedish ancestry rang the Liberty Bell when the Declaration of Independence had been signed, giving notice to the world that a new nation had been born and that a new era in the history of governments had had its commencement and destined to be the forerunner of a great nation, whose influence has been felt throughout other republics and the entire world.

"The descendants of this colony have made good and became leaders of thought wherever they located. In the Colonial States we find the names of the Bayards, of Delaware; the Swansons, of Virginia, who can trace their ancestry back to this settlement on the Delaware.

"I presume one of the reasons I am invited to speak here to-day is because years ago, in Illinois, my father had the good sense to propose to a Swedish lady, and like the good woman she was she showed her good judgment by accepting in marriage a man of whom any son might be proud. He was an honor to himself and a leader in every community in which they lived. For over 40 years he walked hand in hand with as pure a woman as ever lived. They lived among the Swedish-Americans, shared in the progress of these people, sympathized with them in their reverses, and rejoiced with them in their prosperity.

"The Swedish-American has been an important factor in the development of this Nation from the earliest history. From the very first history shows that the Scandinavian has been closely associated with America. History and tradition tell us that the Viking trod on America's soil. In every portion of this great Nation, from the Atlantic to the Pacific, from the Lakes of the North to the Gulf of Mexico, and from California to Alaska, the Swedish-American has made his presence felt. Not content with the United States, he has invaded Canada to the north, and I have been reading the later-day journals and in the daily press that even in far-off Asia the advice of Swedish engineers and skilled mechanics is being largely sought for.

"The sons and daughters of the north have a happy disposition, coupling therewith a quiet determination that brooks no resistance, and they succeed wherever they go.

"The history of Scandinavia is one of romance, poetry and rich literature, and of honest yoemanry and womanhood. A people loving peace, but brave in war; a people believing in freedom of thought and good government. To-day Sweden ranks as one of the leaders among the nations for good government, a monarchy in form, but a republic in its legislative and administrative functions.

"These people are careful tillers of the soil. Great mechanics, wood and metal workers, and their schools and universities are of the best. No wonder, therefore, when these people came to America to find and make a new home in a new country that they were manifestly fitted to take up this new work. The first farming settlements of Swedish-Americans in the last century were in the Bishop Hill colony, Ill.; the Andover settlement in Henry County, and in Victoria, Knox County, Ill.; and the Kassell settlements in Iowa.

"Later the settlements spread into other parts of Illinois, Iowa, and Minnesota until the Civil War in 1861. After the Civil War they extended their settlements into the Dakotas, Nebraska, Kansas, and the far West.

"The story of Bishop Hill colony is very interesting. These colonists were a great company, and, under the leadership of Eric Janson, withdrew from the State church in Sweden and decided to come to America, where they thought they would have more freedom to worship God in their own way. Most of these people came from the Province of Helsingland, Sweden. The journey to America, its long, tedious trip in sailing vessels across the Atlantic, and the journey through the States to western Illinois was a story of hardships we can scarcely understand to-day.

"The land on which they settled in Illinois was of the finest in the country, and the improvements made there by these pioneers and their descendants are of the highest class.

"A few miles west of this settlement was the village of Andover, settled by New Englanders in 1835. This village of Andover became historical in the history of the Swedish-American. My people arrived there in 1849 after a three-months' journey, having been seven weeks in crossing the Atlantic in a sailing vessel, the bark *Charles Tottie*. Arriving in New York, they proceeded on their way to their destination, via the Great Lakes to Chicago, from Chicago by canal to Peru, and thence by teams to their destination. I mention this fact because it was the best-known route at this time and used by immigrants until the railroads were built west to the Mississippi River.

"What these pioneer colonists and settlers suffered no tongue can tell; no language is adequate to express. For several years, from 1849 until 1854, Asiatic cholera played havoc among these people, leaving many motherless and fatherless families. In the company with which my mother's people came more than half of their number lost their lives from the dreaded disease.

"The first Swedish-speaking minister in the West was Rev. Jonas Hedstrom, of Victoria, Ill., coming from New York State in 1839 to the West several years before the Bishop Hill colony was located. He was an ordained minister in the American Methodist Church, but when the Swedish settlers came he began preaching in his native language. He was an able speaker, and with his familiarity with the English language, his charming personality, he was enabled to aid them in their struggles, in their privations, in their affliction by Asiatic cholera, finding homes for the orphans and homeless. He was a messenger of mercy, indeed, and he by overwork for his countrymen laid down the cares of life at an early age.

"In March, 1850, the first Swedish Lutheran Church in the West was organized by the Rev. L. P. Esbjorn in my parents' home. Rev. Esbjorn was an able man and an excellent organizer; he was helpful to the early settlers, and is lovingly remembered. The first Swedish Lutheran Church building west of the Alleghenies was built at Andover, and is still carefully and lovingly preserved by the descendants of these early pioneers. To this church Jenny Lind, the queen of song, gave a thousand dollars.

"The home in which I was born was built in 1836 under the orders of a Capt. Mix, living on Long Island, and the place was originally known as the Capt. Mix place, but later more familiarly known as the Lobeck home, and was the destination of many of the immigrants then coming to America. Being directed there because my father was able to speak several languages fluently, he therefore could be of assistance to the early pioneers.

"Time forbids my going into the details of these western settlements in Illinois, Michigan, Wisconsin, Minnesota, and the Dakotas, as well as Iowa, Nebraska, and Kansas. While the Eastern States did not receive a large percentage of the Swedish immigration from 1850 to 1880, most of the immigrants going west, since then the Eastern States have received a large immigration. Knowing this, I was not surprised when I read the census reports for 1910 and noted the wonderful increase. I find in 1910, according to the census reports, that there were in the United States Swedish population born in—

Sweden	665,207
Children born of Swedish parents or of one Swedish parent and other native	669,032
Total	1,334,239

Persons in the United States born in Sweden.

"I find these figures very interesting.

"With this short résumé of history comes the question, Has the Scandinavian made good in this country? Is he making good, and will he continue to make good in the future?

"He has made good.

"First, as a tiller of the soil. The Swedish pioneers coming to the West found a soil rich in nature; they had but little means.

working at such employment as they could get. They were in a strange country, hearing a strange language, everything strange and new; but with untiring and persistent energy they turned the virgin soil to the sun, sowed and planted the seed, and with such meager tools as they had at hand cared for it and waited until the harvest, and they prospered. When they came to this land they had little or no money with which to build homes, so they built the log cabin and the sod house, which sheltered them and their loved ones; but they were not satisfied with these rude types of shelter, and later built modern homes for their families and replaced the sheds with barns to provide comfortable shelter for their live stock and machinery. Their knowledge of mechanical tools was of great help to them. The traveler can tell the Swedish-American settlement by the high character of their improvements.

"In the mining and lumber industries they have prospered. The history of the great lumber camps of the Northwest would not be complete if the names of these Swedish-Americans were not mentioned.

"Go through the copper and iron mines of Michigan and Minnesota, the silver and gold mines of the Rockies and California, you will find that the Scandinavian miner is sought for because of his skill.

"As laborers in every line they have made good. They are intelligent, painstaking, careful, and industrious, and have proven themselves faithful employees. As to mechanics, the Scandinavian is a natural mechanic in metals, and as carpenters they are skillful, as cabinetmakers they are of the best. To-day the great construction firms of the country employ Swedish artisans of all kinds—engineers and draftsmen—because of their recognized ability in construction lines.

"If you will go through the manufacturing plants of the New England States, the Middle States, States like your own, in great cities, such as New York, Boston, Brooklyn, Pittsburgh, Cleveland, Chicago, Rockford, Rock Island, Minneapolis, Kansas City, and Omaha, you will note that the inventive genius of the Scandinavian is everywhere recognized. One of the greatest inventions of the age—the Brown corn planter—manufactured first at Galesburg, Ill., was invented by a Swedish boy on a farm near Galesburg. The first chilled-steel plow was the invention of Freeburg, of Moline, and the most valuable feature of the voting machine was perfected by Sjoberg, of Omaha.

"John Ericsson, who with Edison, Bell and Morse share honors with the inventors of all ages, was of Swedish birth, and was one of the greatest inventors of the nineteenth century. He excelled in inventive genius. I was reading a short time ago that he constructed the first locomotive that would make a mile a minute. The first successful application of steam to propel vessels was his invention. As a boy he constructed hydraulic pumps of all kinds. The first iron war vessel of our Navy—the *Michigan*—was constructed by him in 1841. This iron war ship still plies on the Great Lakes. The victory over the *Merrimac* in the Civil War by the *Monitor* is so well known by every schoolboy that I need not say that it was Ericsson's invention. His wonderful ideas have revolutionized the construction of the navies of the world. I might mention a great many more instances of the inventive genius of the Scandinavians, but time will not permit.

"EDUCATION.

"The education of the Swedish people is of the best, and every child endowed with common sense can read and write. The schools of Sweden are of high type. Its universities are recognized standards the world over, so it was but natural when they came to this country that they should send their children to American schools, where they could imbibe American patriotism and learn the language of their adopted land. They not only sent their children to American schools and colleges, but they have erected and endowed universities of their own throughout Illinois, Minnesota, Iowa, Nebraska, Kansas, and on the Pacific coast. And as I look over the names of the graduates of our world-renowned colleges, such as Harvard, Yale, and the others, I find the name of the Swedish-American in every branch of learning—the law, the ministry, and professions of various kinds. If you want to find a good mathematician, look for the Swedish-American. If you wish a high-class civil engineer, send for a Swedish-American. In fact, in every avenue of learning the Swedish-American has always been at the front in the march of progress.

"RELIGION.

"One of the greatest attributes to the success of the Swedish-American is the fact that they are a religious people. As a nation they stand high in the religious world. When they came to this country of ours they brought with them the Bible, the catechism, the hymn book, and the minister to preach them the teachings of the Nazarene; and we find throughout this land to-day their churches of all denominations, their homes for the homeless, the infirm, the old, little children, and their hospitals of mercy; and, I believe, according to their number, they are doing as great a work as any people in the land.

"MUSIC.

"The Swedish-American loves music, and through the country, in the large cities, in their colleges, they have their great musical choruses. They sing at their firesides as well as at public gatherings; and no nation has given better song to the world than Sweden; and Jenny Lind and Christine Nilsson enthused America with their charming voices.

"PATRIOTISM.

"The Swedish-American population of this country has proven true to the flag. He loves the Stars and Stripes. While naturally he cherishes the colors of old Sweden, yet he loves the flag of his adopted land more. I can remember when but a boy, and the call for volunteers came through the voice of the immortal Lincoln to go forth in battle that this country might be a united one, that the Swedish boy barely old enough to go, the Swedish man of mature years answered this first call and answered every call to preserve the Union. It is said that in Illinois one out of every five Swedes old enough joined the Army to defend the flag. Company C of the Forty-third Illinois, raised principally in my own home village, which I well recollect, sent its Nortons, Andersons, Klings, Ericsons, Petersons, and Carlsons. I knew personally many of them in the Fifty-seventh Illinois, under command of Capt. Forse and Capt. Eric Johnson; there were Swedish boys in the One hundred and twelfth Illinois (the Henry County regiment) and Silversparres Battery. Minnesota, under Col. Hans Mattson, sent hundreds to the front. No braver soldiers fought side by side with the sturdy German, the brilliant Irishman, the hardy Norwegian, and the native-born American at the Battles of Shiloh, Corinth, Murfreesboro, Vicksburg, Chickamauga, Resaca, Atlanta, and Nashville. They served under generals like Grant, Sherman, Thomas, Sheridan, and Rosecrans and the other great leaders.

"The story of the First Minnesota, in which Scandinavians took part in the memorable charge at Gettysburg will never be forgotten. Many of these brave men never came back to tell the story, but as we heard it from the lips of their comrades, we know they fought and fell as patriots—as Swedish-Americans can do. In the Navy, he did his work as a sailor, and directed his guns right under the orders of a Dahlgren, and Yankee Swanson was Admiral Farragut's right-hand man at the guns.

"AFTER THE WAR.

"When the Civil War was over and they came back to their homes, they adapted themselves to local conditions as farmers, merchants, and mechanics, and as true Americans helped make this country blossom like a rose.

"In the Spanish-American War they demonstrated that Swedish-American patriotism still lived, and did their duty as true soldiers; and at Vera Cruz, Eric Stream, of Brooklyn, gave his life in defense of his country.

"POLITICS.

"The Swedish-American is active in political lines, and we frequently find in the Northern and Western States, where they have been elected as city and county officials, members of legislatures, as State superintendents of public instruction, as Members of Congress, and as governors. They have ever exerted their influence for public good. I might here mention Gov. John A. Johnson, of Minnesota, who, had it not been for his untimely death, might have presided over the destinies of this Nation; and in these later days we have Gov. John Lind, of Minnesota, intrusted by the President of this great Nation with one of the most difficult and most delicate situations of the hour.

"MERCHANTS—MANUFACTURERS.

"As merchants and manufacturers they are of high class. Go through the manufacturing centers of our country and through the stores in our large and smaller cities, and you will find that the Swedish-American is well represented. Where 40 years ago scarcely a Swedish name was seen over a store or factory, to-day they rank among our merchant princes and great manufacturers.

"FINANCE.

"They understand finance, and in all towns to-day we will find they control successful banks. In the city of Chicago, among the Swedish-American banks one has deposits that run over $30,000,000.

"LITERATURE.

"In the newspaper field their presence is felt, and more than 150 Swedish-American papers and periodicals are entered into our post offices as mailable matter. Among the renowned writers I might mention the late lamented Enander; and to-day we find editors like Henschen, Schon, and others.

"SUMMARY.

"The Swedish-American people have become thoroughly American. After once coming here to live and make their home, and after breathing the fuller freedom, while they love to visit the 'fatherland' they have no desire to return to the northland across the sea.

"While I have told of the achievements of the Swedish-American, it is fair to state the opportunity he has had to show his ability. 'America is a land of opportunity.' No other nation in the New World has developed like the United States. In this country men and women have greater opportunity to make a competence than in any other land. When in the last century the Swedish immigrant came to our country the Central and far West was undeveloped—large areas of richest soil uncultivated, railways to build, cities to build, forests to fell, mines to develop—where he could use his muscle, his skill, and brain. When he first came the candle was in use; now electricity turns darkness into day. Morse had just completed his first telegraph instrument, and Washington and Baltimore were connected by wire. Now we send messages of love and business around the world by wire or wireless. Then no telephone, now a household necessity, for a Bell and Marconi solved the problem in our day and generation.

"Railroad construction then in infancy; now we have best-equipped and greatest railway system of the world. Then the stagecoach; now the Pullman coach. Then street cars drawn by horses or mules; now driven by electricity. The immigrant came by sailing vessel to our shores; now the palatial steamships cross the seas.

"Wagons were pulled by oxen or horses, a spring seat being a luxury. Now the automobile, in every form, glides swiftly along. The balloon has given place to aeroplane.

"The farm implement was then the hoe, spade, brush harrow, the sickle, and the flail. Since he came here the cultivator, the corn planter, the mower, harvester, and thresher, implements of every description for up-to-date gardening and farming have come into necessary use. To the farmer's door is now delivered news of the world by mail or wire. Then a letter cost 25 cents to mail. Every line of manufacture has the latest improvements or can not succeed. Cities have grown up like magic, and my Swedish friends have had the opportunity to assist in their development.

"I have spoken in my own way and manner about the achievements of the Swedish-American. But what about his future? I have the highest hope for the future of the Swedish-American in this Nation. Those of us who in the early days of the pioneers were only afforded limited means of education know that our sons and daughters will have better educational facilities and be better fitted to meet life than we were. Where there have been great merchants in the last 10, 20, or 40 years, there will be greater ones in the next decades; where there have been good farmers in the past, there will be better ones in the days to come; where there have been great banks, greater ones will take their places.

"As I look into the future, I see the Swedish-Americans, a great people, true to their adopted country, true to the stars and stripes, true to everything that will help elevate mankind. In a word, a great citizenship who will, under the providence of God, help make this the greatest Republic in the world, a prosperous Nation, a leader for better Government among the nations of the earth."

Tariff and Wheat Prices.

EXTENSION OF REMARKS

OF

HON. HALVOR STEENERSON,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 16, 1914.

Mr. STEENERSON. Mr. Speaker, during the debate on the Agricultural appropriation bill a few weeks ago I took occasion to discuss the relation of tariff to domestic prices of farm products, and especially to point out that in a commodity like spring wheat, of which we ordinarily produce only enough to supply the domestic demand, the home price usually exceeds the export price of similar grades by nearly the amount of the duty. I quoted figures tending to show that this premium over the export value of hard spring wheat, which had been paid to our northwestern farmers in the past, was due to the protective tariff, which excluded the spring wheat of western Canada from our markets. This premium, running as high as 24¼ cents in some years, was almost entirely wiped out by the threatened Canadian reciprocity of 1911, and has since been greatly reduced by the Democratic tariff policy.

Since I made those remarks the discussion has continued, and our Democratic friends still insist that the Republican protective duties on farm products did not enhance their domestic price, and that this is proven by the fact that prices in 1914, after the Underwood law, are higher than in 1913, when the Republican law was in force. My colleague [Mr. HAMMOND], for instance, quotes prices at St. James, Minn., in his district, showing that March 7, 1913, corn was 36 cents per bushel, while March 6, 1914, it was 50 cents, and potatoes were worth 35 cents per bushel March 7, 1913, as against 75 cents per bushel March 6, 1914, and so through a long list of farm products, the duty on which has been either greatly reduced or entirely removed by the Underwood law. The argument deduced from this is not that the lowering or removal of the duty has caused the higher prices, but that it proves that local prices are independent of the tariff and rise and fall without regard thereto. Mr. HAMMOND says:

> It matters not to the farmer, when he hands his wheat to the elevator and receives his pay for it, whether that wheat remains in the United States or goes out of the United States, there is always a market somewhere for the staff of life.

He goes on to show that importations of potatoes under the new law were less last year than the year before under the old law, and argues from this that the tariff does not affect the market price here. The answer to this is that in a year when our domestic supply of spring wheat or potatoes is so large as to greatly exceed our demand, then his reasoning will apply, because then prices will tend to fall to an export basis; but whenever the domestic production is only about sufficient for the demand, then it will not apply, and domestic prices will tend toward the general or world prices, with cost of transportation and duty, if any, added.

To support the argument that the tariff has nothing to do with wheat prices, my colleague [Mr. HAMMOND] called attention to the fact that prices were higher in 1914 (crop of 1913) than the year before (crop of 1912). But to clear up the specific issue, the effect of the tariff on the price of spring wheat in the Northwestern States, we must take into account all the factors that go to influence prices, both local and general. The total wheat crop of 1913 was 524,000,000 bushels of winter and 240,000,000 bushels of spring, or a total of 764,000,000 bushels, whereas the crop of 1912 was 400,000,000 bushels of winter and 330,000,000 bushels of spring, or 730,000,000 bushels in all. It will be noticed that last year's spring-wheat crop was small and the year before it was the largest in history. I insert here a table of production:

UNITED STATES WHEAT CROP.

Final estimates of the wheat crop and acreage of the United States, by years, made by the Department of Agriculture, were (hundreds omitted in acreage and thousands in yield):

	Acres.			Bushels.		
	Winter.	Spring.	Total.	Winter.	Spring.	Total.
1913	31,699	18,485	50,184	524	240	763
1912	26,571	19,243	45,815	400	330	730
1911	29,162	20,381	49,543	431	191	621
1910	27,329	18,352	45,681	434	201	635
1909	28,330	18,303	46,723	446	291	737
1908	30,026	17,531	47,557	438	227	665
1907	28,405	16,800	45,211	409	225	634
1906	29,951	17,355	47,306	493	242	735
1905	29,983	17,872	47,854	419	273	693
1904	27,031	17,044	44,075	325	228	552
1903	32,510	16,954	49,465	402	236	638
1902	26,657	19,545	46,202	363	307	670

Figures for 1911 and 1910 revised to accord with census.

With such an extraordinary amount of spring wheat in 1912 it is plain that, as we could not use quite all but must export some, the price must fall to nearly an export basis, which it did, but that was only a temporary condition. I will also insert tables showing the prices at Winnipeg and Minneapolis, and ask my readers to compare the amount of the premium at Minneapolis over Winnipeg with the spring-wheat production

for those years in the United States, and it will show that when spring wheat is scarce in the United States the tariff has raised the price to the farmer nearly the amount of the duty, and when production has been the highest the premium has nearly disappeared. I have also cut from the Weekly Northwestern Miller the daily quotations in the principal wheat markets of the United States and Winnipeg for the three principal crop-moving months of October, November, and December for the years 1910, 1911, 1912, and 1913, and submitted them to the Department of Commerce to compute the averages, which I here insert:

DEPARTMENT OF COMMERCE,
BUREAU OF FOREIGN AND DOMESTIC COMMERCE,
Washington, March 16, 1914.

Hon. HALVOR STEENERSON,
House of Representatives, Washington, D. C.

MY DEAR SIR: The clippings from the Northwestern Miller, showing quotations on wheat, which you submitted to the bureau several days ago, are returned herewith, together with a table giving average prices of December, May, and cash wheat for the last four months of 1910, 1911, 1912, and 1913, respectively, in the various markets specified.

* * * * * * *

Very truly, yours,

A. H. BALDWIN, *Chief of Bureau.*

Wheat prices.—Averages of closing prices of December, May, and cash wheat at the principal markets during the last three months of the years specified in cents per bushel.

[Compiled by the Bureau of Foreign and Domestic Commerce, Department of Commerce, from quotations published in the Northwestern Miller.]

	Minneapolis.	Duluth.	Chicago.	St. Louis.	New York.	Kansas City.	Winnipeg.
December wheat:							
1910	102.81	104.32	92.41	94.18	99.32	91.04	92.15
1911	105.12	104.70	96.28	96.47	100.60	98.66	95.72
1912	84.32	84.52	88.38	90.28	96.10	83.31	82.77
1913	82.98	83.61	86.625	88.07	95.45	81.78	82.11
May wheat:							
1910	106.47	107.91	97.74	98.785	104.22	95.12	96.02
1911	109.12	108.40	101.22	101.02	105.58	100.76	99.04
1912	89.38	89.28	93.52	94.37	99.88	88.04	87.28
1913	87.665	88.09	90.74	91.88	98.08	86.85	87.66

	No. 1 northern.			No. 2 hard.	No. 2 red.	No. 2 hard.	No. 2 red.	No. 1 northern.
	Minneapolis.	Duluth.	Chicago.	St. Louis.	St. Louis.	Kansas City.	Kansas City.	Winnipeg.
Cash wheat:								
1910	104.53	104.67	107.08	97.03	97.87	94.665	95.07	94.35
1911	105.83	105.10	109.55	103.87	97.73	102.97	97.92	98.33
1912	85.26	85.12	90.09	90.41	106.72	86.56	101.30	84.75
1913	84.83	85.19	89.66	89.40	93.95	85.61	89.29	82.37

I invite comparison particularly to the prices in Minneapolis, Winnipeg, and New York, bearing in mind that if we are on an export basis the New York price ought to be at least 15 cents per bushel higher than Minneapolis, for it costs that to haul the wheat to the seaboard. It should also be borne in mind that the Winnipeg price means wheat delivered in elevator at Port Arthur or Fort William on Lake Superior, and that it is on a parity with wheat in elevator at Duluth, so far as reaching the foreign market is concerned. The Winnipeg grades are a little stiffer than the Minnesota grades, so that when the price is the same at Minneapolis, Duluth, and Winnipeg, it is really lower by a cent or two at the latter place, because the wheat called for is a little better than what would pass in Minnesota.

I submit that an examination of the figures in these tables will convince any open-minded person of the correctness of the claim that we Republicans have made—that the duty on wheat has in the past enhanced the farm price of spring wheat by a premium of from 1 to 24 cents and on the average by about 12 cents per bushel. The same reasoning will apply to barley, rye, oats, flax, and other grains, as well as to potatoes. I contend further that the present Democratic tariff is nearly useless for protection so far as wheat and potatoes are concerned. The present law, as I stated in my first remarks, places wheat and potatoes on the free list, with a clause that 10 cents a bushel shall be imposed on wheat from any country imposing a duty on our wheat, and 10 per cent ad valorem on potatoes coming from a country that imposes a duty on our potatoes. This so-called countervailing duty can be removed at will, without notice, by any foreign country that chooses to do so by simply enacting that our wheat and potatoes may come in free into that country. This makes it uncertain how long the duty will remain; and a miller who buys a supply of wheat for future manufacture must make allowance for this uncertainty, and hence a lower price will prevail. In this manner even the slight benefit that the farmer might otherwise derive from these low duties is almost entirely taken away.

Minneapolis and Winnipeg prices and the advance of Minneapolis over Winnipeg prices, page 97 of Senate Document No. 849, Sixty-first Congress, third session, being message from the President of the United States transmitting, in response to Senate resolution of Feb. 23, 1911, a report from the Tariff Board relative to various commodities named in the proposed Canadian reciprocity measure.

Relative to the pending tariff bill and its probable effect upon wheat prices, Secretary John G. McHugh, of the chamber of commerce, has issued a statement giving the comparative prices for Minneapolis, Duluth, and Liverpool wheat, which shows, Mr. McHugh said, that the prices ruling in Minneapolis and Duluth are not made in Liverpool. The table follows.

Comparative prices of wheat.

First trading day	Minneapolis, No. 1 northern, delivered.	Duluth, No. 1 northern, track.	Liverpool. Future.	Liverpool. England, current prices.	Liverpool. United States equivalent.	Approximate cost to take wheat in store, Duluth, and deliver in store at Liverpool.

When the Ship Goes Down—Liability of Vessel Owners for Losses at Sea.

EXTENSION OF REMARKS

OF

HON. JAMES W. BRYAN,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 14, 1914.

Mr. BRYAN. Mr. Speaker, under authority granted by unanimous consent I extend in the RECORD the following article, which is well worth the careful consideration of every Member of this House:

WHEN THE SHIP GOES DOWN—LIABILITY OF VESSEL OWNERS FOR LOSSES AT SEA.

[Thomas I. Parkinson, Columbia University.]

If a New York-Chicago "flyer" leaves the track and plunges to destruction, carrying to death or personal injury its passengers and crew, our laws, both State and Federal, provide that the victims—the injured and the dependents of the killed—may recover their full damages out of the general assets of the railroad company. The railroad carrier is an insurer of the traveler's safety, and this fact is largely responsible for the economic argument in favor of railroad "safety first" campaigns.

What would now be said of an act of Congress providing that the liability of the company, if any, should be limited in amount to the value of the wrecked train as it lay at the bottom of the embankment plus the amount of the ticket money paid by its passengers?

Impossible as such a rule seems when applied to carriage by land, it states precisely the effect of the shipowner's limited liability laws enacted by Congress and constantly applied by our admiralty courts. For the frightful loss of life and property involved in the wreck of the *Titanic* the liability of the owner, under our laws, is limited to $90,000. This sum represents the amount of the pending freight money for the fatal voyage. Under the English law the owners of the *Titanic* are liable for nearly $3,000,000.

Victims of this disaster sought to have our courts apply the English rule in determining the amount of the owner's liability, and secured a ruling to that effect by Judge Holt in the district court; but the Supreme Court of the United States, in an opinion handed down May 25, declares that whenever our courts are resorted to for a remedy in such cases the limited liability rules established by Congress will be applied. Therefore, until Congress acts by repealing or amending these rules claimants in our courts can recover damages for ship accidents only to the extent of the value of the wreck and the pending freight. This is true even though, as in the *Titanic* case, the owner is liable under the laws of the country whose flag the ship flies, for a much greater amount.

Briefly stated, our law provides that if the owner surrenders the wrecked vessel and pays into court the pending freight he is relieved from all further liability. If the vessel is lost, he is obliged to pay only the pending freight. Insurance money payable to the owner for the loss of the ship is not available to the damage claimant. Therefore, where the vessel is lost or seriously damaged there can be no substantial recovery.

These rules are applied as well to inland river and bay navigation as to the Great Lakes, coastwise, and foreign trade. There is no need for further illustration of their operation. They are simple and subject to almost no exception. Their effect is to leave passengers, crew, and shippers without redress for losses by accident unless they have the foresight to insure themselves.

The laws of the United States are not peculiar in limiting the owner's financial responsibility. Practically all maritime nations have adopted the limited liability principle. It is a principle of public policy. The early Roman and common law knew no such limitation. It was developed in the Middle Ages and had become the settled law of continental Europe even before its incorporation in the Napoleonic Code of 1808. It was incorporated from an earlier statute into the English merchant shipping act of 1854. It was adopted in this country in 1851 by an act of Congress obviously based on the English statute, and it has been perfected as an instrument for the protection of the shipowners by subsequent amendment and judicial interpretation.

Though the principle of limited liability is now universally accepted, there are important differences in the nature of the limitation and its amount. Our laws are substantially in accord with those of France and Germany in permitting the owner to abandon the vessel and thereby escape all further financial responsibility. Great Britain, though limiting the owner's liability, early developed the rule that the limit should be the value of the vessel before the accident.

The importance of this rule may be appreciated when it is applied to a case like the *Titanic*. The value after the accident was nil; the value before the accident, in the neighborhood of $10,000,000. In 1862 England adopted a rule more definite, more easily applied, and at the same time more favorable to the owner, viz, that the liability should be limited to a fixed sum per registered ton of the vessel. Under this rule the owner is liable for £8 or £15 per ton of the vessel's tonnage, according to whether claims are for loss of property or for loss of life, or both.

Though our act of Congress was modeled on the English laws, its language was sufficiently different to justify our admiralty courts in interpreting it as limiting the owner's liability to the value of the vessel after the accident rather than immediately before. The result is that, under our law, the fate of the vessel practically determines whether claimants recover any substantial damages. Under the English law the owner's liability is not defeated or even affected by the fact that the ship itself is no longer available for the satisfaction of damages.

If a great shipowning country like England finds it wise policy to impose such substantial liability for losses at sea, it is difficult to understand why the United States, furnishing passengers and cargo rather than ships, should provide such comparatively inadequate financial responsibility to secure redress to shippers and the traveling public. The late Senator Rayner, in addressing the Senate on the occasion of the presentation of the *Titanic* report, said:

"No matter how many suits are brought in the State court, no matter how many suits may be brought in the Federal courts, the owners of that ship, no matter how able they may be financially to answer in damages, can go into the Federal courts, sue out an injunction, have a trustee appointed, bring the ship if it exists—of course, in this case the ship is gone—bring pending freight into court, and escape all liability whatever for injury to passengers, for injury to goods, or for any cause whatever.

"That is the statute that is now upon the statute books of the United States. It ought to be repealed or modified. There is no reason on earth why it should continue. When it was passed it was thought to afford an invitation to shipowners to take to the sea and risk the hazardous character of the adventure, but I apprehend there is no more danger on the sea now than there is on land; and if these statutes are not repealed there certainly ought to be some modification of them."

OLD LAWS—NEW CONDITIONS.

We are at present scrutinizing ancient rules of law and testing them from the point of view of their effect in operation as securing justice to the individual. Does this limited liability principle operate to secure substantial justice? Are modern conditions the same as those under which it was first developed? At that time shipping was generally carried on by merchants or independent owners. A single ship frequently represented an owner's entire business investment and limited liability was an encouragement to venture in the hazardous business of navigation.

Much of our modern shipping is carried on by extensive corporations, such as the North German Lloyd, Hamburg-American, and the International Mercantile Marine. These companies frequently invest heavily in a single ship, but that ship seldom represents a very large part of their entire capital. The loss of a ship like the *Titanic* is, of course, a matter of serious concern, but it does not involve the extreme hardships to which the loss of his single vessel subjected the owner in earlier times.

Moreover, the hazards of navigation have been greatly reduced through governmental activity in improving harbors, removing obstructions, marking channels, placing signals, making accurate charts, patrolling ice fields, and destroying derelicts. Wooden sailing vessels have been replaced by modern steamships. Voyages which took months have been reduced to days. General use of wireless telegraph, submarine signals, prescribed lanes, and the increase of speed bring steamships into closer communication and give to the shipowner a control over his vessel which, in so far as the prevention of accidents goes, is equivalent to that exercised by the operating department of a railroad over its moving trains. It can no longer be said that the control of the shipowner ceases when the vessel passes beyond the horizon.

These circumstances suggest for serious consideration the desirability of repealing the special privilege enjoyed by water carriers as compared with carriers on land. If repeal be unwise or impossible, it is at least possible and seems desirable to modify these laws as now applied in the United States so that, irrespective of the value of the vessel after the accident, there may be some substantial fund to which claimants may have recourse.

The adoption by Congress of the English rule has been advocated by the limited liability committee of the Maritime Law Association of the United States. The committee declares the change essential to work justice to the owner as well as to the passenger. Their report says: "A fixed rate per ton furnishes the nearest practicable approach to equality of responsibility among all vessels in performing similar services and for damage claims incurred in performing them."

This recommendation has not been urged upon Congress, and there are no bills pending to carry it into effect.

Conflict of varying rules, resulting from the fact that vessels enter territorial waters and become subject to the jurisdiction of several different nations, suggests the desirability of adopting by international agreement a uniform rule governing the nature and amount of the owner's financial responsibility, just as the London conference recently prepared such an agreement as to rules governing the construction, equipment, and operation of vessels in the interest of increasing safety at sea.

THE INTERNATIONAL AGREEMENT.

The problem has already received consideration at several diplomatic conferences, and a tentative draft of an international convention which substantially adopts the English rule has been prepared. It was expected that another international conference dealing with this subject would be held in Brussels in September, 1913, and an appropriation was made by Congress to pay the expenses of delegates representing the United States. Congressman MONTAGUE, of Richmond, Va.; Edwin W. Smith, Esq., of Pittsburgh, Pa.; and Judge Ward, of the Circuit Court for the New York District, were named as delegates from this country. The conference was postponed, however, and has not yet been held.

Prior to the conference an effort ought to be made to develop a public opinion respecting the questions of policy involved in reaching an international agreement. The interests not only of the shipowner and the cargo, but of the traveling public as well, should be represented. Agreements involve compromises. If the United States, Great Britain, France, and Germany, along with the other maritime nations, are to reach an agreement as to the rule which should in future be applied in cases like the *Titanic*, it is obvious that the position of the United States must be either to help France and Germany to compromise England down to the lower limit provided by these continental countries or to help England to compromise Germany and France up to the higher limit provided by the English law.

POLICY OF THE UNITED STATES.

If our delegates are to exercise any influence upon the terms of an international agreement they must fix upon a policy which the United States as a nation deems just and desirable from the point of view of owners, shippers, and passengers. Who is to determine what the policy of this country should be? Are our delegates to assume that existing acts of Congress represent our policy on this important subject, or is the State Department to determine the matter and instruct our delegates irrespective of existing acts of Congress?

Of course, there will be ample opportunity for full discussion of the terms of any agreement when it is submitted to the Senate for confirmation; but an intelligent discussion of the subject by Congress and the general public prior to the formulation of such an agreement seems desirable.

We have no Federal legislation fixing the liability of the shipowner for injury to or the death of a member of his crew. Under the rules applied by our admiralty courts the right of the seaman or his dependents to recover for his injury is extremely limited. The injured seaman is entitled to "maintenance and care, at least during the continuance of the voyage." After the termination of the voyage the disabled seaman or his dependent family can recover nothing for loss of earning power or support except in cases of actual negligence on the part of the owner, for the owner is not liable for the negligence of the master or crew.

Even in cases of the owner's actual negligence the claim of the seaman or his dependents is subject to the limitation of liability laws which permit the owner to abandon the ship to the claimants, and thereby escape personal liability. This means in cases of wreck that even where there is a right to recover there is no substantial recovery. In the *Titanic* case, for example, any judgment recovered by the crew or their dependents shares with other claimants the $50,000 to which, under the United States law, the owner's liability is limited.

Compare this with the laws of England, France, and Germany. In these countries seamen and their dependents are provided for in the workmen's compensation laws. The injured seaman or his dependent receives compensation irrespective of the circumstances under which the injury occurred, and also without regard to the limitation of liability enjoyed by the shipowner as to other claims.

Several bills providing a system of workmen's compensation for employees engaged in interstate transportation by land have been introduced in Congress, but none of these has provided for compensation for employees engaged in interstate or foreign transportation by water. Transportation by water is specifically referred to in but a few of our State compensation acts, and it is not yet settled how far this industry is within the scope of these acts, particularly as to injuries occurring outside of the State.

FEDERAL COMPENSATION.

The attorney general of the State of Washington has ruled that the compensation act of that State does not apply to vessels plying on navigable waters having an outlet to other States even though such vessels be engaged solely in intrastate commerce. Whether or not the State acts apply there can be no doubt that a uniform Federal rule is as desirable in the case of employees engaged in interstate transportation by water as in the case of employees engaged in interstate transportation by land.

It is difficult to obtain any statistics of accidents to seamen, but it is a matter of common knowledge that injuries to this class of labor are of frequent occurrence. In 1906, according to the report of the Census Bureau, there were 37,321 vessels of 5 tons or more operating under the United States laws. These vessels employed 140,929 persons, with an aggregate pay roll of $71,636,521. The figures for the last census are not as yet available.

Judge Alexander, for the House Committee on Merchant Marine, recently introduced a bill extending the jurisdiction of the Interstate Commerce Commission to water carriers engaged in foreign and interstate commerce, including our coastwise, Great Lakes, and inland river trade. This legislation, if enacted, will probably be a stepping stone toward the application to all transportation under Federal control of regulatory legislation affecting any part of such transportation unless clearly inapplicable. Irrespective of such a development, however, there is immediate need for Federal legislation extending the existing Federal employer's liability acts (or, if they be passed, the interstate railroad workmen's compensation acts) to employers engaged in interstate and foreign commerce by water.

If Congress passes a workmen's compensation act covering seamen, the problem of shipowner's liability so far as members of the crew are concerned will be entirely and satisfactorily solved. Under the English workmen's compensation act the shipowner is liable to the full extent of his resources for the limited sums provided in the schedule of compensation. Such an act in this country would dispose of all questions as to the nature, extent, and amount of the shipowner's liability. Instead of being limited to the amount provided by the forfeiture of a stated sum per registered ton or derived from the sale of the wreck and the collection of pending freight the seaman or his dependents would be entitled to recover from the general assets of the owner the compensation which the act provided for his case.

ACCIDENT INSURANCE.

This would result in making the owner's liability for injuries to his seamen a matter for insurance and would probably result, as it has done in the case of other employees, in forcing the owner to keep his seamen insured for the full amount of the compensation provided by the act. This is the fairest, most economical, and in the long run most satisfactory method of dealing with the owner's responsibility for injuries to his seamen.

Sick and disabled seamen are provided with care and treatment by the United States Marine Hospital, for which Congress appropriates nearly $1,000,000 annually. Formerly shipowners were required to contribute to the support of the hospital and were permitted to deduct the amount of the contribution from the seamen's wages. Later a tonnage tax was levied for its support, but now it is maintained solely by Government appropriation. This institution is excellent as far as it goes and may well form a precedent for the establishment of Government hospitals for sick and injured in other lines of industry; but it takes no account of loss of earning power or of support to which injury and death subject seamen and their dependents.

The freedom from personal or unlimited responsibility for his own and his agents' negligence enjoyed by the shipowner under our laws is not confined to his position as a carrier of passengers and an employer of seamen. The common-law exemptions from liability, such as an act of God or a public enemy, have been so expanded by our acts of Congress, and particularly by the Harter Act, that the owner is now under little or no liability for cargo losses. Not only is his liability for such losses limited in amount, but in the ordinary case he is entirely exempted from any responsibility for the loss.

These exemption laws and their development form one of the most interesting and important chapters in our admiralty law. A brief quotation from the hearings of the Senate Commerce Committee on Senator Nelson's bill to amend the Harter Act indicates the present state of these laws:

"The effect of the Harter Act has been constantly burdensome to American shippers ever since its enactment. The full force of its provisions has been made conclusive by court decisions. In practically all cases of damage or loss, whatever the actual facts may be, it is almost impossible to show that the shipowners have not used due diligence to make the vessel seaworthy and properly manned, equipped, and supplied, and it is almost always possible for the shipowners to allege, for the purpose of escaping liability, that the accident was due to faults or errors in navigation or in the management of the vessel."

Before the same committee Howard S. Harrington, a New York admiralty lawyer, said:

"I should like to say a word from the standpoint of a practicing lawyer to whom an American cargo owner comes whose cargo has been shipped on the vessel and the vessel has gone on the strand, and she, with her cargo, is a total loss in many instances as a result of gross negligence, and he asks what recovery he has. Under the existing state of law, with the Harter Act in force, we have to advise him that he has practically no recovery whatever."

READJUSTMENT OF LIABILITY LAWS.

Like the limited-liability laws, these exemptions from liability laws apply to all claims for damages made in our courts whether the vessel be American or foreign and whatever the nationality of its owners.

The readjustment of our laws respecting the owner's liability for cargo losses may safely be left to the shippers. But the readjustment of laws fixing the owner's responsibility for injuries to passengers and members of the crew calls for intelligent public discussion and organized public opinion.

The legislative changes suggested by the conditions described may be summarized as follows:

1. An amendment to our limited-liability laws similar to the English rule, increasing the owner's liability so that where the owner is liable the persons to whom he is liable may have recourse to some substantial fund irrespective of the condition or value of the vessel after the accident.

2. The enactment by Congress of a law authorizing the district courts in admiralty to entertain actions to recover damages for death, so that our admiralty courts may not in future be dependent, as they are now, on the existence of such laws in the State or country to which the ship belongs in order to give redress in death cases. Under our present Federal law the old common-law rule that an action dies with the person still obtains, and it is only by applying the State or foreign law that our admiralty courts can take jurisdiction of an action for damages for death at sea.

3. An amendment of the Harter Act decreasing the owner's exemption from liability for cargo loss.

4. The extension of the Federal employers' liability laws or future interstate railroad workmen's compensation laws to seamen on vessels in foreign, lake, coastwise, and inland river trade.

These extensions of the owner's liability, besides doing justice to passengers, shippers, and crew, would in all probability have an important indirect effect in preventing accidents at sea. Until a short time ago we were taught to believe that transportation on the water was comparatively safe compared with transportation on land. Lately a large number of serious accidents, involving great loss of life, have impressed upon us that there is much to be done to increase safety at sea.

Considerable attention has been devoted to the problem of increasing safety by governmental regulations respecting the construction, equipment, and operation of vessels. Senator LA FOLLETTE'S bill, directed particularly to improving the condition and efficiency of seamen, has been passed by the Senate and is pending in the House. The London conference has prepared a code of rules, which are recommended to maritime countries for adoption. The House Committee on Merchant Marine has introduced a bill based on this code.

No consideration seems to have been given, however, to the possibility of contributing to this safety movement by increasing the owner's financial responsibility for accidents when they occur.

The movement for prevention has been tremendously advanced by the employer's realization of the economic advantage to him of prevention and the economic cost of accidents. It is not probable that increased liability on the part of the shipowners will result in increased efforts on their part to devise ways and means of preventing losses. However effective governmental regulations may be, it can not be so successful as the concerted efforts of the owners to conserve their own property.

No one accuses the owners of deliberate carelessness in exposing the traveling public to unnecessary danger, but there is good reason to believe that the owner's active and positive attention to the safety of his passengers will increase in proportion to increases of his financial liability for the damages suffered by them in case of accident.

Mr. Speaker, in referring editorially to the preceding article the editor of the Survey says:

The loss of the *Titanic* aroused public interest in the general subject of safety at sea. The recent decision of the United States Supreme Court that the liability of the owners of the *Titanic* for damages to the victims of that disaster is limited to the sum of $90,000, whereas their liability under English laws is in the neighborhood of $3,000,000, has directed attention to the present state of our limited liability laws in admiralty.

In all the thousands of bills introduced in Congress since the *Titanic* disaster none provides for placing on shipowners a substantial liability to answer in damages for losses occurring by accident at sea.

The editor of the Survey, when he wrote that comment, had not had called to his attention House bill 12807, introduced on February 2, 1914, by myself and referred to the Judiciary Committee, as follows:

A bill (H. R. 12807) relating to the maintenance of actions for death or injuries on the high seas.

Be it enacted, etc., That every person, firm, or corporation engaged in transporting of passengers or freight by water, or who shall own or operate any vessel or sailing craft on the high seas, Great Lakes, or any navigable water of the United States within the admiralty jurisdiction of the United States and out of the jurisdiction of any particular State, shall be liable in damages to any person suffering injury while such person is employed on any such vessel, or is a passenger thereon, or is on or upon any such vessel under any other conditions, or in case of death of any such employee, passenger, or person, to his or her personal representative, for the legal benefit of the surviving widow or husband or children of such person; and if none, then of such employee's parents; and if none, then of the next of kin dependent upon such employee, for such injury or death resulting in whole or in part from the negligence of any of the officers, agents, or employees of such person, firm, or corporation, or by reason of any defect or insufficiency due to its negligence in its engines, appliances, machinery, works, boats, wharves, or equipment.

SEC. 2. That in all actions hereafter brought against any such person, firm, or corporation under or by virtue of any of the provisions of this act to recover damages for personal injuries to an employee, or where such injuries have resulted in his death, the fact that the employee may have been guilty of contributory negligence shall not be considered.

SEC. 3. That in any action brought against any such person, firm, or corporation under or by virtue of any of the provisions of this act to recover damages for injuries to or the death of any of its employees, such employee shall in no case be held to have assumed the risks of his employment to prevent or limit recovery.

SEC. 4. That any contract, rule, regulation, or device whatsoever, the purpose or intent of which shall be to enable any such person, firm, or corporation to exempt itself from any liability created by this act, shall to that extent be void: *Provided*, That in any action brought against any such person, firm, or corporation under or by virtue of any of the provisions of this act, such person, firm, or corporation may set off therein any sum it has contributed or paid to any insurance, relief benefit, or indemnity that may have been paid to the injured employee or person entitled thereto on account of the injury or death for which said action was brought.

SEC. 5. That no action shall be maintained under this act unless commenced within two years from the day the cause of action accrued, or within two years from the death of the decedent, unless during that period there has not been reasonable opportunity for securing jurisdiction of the vessel, person, firm, or corporation sought to be charged: *Provided, however*, That after the expiration of a period of two years from the decedent's death the right of action hereby given shall not be deemed to have lapsed until 90 days after a reasonable opportunity to secure jurisdiction has offered.

SEC. 6. That any receiver or receivers of any person, firm, or corporation liable under this act may be sued under the provisions of this act without first obtaining the consent of any court under whose jurisdiction such receivers may have been appointed.

SEC. 7. That nothing in this act shall be construed to abridge the rights of suitors in the courts of any State or Territory to a remedy given by the laws of any State or Territory in case of injury or death from injury received on the high seas or elsewhere.

SEC. 8. That the personal liability of any shipowner or person sued under this act shall not be subject to any form of limitation on account of the provisions of Congress or general admiralty law as to limiting liability of shipowners.

This bill is based on the employers' liability law as applied to common carriers by railroad, and, if enacted into law, would give adequate relief to any persons or their dependents in case of injury or death at sea. I do not know how it could be made better, except by a modern workmen's compensation act requiring all owners of vessels flying the American flag to pay a certain set sum, properly proportioned, into a fund for immediate payment by a commission or one of the departments at Washington for injuries sustained, just as quickly as they could be reported and proofs submitted. We will come to that, but the country as a whole has not attained that degree of civilization yet. The State of Washington, for instance, has, but it will take 10 years, probably, for Uncle Sam to get the idea.

The present shipowners' liability laws are absolutely unconscionable. They were, in the main, worked through Congress on the day before adjournment in that mass of legislation that is passed without consideration at such a time. I detailed in a speech on February 2, 1914—RECORD, page 2869—many of the facts of this situation.

All "safety-first" campaigns or other efforts to save life and limb and prevent human suffering generally involve a selfish sentiment. All legislation for safety appliances is opposed, as a rule, by the railroad or the factory which must obey it. A repeal of legislation involving liability for injuries on railroads and in the shops would be followed by carelessness and an increase of such accidents.

It is only reasonable to suppose that the same rule applies on the ocean. It is a reproach to Congress that a seaman or an employee or a passenger or a shipper on the water is given any less protection by the law in these matters than is given under like circumstances on the land.

A Statement by Mr. Andrew J. Peters, a Representative in Congress.

EXTENSION OF REMARKS

OF

HON. WILLIAM F. MURRAY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 11, 1914.

Mr. MURRAY of Massachusetts. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include a statement by Mr. ANDREW J. PETERS, a Representative in Congress from Massachusetts, which appeared in the Boston Sunday Post of June 14, 1914.

The statement is as follows:

SEES GOLDEN ERA OF PROSPERITY—PRIVILEGE DESTROYED AND EQUAL OPPORTUNITY PROVIDED BY RECENT LEGISLATION, SAYS PETERS.

WASHINGTON, *June 13.*

The Hon. ANDREW J. PETERS, Representative for the eleventh Massachusetts district, was interviewed to-day by the Boston Post representative regarding his views on industry and the administration.

He talked frankly, as follows:

"If there were ever an era in American trade when our great principle of equal opportunity shed its rays with greatest brilliancy, that era is now here. Toward the light the faces of earnest men are turned; they see the clouds of privilege and industrial discrimination evaporate in the glorious sunshine.

"LAST HOWL FOR HOWLER.

"The calamity howler is having his last howl. We hear it reverberating throughout the land. Its sound has grown familiar during the long, wearying months, while the real thinkers, the real workers for the public good, have wrought out the remedy for the real ills of industry and placed the policeman's club and the industrial germicide where they would do the most good.

"There are no fanciful theories in the new situation with regard to business and finance. Sound remedies were needed to meet an emergency that bordered on a crisis. These remedies have been compounded to check and eliminate the big ills and evils that have crept into our industrial system, festering, clogging, and strangling the arteries of business.

"DIAGNOSING ILLNESS OF BUSINESS.

"Uncontrolled concentration of wealth and power has always been, since the earliest civilization of mankind, a menace to the happiness, the freedom, and the progress of the masses of the common people. History is blackened with the tyranny of privilege and abused power.

"The United States to-day is suffering from an overdose of privilege. We have reared a vast crop of industrial parasites, fed and fattened by tariffs. They are weaklings and dare not meet the competition of the world. Their narrowed visions can see safety only in the prop that has kept them in glorious, selfish profits.

"The most able legal talent is subsidized in the service of privileged factions. A powerful press supports its views. The railroads, the coal mines, the oil fields, and much of the machinery of production are in subjection. The necessaries of life itself are concentrated in the hands of a few.

"The chains of banks interlocked by directors form a network over the land. There are barbs in the network that pierce the fabric of agriculture and industry.

"The most important evil of our time is dependence. The necks of business men are bent to the yoke of gigantic combinations. Thousands are forced to become mere servants or agents;

they have no voice in the shaping of business policy. These dependents were formerly independent factors in trade; they were the pride, the backbone of American development.

"MEDICINE PRESENTED BY CONGRESS.

"The present administration has undertaken to prescribe the remedy for the crying evils that clog American industry. All thinking men who have broadened their knowledge of mankind agree that the American principle of equal opportunity is the basis on which we place our hope for healthy, normal growth of prosperity. They believe true Americanism is possible of achievement; that industrial despotism, like political despotism, has no place in our country.

"The men of large business who see economy in large operations are entitled to every opportunity. The public is equally entitled to protection from oppression of large operations. The greatest consideration of a combination must eventually be, not that it does a large business, but that it does no unfair injury even to the 'little fellow.'

"The antitrust measures, the trade measures, and the banking and currency measures form the principal ingredients of the remedy now being provided.

"To insure equality of opportunity, to insure the square deal to everyone in industry, to bring to bear on the minds of big business men that they are amenable to the American people for their conduct—these are some of the healing effects we are confident will restore American business to normal health.

"INDUSTRIAL SAFEGUARD.

"There can be no question that the object of government is to protect the happiness, the homes, and the lives of the people. When any of these inherent blessings are endangered no diverting cry from one small portion of the people can dissuade the prompt action of the representatives of the whole people.

"The strengthening of our industrial safeguards at the present time means an immediate relief from the danger of discrimination. The danger is not theoretical; it is a tangible, active, and threatening danger, and at its mercy lies the vital trade and prosperity of the country.

"The elimination of discrimination means the strengthening of the bulwarks of equal opportunity. Without equal opportunity, American progress is at an end. For the accumulation of wealth by the few, through special privilege or through unlawful discrimination, must not be allowed to supplant the accumulation of wealth by the many, even though the latter is a slower process.

"Piracy has its origin in the human mind. Corporations will commit no crimes when men are made to refrain from committing them. When monopoly becomes criminal, some human culprit deserves the penal code.

"To check the modern industrial evils and encourage American initiative and individual enterprise is the sole object of the new legislation. Could any greater aid come to the relief of American industry?

"RIDDING TRADE OF HIGHWAYMEN.

"The little thinkers have shouted their fears broadcast that the new trust and trade legislation threatens wholesale and unlimited persecution of business men. I doubt if there ever arose in a large movement an equal of this bugaboo. Every jostle on the sidewalk can now be made the subject of complaint for assault and battery. Yet such prosecutions are rare, and persecution from this source is unknown. The penalty is read into our laws; it needed to be placed there to lessen the jostling in general by bringing flagrant cases into court.

"The right to prosecute industrial thuggery in the business that sustains the American Nation is just as fundamental and necessary in our laws.

"By what twisting of the imagination can the American business man—the honest business man—foresee any interference with his business? Can the little thinkers induce him to believe that the policeman's billy was provided to rap every head on the highway?

"A CONGRESS OF ACTION.

"During the months of strenuous work on the big trade, currency and trust bills, I have not passed unnoticed the cries of 'halt' that have arisen in Boston and throughout New England. There has been a needless fear that the Democratic administration was aiming to brand as a dishonest rascal every man who had earned and saved a modest fortune; that we were devising laws to hamper instead of to aid business.

"Some there were who felt thankful they were not fed to wild beasts or thrown off cliffs.

"The calamitous utterances of the past few months appears to me to be founded on shortsighted views of present conditions and the trend of events. The fact is that a crisis in industry had been reached. There could be no delay in framing the laws that would curb the enemy of progress.

"No better time than now, when the business depression has spent its full force upon trade relations and industries of New England, could I better illustrate the error that the little thinkers have fallen into.

"The causes of fear and utmost concern in America to-day lie in the discrimination that is discouraging our Yankee enterprise. They do not lie in the great movement of the present administration to apply the remedy for the evils.

"THE DEPRESSION IN TRADE.

"America is suffering to-day, in common with the other countries of the world, from a depression in industry and trade. The causes of the depression are not American, although the scare of 'big business' may have contributed to the general effect.

"The entire world of commerce is closely woven to-day. Boston, New York, and Chicago are in constant touch with London, Paris, and Berlin. Conditions in every important center of trade reflect on the general fabric of commerce, and any review of the depression must take into consideration the general trend in the world's markets.

"I quote from the Statist, of London, the issue of May 23:

"'There is discouragement in all the leading markets. In Paris, which is always so deeply interested in investments in foreign countries, the fall in securities has brought about a great lock-up and has therefore tied the hands of large numbers of operators. In Germany there is a shrinkage in trade, an increase of unemployment, and an exceptional cheapness of money. In Germany the tone of trade has been affected by unfavorable foreign trade statistics for April, which show a bigger reduction in exports than has been registered for several years. In Austria-Hungary trade, if possible, is worse than it was.

"'It would, indeed, be surprising, when this is the general state of things, if London were either optimistic or active. On the contrary, it is depressed. The great public is holding aloof, and operators are doing as little as they can. In such a time it is inevitable that there should be rumors of all kinds afloat pointing to this and to that personage or institution at home and abroad. There is no use in reasoning with that kind of mischief-making. It will not be stopped until confidence begins to revive and people see the extravagance of the rumors they were supplied with.'

"BLAMING THE TARIFF A HABIT.

"Whenever there is a falling off in trade, when the merchant and manufacturer find less demand for their goods, we Americans have become accustomed to blaming the tariff. It is the first specter that looms up when dullness comes, and this is particularly the case in times of revision.

"Now, it is a fact that industrial depression exists all over England, with her free trade. Is that depression due to the American tariff?

"In Germany, where there is a highly centralized industry, a high tariff and trusts, a similar condition of stagnation exists. Has our tariff caused it? Can our tariff be blamed for 'a bigger reduction in German exports than has been registered for several years'?

"Is business at its lowest ebb in Austria because of the American tariff? Has our Democratic tariff revision brought about the immense fall in securities in France, where a high tariff exists?

"The high-tariff advocate, viewing the dullness in his sphere of business, ascribes it to the act of his Government, quite ignoring the fact that across the sea, some thousands of miles away, there is even greater dullness under the very conditions which he would establish here.

"A TEST OF REAL PATRIOTISM.

"In addition to the downward trend of the world's trade in general, the American manufacturer and merchant are bearing an added burden of depression brought on by the false scare in regard to the new banking, trade, and trust legislation.

"Our forefathers bore the burden when they threw off despotic oppression and established liberty. The light they established shone in the darkest corners of the world, uplifting hopeless millions who had been doomed by oppression to abject slavery. We advanced the entire world, and established new principles that will bear fruit while mankind endures.

"We are now face to face with the problem of preserving industrial freedom, the most vital feature of our progress. In order to preserve individualism and the opportunities of individudal progress, we must guarantee every man the square deal in trade. We must drag out by the roots the parasites that have been sapping the lifeblood of American trade, and encourage the healthy, normal growth of every industry, big and little.

"The manner in which American industry adjusts itself to the new order of things will be a test of real patriotism. The

sooner the American business men will recognize that there has been a crisis, that the crisis has been met by a fearless administration, and that the new laws threaten no business, large or small, that is honestly and fairly conducted the sooner will come that great and lasting boom of prosperity which we all hope for.

"TIDE OF BUSINESS TURNING.

"Already the pulse of commerce is quickening, and there is a slow but steady recovery of hopefulness in the big centers of the world's trade.

"The Statist, of London, issue of May 30, says:

"'There are signs that courage is recovering in France. In fact, Paris is buying once more.

"'We shall see a revival here and in the United States precede the revival elsewhere.

"'Quiet people with money to spare are investing in the aggregate on a large scale and are sure when things right themselves to make exceedingly profitable bargains. By and by it will be found that the wreckage floating in the market is very much smaller than people now apprehend. Some fine day people will wake up and discover that stocks are really growing scarce. Then recovery in earnest will begin.'

"In our own country those who were scared the most have discovered that their fears were unfounded. Every day there is a noticeable increase of hopefulness and faith in the new order of things. There is the promise of a bumper crop, and this is materially aiding the recovery in business.

"The time has arrived to clear the track and release the brakes. Ahead lies prosperity unlimited. The rights of way are protected from the highwaymen of industry. Opportunity beckons more invitingly than ever before."

Address Delivered by Hon. Samuel A. Witherspoon in Tammany Hall July 4, 1914.

EXTENSION OF REMARKS

OF

HON. MICHAEL F. CONRY,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 11, 1914.

Mr. CONRY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an address delivered by Hon. SAMUEL A. WITHERSPOON in Tammany Hall July 4, 1914.

The address is as follows:

(Address delivered by SAMUEL A. WITHERSPOON in Tammany Hall July 4, 1914.)

Ladies and gentlemen, if I were required to compress my entire speech in one sentence, I should say that this is the 4th day of July. It is the anniversary of our independence. It is the birthday of human freedom. It is the day whose dawn ended the long dismal night of tyranny and oppression and spread the light of human freedom and happiness throughout the ends of the earth.

THE SIGNIFICANCE OF THE DAY.

It is the day on which our forefathers first repudiated the doctrine accepted in all the ages that people lived to serve their governments and substituted therefor the principle that the sole object of governments is to promote the happiness of the people. However violent the shock which the Declaration of Independence inflicted upon the opinions of mankind, and however stubborn the resistance throughout the world to an acceptance of the lessons it taught, yet after an experience of 138 years the wisdom and justice of the act is no longer and nowhere questioned. The multitude of blessings to the human race and its rapid approach to a higher and better destiny, following as effect follows cause, the Declaration of Independence constrains a grateful humanity to crown our forefathers with the glory of solving the great question of human liberty. The foundation of this solution, the corner stone of this liberty, the right for which each colony strove for two centuries was the right of local self-government, and this right expressed in the existence of each State and in the terms of the Constitution now no longer depends upon reason to uphold it, but appeals to the testimony of an experience of 138 years to demonstrate how vital it is to the growth of the Nation and the happiness of the people.

One lamentable exception in this long period when the right of local self-government was suspended and when disorder, bloodshed, riots, humiliation, and tyranny followed its abandonment, illustrates and measures its value. It was in the dark decade from 1865 to 1875 when the carpetbagger and the public plunderer made the laws under which the southern people were forced to live. In the desperate struggle of a prostrate, helpless, hopeless people for its lost freedom the friendship of this great democratic society, breathing the spirit of our fathers and fired by the same love which first bound the American Colonies into Union, has not yet been forgotten. The notes of your sympathy came stealing through the wreck and ruin of a proud civilization like the plaint of the æolian harp—mournful, but sweet to the soul. And to us it matters not what may be your political fortunes, whether you rise in power and victory or go down in defeat, when your last friend, like ours, has deserted, if you listen, you will hear in the hearts of the South the echo of the poet's song:

With all thy faults, we love thee still!

THE DIFFICULTY OF THE PROBLEM.

The political problem which found its solution in the Declaration of Independence was the most difficult ever submitted to patriots and statesmen. The representatives of the Colonies assembled to deal with the situation before them were confronted with obstacles which had never been surmounted. On the one hand, they owed allegiance to what they had considered the best Government on earth. The English system of laws, its trial by jury, its habeas corpus, its Parliament with the right of representation, and its bill of rights and the Magna Charta were cherished blessings which held the Colonies with love and reverence in allegiance to the mother country, and to enjoy these privileges under the Crown was the wish of the colonists even after the War of the Revolution had begun. But there was one right more sacred than all the others, and that was the right of local self-government. To make the laws under which each Colony should live was the only condition of its allegiance to the King, and this condition he was unwilling to grant.

The right of local self-government, including the right to choose their own officers, to levy their own taxes, and to pass the laws touching local affairs, was the only condition to the continuance of Colonial allegiance to the Crown, and if this right had been conceded the Declaration of Independence would not have been written and the Revolution would not have occurred. The denial of this right resulted in the severance of all connection with England. But the weakness of each Colony by itself inspired no hope that, acting singly and independently, they could establish, maintain, and preserve this sacred right, and hence arose the necessity of union. The necessity of a union was the result of wars with the Indians, the French, and of the actual war at the time with the mother country. The idea of union had been growing for more than a century. It found its first formal expression in 1642 in the New England confederacy, called the United Colonies of New England; but when the Crown took away from the four Colonies thus united the right of local self-government on which it was founded the union itself fell. Again, a union of six Colonies was formed in the Albany Congress in 1754, but the terms of this union were rejected by every Colony represented in the convention. But oppression continued and tyranny grew more unbearable, and the idea of union grew stronger, until two years of war with England made the acceptance of the idea possible. But there was in history no precedent for a permanent and successful union of free and independent States, and all the republics of the past had either merged into empires or fallen into decay and ruin, with the loss of popular liberty. Under these circumstances the formation of a lasting union with the power to protect the States, and at the same time to insure to each State the right of local self-government, was the problem presented to our fathers, and the question answered in the Declaration of Independence.

ANALYSIS OF THE DECLARATION OF INDEPENDENCE.

Its analysis discloses three vital propositions:

First. It renounces all allegiance to Great Britain and dissolves all political connection with its Government. This part of the Declaration of Independence has given to it the name of the Declaration of Independence, but the full significance is lost, unless we consider the other parts of the instrument. If this had been the only purpose and object, it might have been expressed in one sentence. We might have declared our independence of England and substituted another monarchy for the old one. The dissolution of all connection with Great Britain was a small part of the work accomplished.

Second. It declares that the Colonies are, and of right ought to be, free and independent States. To be free meant that each one should have the right to make the laws under which its people should live and to choose the officers who should administer those laws; and to be independent meant that no other

power, neither England nor any government to be formed, should have the right to interfere with the enactment or enforcement of those laws. Here we have a clear and unmistakable expression of the right of local self-government, but in order that the world might understand its full meaning we have a long enumeration of the instances in which George III had denied this right set forth as the justification of the declaration. And in order to make the meaning still clearer we have a statement of the principles on which government must rest, namely, that all men are created equal and have inalienable rights, or, in other words, rights which government can not take from them and which they themselves can not surrender, among which are life, liberty, and the pursuit of happiness; that governments have no other excuse for existence except the maintenance and preservation of these rights; and that government has no just powers except those derived from the consent of the governed, and should be abolished whenever it fails to recognize and uphold the liberties of the people.

Third. We find the idea of union. In order to throw off the yoke of tyranny, to preserve the liberties of the people, and to shield us from all enemies it was necessary to combine the powers of all the Colonies and to unite them in one general government, and for the fulfillment of this purpose each one as security to all the others executed a mortgage upon its life, its fortune, and its sacred honor. Local self-government and union are therefore the corner stones of the political structure whose foundations were laid on the 4th day of July, 1776.

The Constitution follows the solution of the problem of liberty set forth in the Declaration of Independence.

This interpretation of the Declaration of Independence subsequently guided the framers of the Federal Constitution when they came to form a more perfect union on the principles stated on the 4th day of July, 1776. So the General Government, which is a union of the States, is given all governmental powers over the public defense, the coinage of money, post offices, interstate and foreign commerce, and all other subjects in which all the States have the same interest and in which no State has a special or peculiar interest, and all powers of government affecting the local affairs and welfare of each State and constituting the right of local self-government are reserved to the States.

To the States are reserved not only all matters of local self-government but the election both of its own officers and of all officers whose functions in combination form the union itself. When each State chooses, elects, and commissions its electors and these electors meet at its capitol and cast the vote of the State for President and Vice President of the United States, and when the votes of all the States for these officers are counted and declared, we have in the persons of the President and Vice President chosen the union of the States in the executive department of the Government. When each State has chosen and commissioned its Representatives and Senators, and these officers of the States meet and organize the House of Representatives and the Federal Senate, we have in the organization of the Congress and in the performance of its functions a union of the States in the legislative department of the General Government. And when the President and the Senate thus chosen by the united action of the States select the Federal judges, we have the union of the States in the judicial department of the Government. It is plain, therefore, that in the very Constitution of the dual form of our Government its foundation rests upon the idea of local self-government expressed in the existence and complete jurisdiction of the States over all matters of local concern and upon the idea of the union of all the States in all governmental matters of general concern; that the continuance of the Union is coextensive with the existence of the States; and that the destruction of the States involves the destruction of the Union.

But in addition to this division and separation of all governmental powers between the Union on the one side and the States on the other, the fact that all powers of government vested in any man or any body of men will be abused to the injury of the people caused our fathers to further separate and divide both governmental powers delegated to the General Government and those reserved to the States into three classes—the executive, legislative, and judicial—and hence we have in each State government and in the General Government three separate, distinct, and independent departments, with a number of checks and balances to enable each one to protect itself against the encroachment of the other. This fundamental division of all political powers between the States and the General Government and this separation of the powers of each government into three departments, together with a number of constitutional prohibitions against the exercise of certain powers by both governments and the enumeration of a number of rights which neither the State nor the General Government can take from the citizen, constitutes the solution of the great question of human liberty, whose fundamental principles were established, and whose corner stones were laid in the glorious Declaration of Independence which we are celebrating to-day.

FAITH IN THE PERFECTION OF OUR DUAL FORM OF GOVERNMENT.

And the practical question for you and for me is whether in the administration of our Government and in the development of our country it is wise to assume that this solution of the question of our liberties was the wisest and best that can be made, or shall we assume that it is wrong in principle or filled with defects and imperfections and endeavor to change it in the hope of securing something better? For my part I have never had a doubt that the dual form of Government founded 138 years ago to-day and perfected in the adoption of the Federal Constitution is the wisest and best Government ever conceived in the mind of man, and that all our national ills and troubles have resulted not from any defects or imperfections in the form of our Government, but solely from the selfish and wicked administration and reckless violation of its sacred principles, and that the same administration of any other form of government would have resulted in far greater and more grievous wrongs.

I resent all efforts to change or alter the Union of our fathers. The evidences of its wisdom, the proof of its perfection, and the blessings of its administration would require volumes to tell, but I will mention one or two reasons on which I base my confidence and allegiance.

First, experience and history gives us no other form of government on which we can rely for the preservation of human liberty and the happiness of the people. In all forms of government, whether it be monarchiaristocratic or democratic, whether it be a republic or an empire, there has been a failure to accomplish the true ends of government, which, in the language of the Declaration of Independence, in the rights of life, liberty, and the pursuit of happiness, and none of the Governments which have failed were founded, as ours is founded, on the doctrine of local self-government and the union of free and independent States. Lacking this fundamental requisite of good government, the Republic of Rome was merged into an empire, and the liberties of her people were lost in the tyranny of her rulers.

The Grecian Republics have all passed away, and all the glories and achievements of that great people serve to demonstrate that their governments were founded on wrong principles. The British Government, which is the most perfect of all, has blackened its own history with despotism and oppression, and a long list of its tyrannies was the cause of the Revolution and the establishment of our Government. It took seven long years of war and a humiliating surrender at Yorktown to teach the English that the right of local self-government is the right of free men; and the prosperity, happiness, and contentment of her colonies throughout the world is due to the practice of the lesson they learned from Washington. In all her wide domain England has for centuries seen no such suffering, poverty, and wretchedness as in the only part of her Empire to which she has denied the right of local self-government, and she has at last rectified this wrong by granting home rule to Ireland. Therefore, whether we look back through the centuries of the past or among the present nations of the earth, if our dual form of government is not the best, where is the one for which we would be willing to exchange it?

Again, if it be conceded that our dual form of government is imperfect, still it is impossible for us to change it and substitute a better. It is impossible for us to give the subject the same consideration received from our fathers. For two centuries their best thought and greatest wisdom were fastened on the problem. The deprivation of liberty drove them from the land of their birth and induced them to face and endure the dangers and hardships of an untried life in the wilds of the new continent. The oppression and tyranny from which they suffered for more than a century aroused the genius of our fathers to a degree which we can never hope to attain. No other age of the world has developed such patriots and statesmen as the heroes who conceived and formed our Government. And no people engrossed as we are in the enjoyment of the blessings and in the pursuit of the riches which have resulted from the work of our fathers can hope to change and alter and overturn the result of their labors with any reasonable hope of improvement upon the nature of our Government. Therefore I submit that the dual form of our Government should be regarded, as the courts regard their decrees, as the final settlement and determination of the question of human liberty. It is the res judicata of politics. No reason, argument, or testimony against it should ever be received, and the Declaration of Independence should be regarded as the Bible of our liberties,

and all its principles and doctrines should be sacred in our love and reverence.

All objections or criticisms should find their refutation in the words of the instrument itself. A few days ago I received a letter from a good woman in my district asking me to have Congress pass a law prohibiting all public schools from teaching our children that the earth is round. She referred me to a great many passages from the Bible where it speaks of the four corners of the earth and declares that the sun rises and sets. She knew that the Bible is true, and to her it was horrible that children should be taught what is false. She said she had heard that many people had traveled around the earth, and therefore believed that it was round; but she said that if they would only read the Bible, which we know is true, they would see how badly they are mistaken. I wish every American had the same sublime faith and love for the Declaration of Independence. When its principles are assailed, when its lessons are rejected, when its doctrines are repudiated, I wish we could always answer the objector by telling him that if he would only read the Declaration of Independence he would see how badly he is mistaken.

THE WANT OF CONFIDENCE IN OUR GOVERNMENT.

But the tendency of all Republics is to drift into the empire. The very patriotism of the people and their pride in a great government leads them to enlarge its powers and to approve its usurpations until their liberties are gone. The rapid strides of the Union of our fathers into a great centralized Nation or empire is appalling. The loss of confidence in the State governments and a reliance upon the General Government marks the decline of the Republic. The transfer of the powers of local self-government from the State to Washington is alarming.

THE WORK OF THE REFORMER.

The transition of the Union of our fathers into a great Empire is the dream of the reformer, and he never loses an opportunity to take a step in this direction. He began this work of transformation in the midst of the excitement and passions following the Civil War and secured the adoption of the fifteenth amendment to the Constitution. He succeeded, by the fifteenth amendment, in transferring jurisdiction over the question of franchise, so far as it is affected by race, color, or previous condition of servitude, from the State to the Federal Government.

He is now taking advantage of a great popular movement in favor of woman suffrage, and while a number of States have already conferred this right on women, and while any and all of the others can do so whenever they deem it wise and best, yet the irrepressible reformer has seized upon this question as affording an opportune time to transfer the subject of franchise, so far as it affects women, from the jurisdiction of the State to that of the Federal Government. When the General Government begins to determine what negroes and what women shall vote, it will not be long until all your State, county, and city officers will have to come to Washington to find out who shall vote in your State elections. The right of the franchise lies at the foundation of local self-government, and the removal of this foundation stone will shake the whole structure of the Union.

One of the effects of class legislation and of vicious and extravagant laws which have marked Federal legislation for the past 50 years has been to concentrate the wealth of the country in the hands of the few, and this in turn has resulted in the corrupt election of United States Senators by State legislatures in many instances. This great evil aroused a widespread popular movement for the election of Senators by the people, and when the constitutional amendment to accomplish this purpose was pending, the ever-watchful reformer got in his work again, and succeeded in fastening upon the resolution the Bristow amendment, which effectually transfers from the State to the Federal Government the ultimate power of control over all State elections for United States Senators.

This terrible blow at the Union of our fathers emboldened the reformers to the degree that in the very same Congress they succeeded in passing a law to purify and regulate State primary elections which are purely the creatures of State statutes and over which the Federal Government has no more jurisdiction than the Czar of Russia. And there is now pending in the House of Representatives a bill to perfect and enlarge this usurpation with almost a certainty of its passage.

From time immemorial both the Federal and all of the State governments have acted on the assumption that the construction, maintenance, and repair of public highways through the country was a purely local question and formed a part of local self-government.

You can not walk in a street or an avenue of an American city or travel a public road in the country without observing the achievement of State jurisdiction, but the House of Representatives has passed a bill to tax the American people $25,000,000 to be distributed among the States, ostensibly for the purpose of improving the public highways, but really for the purpose of enabling each Member to show his people how much money he has procured for them and thereby facilitate his reelection.

But what is regarded as the greatest evil of the day is the evil of intemperance, and the magnitude of this great curse demands a drastic remedy. The removal of this great evil presents another rare opportunity to the reformer, and he now wants an amendment to the Federal Constitution which will transfer to the Federal Government the police powers of the States.

THE ASSISTANCE OF THE IMPERIALISTS.

The American reformer has always found powerful support in the imperialists of our country. Those who never had any faith in the Union of our fathers and who have always favored a strong, centralized, imperialistic government at Washington have made the successes of the reformer possible. Some years ago a presidential election was made to turn upon the paramount issue of imperialism, and the patriotic defenders of the Union of our fathers went down in defect.

As a consequence we spent seven years, which was the exact period it took our fathers to establish the independence we celebrate to-day, in crushing out the independence of the Philippines and in coercing their submission to a Government whose powers are not derived, as the Declaration of Independence says all just powers are derived, from the consent of the governed, but from our superior naval and military forces.

And to-day we are exercising powers of government over a part of our nearest neighbor, Mexico, and in order to do so we have slain 321 of our neighbors.

The powers of government which we are exercising over Veru Cruz, and the territory still moist with the blood we have shed, are derived not from the consent of the governed, but from the presence of battleships and dreadnaughts.

If we continue to exercise the powers of government over the people of foreign countries without their consent, we will finally destroy our own love and reverence for the principle laid down in the Declaration of Independence that all just powers of government are derived from the consent of the governed and eventually our own Government will usurp and exercise over us powers which it did not derive from our consent.

When the reformers and the imperialists shall have succeeded in transferring to the Federal Government full jurisdiction over the elective franchise, over the elections of the States, over the public highways, and over the police powers of the States you had just as well blot out all State lines, burn up the Declaration of Independence, and try to forget what was done on the 4th day of July, 1776.

Against this imperialistic tendency I oppose the wisdom, the patriotism, the love of liberty, and the statesmanship of our fathers. I appeal to your love and reverence for the Declaration of Independence. And if you entertain any doubts on the subject I ask you to read the Declaration of Independence and see how badly the reformers and the imperialists are mistaken.

But if all argument fails, if reason ceases to act, if experience has lost its value, then I make one last appeal to the lesson of the flag. Look at its glorious stars. Each is the emblem of a State created solely to preserve the right of local self-government. They sparkle, they twinkle, they shine, they blaze in the flag-like diamonds of liberty. The stars never grow, shrink, or die. They never change their size, their weight, their course, nor their brilliancy. From the dawn of creation they have been ever shining, still the same. And when they cluster together in the flag they teach us that the States and local self-government which they emblemize shall never been destroyed or impaired. This same idea is expressed in the background of blue in which they shine. It is the color which never fades. The crimson red glow of the sunlight on the cloud soon fades into shadows and darkness. The beautiful green with which nature robes her grasses and leaves must soon change to the colors of decay and death. But when God stretched the sky above us he painted it with his own fadeless blue, and the paintbrush dropping into the deep, wide sea gave it the same unchanging hue. And as long as the seas around us and the skies above us refuse to change their eternal color, and so long as the stars of heaven are beautiful and bright, so long does the flag teach us that the free and independent States of the Union and local self-government which they embody shall be the anchor of liberty throughout the generations to come.

The Tariff.

EXTENSION OF REMARKS
OF
HON. PHILIP P. CAMPBELL,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 11, 1914.

Mr. CAMPBELL. Mr. Speaker, in going through an old CONGRESSIONAL RECORD a few days ago I came across a speech I delivered in this House over 10 years ago. I discussed the effects of protection and free trade on the prosperity of our country. The present condition of our laborers, our farmers, and our industries, so soon after the enactment of a Democratic tariff, is my justification for calling the attention of the House to that speech at this time.

I shall omit some of the questions of other Members and my answers, and submit that 10-year-old speech as a proper charge against the tariff law enacted by this Democratic administration.

Free trade is producing the same old Democratic hard times. The speech is as follows:

"It may be said without fear of successful contradiction that the Democratic Party, as an organized body, to-day is and forever in the past has been opposed to the protective policy. The gentleman from Missouri [Mr. CLARK] on yesterday delighted his Democratic friends with an assault upon the protective policy. In his speech he adopted as his own the sentiments expressed by the gentleman from Mississippi [Mr. WILLIAMS], the leader of the minority upon this floor. That gentleman has voiced the sentiments of the Democracy of this day upon the tariff question when he says:

"LEGALIZED ROBBERY.

"The system is one of legalized robbery. That is the result and that is the effect. It is robbery for the reason that it prostitutes the Government to do what government has no right to do, viz, to build up or hothouse one man's industry, one man's capital, one man's labor by laying a tax upon the labor and capital of all men.

"The gentleman from Mississippi [Mr. WILLIAMS] gives expression to the position of his party.

"The last official announcement of the Democratic Party in the campaign that elected this House said:

"The theory of free trade is that both the seller and the buyer are benefited by the exchange of commodities, and that as all are consumers the greatest good to the greatest number requires that there be no barriers to trade in order that the goods may be as cheap as possible and the cost of living reduced to the minimum.

"That has been the position of free traders at all times and everywhere. The gentleman from Mississippi [Mr. WILLIAMS] in his leadership is consistent. He stands upon the platforms that the Democratic Party has made in the past upon this question. For 40 years, when that party was in the ascendency, their position upon the tariff question was against protection.

"The Democratic Party at one time adopted a constitution, and in the convention which adopted it there were none but Democrats. That constitution was adopted by the Confederate States of America, and in it was inserted this clause:

"Nor shall any duties or taxes on importations from foreign nations be laid to promote or foster any branch of industry.

"HATRED OF PROTECTION.

"Mr. Chairman, I take it from the expressions of the minority of this House that that party has not changed its position on the policy of protection. Every time any gentleman on that side has spoken during this Congress upon this question he has given expression to the sentiments that animated his party in the past and that animate it to-day. Every assault made upon the protective policy has met with round after round of applause from the minority on this floor.

"Now, Mr. Chairman, the system or policy of protection is called 'legalized robbery.'

"It must not be supposed that this allegation is a statement of facts. It is only the declaration of a theory. The fact is that the policy of protection, wherever and whenever practiced, has led to general prosperity, and the abandonment of that policy has led to universal depression and adversity.

"Under the policy of protection the British Empire became the greatest commercial power in the world. Its commercial enterprises became a very hive of industry, and its commerce covered the seas.

"But in the midst of her marvelous prosperity she yielded to the siren voice of the free trader and in 1846 adopted that policy. Since that time she has witnessed the growth and prosperity of the commerce of her competitors while her own has been diminishing year after year.

"This has been the experience of England. The theorist may exhaust the vocabulary in demonstrating his proposition, but the actual fact of growth under protection and of decay under free trade is clearly set forth in the experience of England.

"But, Mr. Chairman, we need not confine experience under the policy of protection and the theory of free trade to the people of the British Empire. We have had experience of our own.

"HELP FOR THE YOUNG REPUBLIC.

"The protective policy was adopted by the American people by the act of July 4, 1789. We were then a young Republic rising from the ashes of a revolution resulting in our independence. Our enterprises had been sacrificed and our resources had been exhausted in the acquisition of that noble and lofty ambition. But six short years after the enactment of our first protective-tariff law, President Washington, in his annual message to Congress in 1795, said, referring to our prosperity:

"Our agriculture, commerce, and manufactures prosper beyond former example, with burdens so light as scarcely to be perceived.

"LETTING WELL ENOUGH ALONE.

"The policy of protection was continued, the people letting well enough alone, and in 1812, on account of the war with England, the tariff schedules were doubled in the act of that year. Under that act the Republic waged a victorious war against the fleets and soldiery of the British Empire, and was richer and more prosperous at its close than when it began.

"The act of 1812 provided for its own expiration. One year after the war was over the schedules expired.

"By the act of 1816 an attempt was made to make a low tariff a protective tariff, but the rates in that act were not high enough to meet the conditions in the Old World.

"When our manufacturers undertook to compete with the manufacturers of Europe under the act of 1816, they found that their European competitors were able to undersell them in our own markets. The importations of goods from foreign countries flooded our country, swamped our industries, and absolutely ruined manufacture, agriculture, and other industries, so that a condition of almost hopeless despair was apparent on every hand. A period of hard times set in, agriculture was unprofitable, manufactures suspended, labor was without employment, industrial and commercial paralysis existed throughout the land, and revenues were insufficient for the expenses of the Government in a time of peace.

"EFFECTS OF DEMOCRATIC REVISION.

"President Monroe in 1819 in his annual message, speaking of the condition of the country, said:

"The great reduction in the price of the principal articles of domestic growth which has occurred during the present year and the consequent fall in the price of labor, apparently so favorable to the success of domestic manufacturers, have not shielded them against other causes adverse to their prosperity. The pecuniary embarrassments which have so deeply affected the commercial interests of the Nation have been no less adverse to our manufacturing establishments in several sections of the Union.

"Again, in 1821, referring to the public revenue, he says:

"At the close of the last session it was anticipated that the progressive diminution of the public revenue in 1819 and 1820, which had been the result of the languid state of our foreign commerce in those years had in the latter year reached its extreme point of depression. It has, however, been ascertained that the point was reached only at the termination of the first quarter of the present year.

"RELIEF CAME.

"Mr. Chairman, in 1824, having had eight years under a tariff revised by the Democratic Party and seven years of the greatest depression and hard times that had been known to the country, the people returned to the policy of protection for relief, and, Mr. Chairman, they did not return to this policy in vain. With the enactment of the law reestablishing the policy of protection, relief came. This act was supplemented and strengthened by the act of 1828, and under this tariff the country witnessed marvelous prosperity throughout every industry. Agriculture and manufacture revived on every hand, idle labor returned to remunerative employment, revenues poured into the Treasury, and the national debt was paid and the expenses of the Government fully met without resorting to the pawnbroker.

"President Jackson, in 1830, in his annual message, referring to the prosperous condition of the country, said:

"The pleasure I have in congratulating you upon your return to your constitutional duties is much heightened by the satisfaction which the condition of our beloved country at this period justly inspires.

"Again, President Jackson, in his message of 1832, said:

"I can not too cordially congratulate Congress and my fellow citizens on the near approach of that memorable and happy event, the extinction of the public debt of this great and free Nation. Faithful to the wise and patriotic policy marked out by the legislation of the country for this object, the present administration has devoted to it all the means

which a flourishing commerce has supplied and a prudent economy preserved for the Public Treasury.

"Now, Mr. Chairman, it might reasonably be expected, with the experience they already had, the people of that day would have been satisfied to let well enough alone; but the Democratic Party said the tariff was 'legalized robbery,' and that party was again given the privilege of revising the tariff, and gave the country the act of 1832.

"MORE DISASTER.

"The results that followed that tariff revision by the Democratic Party were similar to those that followed the act of 1816. The industries of the country languished, its revenues were insufficient, and the Government became a borrower of money with which to defray the expenses incident to its operation in a time of peace, hawking the Government's bonds through the markets of the country without finding buyers.

"Upon that subject President Tyler said, in 1841:

"Of the loan of $12,000,000 which was authorized by Congress at its late session only $5,432,726.88 have been negotiated. The shortness of time which it had to run has presented no inconsiderable impediment in the way of its being taken by capitalists at home, while the same cause would have operated with much greater force in the foreign market. For that reason the foreign market has not been resorted to, and it is now submitted whether it would not be advisable to amend the law by making what remains undisposed of payable at a more distant day.

"Now, sir, we have again seen the people rise with prosperity under the policy of protection as established by the act of 1824 and pay off the Nation's debt, and we have seen them go down with adversity under the tariff revised by the Democratic Party in 1832 and become the borrowers of money with which to pay the ordinary running expenses of the Government.

"DEPRESSION SET IN.

"In 1842 the policy of protection prevailed, and all manner of industry revived; but the people yielded to the demands of the free trader in 1846, when the Democratic Party, the friend of free trade, again revised the tariff, and again, sir, a period of depression set in. The industries of the country became inactive, and labor engaged in agriculture and manufacture throughout the land was without remunerative employment.

"President Fillmore, in his annual message in 1851, referring to the condition of the country, said:

"The value of our exports of breadstuffs and provisions, which it was supposed the incentive of a low tariff on the large importations from abroad would have greatly augmented, has fallen from $68,701,921 in 1847 to $26,051,373 in 1850 and to $21,948,653 in 1851, with a strong probability, amounting almost to a certainty, of a still further reduction in the current year.

"The policy which dictated a low rate of duties in foreign merchandise, it was thought by those who promoted and established it, would tend to benefit the farming population of this country by increasing the demand and raising the price of agricultural products in foreign markets.

"The fact is, Mr. Chairman, in theory we expand our exports under free trade, but in practice they diminish under that policy.

"Again, speaking of the disastrous effects upon the country under the 1846 tariff revision by the Democratic Party, President Fillmore said:

"In my first annual message to Congress I called your attention to what seemed to me some defects in the present tariff and recommended such modifications as in my judgment were best adapted to remedy its evils and promote the prosperity of the country. Nothing has since occurred to change my views on this important question.

"Without repeating the arguments contained in my former message in favor of discriminating protective duties, I deem it my duty to call your attention to one or two other considerations affecting this subject. The first is the effect of large importations of foreign goods upon our currency. Most of the gold of California, as fast as it is coined, finds its way directly to Europe in payment for goods purchased. In the second place, as our manufacturing establishments are broken down by competition with foreigners, the capital invested in them is lost, thousands of honest and industrious citizens are thrown out of employment, and the farmer, to that extent, is deprived of a home market for the sale of his surplus produce. In the third place, the destruction of our manufactures leaves the foreigner without competition in our market, and he consequently raises the price for the article sent here for sale, as is now seen in the increased cost of iron imported from England.

"PRESIDENT BUCHANAN.

"There was no change in the tariff, and conditions became no better. The country was still under the Democratic tariff, revised by that party in 1846, when President Buchanan, in his first annual message in 1857, said:

"We have possessed all the elements of material wealth in rich abundance, and yet, notwithstanding all these advantages, our country in its monetary interest is at the present moment in a deplorable condition. In the midst of unsurpassed plenty in all the productions of agriculture and in all the elements of national wealth, we find our manufactures suspended, our public works retarded, our private enterprises of different kinds abandoned, and thousands of useful laborers thrown out of employment and reduced to want.

"Now, Mr. Chairman, we have seen the first half century of our country's history rising under the protective policy to prosperity and falling under tariff revision by the Democratic Party to adversity. A condition of prosperity came with the policy of protection and a condition of adversity came when the theory of free trade was yielded to, and this has been without an exception.

"REPUBLICAN POLICY.

"It is not strange, then, that among the first laws enacted by the Republican Party was a law putting into effect the policy of protection, a policy that was sustained for almost a third of a century after its adoption in 1861.

"That period, Mr. Chairman, began with a bankrupt Treasury, with industrial depression on every hand, with civil war and secession—a war that cost billions of treasure and the lives of thousands of the best men in the Nation and took four years and more of the Nation's time, reducing its energies and its resources and prostrating the whole South so that that section had to begin anew. The great West was a wild, unbroken prairie, designated on the maps as a part of the great American desert. The West and South at the close of the war had nothing except a determined purpose on the one hand to subdue the prairie and on the other to restore its waste places. Few, if any, implements; less, if any, farm animals; and but few of the merest necessities of life. The people of the South looked out upon desolation and ruin; the home seekers and settlers of the West looked out upon an unbroken prairie that receded to the horizon in every direction. There was nothing to gladden the vision or to cheer the heart of either.

"MARVELOUS DEVELOPMENT.

"Mr. Chairman, the fact is that no like period in the history of this or any other country has ever witnessed such marvelous development of resources and such unparalleled prosperity of industry. Agriculture and manufacture have grown up and prospered together. The farmer has a market at home for his produce. The manufacturer has not had to go abroad with his wares. Both have prospered by practicing the profitable economy of eliminating distances from the question of trade. The policy of protection has preserved the American market for the products of American manufacturers, and American manufacturers have made markets for the products of American farmers, and together they have established the high standard of American living and made possible a high scale of American wages. [Applause on the Republican side.]

"The farmer of the West has learned and the farmer of the South ought to learn that when the factory is closed he not only loses customers for his products, but also meets additional competitors in his production. The workman, losing his employment in the factory, settles upon a farm and becomes a producer of the products he formerly bought from the farmer. The prosperity of the farmer depends upon the prosperity and employment of those who buy his products.

"The West and South experienced a marvelous growth and prosperity during the period I have mentioned, all under the policy of protection, and continue to prosper under that policy. The gentleman from Mississippi [Mr. WILLIAMS] admits this fact for Mississippi.

"I make the admission for Kansas, and in addition cite the fact that on the 1st day of January, 1904, the Kansas bank account contained $73 per capita for the entire State. In the West we have built houses, barns, schoolhouses, churches, colleges, bridges, courthouses, charitable institutions, and magnificent statehouses, and are as well provided with all these as any section of the Union. This growth and prosperity has been gradual, and we may hope that it will continue while the policy that made it possible is maintained. [Applause.]

"What has been said of the South and West may be said of the whole Union, and it may be said without fear of successful contradiction that there is no like period in the history of this or any other country anywhere in the world where the people made such marvelous development and progress in all that ministers to the welfare and happiness of a people. [Applause.]

"FREE-TRADE ECLIPSE.

"But in 1892, in the midst of plenty, surrounded by unusual conditions of prosperity, the Democratic Party raised the old banner of opposition to the protective policy and again asked for an opportunity to revise the tariff. The policy of protection was then called a system of robbery that made the rich richer and the poor poorer, and hothoused into prosperity one industry at the expense of another. The people had forgotten their country's history, and said, 'We'll try it.' The depression and ruin that was inaugurated with that tariff revision by the Democratic Party is vivid in the minds of all. It is impossible to exaggerate the condition of devastation that followed upon the ruins of every industry throughout the land. Banks suspended, factories closed, furnaces drew their fires, mills suspended work, agriculture was prostrated, industry of all kinds languished, values of farm products and farm animals went downward, farm

values went to a low ebb, values of all commodities went down to the ruin of all industry.

"There was little or no incentive to work upon the farm, and nothing to do in the factory. This wreck of industry resulted in the loss of employment to more than 3,000,000 of workingmen, and those who were not let out of employment entirely were working upon less than one-half time. Railway employees, except those on scheduled trains, were fortunate if they made one-third of their usual wages; coal miners were fortunate if they made one-fourth of their customary earnings, and factory operatives in all branches fared no better. Revenues were insufficient for expenses, and the Government took its bonds to the money lender.

"ARMY OF THE UNEMPLOYED.

"There were no complaints about trusts or combines. There was just one great organization brought into being during that period—Coxey's army—an army made up of men without work, who wanted something to do. These honest men had voted for tariff revision by the Democratic Party. They were now marching upon Washington, demanding nothing but an opportunity to work.

"These men, and all who went out of employment with them under the Gorman-Wilson tariff revision, had been, under the Republican policy of protection, large consumers of the best products in well-supplied markets, but under the Democratic revised tariff they subsisted upon soup provided in large part by public charity. So sudden a change from a condition of employment that made possible a demand for better pay, as was done in 1892, to a condition of no employment at all could only be repeated by again permitting the Democratic Party to revise the tariff. [Applause on the Republican side.]

"But, Mr. Chairman, it did not take long to get enough of the Gorman-Wilson tariff revision, and the election of 1896 called upon the Republican Party to again give the American people the benefits of the protective policy.

"RETURN OF PROSPERITY.

"The Dingley Act restored that policy, and with that restoration came a return of prosperity. The whistle blew, and idle labor found its way to industries that were opening their doors throughout the land. Smokestacks throughout the country began again to emit in ceaseless streams the emblem of a country's prosperity, and the hum of spindles made a song of gladness that echoed throughout the land. The 3,000,000 of men who went out of employment with the revision of the tariff by the Democratic Party found employment in the enactment of the Dingley law by the Republican Party, and a million and a half have been added to those who have employment in the industries of the country. Agriculture revived, banks rechartered and opened, industry of every kind acquired new life and energy. Every field of industrial life became a field of industrial activity. The railroads of the country added hundreds and thousands of men to their employees, endeavoring to take care of the commerce of the people. [Applause on the Republican side.]

"EFFECT ON AGRICULTURE.

"Now, Mr. Chairman, much has been said about the condition of the country immediately preceding the last revision of the tariff by the Democratic Party, and it has been declared upon this floor recently that the agricultural interests of the country were in a condition of hopeless bankruptcy during the years immediately preceding the year 1893. Now, sir, the fact is that the value of farm animals for the four years from 1889 to 1892, inclusive, was nine and three-quarter billions of dollars, in round numbers. The value of farm animals from 1893 to 1896, inclusive, was eight billions, in round numbers—nearly two billions less. The value of farm products from 1889 to 1892, inclusive—that is, corn, wheat, and oats—was five and a quarter billions of dollars, and the value of corn, wheat and oats from 1893 to 1896 was three and three-quarter billions of dollars; and the value of farm animals for the seven years following the enactment of the Dingley law was twenty and a quarter billions of dollars, and the value of corn, wheat, and oats, nine billions of dollars.

"Between March 4, 1889, and March 4, 1893—Harrison's administration—we paid $365,500,000 of the national debt. From March, 1893, to March 4, 1897—Cleveland's administration—we went in debt $265,000,000. Our exports the last year of the Harrison administration, under protection, were $334,500,000. Our exports the first year under the Cleveland administration under the Gorman-Wilson bill were $196,000,000. [Applause on the Republican side.]

"BOURBON TARIFF TINKERS.

"But the Democracy now claim that the tariff should be revised because it is claimed, first, that the protective policy creates and maintains trusts; second, that the products of manufacture are sold cheaper abroad than at home; and third, that the protective policy keeps us out of foreign markets.

"Now, sir, upon the first of these propositions. The people of this country understand the trust question. It is well known to the reading public to-day that free-trade England has her full proportion of aggregations of capital known as trusts; that every civilized country in the world, whether upon a free-trade or protective basis, if there is a prosperous condition of industry at all, is experiencing the same conditions of organization and aggregation we are experiencing in this country. The people also know that many of the trusts in this country do not engage in the production of protected commodities.

"TARIFF AND TRUSTS.

"Mr. WILLIAMS of Mississippi. Will the gentleman from Kansas submit to an interruption?

"Mr. CAMPBELL. Yes.

"Mr. WILLIAMS of Mississippi. The gentleman has just made that statement. Now, will the gentleman name one trust—just one trust is all I ask—engaged in the manufacture of a nonprotected product?

"Now, Mr. Chairman, if it were true that the policy of protection made trusts possible in the first place and made their continuance possible in the second place, we must still object to the remedy the Democratic Party proposes, to wit: If any trust is engaged in the manufacture of a protected commodity, put that commodity in open competition with the products of the world. This plan of the Democratic Party would open the markets of this country to all the world if any of the articles manufactured in whole or in part, produced in whole or in part, by aggregations of capital known as trusts. That would be just like shooting into a chicken coop full of chickens with a double-barreled shotgun with both barrels for the purpose of killing a weasel. [Laughter and applause.]

"Twenty furnaces are independent, five furnaces are in a trust, all produce a like product. The products of the whole are put upon the free list for the purpose of destroying the trust. Three hundred factories are independent, 10 are in the trust. The products of all are put upon the free list for the purpose of destroying the 10 in the trust.

"When you draw the fire in a furnace or close the door of a factory, whether it is one of a combine or maintains its independence, you throw the workmen employed by that furnace or in that factory out of employment.

"DESTRUCTIVE REMEDY.

"Nothing is truer than that if the people of this country are supplied by the manufacturers and labor of foreign countries, whether the purpose be to destroy trusts or to establish free trade, the manufacturers and laborers of this country will not be called upon for those supplies, and just to the extent that they are not called upon for them will our factories close their doors and our labor go without work. There is no question that the proposed remedy would accomplish its purpose. It would destroy the trusts, but their destruction would take with it the last employment of thousands and tens of thousands.

"The trust question was not a serious one from 1893 to 1896, when industrial paralysis extended into every avenue and industry in our whole country.

"No, Mr. Chairman, it is not the intention of the Republican Party to wreck the prosperity of this country in order to control the trusts.

"A patriot and a statesman at the White House, conscientiously devoted to the well-being of the whole country, alert alike to the welfare of the rich and the poor, the employer and the employed, with competent and able assistants in all the departments of Government, is controlling and regulating, rather than destroying, the enterprises of this country, by whatever name they may be known. [Applause on the Republican side.]

"EXPORT PRICES.

"Now, as to the charge that the products of manufacture are sold cheaper abroad than at home, therefore, we should put the country upon a free-trade basis.

"It has not been my privilege to see a list of the articles that are sold cheaper in foreign markets than they are in our own, and I do not deny that it is done in some particulars. I have heard it stated, however, upon as good authority, that the prices quoted by those who make the charge is the retail price at home and the manufacturer's price to the jobber abroad. It was charged two years ago that sewing machines and reaping machines were selling cheaper in foreign markets than to our own people. It has been stated, upon the authority of dealers in Sydney, Australia, that the Deering binder sold there for $155 to $182, while it sells here for $125; that the McCormick binder sold in Sydney for $165 to $194, and sold at home for $125; the New Home sewing machine sold in Sydney, Australia, for $55, in this country for $35.

"But, if the allegation were true, it is better that American manufacturers get into foreign markets by that method than that foreign manufacturers come into American markets by the same method. [Loud applause on the Republican side.]

"LESSONS OF EXPERIENCE.

"We have had experience—our markets have been exploited by foreign manufacturers.

"In 1846 iron rails sold in the United States for $50 per ton. As soon as the tariff was removed by the Democratic Party in 1846 English manufacturers reduced the price of iron rails to $40 per ton, swamped the American market, then, after ruining that industry in this country, they raised the price to $75 per ton for iron rails.

"And that was not our only experience. Our markets were exploited by the manufacturers of foreign countries at another time when we were under a tariff revised by the Democratic Party. As far back as 1819 Monroe says in his message of that year, referring to the way foreign manufacturers ruined our manufactures—

"Their manufactures have been shipped by the manufacturers to the United States and in many instances sold at prices below their current value at the place of manufacture. Although this practice may, from its nature, be considered temporary or contingent, it is not on that account less injurious in its effects.

"We were then under the tariff act of 1816. Foreign manufacturers were exploiting our markets, ruining our manufacturing establishments, and establishing the sale of their products here.

"To whatever extent the products of American manufacture, protected or otherwise, are sold in foreign markets cheaper than they are sold at home, the American consumer could ill afford to exchange places with the foreign consumer. A factory, a shop, a furnace, an industry of whatever nature that is established here becomes a part of the property of the great body of the American people. Taxes are paid, schoolhouses are built, and schools maintained, churches are built and maintained, the institutions of the country are supported by the industries of the country.

"The manufacturer who is not engaged in producing articles on the protected schedule could not afford to have a neighboring factory engaged in some other product that is on the protected schedule, transferred, with its employees, to a foreign country. The farmer could not afford to have a manufacturing establishment engaged in producing a protected article that is sold cheaper abroad than it is at home, removed to the place abroad. So I say, to whatever extent the practice is followed, it is better for us that our manufacturers practice it in foreign markets than that the manufacturers of foreign countries should practice it in our markets. [Loud applause on the Republican side.]

"Now, sir, as to the objection that our products are kept out of foreign markets by the policy of protection. The most emphatic answer to that objection is that it is only true in theory, and that it is in no sense true in fact.

"PROTECTION AND EXPORT TRADE.

"Why, sir, we have advanced from year to year under the protective policy from one of the lowest exporters among the great nations of the earth, until to-day we rank first. Our exports last year were one and a half billions in round numbers, while England's exports were one billion four hundred millions; Germany's one billion two hundred thousand, and France's eight hundred millions.

"We have extended not only the amount but the variety of our exports from year to year, and the year that has just closed has shown the greatest export from this country that has ever been made by any one country in any one year.

"But we are told that we can not sell our products in the world's markets while we refuse the world the privilege of selling in our markets. But we do. [Applause on the Republican side.]

"COST OF LIVING.

"It is said the cost of living has increased in a greater proportion than the wage scale has been raised, therefore the tariff should be revised by the Democratic Party.

"Now, conceding, for the sake of the argument, that some of the necessities of life are higher now than they were from 1893 to 1896 under the last revision of the tariff by the Democratic Party. Bread and meat were cheap in those days, but people went without food. Clothing was cheap, but people went without raiment. Hardware and lumber were cheap, but men did not build houses. Land was cheap, but people did not buy farms. Live stock was cheap, but farmers did not buy stock. Everything was cheap, but no one could buy.

"To-day bread and meat may be a little higher, but no one goes hungry. Clothing may be a little higher, but all are clad. Hardware and lumber may be a little higher, but throughout the whole land people are building houses. Farm lands have doubled in value, but all over the country men are buying farms. Many farm animals have more than doubled in value, but all over the country men are buying stock. Sites for industries are higher and material and labor are higher, but enterprising men are purchasing sites and material and establishing industries. Wages are higher, but employers are employing men. The soup house has disappeared and the market has taken its place. [Loud applause on the Republican side.]

"But we are told by the Democratic Party that the policy of protection is in no sense entitled to credit for our splendid prosperity. The declaration is made that the beneficence of a kind Creator has thrust this prosperity upon us, and that our commercial policy has had nothing to do with it.

"PROTECTION AND PROSPERITY.

"Now, I have been taught and have always believed that God was invariable in all His purposes and just in all His ways, and I refuse now to believe that the Divine Being would uniformly withhold from His people the blessings of prosperity and visit upon them the hardships of adversity following a revision of the tariff by the Democratic Party, and lift the hand of adversity and restore prosperity following an enactment of a tariff law by the Republican Party.

"You see, Mr. Chairman, that would be a discrimination that could not well be harmonized with the promise that 'He maketh His sun to rise on the evil and the good, and sendeth rain upon the just and the unjust.' [Applause on the Republican side.]

"So I say again, in closing, Mr. Chairman, that adversity with every variety of hardship has been visited upon the people of this country following every revision of the tariff by the Democratic Party. [Loud and continued applause.]"

Administration at Washington Fighting for the People's Rights.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. COX,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, July 16, 1914.

Mr. COX. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an article prepared by Mr. George P. Hampton, published in the Pennsylvania Grange News, July, 1914, on "The administration at Washington fighting for the people's rights."

The article is as follows:

ADMINISTRATION AT WASHINGTON FIGHTING FOR THE PEOPLE'S RIGHTS.

[By George P. Hampton.]

When the farmers of Pennsylvania in their great fight defeated the $50,000,000 good-roads bond issue the opposition was bitter in its denunciation, and all manner of dire consequences were prophesied by those who hoped to benefit by this exploitation of the people. The same thing is happening at this time in the State of Washington, where the combined farmer and labor forces are making a great popular government fight to secure the adoption of seven important measures, popularly known as "the seven sisters," which will take power from the saloon and special interests and place it in the hands of the people. The splendid way in which the Grange, the Farmers' Union, and the labor forces are working together, and the prospects that they will succeed, makes the opposition exceedingly bitter. The State is flooded with denunciations of the leaders in "the seven sisters" movement, and every effort is made to scare the voter with dire forebodings of calamity and disaster if "the seven sisters" should carry.

These experiences are similar to what happens in every State whenever things are doing which are positively beneficial to the people and which are correspondingly effective in stopping their exploitation and robbery by special-privilege interests. They are typical of what is going on here in Washington today. To listen to the calamity howlers of the special-privilege interests, the hordes of hungry office seekers, and the political opponents of the present administration, the country is going

to the dogs and neither Congress nor the Government is doing anything to justify the confidence of the people, and least of all the farmer.

But, leaving out the political opponents of the administration, who, because of their intense desire to win in the next election, are politically color blind and therefore not to be taken too seriously, the trouble with these calamity howlers is that this Congress and administration is actually doing things for the people, and doing them so aggressively that they see their chances of continuing their exploitation and robbery through special privileges slipping away from them.

The special-privilege interests were made to realize that they were up against the real thing in government for the people in the thorough way in which the investigations of the Steel Trust, the Sugar Trust, the Money Trust, etc., were conducted. They got a taste of what was coming in the passage of the law providing for the direct election of United States Senators. Since then the assault on the citadel of special privilege has been continuous and increasingly effective.

The special-privilege interests got another staggering blow in the passage of the parcels-post bill, and they have since failed in every effort to put a brake on it or to curb the Postmaster General, who is determined to give the people a square deal in its rapid development. But that is not the worst, as viewed by big business, this Postmaster General, backed by the President, is doing. He has declared for the Grange plan of Government ownership of telegraphs and telephones and means business. He has also declared for a revision of the railway mail pay, which will safeguard the rights of the people, and Congress has pending a bill embodying his recommendations. Such a Postmaster General is indeed dangerous to the interests. From their point of view he is a menace and must be discredited. But how about the people?

The interests were again hard hit in the tariff revision, and their great fear now is that abundant crops and good prices will prevent them stampeding the farmers into helping them restore the old high-protection days on the plea that they have been robbed by this tariff reduction.

Special privilege got another staggering blow when the currency bill passed. Wall Street has been dull, and Wall Street gamblers have been wailing ever since. How heavy the blow Wall Street got may perhaps be seen somewhat from the fact that the price of a seat on the New York Stock Exchange dropped from $80,000 to $45,000.

The interests are now fearing the loss of more special privileges in the passage of the administration antitrust bills. There are five of them, and all have "teeth." Consequently, every effort is being made by those whose power to rob the people is not blocked to stir up public opinion against them and prevent their enactment at this session, in the hope that a new Congress will be more "pliable." By means of press bureaus and letters, telegrams, and petitions to the President and Congress every effort is made to show that business is suffering by even the fear of such legislation, and that it is time to let a "tired and worn-out Congress go home" and put off the passage of these bills until after election. But the President insists that the antitrust bills must pass before Congress adjourns. Such stubbornness in a President, such indifference in the White House to their demands, is alarming to "big business." Of course the kings of Wall Street and the trust magnates have no use for such a President and will discredit him and this Congress with the people if it can be accomplished. They must do this if they are to retain the special privileges they have or regain any of those which have already been taken from them.

The interests are again hard hit in the five bills of the administration's conservation program. It is a clear-cut conservation program for the people. The water-power bill alone, House bill 10673, which effectively stops the grabbing of our water power by private corporations and provides for their utilization by the people, is alone enough to make this administration and Congress memorable as a people's administration and Congress, and consequently to win for it the bitter opposition of the "big business" exploiters who wanted these water powers for their private gain. Of course a President and a Congress standing for such things must be discredited and driven from power. But what do the people say?

In the handling of the Alaska situation the story is the same. The private exploitation of that vast and wonderfully rich Territory by the Guggenheims and other syndicates has been stopped, and legislation enacted providing for its development for the benefit of all the people. Bitter? Of course the "big interests" that intended to monopolize the natural resources of Alaska are bitter and denounce a President and Congress standing for such things.

In the legislation for the District of Columbia the same fight for the people against special-privilege monopoly is being fought by this Congress. The Crosser bill to provide for the municipal ownership of the street railways of the National Capital has stirred up the opposition of all the group of special-privilege interests who profit by the monopolization of municipal public utilities.

Again, this Congress and administration has dared to be friendly to the farmers' ideas about good-roads legislation, and insist that in all such legislation "from farm to market" must be the guiding principle. Against such a stand the interstate highway pleasure boulevard advocates have so far been unable to make headway, and so they, too, have no use for this Congress. But how about the farmers? As State Master Kegley says, "It is not millions or even hundreds of millions, but billions that are at stake in this fight."

Again, Congress has grappled with the great subject of rural credit with an evident desire to give the farmers a sound, comprehensive, and complete rural-credit system.

Hearings have been held by a joint committee for months, and dozens of bills introduced, but the spokesmen of the farmers have been hopelessly divided in their ideas and demands, and this division of opinion is reflected in the opinions of those Members of Congress who are honestly working on the subject. Realizing that more time is needed to bring about a general agreement and work out a satisfactory system, the farmers themselves have asked that legislation be put off until next session, and in this both Congress and the President have concurred.

So far the rural-credit discussion has centered around land-mortgage credit, but, important as that is, the evidence is conclusive that there is a growing realization among the leaders of thought in farm circles that the big side of farm credit is capital and commercial credit. The writer ventures to assert that this idea will grow and will dominate in the rural-credit legislation when finally enacted. The right solution of this question means the saving of billions to farmers. The progressive granges are grappling with the problem, and so, too, are the editors of the great farm papers, and with strong prospects that a common understanding will be reached before Congress meets in the next session.

The story of what this Congress is accomplishing for the people is far from complete, but its continuation and the details of any particular measure must be left to another letter. It may be said, however, of this Congress that it is the greatest people's Congress in a generation. The amount of legislation it has passed in the interest of the people and the administration measures still pending is greater than that of the six immediately preceding Congresses put together. It is legislation with teeth in it. It will do what is intended. That is the reason the special-privilege interests attack it so bitterly and insistently. It is the reason why the alleged failures of the administration in its Mexican policy and the alleged surrender to England in the repeal of the Panama Canal tolls are magnified and made so much of.

All this, of course, is intended to pull the wool over the eyes of the people, blind them to their real issues, and get them to quarreling among themselves over matters of, to them, far less moment. The farmer's great fight is to destroy the monopoly conditions at home which rob them of the profits of their toil, which robs them in the marketing of their crops, subjects them to extortionate charges for what they must buy, that rob them in discriminations in transportation charges, and prevents them in controlling their own credit facilities, thereby compelling them to pay interest charges which makes reasonable profits impossible and which prevents them from securing the capital necessary for the proper development of their farming operations. As State Master Kegley has said: "The battle between the farmers and their monopoly exploiters as to who shall enjoy the profits of agriculture is on in earnest." The victory is bound to be with the farmers if they do not allow these outside issues to distract them from their own fight.

This is a people's Congress, not because it is a Democratic Congress, for there are reactionary Democrats who do not trust the people and who oppose the farmers' measures. But it is a people's Congress because there are in all the parties representatives who are fighting on the side of the people, and these working together, aided by the President, are strong enough to carry the people's program through. It is the best nonpartisan Congress we ever had, and farmers should see to it that those who have made good from the people's standpoint, regardless of their party affiliations, are reelected and returned to Congress to continue their good work.

Navigability of the Susquehanna.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, July 16, 1914.

Mr. MOORE. Mr. Speaker, on October 22, 1913, I introduced a bill (H. R 9001) declaring navigable the Susquehanna and its tributaries, in the following form:

Whereas the Susquehanna River rises in the State of New York and courses through Pennsylvania and Maryland to the Chesapeake Bay and Atlantic Ocean, being an interstate stream capable of responding to the needs of modern commerce and navigation; and
Whereas the Susquehanna River and its tributaries are capable of affording a competitive means of transportation for the agricultural, mining, and industrial products bordering thereon, including the rich coal fields of Pennsylvania; and
Whereas the Susquehanna River has been closed to navigation by the construction of a dam at McCall Ferry for the erection of which no sanction was obtained from the Government of the United States; and
Whereas no Federal supervision of the Susquehanna River or any of its tributaries above the Maryland border line has been exercised by the War Department because of an Executive order declaring said stream to be nonnavigable above the Maryland border line: Therefore

Be it enacted, etc., That the Susquehanna River and its tributaries be, and they are hereby, declared navigable in law wherever they are navigable in fact, any Executive or departmental order to the contrary notwithstanding.

Subsequently, on February 26, 1914, I addressed the House upon this subject, calling attention to the enormous drainage area of the Susquehanna and its tributaries, and to the increasing population for whose transportation purposes the streams might be made available, and said:

"The recent awakening of the people of Massachusetts to the bridging over of their streams and to the heavy freight charges to which they have been subjected because of the incompetency and neglect of their rivers affords a lesson for the people of New York, Pennsylvania, Maryland, and Virginia with regard to the treatment of the Susquehanna. Not only have the old canals which were fed by the river and its tributaries been put out of business, but the Susquehanna itself has been completely dammed at McCalls Ferry in Pennsylvania, and the unusual position has been taken by the War Department that the river is not to be regarded as navigable above the Maryland line. It is possible the rocky condition of the river and the expense of dredging may have had something to do with the edict of the War Department, but it is easily demonstrable that engineering problems such as are presented by the Susquehanna have already been met by the expenditure of large appropriations upon other streams where the public purposes to be served are not so great as those that would result from the improvement of the Susquehanna."

There was much more relating to the peculiar condition under which dams and bridges might be erected on the Susquehanna and its tributaries without Federal supervision. The great dam at McCalls Ferry in Pennsylvania, reported to have cost $16,000,000, and being second in size only to the Keokuk Dam, was built so that it completely blocks the Susquehanna River, and therefore bars effectively all interstate navigation, although the construction of the dam itself resulted in the creation of a splendid deep-water pool 6 or 7 miles in length.

Amongst other things, I then said:

"It was a great piece of engineering, but it escaped the scrutiny of the Federal Government, which it could not have done had the Government exercised its ordinary jurisdiction. No lock or passageway for vessels seeking an outlet to the Chesapeake Bay or to the sea was provided. Even the shad fishermen above the dam were shut out of their usual occupation, and although a fishway has since been set up, there is no method for fishing vessels to pass the dam. The structure is a barrier to commerce above and to commerce below; it is as much a barrier to the potatoes and tobacco of York and Lancaster Counties as it is to the coal from Wyoming or Luzerne.

* * * * * * *

"In the light of these facts, it would seem to be an act of simple justice to revoke the ruling of the War Department, so that the Susquehanna River may hereafter be treated as a navigable stream free to the people of the Nation. It is nature's highway to the sea from the very heart of the greatest anthracite coal fields of the world and ought to be preserved by the Government for the free use of the people, whether Congress is ready to improve it for transportation purposes or not."

I do not intend to quote further from the speech of February 26, except to say that the arguments therein made as to the navigability of the Susquehanna and its tributaries have been fully sustained by the War Department in connection with the application of the Susquehanna Power Co. for the approval of its plans for a power dam across the Susquehanna River near Conowingo, in Maryland.

In view of the increasing importance of maintaining the navigability of our streams and also of utilizing some of them for the development of power, and inasmuch as this whole question is about to be considered when we reach the bill presented by the gentleman from Georgia [Mr. ADAMSON] to amend the general dam act, I have obtained from the War Department for the information of the House a copy of the opinion of the Judge Advocate General upon which the action in the Conowingo Dam case was based.

While the opinion does not deal fully with such exigencies as may have induced the action of the War Department in declaring the Susquehanna nonnavigable above the Maryland line in 1904, it goes very fully into the mooted question of State jurisdiction over streams wholly within the boundaries of a State, and so sustains the exercise of Federal jurisdiction over all streams that are navigable, that it is well worth perusal at this time. I append it in full:

THE OFFICE OF THE JUDGE ADVOCATE GENERAL,
June 8, 1914.

The SECRETARY OF WAR:

Application by the Susquehanna Power Co. for approval of its plans for a power dam across the Susquehanna River near Conowingo, Md., which involves the legal question whether that river is one "the navigable portions of which lie wholly within the limits of a single State" and across which, therefore, the legislature of the State may authorize the construction of this dam under the first proviso of section 10 of the act of March 3, 1899.

1. In 1907 the War Department, following the view expressed only once before and under circumstances hereinafter referred to, that the Susquehanna is a stream the navigable portions of which lie entirely within the limits of Maryland, approved the location and plans for a dam proposed to be built by this company across the Susquehanna River near Conowingo. Nothing was done upon the actual construction of this dam in pursuance of this approval, and on February 24, 1913, the company, addressing the Secretary of War, stated that contemplated changes in the original project necessitated a change in the location of the structure as formerly approved, which new location was indicated on a map, and requested either that the instrument of approval of 1907 be amended so as to show the approval of the changed location or that a new instrument be executed covering approval of the construction of a dam and power plant at the new location. After consideration, the Secretary of War concluded, apparently with some doubt, however, that the application for the relocation of a dam by the Susquehanna Power Co. might be authorized by the department if properly supported by authority of the Legislature of the State of Maryland and if the location and plans for the dam were such as to receive the approval of the Chief of Engineers and the Secretary of War, and indicated, in communicating to the company his conclusion, the provisions which an instrument of approval should contain. On April 2, 1913, the Chief of Engineers communicated the foregoing decision to the company. Apparently nothing has been done since, and now the company states that it may desire to build a dam at a location several thousand feet above the one heretofore approved, with an increase of 20 feet in the height of the structure; and the present questions arise upon the company's inquiry whether an application for approval of these changes would be considered merely as a modification of the former approval or as an entirely new proposition. The Chief of Engineers is of the opinion that such an application would have to be considered as covering a new project. In this view I concur, and the question becomes, as upon an original application, whether the State of Maryland can grant the authority for a dam which the company now proposes to construct, or must the company seek and obtain the authority of Congress?

2. Notwithstanding the action of the department upon the former application, I am convinced that that action was not in accordance with the law and that a different view must now be taken for the present and future guidance of this department. The action of the department in approving this company's former application and thus regarding the Susquehanna as a river whose navigable portions lie entirely within a single State, has resulted from a single departmental precedent, which marked a departure from the traditional attitude of the department toward this river and those similarly situated and of like importance, and which should now be reviewed. That single precedent is the decision made by Secretary Taft

in 1904 in the case of the Pennsylvania Railroad Bridge at Havre de Grace to the effect that the Susquehanna is a river the navigable portions of which lie wholly within the State of Maryland, and that the bridge could therefore be authorized by the Legislature of Maryland. When that application first came to the department the Chief of Engineers found, evidently, that the Susquehanna River is navigable in both Pennsylvania and Maryland, and, after adverting to the fact that a river is navigable in law when it is navigable in fact and that the navigability of a stream does not depend upon the mode by which commerce is conducted upon it nor upon the difficulties attending navigation, such as those made by falls, rapids, sand bars, concluded as follows:

Under the circumstances, I am of the opinion that the department should hold that the consent of Congress to the construction of a bridge over the river is necessary, and I recommend that the Pennsylvania Railroad be so informed.

These views and recommendations were concurred in by Assistant Secretary Oliver. Subsequently, however, applicant obtained a reconsideration by the Secretary himself, as a result of which Mr. Secretary Taft came to the following conclusion:

WAR DEPARTMENT, *Washington.*

In the absence of Secretary Oliver, I have reexamined the question as to whether the Susquehanna River can be said to be a navigable river within the provisions of the act of Congress requiring that navigable rivers in two States shall not be crossed by bridges except by authority of Congress, or should be considered as navigable within one State, consent to cross which may be given by the legislature of a State with the approval of the Secretary of War.

My own judgment is that in the present condition of the Susquehanna it is navigable only within one State. There is no interstate navigation such as was in the mind of Congress in making the distinction. For this reason the consent of the Secretary of War will be regarded as sufficient for the construction of the bridge in accordance with plans to be approved by this department. This conclusion is reached on the assumption that the State of Maryland has already consented to the erection of the bridge.

Thus the Secretary of War overruled the views and recommendations of the engineer department and the action of the Assistant Secretary of War.

3. The department's action on the power company's application was based entirely on Secretary Taft's decision. The Chief of Engineers, in presenting the application to the Secretary, said:

The Susquehanna is an interstate stream, but under the ruling of March 8, 1904, by the Secretary of War, it is held to be navigable only within one State, in view of which the authority cited appears to be sufficient to justify action by the department on the plans presented without the authority of Congress.

And accordingly recommended approval. When in February, 1913, this company submitted an application for an approval of the relocation of the dam, Mr. Frankfurter submitted to the Secretary of War a memorandum saying that the permit of April 9, 1907, was based upon a finding of Secretary Taft, of March 8, 1904, that the Susquehanna River in its then condition was navigable solely within the State of Maryland. That memorandum then proceeds:

Secretary Stimson directed an inquiry into the present condition of the navigability of the Susquehanna River. The Chief of Engineers reports that the conditions since the ruling of Secretary Taft are unchanged, and that the navigable reach of the river is still wholly within the limits of the State of Maryland. Therefore the application for the relocation of the dam by the Susquehanna Power Co. may be authorized by the department if properly supported by the authority of the Legislature of Maryland and if the location and plans for the dam are such as to receive the approval of the Chief of Engineers and the Secretary of War. (Sec. 9, river and harbor act of Mar. 3, 1899, 30 Stat., 1151.)

The records of the department do not show what kind of inquiry was made—indeed, it is assumed that nothing but an office investigation was made—into the present condition of navigability of the Susquehanna River by the Chief of Engineers, but that officer, on February 27, 1913, in a memorandum filed with the Secretary of War, said:

About 30 years ago the Government expended about $45,000 in improving navigation on the north branch of the Susquehanna River between Wilkes-Barre, Pa., and the New York State line, and since 1853 about $168,000 has been expended in securing a 12-foot channel from the mouth up for a distance of 5½ miles. There is no navigable connection between these two reaches of the river and practical interstate navigation has not been possible. Too, from the mouth up to Port Deposit, a reach wholly within the State of Maryland, is the limit of boat navigation, and in a decision rendered by Secretary Taft March 8, 1904, it was held that the river "should be considered as a navigable river within one State," i. e., the State of Maryland.

(a) There has been no change in conditions since the aforesaid ruling of the Secretary of War, and navigation above the Maryland State line is impracticable on account of obstructions both natural and artificial.

So, then, if the decision in the Pennsylvania Railroad's bridge case was wrong, so has been the action of the department in the present case.

4. Whether regarded as a conclusion of fact that the Susquehanna is navigable in fact only in Maryland, or as a conclusion of law that the mere absence of interstate navigation places a stream within the proviso in question, the decision in the Pennsylvania Railroad case is unsound, and equally so from both viewpoints. The Susquehanna River is navigable in Maryland and also in Pennsylvania. The navigable stretch in Maryland is vastly important, connecting with the Chesapeake Bay and the ocean. It is also well known that this river has several navigable reaches in Pennsylvania. The entire river within the limits of that State has been regarded by the courts and legislature of that State as a navigable river and important public highway from the earliest time. (Price's Index to Local Legislature, p. 1032; Carson *v.* Blazer, 2 Binney, 475; 4 Amer. Dec., 463.) Its possibilities as a great highway of commerce have at all times been recognized by that State. It was first declared to be a public highway in 1785. As early as 1791, £6,290 were appropriated for its improvement, and large sums have been appropriated from time to time even to this day. Active canals were heretofore maintained to insure navigation throughout its length and the length of its important branches. With the coming of railroads, however, the canals have been gradually and largely abandoned, being in the most cases bought out by the railroad companies. The Federal Government also has regarded the river as navigable in Pennsylvania, and Congress has from time to time appropriated money for its improvement. The Engineer Department regarded this river as navigable within the State of Pennsylvania even at the time of the Pennsylvania Railroad decision, and accordingly held that the consent of Congress had to be obtained for the construction of the bridge. A recent report from the local engineer officer at Baltimore shows beyond all question that the river is navigable within the limits of that State. There are numerous ferries on the river for commercial passenger traffic. There is a section of the river now used by steamboats of large size at and near Williamsport on the west branch. At Harrisburg the river is navigated by gasoline launches, canoes, flat-bottom ferryboats, and flat-bottom barges propelled by flat-bottom rear-wheel steamboats. These barges are used for handling coal and sand. When the 4½-foot dam at Harrisburg is completed larger traffic of this character may be expected. Above the Clarkes Ferry Dam there is canoe and motor-boat traffic extending within the limits of slack water. Motor boats are also used above the wing wall of the York Haven Power Co., at York Haven and Goldsboro, and motor boats are used at the pool above McCall Ferry. There is a tendency among practical men to conceive of navigable capacity as nothing less than what is sufficient to carry on trade and commerce by means of the usual large carriers propelled by steam or wind, but it is well established by the courts that if a stream can be used for commerce or trade in any form to any substantial extent, even for the floating of rafts of logs or lumber, it is a navigable stream. The supreme test is capacity. The law depends on that fact. If capacity is present, the stream is navigable. In determining navigable capacity it must be considered whether the stream is fit for valuable floatage; whether the public are interested in transportation in any form upon it; whether the periods of floatage capacity are sufficiently long to make it susceptible of use beneficial to the public; whether it has ever been previously used by the people generally, and for how long. The evidence should not be confined to the present or past use, but capacity for future use, as the country develops along its shores, must be considered as well. It is not necessary that waters be fit for navigation at all times, but their capacity therefor must recur with regularity. Nor is it essential that waters, in order to be navigable, shall afford a continuous passage throughout their entire extent for water craft or logs or other traffic. Navigability of waters must be determined by their capability for use as highways for commerce, trade, and travel, for the transportation of the products of the country, of its industries, of its fields and forests or mines, in the customary mode of such transportation. This capability of use affords the true criterion of navigability rather than the extent and manner of that use. If it be capable of being used for purposes of commerce, no matter in what mode the commerce may be conducted, it is navigable in fact, and becomes in law a navigable river or highway, although its navigability may be encompassed with difficulties by reason of natural barriers. (Genessee Chief, 12 How., 443; The Daniel Ball, 10 Wall., 557; The Montello, 20 Wall., 430; Barney *v.* Keokuk, 94 U. S., 324; Water Power Co. *v.* Water Commissioners, 168 U. S., 349.)

5. The Susquehanna beyond all question has navigable portions in Pennsylvania as well as in Maryland. Whether the portion lying across the Pennsylvania-Maryland boundary is navigable in fact or not is not certain. Accepting the definition of navigability as laid down by the courts, however, I am not convinced that the river at the boundary is not navigable. Assuming, however, that it is not, does that fact make the Susquehanna River one whose navigable portions lie wholly within the limits of a single State, within the meaning of the first proviso of section 9 of the act of March 3, 1899? I am con-

vinced to the contrary. Said section 9, so far as pertinent here, is as follows:

That it shall not be lawful to construct or commence the construction of any bridge, dam, dike, or causeway over or in any port, roadstead, haven, harbor, canal, navigable river, or other navigable water of the United States until the consent of Congress to the building of such structures shall have been obtained and until the plans for the same shall have been submitted to and approved by the Chief of Engineers and by the Secretary of War: *Provided*, That such structures may be built under the authority of the legislature of a State across rivers and other waterways the navigable portions of which lie wholly within the limits of a single State, provided the location and plans thereof are submitted to and approved by the Chief of Engineers and by the Secretary of War before construction is commenced.

The act of which this section is a part is a revisal of the act of 1890. The entire act is somewhat infelicitously drawn, and, like most great pieces of constructive legislation, there are portions of it which are more or less obscure; but this proviso, I think, is not one of them. Any present doubt of its meaning is not inherent, but has been cast upon it by the decision in the Pennsylvania Railroad bridge case, which I regard as erroneous.

When the general scope and tenor of this statute and its antecedent are considered in connection with its main purpose and view of the facts to which Congress must have meant it to apply, there is little or no difficulty attending its interpretation; and least of all in this proviso. The main object of the statute is clear. For many years the States of the Union, with the tacit assent of Congress, had been exercising control over the navigable waters of the United States within their respective limits. By these acts the whole policy of the Government was changed. By them Congress asserted its paramount power in sweeping terms over all navigable streams of the United States. It was intended that thereafter the navigable waters of the United States should be under the exclusive control of the United States; that for the future their navigability should be interfered with only by the express permission of the United States, granted in some cases through special consent of Congress and in others through its agents, the Secretary of War and the Chief of Engineers. The whole purpose was to preserve these great instrumentalities of commerce and their navigable capacity from possible adverse action not only by individuals but by the States as well. Congress left to the States no power of consent, except in one instance, namely, where, as said in the proviso, the navigable portions of the river lie wholly within the limits of a single State. And even here State consent is not effective until the location and plans of the obstruction are submitted to and approved by the Chief of Engineers and the Secretary of War.

6. The patent error in the decision which I am now questioning proceeds out of the idea expressed in the following language:

There is no interstate navigation such as was in the mind of Congress in making the distinction.

The act is not limited in its scope to interstate navigation. It operates not directly on interstate navigation at all, but upon the agencies and instrumentalities of that commerce. Its sole object is the preservation and protection of the navigable capacity of these great instrumentalities. It does this, not by preventing obstruction to navigation only, but to navigable capacity. Most of our streams and watercourses are, in fact, more or less navigable in some of their reaches, and the nonnavigable portions serve as feeders for and are so connected with the navigable sections that it is difficult and scarcely practicable to apply a separate rule for each. This is so, of necessity, where ample regulation of the navigable section can only be secured through regulation of the nonnavigable section. The proviso refers to streams the navigable portions of which lie entirely within a single State. The decision of 1904, in order to get within the language of this proviso, considers a stream with navigable portions in more than one State but with no practical navigation at the boundary, as so many separate navigable waterways, each of which lies entirely within a single State. The purpose of this statute is protection, and for this purpose the Federal Government's jurisdiction covers the entire stream and treats it as a unit. (United States *v.* Rio Grande Co., 174 U. S., 690; St. Anthony's Water Power Co. *v.* Water Commissioners, 168 U. S., 349; The Montello, 20 Wall., 430.) In the Rio Grande case the Supreme Court had before it the question of the scope of this act in construing section 10 thereof, which provides:

That the creation of any obstruction not affirmatively authorized by Congress to the navigable capacity of any of the waters of the United States is hereby prohibited.

In that case it was contended that, although the Rio Grande is navigable for a certain distance above its mouth, inasmuch as it was not navigable in New Mexico the statute forbidding obstructions to navigable waters did not apply to obstructions in said nonnavigable portions. It was there decided, in effect, that a navigable stream is a unit within the purview of the laws of the United States made for the protection of navigation, the court saying:

It is urged that the true construction of this act limits its applicability to obstructions in the navigable portion of a navigable stream, and that as it appears that although the Rio Grande may be navigable for a certain distance above its mouth, it is not navigable in the Territory of New Mexico, this statute has no applicability. The language is general and must be given full scope. It is not a prohibition of any obstruction to the navigation, but any obstruction to the navigable capacity, and anything wherever done or however done, within the limits of the jurisdiction of the United States which tends to destroy the navigable capacity of one of the navigable waters of the United States is within the terms of the prohibition. Evidently Congress, perceiving that the time had come when the growing interests of commerce required that the navigable waters of the United States should be subjected to the direct control of the National Government and that nothing should be done by any State tending to destroy that navigability without the explicit assent of the National Government, enacted the statute in question. And it would be to improperly ignore the scope of this language to limit it to the acts done within the very limits of navigation of a navigable stream.

The purpose of the act was protection to navigable capacity. In order to preserve the navigable portions lying within one State, the act reaches the nonnavigable portions lying within the same or another State. All the more so does it reach the navigable portions, though they lie in different States. Navigable portions not continuous and separated by barriers and other obstacles are not to be considered as separate and distinct navigable waters, neither in common understanding nor in law. (St. Anthony's Water Power Co. *v.* Water Commissioners and The Montello, supra.)

7. Congress here simply recognized what we all know and what the courts recognize, that a navigable water may have several navigable portions. The only distinction made is between rivers whose navigable portions lie entirely within a single State and those whose navigable portions lie within more than a single State. And this distinction was made not because in the latter there is, and in the former there is not, interstate navigation, but because where all navigable portions lie entirely within a single State that State would have no reason, interest, or opportunity to act otherwise than to preserve and protect in the most efficient manner the navigable portions of the stream all of which lie within its borders. On the other hand, where one or more navigable portions lie in different States, each State may, in the control of its portion, act injuriously to the navigable portions lying within the other State or States. Thus, were it not for the paramount power of Congress, Pennsylvania, in the present case, may obstruct its navigable portions injuriously to the navigable portions in Maryland.

Aside, however, from all other considerations, the language of the section is too clear to admit of construction. I refer again to the language of this section (section 9). After declaring it unlawful to place any dam, etc., in any navigable waters of the United States without the consent of Congress, it says:

Provided, That such structures may be built under authority of the legislature of the State across rivers and other waterways the navigable portions of which lie wholly within the limits of a single State.

Inasmuch as Congress for the first time took over in one sweeping act complete jurisdiction of all waterways of the United States and required, except in one instance, congressional consent to dam a stream, and highly penalized the construction of a dam without such consent, it would naturally be expected of Congress to use definite language to describe the streams excepted from its control and left to the partial jurisdiction of the States. The phraseology is, as was to be expected, clear and concise, and indicates just what waters are to be under the jurisdiction of a State after the passage of the statute—rivers and other waterways the navigable portions of which lie wholly within the limits of a single State. That language is plain enough, and there is in it no accidental or insignificant word.

8. An examination of the CONGRESSIONAL RECORD shows clearly that the intention of the committee in reporting the bill, and Congress in passing it, was not to include such rivers as the Susquehanna in the description of those whose navigable portions lie entirely within a State. The Susquehanna River is more than 500 miles long, with navigable portions in at least two States. Its basin is the largest and most important drainage area commercially in the North Atlantic States. Its drainage basin has a total area of about 28,000 square miles, of which 22,000 lie in the State of Pennsylvania, comprising about 47 per cent of the entire area of that State; 6,000 square miles in New York, or 13 per cent of the area of that State; and 260 square miles in Maryland, or about 2 per cent of the area of that State. What the committees of Congress had in view were rivers of minor importance. For instance, it was said for the committee in the debate on this very proviso:

But as regards the small rivers entirely within the limits of a State, it is intended to go to the extent of authorizing the bridging of such rivers without getting the authority of Congress to build a bridge, provided that the plans for such bridges across such small rivers be submitted to the Secretary of War and approved by him.

Again:

The gentlemen of the committee have conceded that it will be of very great advantage to the commerce of the country and to the business of this House to allow rivers that are entirely within a State to be bridged by corporations having State authority therefor by submitting their plans for the approval of the Secretary of War.

And again:

The object of this provision is simply that if a navigable river wholly within the limits of a State shall be bridged, or if the State shall authorize the construction of the bridge over it, the approval of the Secretary of War shall first be obtained. (Page 5402, CONGRESSIONAL RECORD, vol. 21, pt. 6, 51st Cong., 1st sess.)

9. Upon mature consideration, I am convinced that it was erroneous in law for the department to hold as it did in the Pennsylvania Railroad bridge case and to follow that holding in the original permit in this case. I am convinced that a lax view of Federal jurisdiction over such streams or a failure upon the part of the department to enforce full Federal jurisdiction over such streams is none the less erroneous in policy, and will lead to a point, as in some instances it may have already done, where the Federal Government will not be consulted at all. The inevitable result will be that artificial obstructions will become so numerous and insuperable as to be destructive of navigable capacity and prohibitive of future navigation improvement.

10. I recommend that applicant company be notified that it is the view of the present Secretary of War that the consent of Congress, under existing law, must be obtained for the construction of a dam across the Susquehanna River. The Secretary may be inclined to question the equitableness of such a step at this stage of the proceedings, but it is clear that the present proposition is one de novo and should be considered independently of all previous applications. Furthermore, notwithstanding the approval of this company's original plans was given seven years ago, nothing has been done yet on actual construction. This case does not involve the question of the power to rescind a permit after the permittee in good faith has made contracts and spent sums of money upon the strength of the permit. It is not a question of rescission at all, but of a new approval. It is not a question of a lawful permit having been given in the first instance, but of an unauthorized approval. So, too, nothing has been spent on actual construction. In my judgment it is better law and better policy to stop the matter here.

E. H. CROWDER,
Judge Advocate General.

Panama's Independence of Colombia.

EXTENSION OF REMARKS
OF
HON. J. HAMPTON MOORE,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, July 13, 1914.

Mr. MOORE. Mr. Speaker, our generosity as a Nation seems to be without bounds. If we have been generous heretofore in Panama, in Cuba, or in the Philippines, the present administration does not intend to let suffer the reputation we have already attained. If any other nation wants anything, our modern diplomacy seems ready to yield it, just because we are a big, strong Nation and can afford to give away most anything that anybody wants. This was about the position we assumed in the Panama Canal controversy with Great Britain, and it is about what the present Secretary of State thinks should be our policy with regard to Colombia. In his statement to the newspapers, issued July 12, Secretary Bryan, in support of the proposition that we shall pay Colombia $25,000,000 and apologize for taking the Panama Canal which we have since dedicated to the world, tells us that Colombia has a grievance against us and that we ought to pay a cash consideration to to salve her wounded feelings.

Colombia feels—

Says the Secretary—

that she has been aggrieved; and whatever may be said as to whether or not this feeling is justified, no one will deny that she has sustained great financial loss in the separation of Panama from her.

Therefore we should pay Colombia $25,000,000 and charge that up along with the $400,000,000 we are spending upon the Panama Canal, because while it will be a slight burden upon the taxpayers of the United States it will be a great boon to the Government of Colombia. Secretary Bryan tells us that he found an estrangement existing between the United States and Colombia.

It is not necessary—

He says—

to discuss the events which gave rise to this estrangement, because it does not matter which party was at fault. The estrangement exists, and this is the fact that must be dealt with.

Therefore, no matter whether Colombia has lorded it over Panama in spite of Panama's right to independence; no matter whether Colombia, as the strong and powerful nation, had used little Panama as a pawn in a great national grab game; no matter whether in the last instance Panama's independence was rightfully or wrongfully established, it is our duty, according to Secretary Bryan, not only to—

do justice to Colombia, but in case of doubt as to what is just we must resolve that doubt against ourselves and in favor of Colombia.

In other words, as the Secretary views it, there are no two sides to the question, and we, the people of the United States, who have been so liberal to the world at Panama, must pay tribute to Colombia or lose her valued friendship.

This new policy is certainly not in accord with the precedent established by George Washington when he held aloof from France in her controversy with Great Britain after France had assisted us in the Revolutionary War, nor is it quite in harmony with the spirit of Jefferson or those other earlier patriots, who, after they had tolerated the payment of tribute to the Algerian pirates for a little while, finally sent Decatur and Bainbridge and men of their type into the Mediterranean Sea to shoot up the brigands who waylaid our commerce.

Of course, we may be more civilized to-day than we were a century and more ago, and it is possible we may have passed through and beyond the era of "dollar diplomacy." Therefore in the spirit of good will to all men, and because we can afford to do it, we may give over our rights in the Panama Canal to those who seek them; and while we are in doubt, because of our great strength and power, as to what we may do in Mexico to preserve the lives and rights of our citizens we can still afford, since Colombia requests it, to give her $25,000,000 in cold cash rather than permit the estrangement that exists to continue.

From the beginning of this controversy which involves the question of the strong nation being generous with the weak I have wondered whether in view of Colombia's peculiar attitude toward Panama the sympathy of the Secretary of State has not been like unto that of the good old lady, who, looking upon the blanched face of the culprit behind the bars, prays for his release in spite of the fact that the victims of his deviltry are still suffering the wrongs inflicted by his hands. Colombia's title to Panama was never so clear as to free it from the suspicion that Panama's strategic and financial value was more to be desired by Colombia than any purpose to advance Panama or promote the independence of her people. The history of the whole transaction from the days of the discovery of the Isthmus down to the present time develops an interesting and heroic chapter of the efforts of a people to be free. And when that story is carefully considered in all its tragic details there is ample justification for the belief that the United States ought not to yield up $25,000,000 without a better understanding of the situation and need not apologize to Colombia for the upbuilding of Panama until all the facts are ascertained.

One of the most careful students of South American history of whom I have knowledge is Mr. Wilfred H. Schoff, secretary of the Commercial Museum at Philadelphia. He has gone over the Spanish and American records with great care, and at my request has prepared a summary of facts bearing upon the controversy which I trust will have the consideration of Congress and of the State Department. I append Mr. Schoff's historical review of the Panama-Colombia controversy hereto, because of the light it throws upon the whole subject:

PHILADELPHIA, *July 10, 1914.*

Hon. J. HAMPTON MOORE, M. C.,
Washington, D. C.

DEAR MR. MOORE: In the course of a recent conversation you asked for my opinion of the treaty now pending in the Senate, in which it is proposed that the Government of the United States should make an expression tantamount to an apology to the Government of Colombia because of the act of our Government in recognizing the independence of the Republic of Panama in 1903.

I feel very strongly that it would be inadvisable and unnecessary to include in a treaty with Colombia any such expression of regret or apology, because that would involve the admission that the United States had committed a wrongful act, and this, as I read the history of the whole affair, seems clearly not to be the case.

The relations of the Isthmus of Panama to the Colombian union and of the United States to the Isthmus seem to resolve themselves into two definite propositions: First, that in joining the Colombian union the Isthmus reserved the right to separate therefrom, fought for that right when it was trespassed upon, secured the acknowledgment thereof in two constitutions of the Republic, never relinquished that right, and exercised it in 1903 in accordance with the original reservation.

Second, that the Colombian administration from the years 1900 to 1904 was irregular and dictatorial and governed contrary to the provisions of the Colombian constitution, so that its acts with reference both to the Isthmus and to the United States were irresponsible and invalid under Colombian law.

As it has been asserted on numerous occasions by Colombian representatives that under the Spanish decrees the Isthmus had always been incorporated with the viceroyalty of the new Kingdom of Granada, which subsequently became the Colombian Republic, I append quotations from a number of royal decrees, showing the contrary to have been the case, and will subsequently cite passages from the laws and records of Colombia in support of my proposition above stated.

From the first days of Spanish settlement the Isthmus and the mainland of South America were distinct administrative entities. In 1508 King Ferdinand made the division into two Provinces, the boundary of which ran through the Gulf of Uraba at the head of the Bay of Darien and close to the mouth of the Atrato River. East of the dividing line as far as the Cape de la Vela, practically the present coast of Colombia, was granted to Ojeda, and west of that line as far as Cape Gracias a Dios, the present coast of Panama, Costa Rica, and Nicaragua, to Nicuesa. Balboa, the discoverer of the Pacific Ocean, lost his life because as a follower of Ojeda he entered on territory west of that concession and there stirred up rebellion against Nicuesa, who was the royal grantee. For two centuries this division was strictly maintained, the reason being that the mainland, of which Cartagena was the fortified port, was naturally in closer communication with the interior, where the Spanish power was centered in Bogota, while the Isthmus, with its fortified ports of Nombre de Dios and Panama, was in closer communication with the viceroys of Peru at Lima. The reason was imposed by the topography of the continent. Cartagena was the only possible seaport for handling the precious metals coming down the Magdalena River, and Panama was the only possible port for handling the precious metals coming up by sea from Peru.

This condition is clearly shown by a royal decree of 1535, by which Panama was made an independent audience, and in fiscal matters attached to the viceroy of Peru. (Recopilacion de las Leyes de Indias, titulo 15, libro 2.)

In 1550 Emperor Charles V ordained that the Isthmus should be one of the Provinces of Peru. (Recopilacion de las Leyes de Indias, titulo 1, libro 5.) This was confirmed by a similar decree in 1568 (Recopilacion de las Leyes de Indias, titulo 3, libro 3) and 1606 (Recopilacion de las Leyes de Indias, titulo 2, libro 5).

About 1600 a royal statement of officers of the Indies classified as districts under the viceroys of Peru the following:

1. Panama, including Tierra Firme, Veragua, Santa Catalina, and Porto Bello.
2. Lima.
3. Santa Fe (new Kingdom of Granada).
4. Charcas.
5. San Francisco de Quito.
6. Chile.
7. Trinidad and Buenos Aires.

Panama and Bogota were under that decree of equal rank and independent of each other. (Recopilacion de las Leyes de Indias, titulo 2, libro 5.) Again, by royal decree of Philip III in 1614, Philip IV in 1628, it was ordained that "The president of the audiencia of Panama shall obey the viceroy of Peru and hold regular communication with him." (Recopilacion de las Leyes de Indias, titulo 1, libro 5.)

It was not until 1717, nearly 200 years after the creation of the viceroyalty of Peru, that Santa Fe de Bogota was elevated to the vice-regal dignity, and the decree that established it mentioned as its Provinces Santa Fe, Cartagena, Santa Marta, Maracaibo, Caracas, and Quito. These are the modern Republics of Colombia, Venezuela, and Ecuador. Panama was not included in that decree, and remained attached to the viceroys of Peru. (Coleccion de Los Tratados del Peru, Vol. I, p. 267.) This new viceroyalty did not please the King of Spain, and it was reduced again to the rank of a captaincy by decree of 1723. (Coleccion de Los Tratados del Peru, Vol. I, p. 269.) A subsequent decree in 1739 re-created the viceroyalty of Santa Fe, and this time its borders were enlarged so as to include the Audience of Panama (Coleccion de Los Tratados del Peru, Vol. I, p. 121), but the same decree kept Panama in fiscal matters (by far the most important) subject to Lima, as before. "Notwithstanding the separation of your Province from Lima and its attachment to Santa Fe, the viceroyalty of Peru is directed to make its remittances to you as heretofore." (Coleccion de Los Tratados del Peru, Vol. I, p. 122.) The reason is manifest. Panama was in regular and easy communication with Peru, while the journey to Bogota and return required several months. Economic necessity kept the Isthmus subject to Lima, however much the military influence might procure its attachment to Bogota.

The assertion of Gen. Reyes during his futile mission to Washington in December, 1903, that "All the royal letters patent from 1533 to 1803 incorporated the Isthmus into the viceroyalty of the new Kingdom of Granada" was incorrect; first, because the viceroyalty of New Granada did not exist until 1717; and second, because when, for judicial purposes, Panama was attached to Bogota in 1739 its fiscal relations were expressly reserved to Peru.

In the long war of rebellion against Spain the Isthmus took no part. The city of Panama was garrisoned by a strong Spanish force. The independence of Colombia had been completely achieved by Bolivar before Panama had a chance to act. In fact, one campaign undertaken for the liberation of the Isthmus by a foreign legion consisting of volunteers under English officers, but with the approval of Bolivar, was disastrously defeated by the Spanish forces on the Isthmus and fled to Maracaibo. (Restrepo, Historia de la Revolucion de Colombia, I, ch. XII.)

The Republic of Colombia was formed in December, 1819. Panama rose against the Spaniards in November, 1821, when the Spanish governor, Col. José Fabrega, himself convened the provincial council and obtained the passage of an ordinance of independence, of which he was the first signer, as well as the first governor of the new Republic.

The resources of the Isthmus were felt to be insufficient to insure its independence without further aid, and its citizens had the choice of federating with the Central American Republics or with the greater Colombian Republic, headed by Bolivar. They chose the latter as the stronger power, and from a communication forwarded by Fabrega to Bolivar I quote a few words only:

"I have the high pleasure to communicate to your excellency that the Isthmus has decided upon independence from the Spanish rule. This act causing the total change of a political system which might have led to disastrous struggles has been accomplished with such order that its like could hardly be found. It is memorable in the pages of the history of free America. * * * We need disciplined men with competent officers to garrison the more important points where we might be attacked. My own gratitude is very deep at having been found worthy of public confidence to govern an independent Isthmus. I am determined to make any sacrifice for the country at whose birth I was present. I hope you will report these facts to your Congress, with the view of admitting us to the Republic which you represent."

This letter was dated at Panama November 29, 1821. Bolivar's reply was dated Popayan, February 1, 1822, from which I quote again a few words:

"I desire to congratulate the illustrious Province over which you have the glory of presiding. It is impossible for me to express the feeling of joy and admiration which I have had upon knowing that Panama, the center of the universe, is regenerated by itself alone and free through its own strength. The act of independence of Panama is a more glorious monument than any other American Province can offer to history. * * * I repeat the gratitude with which I have accepted in the name of Colombia the services which you and your generous people have accorded it in thus completing the boundaries that Providence and nature have suggested for our immense Republic." (Posada, Resena Historica de Panama, 28–29.)

Thus in Panama's act of independence, and from the pen of the great liberator himself, we have the direct assertion and acknowledgment of the independent sovereignty of the Isthmus.

The first Colombian Republic, which was formed in 1819, was a federation of sovereign States, the political formation of which was modeled after ideas borrowed from the French Revolution. Bolivar assumed far more autocratic powers than the constitution contemplated, and dissatisfaction on the Isthmus was so great that in 1830 an ordinance of secession was adopted under the leadership of Jose Espinar; at about the same time other Provinces of Colombia separated and formed the Republics of Venezuela and Ecuador, which have remained independent since that time. The Isthmus, however, was persuaded to return to the federation, but not until after the passage of a second ordinance of secession, under Juan Alzuro, in July, 1831.

Civil war broke out in 1839 throughout the Colombian Republic, lasting until 1841, and so great was the dissatisfaction of the Isthmus with the rule of Bogota that an isthmian convention, elected under call of Col. Tomas Herran, met at Panama November 18, 1841, and formally declared a separation, reasserting the independent sovereign rights of the State. The chief articles of the declaration were.

"1. The former Provinces of Panama and Veraguas shall compose an independent sovereign State which shall be constituted as such by the present convention under the name of the State of the Isthmus.

"2. If the organization which may be adopted by New Granada shall be federal and agreeable to the interests of the people of the Isthmus, this may form a State in the federation: *Provided*, That in no case shall the Isthmus be incorporated into the Republic of New Granada under a central system of government." (Valdés, La Independencia del Istmo de Panama, p. 4.)

This was the third ordinance of secession from Colombia adopted in Panama, and in each case the political rights reserved on the gaining of independence in 1821 were redeclared and reasserted. The separation lasted this time until 1842, when Gen. Mosquera, representing the Bogota Government, visited Panama and succeeded in persuading the people of the Isthmus to return to the federation on the promise that their rights would be fully acknowledged in the new constitution.

Once again, however, were these promises broken, as the constitution of 1843 was almost an exact copy of the previous one, against which the Isthmus and other Provinces had revolted, and a further revision of the constitution in 1853 made no change as regarded the Isthmus.

Panama was in a state of almost continuous insurrection from 1842 to 1854. It was this condition which brought about the treaty of 1846, by which the United States gained the right of transit across the Isthmus in return for a guarantee of its neutrality and the maintenance of order on the interoceanic highway.

The rights of Panama were recognized by the Bogota Government in 1855, when an amendment to the Granadine constitution constituted it a federal sovereign State, although all the other Provinces remained under direct control of the central government. (Valdés, La Independencia del Istmo de Panama.)

The forces of the Federalists triumphed in 1858, when a new constitution was adopted forming the Granadine Confederation, a group of sovereign States federated for limited purposes, but otherwise independent and possessing at all times the right to secede and to nullify the acts of the Federal Government. Under this constitution any State had the right to secede and declare itself independent and to enter into general relations with the Republic.

It is hardly necessary to note the inadvisability of such a constitutional provision. The essential fact remains that the rights thus recognized as belonging to the people of the Isthmus were never legally and voluntarily relinquished by them.

In 1860 several States seceded from the Granadine Confederation, and among them was the State of Panama, the President of which, Jose Obaldia, issued a proclamation June 4, 1860, in which he stated that "The Isthmus, to secure its own welfare, has no way left open except to emancipate itself forever from the disorganized Granadine Confederation."

Mosquera, president of the confederation, once more persuaded the Isthmians, against their best judgment, to withhold final action. He held out the prospect that the capital of the newly organized Republic should be located at Panama, and his message concluded with these words:

"I trust that in reply to this letter you will advise me that the State of Panama is still in union with the others, and that you will send your plenipotentiary to take his seat in the Congress, the convocation of which I have indicated to you." (Valdés, La Independencia del Istmo de Panama, p. 8.)

This, it will be observed, was a written acknowledgment by the President of the Republic of the independent sovereign rights of the State of Panama in 1860. Panama returned to the federation in 1861, under a written agreement entered into between its President, Santiago de la Guardia, and Manuel Murillo Toro, commissioner of New Granada. This agreement, signed at Colon, September 6, 1861, contained the following specific reservations of the sovereignty of Panama:

"ARTICLE 1. The sovereign State of Panama shall be incorporated into the new national entity which is called the United States of New Granada, and shall continue in consequence to form one of the Federal sovereign States which compose that association * * * with the specific reservations and conditions expressed in the following article.

"ART. 2. * * * the said State to be hereby incorporated with the United States above mentioned, but this State in exercise of its sovereignty reserves to itself the right to refuse its approval to the said new pact, and to the constitution which may be drawn up whenever, in its judgment, it may violate the autonomy of the States." (Valdés, La Independencia del Istmo de Panama, p. 9.)

This agreement was ratified by the legislative assembly of Panama, September, 1861, with the following stipulation:

"The President of the State is hereby authorized, in order to reconstitute the Republic, to incorporate the said State therein: *Always provided*, That it shall be accorded the same concessions as set forth in the agreement of September 6, last." (Valdés, La Independencia del Istmo de Panama, p. 11.)

The rights of nullification and secession recognized in the constitutional amendment of 1855, constitution of 1858, and the agreement of 1861 were never relinquished by the citizens of Panama, and the terms of this agreement of 1861 were included in the Colombian constitution of 1863, by the terms of which it was also provided that an amendment to the constitution should be proposed by a constitutional convention, and after ratification by the State assemblies, reenacted by the succeeding Congress before becoming effective; but notwithstanding this fact a new constitution was promulgated in 1885 by executive decree, without observing the forms of amendment specified in the constitution of 1863, and in direct violation thereof. In this constitution of 1885 the sovereign rights of the Isthmus were terminated without its consent, and it was reduced to the status of a crown colony without representation in Congress. (Colombian Constitution, art. 76, sec. 4.)

The Isthmus was held in involuntary subjection by overpowering garrisons of the national army stationed in its cities by order of the executive at Bogota. This policy had been adopted by the administration before the constitution of 1885 had been promulgated. The president of the State of Panama in 1875, Dr. Pablo Arosemena, was then seized and thrown into prison and his office declared vacant, "because he had not seconded the electoral plans of the president of the nation." (Valdes, La Independencia del Istmo de Panama, pp. 12 and 13.) He protested in a remarkable letter, and the State assembly adopted ringing resolutions of protest against this invasion of their sovereign rights and suspended the session, but in the face of superior force nothing more could be done by them. (Valdes, La Independencia del Istmo de Panama, p. 14.)

The act of secession adopted by the citizens of Panama in popular assembly November 3, 1903, was, therefore, a reassertion of legal rights maintained since the independence of the Isthmus was achieved by its citizens in 1821 and on numerous occasions subsequently asserted by Panama, acknowledged by the Colombian Government, and never relinquished by the citizens of Panama in the form required by the constitution in which those rights were specifically set forth.

Notwithstanding the foregoing procedure for amendments, the constitution of 1885 states as its basis of authority in the preamble that approval has been given "by the municipalities of Colombia." The manner of bringing this about was a fair sample of administrative procedure according to Colombian ideas. The legally elected governors of the States were deposed by executive decree, governors appointed from Bogota to succeed them, the State legislatures were abolished by decrees of the governors, and municipal councils chosen from lists of appointees prepared by the governors. Such constitutional amendment was a Punch and Judy show, and nothing more.

There was nothing secret or underhand about that act of secession of 1903. It was adopted by the municipal council at open session in the Cathedral Square, in the city of Panama, and the written articles were thereupon signed by a great number of citizens, there being no opposition whatever. Every district council on the Isthmus promptly confirmed the act. The movement was organized by a group of citizens of Panama—Manuel Amador Guerrero, José Agustin Arango, Ricardo and Tomas Arias, Manuel Espinosa, C. C. Arosemena, Nicanor A. de Obarrio and Federico Boyd—all prominent citizens of the Isthmus, who acted in full recognition of the risk involved. As Señor Boyd observes in his Exposición Histórica, pages 5 and 26, these men "decided to risk all—lives, family, fortune, and social position—in behalf of our fellow citizens," and as a result of the movement instituted by them the Isthmus accomplished its own independence (Exposición Histórica, pp. 12 and 33) "with its own resources only, with its own elements, without any material aid from foreigners, pecuniary or otherwise, and the movement was planned and prepared exclusively by its own people three or four months before, with admirable caution, precision, and judgment."

The correctness and legality of the Isthmian act of secession of 1903 was recognized by the Government of the United States, and nowhere more succinctly set forth than in a letter from Hon. ELIHU ROOT, Secretary of State, to Diego Mendoza, minister from Colombia in 1906:

"We assert that the ancient State of Panama, independent in its origin and by nature and history a separate political community, was federated with the other States of Colombia upon terms which preserved and continued its separate sovereignty; that it never surrendered that sovereignty; that in the year 1885 the pact which bound it to the other States of Colombia was broken and terminated by Colombia and the Isthmus was subjugated by force; that it was held under foreign domination to which it had never consented; that it was justly entitled to assert its sovereignty and demand its independence from a rule which was unlawful, oppressive, and tyrannical." (S. Doc. 542, 60th Cong., 2d sess., p. 10.)

It now remains to review the course of administration at Bogota with reference to the concession for and work upon the Panama Canal, the negotiations for the transfer of that concession to the United States Government, and the intrigues within the Colombian Government for the control of those negotiations during the years 1899–1903.

The construction of the Panama Canal was undertaken by the French company under a contract known as the Salgar-Wyse concession, dated March 20, 1878, and under its terms the canal company was to be organized within 2 years and the canal work to be completed within 12 years from such organization. (Report of the Isthmian Canal Commission, 1899–1901, vol. 1, p. 473.) It is well to recall that at almost the same date the Bogota Government, in order to reserve to itself absolute control over the Isthmus, sent troops to Panama in violation of the constitution against the protest of the governor of the State, who was removed from office for having the temerity to make such protest, although as an elective State officer the Federal Government at Bogota had no right or constitutional power to intervene. The canal company's concession was extended by law of December 26, 1890, for 10 years upon payment to the Colombian Government of $2,000,000 gold and 10,000 shares at $100 par in the company. (Report of the Isthmian Canal Commission, 1899–1901, p. 479.)

A further extension of time was given the canal company by contract with the Colombian Government April 4, 1893. The original canal company having failed, its rights were turned over to the reorganized company, which was granted until October 31, 1894, to complete its organization, and was given a period of 10 years from that date, or until October 31, 1904, to complete the canal work. In consideration, the $2,000,000 owing and unpaid by the old company was to be increased by $400,000 and in addition to the 10,000 shares of stock in the canal held by that Government. (Report of the Isthmian Canal Commission, vol. 1, p. 481.)

Under this concession the original French Canal Co. and its successors had expended very large sums on the canal work. While much of this money was misused and wasted there is no doubt that between $100,000,000 and $150,000,000 were actually spent in construction work on the canal. The engineering difficulties met with on the Isthmus were far greater than originally anticipated; furthermore, the canal company had no control of isthmian sanitation and was powerless to combat the epidemics of yellow fever and malaria. It became evident as early as 1898 that it would be unable to complete the work within the period of its concession as extended, and that a further extension of time would be necessary. This had been predicted in a report to the Bogota Government from its military inspector of the canal work, Col. Armero, even as early as 1886. (Nelson, Five Years at Panama, pp. 236–237.)

The company therefore petitioned the Colombian Government in 1898 for a further extension in order that its finances might be placed on a more secure footing. Civil war existed in the Republic at that time. Congress was not in session, and a state of siege being proclaimed, the executive possessed under the Colombian constitution almost unlimited powers. (Colombian constitution, 1885, art. 121.) At that time the Colombian President, Dr. Manuel Antonio Sanclemente, whose term of office began November 3, 1898, for a six-year period, granted an extension of the canal company's concession to run until October 31, 1910, by executive decree, indorsed by the ministers of his Cabinet, as required in such cases by article 121 of the constitution. It was this action which finally brought about the imprisonment of President Sanclemente and the establishment of the military dictatorship under the Vice President, José Manuel Marroquin.

That the steps of this intrigue may be clearly understood it is well to recall the provisions of the Colombian constitution of 1885 regarding the election and powers of the executive and legislative branches of the Republic. By title 17, articles 173, 174, and 176, the citizens vote for electors, one for each 1,000 inhabitants, who in turn vote for President and Vice President of the Republic. In practice these electors frequently name the leading candidate President and his leading opponent Vice President, and this was the case in the election of 1898, when Dr. Sanclemente, formerly justice of the supreme court and a member of the national party, was chosen President, and Dr. Marroquin, of the liberal party, a newspaper man and littérateur, not at all in sympathy with Sanclemente, was chosen Vice President. The powers of the Vice President are defined by article 124 of the constitution as follows:

"The Vice President shall perform the duties of the executive office during the temporary absence of the President. In case of the permanent absence of the President the Vice President shall occupy the executive office until the expiration of the term for which he was elected. The death or accepted resignation of the President shall be the only causes of permanent absence."

The legislative branch is composed of two bodies—Senate and House. Article 93 of the Constitution provides that—

"The Senate shall be composed of three senators from each Department. Two substitutes shall be elected for each senator."

And article 99—

"The House of Representatives shall consist of one member for every 50,000 inhabitants of the Republic. Two substitutes shall be elected for each representative."

Article 68 of the constitution directs that—

"The two houses of the legislature shall meet in ordinary session by virtue of law every two years on the 20th of July, in the capital of the Republic. The ordinary session shall continue 120 days, after which the Government may declare the houses adjourned."

Article 72:

"Congress shall meet in extra session when summoned by the Government. In extra sessions only such business may be considered as the Government may submit for consideration."

Article 113 further provides:

"In case of the temporary or permanent absence of a member of Congress, the vacancy shall be filled by his substitute."

In this constitution there are all the necessary elements for internal intrigue looking toward the replacement of the legal officials by their substitutes, who may be, and frequently are, of opposite political affiliations, and it was the existence of these congressional substitutes which enabled President Marroquin to propose to President Roosevelt that if "the recognition of Panama should be revoked he would declare martial law and approve the treaty by executive decree, or call an extra session of Congress with new and friendly members of Congress to do so," it being an easy matter to insure enforced absence of senators and representatives and the sitting of their substitutes in their places in Congress. At this time the two parties in Colombia were divided with reference to the French canal company's rights—the leading item of their foreign affairs. The National Party favored the reasonable continuation of the company's charter rights until funds could be raised and work prosecuted in good faith for the completion of the canal. The Liberal Party, doubting the ability of the canal company to fulfill its obligations, favored the cancellation of its concession on the strict letter of the contract, the forfeiture of its rights and properties to the Colombian Government, and the resale thereof to another purchaser.

This purchaser was, of course, to be the Government of the United States, which, following the Spanish-American War of 1898, and the hazardous voyage of the battleship *Oregon* around South America, was resolved upon the immediate construction of an interoceanic canal.

The procedure favored by the Liberal Party of Colombia was the same as that carried into effect by the administration of Nicaragua, under which the rights of the Maritime Canal Co. for the construction of the Nicaragua Canal had been declared forfeited to the Nicaraguan Government and were now offered for sale.

At this time there was active competition as between the Panama and Nicaragua Canal routes. Either route was feasible from an engineering standpoint, and the probable cost was estimated to be so nearly the same that the choice depended in large part on the arrangements that could be made for the purchase by the United States Government of the rights and properties on either route. Nicaragua was in a position to deliver, and the Isthmian Canal Commission appointed by President McKinley, and headed by Rear Admiral Walker, had submitted a preliminary report favoring that route. The French Canal Co., which was in financial difficulties and was in no position to complete the work, met the Walker Commission's report by a flat offer of its properties and privileges for $40,000,000, upon which the Walker Commission submitted a second report favoring the Panama route as against that through Nicaragua, and the issue was thus brought directly between the French Canal Co. and the Colombian Government as to which should receive the payment from the United States. It was certainly the part of honor for the Colombian Government to stand back of its

concessionaire in order that the great sums invested in good faith in the canal work by French stockholders should not be entirely wiped out, but a powerful element within Colombia favored the exaction of the letter of the contract and the cold-blooded forfeiture of the canal property and the apportionment of its proceeds by Colombian citizens.

Under such conditions President Sanclemente issued his extension of the canal company's concession to run until October 31, 1910. His opponents within and without the administration argued that this extension by executive decree was invalid and must be ratified by the Colombian Congress. President Sanclemente was then an old man past 70 years of age, and had availed himself of article 123 of the constitution by accepting temporary leave of absence from the capital. During this brief period the vice president, Marroquin, performed the executive duties, and the signature of President Sanclemente began to appear, and continued some time thereafter, on official documents in the form of rubber-stamp impressions, a most irregular and illegal proceeding.

Being dissatisfied with the conduct of public affairs, and having recovered his health, President Sanclemente returned to the capital, but subsequently again availing himself of a Colombian statute in force for many years, transferred the executive office to a country estate at Anapolma, in the department of Cundinamarca, at no great distance from the capital. From this time open dissension existed within his cabinet and council of state. Sanclemente was upheld by his minister of state, Rafael M. Palacio, and his minister of war, Gen. Manuel Casablanca, while the remainder of the cabinet sided with Vice President Marroquin, who was urged to assume the Presidency. This condition of anarchy existed until July 31, 1900, when Vice President Marroquin declared himself in the exercise of the executive power, named and installed a ministry, and took possession of the Government.

This proceeding was reported to the United States Government by its minister at Bogota, Charles Burdett Hart, August 5, dispatch No. 391, President's Message and Foreign Relations, 1900, Fifty-sixth Congress, second session, H. Doc. No. 1, page 406. Mr. Hart reported that—

"This act was made possible by first getting possession of the garrison in Bogota, and this in turn was made possible by an understanding with the commanders. Such commanders as were not favorable to the movement were superseded by friends of Marroquin and held under strict surveillance while the necessary steps were being taken to get possession. There was no resistance whatever, and, considering how the matter was accomplished, none was reasonably to be expected."

Minister Hart further reported the treatment extended to President Sanclemente and his loyal minister of state, as follows:

"The first knowledge that President Sanclemente had of the coup d'état was when a Marroquin force arrived at Villeta, President Sanclemente's temporary residence, a day's journey from Bogota, and made him prisoner, together with Rafael M. Palacio, his minister of government."

On August 3 President Sanclemente issued a protest to the nation, stating that Marroquin had violated the constitution and had made himself military dictator, and his Minister Palacio prepared messages to the foreign powers, but, as Minister Hart further reports, "no friend of the Sanclemente government has been able to send or to receive a message by telegraph," and Palacio was subsequently brought to Bogota, paraded through the streets of the capital with the greatest indignities, and lodged in jail. Minister Hart reported again on August 15, 1900:

"Mr. Palacio, minister of government under President Sanclemente, has been brought here a prisoner. On the day of his arrival he was paraded up and down the principal streets under guard before being taken to prison. This was regarded as an act of needless cruelty, and aroused the criticism of men of all parties. * * * Many of President Sanclemente's friends have been taken as prisoners to keep them from conspiring against Vice President Marroquin's government."

When President Sanclemente and his minister of state were imprisoned the minister of war protested in vain against the arbitrary course of Marroquin, and, according to the statement put forth by the Marroquin government, "he desisted from his position only in the conscience of duty fulfilled" and "in the manifest presence of superior force."

The events thus reported by the American minister show clearly that the government set up by Marroquin violated the constitution of Colombia, which provides in article 124 that the death or accepted resignation of a President should be the only cause of permanent absence during which the Vice President should occupy the office, and that the entire subsequent course of the Marroquin administration was illegal and irresponsible and depended solely on his arbitrary control of the military forces of the Republic. It was, therefore, by comparison with more recent events, on an exact parallel with the administration set up in Mexico City by Gen. Huerta; and might equally well be characterized in President Wilson's words, "We can have no sympathy with those who seize the power of government to advance their own personal interests and ambitions."

Sanclemente's concession was granted by executive decree 721 of 1900. (Isthmian Canal Commission Report 1899–1901), vol. 1, p. 483.) It extended the time of the company for an additional six years, to expire October 31, 1910, upon payment of $1,000,000 to the Colombian Government. This decree of extension was signed by the President and by all of his council of ministers, in accordance with the Colombian constitution, article 121.

"In case of foreign war or of civil commotion, the President may, after consultation with the council of state and with the written consent of all the ministers, declare the public order to be disturbed and the whole or a part of the Republic in a state of siege.

"After such declaration the President shall be invested with the powers which the laws confer upon him to defend the rights of the nation or to repress disturbance, and, in case the laws are defective, he shall use the powers conferred by the law of nations. The extraordinary means or legislative decrees of a provisional character, which, within the said limits, the President may ordain, shall be obligatory, provided they bear the signatures of all the ministers.

"The Government shall declare the public order reestablished as soon as the commotion or foreign danger shall have ceased; and the President shall send to Congress a statement of the reasons that induced his measures. All officers shall be responsible for the abuses which may have been committed in the exercise of extraordinary powers."

It should be noted that under this article of the constitution the acts of the President having authority of the council of state during a state of siege are not required to be submitted for approval to the Congress when it shall reassemble, but are only required to be reported as acts accomplished. The Sanclemente extension was strictly in conformity with the constitutional requirements; not only did it bear the signature of the President and all his ministers, but it bore the report of a meeting of a council of ministers, at which it was unanimously approved and the signatures of the president and secretary of the council authorizing the President to issue the extension were attached. (Isthmian Canal Commission Report, 1899–1901, vol. 1, pp. 483–484.)

The granting of this extension was made a political issue in Colombia and was followed, after an interval of only three months, by the arbitrary seizure of power by the Vice President, the imprisonment of Sanclemente's minister of state, dismissal of the remaining ministers, and the appointment of a new cabinet by Marroquin on July 31, 1900. So lawless were the acts of Marroquin that telegraphic communication was denied even to the diplomatic dispatches of foreign Governments. Secretary Hill at Washington, for instance, advised Minister Hart as follows:

"Although the probability of interference with telegraphic communications in Colombia may delay your reception of a cable message, I have embodied the essentials of this instruction in the following cipher message telegraphed you this day:

"'When new government is in possession of machinery of administration, maintaining order, executing the laws in Colombia with general assent of the people, and responsibly fulfilling international obligations, you may notify readiness to enter into relations.'"

Finally, with considerable hesitation, Marroquin was recognized on September 15, 1900, by the ministers of the United States, France, Germany, Great Britain, and Spain. The papal legate declined to join in the act of recognition.

The minister of foreign affairs appointed by Marroquin was Dr. Carlos Martinez Silva, who had previously served as Colombian minister in Washington. This minister addressed a circular letter to foreign Governments, in which, on behalf of the Marroquin government, he attempted to justify this seizure of President Sanclemente's person on the ground that he was incapacitated by insanity due to senile decay, and thereby an unusual occasion had arisen not contemplated by the constitution and the laws. This assertion was not substantiated by evidence or judicial proceedings, and both the American minister at Bogota, Mr. Charles B. Hart, and the American consul general, Mr. Arthur M. Beaupré, interviewed President Sanclemente while he was held captive, and reported no signs of mental disability. On the contrary, he seemed in full and vigorous possession of his faculties, and protested forcefully against Marroquin's treachery. Minister Carlos Martinez Silva's statement was hardly more than an excuse to lay some sort of foundation for the Marroquin government and deceived no foreign Government whose ministers were then resident at Bogota. It was universally recognized that the reason for the violent and illegal change in administration was the determination of the Liberal Party to cancel Sanclemente's extension of time to the canal company, to control the canal negotiations, and, if possible, to bring about a forfeiture of the canal property to the Colombian Government. On the reassembling of the Colombian Congress, Marroquin submitted the Sanclemente extension as an executive order requiring confirmation, and the Congress refused to confirm it. It then became the policy at Bogota to delay final action, if possible, until October 31, 1904, when the canal concession would be forfeited under the terms of the previous extension. The course of events was, however, too swift for this plan to be carried out.

The Isthmian Canal Commission reported on November 16, 1901, in favor of the Nicaragua route, but indicated that if its valuation of $40,000,000 for the Panama rights and properties should be accepted, its report would be modified so as to recommend that route instead, and the Hay-Pauncefote treaty, which enabled the United States Government to undertake the construction of the canal, was signed at Washington November 18, 1901, and proclaimed February 22, 1902.

These events were followed by the acceptance by the Panama Canal Co. of the $40,000,000 offered by the Walker Commission, and by the revision of that commission's report, so as finally to recommend the Panama route.

On June 28, 1902, the President approved the Spooner Act, providing for the construction of the canal, which authorized the President "to acquire from the Republic of Colombia, for and on behalf of the United States, and upon such terms as he may deem reasonable, perpetual control of a strip of land not less than 6 miles in width," and "to secure satisfactory title to the property of the new Panama Canal Co., and to pay therefor $40,000,000, and to the Republic of Colombia such sum as shall have been agreed upon." The act further authorized the President, in the event that he should be "unable to obtain for the United States a satisfactory title to the property of the new Panama Canal Co., and the control of the necessary territory * * * within a reasonable time and upon reasonable terms * * * to enter into a treaty for the construction of a canal over the Nicaragua route."

This act forced the opening of negotiations with both Nicaragua and Colombia, and for a year there was active competition in Washington between representatives of both Republics to secure the final choice of the route favored by each. The Marroquin government was in a poor position to negotiate. The Colombian people had not accepted his usurpation of power, which was followed immediately by an outbreak of civil war, which lasted nearly four years, which devastated the country, and led to the killing of about 250,000 Colombian citizens and the issuance by the different departments of the Colombian Government of more than $700,000,000 of paper money to circulate among the population of a little over 4,000,000, so that the rate of exchange arose to 10,000 per cent, and for a time it cost $5 Colombian money to send a letter from Barranquilla to New York. (Report of Mr. Dickson, British vice consul at Bogota, reports 1901–2–3.)

The Marroquin Government did not send a minister to Washington but maintained as chargé d'affaires Dr. Tomas Herran, secretary of legation. The Colombian Congress was not in session, a state of seige being proclaimed, owing to the civil war, and the negotiations were directed personally by Marroquin at Bogota. After many delays a protocol was submitted by Dr. Herran as the basis of a treaty, in which, under article 1, the Government of Colombia authorized the canal company to sell and transfer to the United States its rights, privileges, properties, and concessions, as well as the Panama Railroad and all the shares of that company, the Government reserving only its shares in the canal company, for which it demanded payment at par, and this protocol further provided that "the railroad company and the United States, as owner of the enterprise, was to be free from all obligations imposed by this concession"—including the reversion to the Colombian Government on August 16, 1966—except as to payment of its outstanding bonds, and the United States was granted control of the canal strip without affecting the sovereignty of the Republic of Colombia over that territory, which, in article 4, the United States acknowledged and recognized.

This treaty was signed in Washington January 22, 1903, and confirmed by the United States Senate, but the Colombian Congress was once more in session and the treaty was referred to it by the Marroquin Government as a new matter for consideration. The report of the Colombian Senate asserted the invalidity of the Sanclemente extension, and stated that "if not valid the question would be changed in consequence of the fact that when a year later the Colombian Congress should meet in ordinary session the extension of 1893 would have expired and every privilege with it," and Colombia would then have become "the possessor and owner, without any need of a previous judi-

cial decision and without any indemnity, of the canal itself and of the adjuncts that belong to it," and would be "in clear, definite, and advantageous position, able to contract without any impediments," and the treaty was unanimously rejected by the Colombian Senate in August, 1903, such rejection being accompanied by a memorandum of reasons setting forth that the Colombian sovereignty would be injured—although definitely confirmed and recognized in the treaty—and that such an agreement would only be approved by a national convention or an amendment to the constitution.

This declaration seems peculiar in view of the fact that the original draft of the treaty had come from Bogota, and the Senate committee's report, which proposed to delay the negotiations until the French canal company's property had been forfeited, no doubt gave the real reason. It is perhaps idle to speculate on the possibilities, but it is hardly conceivable that the French Government would have permitted the forfeiture of that concession and the seizure of the property of the French company without compensation for the vast sums expended there in good faith by the French investors. It is altogether probable that the French Government would have intervened by military force and would have insisted upon a just and equitable settlement of the difficulties.

The rejection of the treaty by the Colombian Senate was not accomplished without a strong protest on the part of the people of Panama, whose Representative in the Colombian Congress warned the Government in so many words that unfavorable action on the treaty would be followed by a revolt on the Isthmus. Anticipating such action, the citizens of Panama had obtained arms and ammunition and had been drilling diligently for months. There was no secrecy about their determination to secure a canal settlement at that time. The newspapers of Panama, New York, and Bogota all printed dispatches referring to these warlike preparations, and the writer was personally informed during the summer of 1903, by several gentlemen from Panama, of the same. The citizens of the Isthmus arose and declared their independence on November 4, 1903. Their declaration of independence stated that their "grievances would have been borne with resignation for the sake of harmony and national union had there been a possible remedy. We must solemnly declare our sound conviction that all such efforts are futile and useless, and all sacrifices have been required of us alone * * *." The declaration referred to the "summary rejection of the canal treaty," and to the "irreparable and perpetual damage which would be caused by the manner in which it was done, which was equivalent to closing the doors to all future negotiations. The people of the Isthmus, in view of such notorious causes, have decided to recover their sovereignty and enter the society of free and independent nations."

Following this declaration, a republican Government was instituted, and a minister sent to Washington to resume the canal negotiations.

Out of the innumerable assertions that have appeared regarding these events the essential fact stands forth unchanged. The United States had agreed, by treaty with the Republic of New Granada in 1846, to maintain neutrality and order on the Isthmus. That Government had disappeared. It had been succeeded by another Government—the Republic of Colombia—which was based on an arbitrary and illegal constitution, proclaimed by military force, the pretended ratification of which was only secured by the dismissal of the legally elected governors of the respective States and by the presidential appointment of new officers, who signified, under orders from Bogota, their approval of the constitution; and under this arbitrary constitution the legal rights of sovereignty reserved to the Isthmus under previous constitutions were invaded, trampled upon, and extinguished by military force and against the protests of the people. Furthermore, the administration pretending to govern under the constitution was itself an illegal and usurping administration, acting contrary to the provisions even of that illegal constitution and irresponsible, in that it had denounced the treaty negotiated at its own request upon its own terms, because, in the meantime, it saw a possibility of securing, through delay, a larger return. On the other hand, was a government resting on the approval of the people, depending on constitutional rights never relinquished, offering to the United States in a business-like and definite manner a satisfactory contract for the construction of a canal. There was but the one thing to do, and any man having the interest of his country at heart must have done the same thing, namely, deal with the party having the best legal standing and at the same time making the fairest offer, and that party was the Government of Panama.

It is unfortunate that so much personal animosity has entered into the subsequent discussion of this matter. The canal treaty was negotiated by Secretary Hay, one of the greatest of American diplomats, and had his unreserved approval. It was referred to by him as an act "forged white hot upon the anvil of statesmanship," and it was ratified in the United States Senate by an overwhelming vote. Subsequent attempts to make of this a party or personal matter are unfortunate and unnecessary. The Colombians, through their narrowness of party strife and personal cupidity, and their disregard of their own constitution and laws, had forfeited the respect of the world, and they were themselves responsible for their downfall.

Gen. Reyes, sent to Washington to recover, if possible, something from the wreck, returned in due course to his country, and in the course of his report stated:

"It was undoubtedly a very serious mistake on our part that we put ourselves in the position of soliciting of the United States Government the ratification of a treaty for the construction of the Panama Canal, when we ought to have carefully awaited from that Government any proposition of that kind. We made a still graver mistake when, without having come to any previous agreement with the canal company as to the conditions under which it might be authorized to transfer to the United States Government the concessions which it held from Colombia, we implicitly authorized it, without contract or agreement, in definition of our rights and its obligations, to join its interests with those of the United States. * * * We let pass the opportunity of demanding and arranging an indemnity; and when we wished to claim it, and did in effect claim it, our demand was ill received, not only by the company but by the Government of the United States, and in the daily press of the highest character our claim was qualified as unlawful extortion (blackmail). * * * We must also admit that the United States Government had granted to us by way of compensation in the Hay-Herran treaty much more than we had asked in the memorandum of our minister in Washington, which served as a basis for that treaty. Comparing these two documents, the Government of the United States may well point to the generosity of its dealings with Colombia and obtain the public opinion of the civilized world in considering as an indisputable fact that the obstinacy of our Government was the only real obstacle to the construction of the canal by the United States, which was the only agency capable of bringing to completion so colossal and gigantic a work. * * * It is highly humiliating for our national patriotism to see the extremes to which we have been brought by our common errors, and to look, without power to remedy them, upon the misfortunes of every kind which have come upon us as the fruit of domestic strife and anarchy; but more humiliating still it has been for us as a nation to submit to the verdict of the great majority of the nations of the world, which have united without hesitancy to sanction the violent spoliation, of which we have been the victims."

The words of Gen. Reyes's report of 1904 are just as true in this year of 1914 as when they were written. There is no step in the Isthmian Canal negotiations where the Colombian Government does not stand convicted upon its own record. As Secretary Hay wrote to Gen. Reyes during his brief mission in Washington, the proposed cancellation of the French canal concession and the proposed forfeiture of its properties in order that the Colombian Government might offer them for sale with a title based on rapacity and fraud, was "a scheme to which the United States Government could not become a party."

It is almost inconceivable at this time that the United States Government, acting as it did, as the agent of civilization and the representative of the great nations of the world in procuring a final and satisfactory settlement of these long-pending negotiations, should now be expected to offer an apology for the course adopted by it in 1903–4, and so unanimously and unreservedly approved at that time by all the great powers of the world. Its actions were such as it may still take pride in and be not ashamed.

WILFRED H. SCHOFF.

Pensions.

EXTENSION OF REMARKS
OF
HON. AUGUSTINE LONERGAN,
OF CONNECTICUT,
IN THE HOUSE OF REPRESENTATIVES,

Friday, July 10, 1914.

Mr. LONERGAN. Mr. Speaker, Senate bill 5207, now before us, is an important matter and deserves careful consideration.

In approaching this subject a twofold duty must be borne in mind, what we owe to the soldiers, sailors, and widows and what we owe to the taxpayers in the matter of safeguarding the Treasury against excessive appropriations. I am in favor of keeping down to a judicious minimum the appropriations which must be made. Nevertheless I do not consider it wisdom, economy, or justice to reduce our Government expenditures at the expense of the old soldier, sailor, or widow. Believing that it is only right and just that loyal patriots' service should be rewarded, it has given me pleasure to vote for appropriations providing for the payment of pensions.

It is an interesting and noteworthy fact that the dollars expended by the Government in pensions for worthy soldiers go where they will do the most good. The money goes direct to the homes of those to whom the question of subsistence is a serious problem—direct to the homes of aged veterans, widows, and, in some cases, dependent children. The money is widely distributed and it very quickly finds its way into circulation. It is safe to say that a smaller percentage of the pension appropriation is wasted or misused than of any other Government appropriation of equal size. The records of the Pension Bureau for the year ending June 30, 1913, show that only 61 new cases for that year were presented by the bureau to the Department of Justice for prosecution on account of offenses against the pension laws. As no less than 860,294 persons participated in the pension appropriation, this small number of violations of the pension laws is excellent evidence of the honesty, integrity, and honor of the soldiers, widows, and dependent children. The low percentage shows very little tendency to practice fraud or deception.

NUMBER OF PENSIONS.

It will be of interest at this time to refer to official records which show how many persons are receiving pensions from the Government. At the close of the year ending June 30, 1913, there were 820,200 pensioners on the roll. Of this number 503,633 persons rendered service in the Army or Navy of the United States, including 328 Army nurses, and the remaining 316,567 were pensioned as widows and dependents. The number of individuals who served in the Army and Navy of the United States during the Civil War is estimated at 2,213,365.

The survivors of the Civil War on the roll on the 1st of July, 1912, numbered 497,263. These survivors at the end of the fiscal year June 30, 1913, were, by death, reduced in number to 462,379, or a net loss during the year among the Civil War veterans of 34,884. This amounts to an annual reduction in the ranks of those heroes of 7¼ per cent.

On the 1st of July, 1912, there were 232,947 widows of Civil War veterans on the pension roll. On the 1st of July, 1913, there were 232,864 such widows on the pension roll, being a net loss of 83 during the last year.

The largest number of pensions ever carried on the rolls of the Government were 999,436 in the year 1902. The total

amount paid in pensions for that year was $141,335,646.95. The greatest amount of pensions ever paid in one year was in the year 1913, when the Government expended for that purpose $176,714,907.39. It may seem strange that during the year 1913, when there were 179,246 less soldiers, widows, and dependents on the pension roll than in the year 1902, that the amount of pensions paid in 1913 should be $35,379,050.44 larger than in 1902. An explanation, however, is simple and is due exclusively to the increase in pensions for Union soldiers provided for by the Sherwood age and service pension act, which became a law May 11, 1912.

It has been recommended that a considerable sum of money could be saved for pensioners by abolishing all unnecessary agencies, special examiners and boards of examiners; that the money saved in this way could be used in increasing the pensions of thousands who need increases.

No time should be lost in bringing about this change, for whatever is to be done for the old soldier must be done quickly. Everybody knows how the ranks are thinning; one by one they are dropping off; each public appearance of the Grand Army of the Republic posts shows great gaps in the ranks and tells the pathetic story of the passing of the veteran.

In common with other Members of the House, I am indebted to Representatives ADAIR, of Indiana, and BURKE, of Wisconsin, for much valuable information on the subject of pensions.

UNJUST TO THE WIDOW.

There are laws in force which are unfair to thousands of deserving widows and should be repealed. One of the most unjust of these laws is the "widows' pension act," passed April 19, 1908, which denies the right of pension to any widow who married a soldier subsequent to June 27, 1890. For instance, a widow who married a soldier on June 26, 1890, may have a pension, but a widow who married a soldier on June 28, 1890, two days later, can not. If the husband of the widow who married before the date specified died a week after the marriage, the widow could receive a pension. Yet in the case of the widow who married just after the arbitrary date, there would be no pension for the faithful wife, even though she ministered to the husband's wants with loving care and devotion for 20 years.

I agree with one of my colleagues who recently pointed out that a soldier's widow may have lived and struggled on with him during 24 years in adversity, sorrow, and in toil, from youth to old age, through storm and through sunshine, and it makes no difference how many long, weary days and nights, through long years she may have nursed him in his sickness and helplessness, nor that in sorrow and tears she spends her last dollar to plant flowers on his grave, she is turned down at the Pension Bureau because of the provisions of this harsh, unjust, and arbitrary law.

Justice demands that so long as we are to continue the policy of pensioning the widows of soldiers and sailors that this class of widows who married since June 27, 1890, should be afforded immediate relief. It is true that the Committee on Invalid Pensions frequently recommends special bills in the case of very needy and destitute widows who married within a short time after the passage of that law. But the granting of a special bill to one of this class, when they all ought to enjoy this privilege as a lawful right, in the absence of proof that the mariage was contracted merely to collect a pension, is discrimination and an injustice to those who married no later and who have not been able to obtain relief through Congress.

THE SOLDIER'S DUE.

I am in favor of more liberal pensions to the veteran, because I believe it is his due. And I believe that there is a growing sentiment that the soldiers, sailors, and widows who are in need shall be guaranteed against want at the sunset period of their lives. The debt which a Nation owes its soldiers can not be measured in dollars and cents. Patriotism can not be weighed on the money scale, nor can sacrifice be described in monetary terms. In computing the value of the soldiers' service we must think of the hardships they experienced, the wounds they received, the privations and suffering on long marches and in desperate campaigns, absence from the loved ones at home, and the dangers and horrors of the battle field. With thousands of the veterans their trials did not end with the closing of the war. Wounds and disease have been doing their insidious work, and the silent sufferings of many brave fellows have gone on year after year, unknown to the general public.

NOT PAID IN FULL.

One fact which is often lost sight of is that the old soldier did not receive full payment for the services which he rendered. The money used in paying the soldiers was depreciated currency, the same kind of currency the Government received from the bondholders who bought the bonds issued by the Government to pay the cost of the war. The fact remains that the soldiers were never paid in money worth 100 cents on the dollar, but the bondholder has been paid in full and in gold. By an act in 1869, known as "An act to strengthen the public credit," these same bonds were payable in gold, and millions of dollars of money went into the pockets of men who loved their money more than they loved their country; while the men who sacrificed health, home, and everything, and who loved their country better than their money, and who were willing to give up all God had given them for the preservation of the Union, are still unpaid.

It has been estimated that $51,061,222 more than the sum paid the Union soldiers should have been given them, and would have been had they received 100 cents on the dollar. Plainly speaking, this was the depreciation on their monthly pay, and computing the period at 48 years, and allowing simple interest at 6 per cent, the interest alone would amount to $147,056,319; to this must be added the principal, which makes the enormous sum of $198,117,541 which would have been paid the soldiers. Do we wish to declare by national legislation that money is more sacred than manhood; that cash is more valuable than patriotism?

TECHNICALITIES VERSUS RIGHT.

Pension cases which have come to my attention during the past year or two have convinced me that there is a deplorable lack of humane understanding in certain of our pension laws. A wound on the battlefield should not be a requisite in order to get a decision from the Bureau of Pensions to the effect that a soldier's disability is due to his military service.

There are cases in which loyal soldiers left the service apparently sound physically, yet in reality, as a result of arduous service, exposure, and strain, returned home with health shattered, never again to know their former strength and vigor. Handicapped by their afflictions, they soon went down in the struggle for a livelihood. Conditions forced them to make application for a pension from the Government which they had served so well. Yet, under existing pension laws, what was the answer to their appeal? "The applicant has failed to show that the disability is due to his military service." In his extremity the applicant perhaps appealed again to his Government, and filed a new series of affidavits. Again the answer came back, calculating and cold, "The applicant has failed to show that the disability is due to his military service."

It ought not be said with truth that this rich, powerful Nation will let such technicalities deprive the Union soldiers of the necessities and comforts of life in their declining years. Statistics show that the old soldiers are now dying at the rate of 1 every 14 minutes, 115 each day; over 40,000 died last year, and many of them were in destitute circumstances. Let us remove technicalities that justice be done.

SPANISH-AMERICAN WAR PENSIONS.

I gladly voted for House resolution 13044, the measure which has for its object the payment in part of the debt we owe to those who served in the Spanish-American War, the Philippine insurrection, and the Boxer uprising in China. The bill as passed the House would grant $12 monthly to the widow of an honorably discharged soldier or sailor, and $2 monthly for each child under 16 years of age, provided that the widow shall have married the soldier prior to the passage of the bill. The pensions are to be limited to widows without means of support other than their daily labor and an actual net income not exceeding $250 a year.

On the 1st of July, 1912, there were on the pension roll 23,841 survivors of the War with Spain, and 24,157 on the 30th of June, 1913. On the 1st of July, 1912, there were on the pension roll 2,931 widows of Spanish War soldiers, and at the end of that year there were 2,860 such widows on the roll. May this great Nation never forget its debt of gratitude to that soldier and sailor body of young men who rendered service to their country within a period remembered by every man in this House.

SPANISH-AMERICAN WAR CLAIMS.

At this moment I have in mind the cases of certain Spanish-American War veterans who rendered loyal service to their country, but are to-day paying a heavy price for their loyalty. They came back from the front with health undermined, and they have hardly known a well day since. Their futures were clouded. They were handicapped in their performance of manual labor, and, unlike the rest of mankind, had no chance to lay aside a little surplus or a safeguard for the proverbial rainy

day. They know, their physicians know, and everybody else who has heard of their cases believe, that their disability is due to the hardships of their military duty. Yet when enforced idleness and medical expense made it necessary for them to appeal to the Government, for which they had offered up the best gift of all, their health, what was the response? "The applicant has failed to show that his disability is due to his military service."

Shot and sword are not the only means for incapacitating our soldiers; and the fever-wrecked trooper who drags himself home after having done his duty, and finds himself wrecked physically, has just as sound a claim in his disability as has the soldier wounded on the field, but it seems to be much more difficult for him to establish his claim.

A LAME DECISION.

There has come under my observation an instance in which a Connecticut soldier was seriously wounded at the Battle of Shiloh. Sworn testimony and X-ray photographs prove that for many years prior to his death he had an open gunshot wound the size of a man's hand on his right leg. When death came he was driving in his wagon; his body was found by the roadside.

The medical examiner was called and he quickly satisfied himself that there had been no violence. "Heart failure" was his verdict. He had never seen the soldier, knew nothing of the condition of his heart or any other organ prior to his death, and did not know of the serious gunshot wound which required dressing every day and had been sapping the soldier's strength for years. And yet the medical examiner merely followed a long-standing general custom.

"Heart failure," wrote the medical examiner in his report, and behind this verdict the Pension Bureau intrenches itself to-day, and affidavits and evidence galore can not induce the change of view. In other words, a medical examiner is called to view the body of a deceased soldier, his chief function is to ascertain the presence or absence of signs of violence; he makes a superficial examination of the man whom he has never before seen, he quickly writes down the result of the superficial examination, and this proceeding is taken as the final word by the pension officials; affidavits and statements are futile, and the "heart-failure" verdict would bar the widow—in this case absolutely destitute—from securing a pension.

For years this widow had ministered to her husband. She dressed his wounds each day. A special bill was introduced in Congress in her behalf. Again she encountered our arbitrary pension laws, she had married the soldier subsequent to June 27, 1890. She was again denied a pension, and to-day she is entirely dependent upon the generosity of kind friends.

However, I trust that the last word has not yet been spoken in this case. I have hopes that a way will yet be found whereby this deserving woman and the soldiers I refer to will receive their just due.

DEMOCRATS IN EARNEST.

The needed changes in the pension laws will come, and they should come, through the Democratic Party. The solicitude of that party for the welfare of the Union soldier has already been written into our legislative history. In the records of the period from August 15, 1876, to May 11, 1912, we can point to no less than 26 legislative acts which were either approved by a Democratic President or passed by a Democratic House of Representatives for the benefit of the soldiers, sailors, widows, and dependent children.

FOR THOSE WHO NEED.

I am in favor of more liberal pensions for those who merit assistance from the Government. The first question should be: Is the pension needed by the applicant? If the answer is in the affirmative, I, in common with all grateful Americans, believe it should be granted. We know that this country is disposed to deal generously with those who fought and bled for it in time of war. I agree with the statesman who said:

We should show the Nations of the world that this Republic is not ungrateful nor forgetful of its defenders. To those who are worrying about the increase cost, let them remember that at every period of the expansion of our pension policy that there has been objection to every increase in pensions, and yet the country has been able at all times to meet its debt of gratitude, to fulfill its governmental obligations, and to prosper. Let them remember that every dollar that the Government spends for pensions makes the Government just so much stronger in the affections of its citizens. The money goes into every avenue of trade and into every section of the country. In numerous cases the distribution of pensions under our present system saves the old soldier or sailor or his widow from State, county, or municipal charity. Nothing could be sadder than to see one of the Nation's heroes dependent upon public or private alms. Loyal and patriotic Americans of all political parties are determined that such shall not be the lot of any of the Nation's defenders.

Letters of Members of Congress Read at the State Convention of the State of Washington.

EXTENSION OF REMARKS

OF

HON. WILLIAM E. HUMPHREY,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, July 17, 1914.

Mr. HUMPHREY of Washington. Mr. Speaker, the Republicans of the State of Washington held a State convention on June 18 last. The Members of Congress, being detained in Washington City by their official duties, could not be present, but each of them wrote a letter, that was read to the convention. I insert these letters in the RECORD, and also a copy of the platform adopted by the convention.

LETTER OF SENATOR JONES.

WASHINGTON, D. C., *June 4, 1914.*

Hon. W. A. RUPP,
Chairman Republican State Committee,
Aberdeen, Wash.

MY DEAR MR. RUPP: Your favor asking me, if unable to be present, to write you a letter to be read to the Republican State convention to be held in Tacoma, June 18, at hand. I appreciate this courtesy, and as it will be impossible for me to be present at this meeting, I avail myself of the opportunity so kindly given.

This convention should, and I believe does, represent the awakened intelligence, aroused patriotism, and ardent Republicanism which move the masses of the people. Two years ago, through our division, the welfare of the people and the destinies of the Republic were placed in the hands of our Democratic friends. This convention should be a step toward union and the overthrow of the Democratic Party and the reinstatement of that party under which, with all its mistakes, the country prospered as no other country on the face of the earth, and under which the most beneficent legislation that ever blessed a people was enacted.

This convention will ratify, I trust, the steps taken by the national committee to make the party and its organization truly responsive to and representative of the real thought and sentiment of the people. Parties are necessary in a representative government. They must, however, keep abreast of the maturely progressive thought of the people, not only in principles and party methods, but in candidates and organization. The national committee has submitted certain changes in the methods of party organization that will make the party more responsive to and more representative of the wish and belief of its members. Some of these changes may not be so radical as some would have, but they represent the composite judgment of the representatives of the party from every section of the country, and if adopted will insure to every voter a fair opportunity to give expression to his views on principles and candidates and have those views duly represented and recorded in the councils of his party. The way is prepared for the determination of any contest that may arise in the party over candidates or principles as the real, genuine majority may desire. State laws and State primaries are to be duly recognized, preliminary or temporary organization is to be perfected in an orderly way, and party strength in the different States will have a more just and equitable influence than ever before. When these rules are ratified, as they will be, the power of the individual will be minimized, the influence of the people magnified, and the candidates presented and the principles declared will be those of the majority, and will be such that all the party can cheerfully accept and earnestly support.

Under the banner of Republicanism the people are going to rule. The party is to be worthy of its great leaders of the past and its best traditions. What it has done is an inspiration to me and to all and makes the word "Republican" an incentive to higher and better work. Under its leadership has been written the history of the Nation during the last 50 years. Every great law upon our statute books in the interest of the masses has been enacted by it. The stupendous progress of the last 50 years, the marvel of the world, has been made under its guidance and leadership. Lincoln, Grant, Hayes, Garfield, Arthur, McKinley, Harrison, Roosevelt, Taft, Blaine, Logan, and a host of other great statesmen and patriots have gained renown, added luster to our Nation's glory, and made us proud of our Nation's history under the banner of Republicanism.

They have not been ashamed of the name "Republican." All they have achieved for humanity has been achieved through it. Is there anything in that word to be ashamed of? Is there any reason why it should now be spurned by those who two short years ago were so proud of it? Surely not. Some of its leaders may not be what they ought to be. What party has none such? You can rid a party of undesirable leaders by staying with it, not by deserting it. If its principles are not all they ought to be, help us to correct them. What party does not have some principles that some of its members do not approve? The Republican Party is not and never has been perfect, but it has been the greatest political agency for the good of humanity that ever blest a Republic, and, impelled by the glorious traditions of the past and moved by the demands and needs of the present, it will gather together the universal good sense, the universal hopes, the universal aspirations, the universal beliefs, the universal courage, the universal patriotism, the universal righteousness of the plain people of this great country and weld and mould them into an aggressive and progressive and determined force to meet and solve the problems of the changed conditions of to-day, so as to promote the social well-being of our people. This can be done with but little, if any, change in the great and fundamental principles of the National Constitution which our forefathers made, not for the day or for fixed conditions, but which are but the fundamentals of a growing, developing, progressing Government, and adapting themselves to ever-changing conditions and the problems growing out of the same. Republicans do not believe the Constitution to be a strait-jacket, suitable only to the puny people and the undeveloped Nation at the time of its adoption, but they regard it as a great charter of liberty for a free, representative, and powerful Government, under which may come unlimited growth and development. This is the belief of the great majority of the people of this country to-day, and they are not longer going to allow their hopes and ideals to be defeated by their own divisions over nonessentials.

Call it what you will, Republicans are going to be Republicans and are going to vote and act together. He is indeed blind who does not see and know this. Every election held since 1912 demonstrates this. Those 4,000,000 who two years ago voted under another name did not cease to be Republicans. Their principles were and are substantially the same as ours who voted under the Republican name. Their intelligence, honesty, patriotism, and Republicanism are not to be questioned for what they did then. The past is gone, but principles remain. Those principles need them and they need us. We and they should welcome a union under that banner of which we have been and are so proud and under which so much of good and glory have been accomplished on behalf of the fundamental principles in which we all believe. We can accomplish nothing without each other and united action; together we can accomplish all things needful. Would-be leaders may say, "We will not get together." They speak only for themselves. They may try to boss the people while denouncing "bossism," but they will fail. The people are not going to be bossed and delivered like so many sheep and cattle under any party banner whatever. They will act for themselves and for their best interests. They prefer the triumph of principles to the personal success or ambitions of any individual, and they propose now to move, act, and vote together, that principles may triumph and stability, good government, and prosperity may bless the land. They know what conditions are now. It is not a "state of the mind" with them, but a present, pressing, and actual condition of political chaos, a widespread industrial depression affecting each one, and foreign complications of the most humiliating character.

This is a time for patriotism, not partisanship. This is a time for unity of thought and action and a time for party differences and personal ambitions to be laid aside. Theodore Roosevelt said a few days ago, having in mind the actual conditions confronting the people and the Nation to-day:

> Times come when it is the duty of all good citizens to sink ordinary party differences and stand up either against flagrant wrongdoing in public life or against policies fatal to the welfare of the Nation at home and to the honor of the Nation abroad.

There spoke the patriot. That principle should determine the course of action of every patriotic citizen in this hour of national trouble, disturbance, and depression. A condition confronts us now. What Republicans and third party men said two years ago would happen in the Democratic Party was entrusted with power has happened and is happening and more. That party by our division has been in power a little over a year. Its promises have not been kept.

The prosperity turned over to it by the Republican Party has disappeared. Business is halted, industries are paralyzed, factories are shut down, mills are closed, men are out of employment, railroads are threatened with bankruptcy and are pleading for authority to further tax the people through increased freight rates in order to live. The cost of living has not been reduced except at the expense of the farmer and laborer. Trusts have not been prosecuted, dissolved, or destroyed. Hesitation, uncertainty, and stagnation prevent development. Vascillation, stupidity, and chaos mark our foreign policy. Ignorance, helplessness, inexperience, incapacity, and fear mark their attempts at legislation. By force of numbers they carried out the orders of the President in framing and passing the tariff law. It is not the product of their judgment and experience, but of his decrees. They may have improved our currency system, but they threaten its efficiency by making it the football of spoils politics. Following in the pathway pointed out by a Republican administration they have provided for the construction of a railroad in Alaska, the only commendable piece of legislation enacted, and the only legislative act of any importance passed during this year of continuous session. They are destroying the merit system by legislative as well as by Executive act. They are increasing appropriations and multiplying public offices. About the only economy secured comes from the discharge of war veterans. Legislation is sectionalized, and our colored citizens are openly and avowedly discriminated against. Platform promises are repudiated or disregarded. Nonresidents are appointed to Alaska and Hawaii. Domestic interests are discriminated against and sacrificed at the behest of foreign corporations, and the Panama Canal is made an instrument for the destruction of American industry, and converted into a subsidy to foreign wealth and greed, and will hang as a millstone about the neck of the American toiler and producer until the American people rise in their wrath and assert their rights in their own property, purchased and constructed by the money of our own citizens. In the face of such a record I appeal to all patriotic citizens in the words of Theodore Roosevelt: "Sink ordinary party differences and stand up against policies fatal to the welfare of the Nation at home and to the honor of the Nation abroad."

We can confidently appeal to the people not only upon the record of failure and incompetency of the Democratic Party, but upon the record of accomplishment of the Republican Party during the last four years of its control which simply continued the great record of Roosevelt and McKinley. Whatever the shortcomings of the last administration the impartial historian will write it down as one of unsurpassed legislative accomplishment. Even to-day our people can look upon it and weigh it impartially and recognize its merits. Whatever may be said of its tariff revision it can not be charged that it halted or disturbed business. It closed no mills or factories. It neither curtailed the markets nor reduced the prices of the farmers' products. It threw no laborer out of employment and reduced no wages. Railroads were prosperous, Government revenues were adequate, and foreign trade expanded without injury to our domestic trade. It was a revision downward, though not so great as the people desired, but its superiority over the present disastrous revision has been actually demonstrated. Aside from its tariff articles it contained many excellent provisions, like the customs' court, the tariff commission, the maximum and minimum clause, and the corporation tax, which alone commended it as an act of large statesmanship. Aside from this, however, there is a long list of wise and progressive measures that prove to an unprejudiced mind the progressive character of the Republican Party and its responsiveness to the people's demands and beliefs. The powers of the Interstate Commerce Commission were tremendously increased, so that it could suspend, determine, and fix railroad rates, force joint rates over rail and water lines, control competing water lines, and force equal treatment by the railroads of all water connections. A postal savings bank system was established and a parcel-post system inaugurated. Publication of campaign contributions before and after elections was provided. The Constitution was amended so that an income-tax law is possible, and Senators are to be hereafter elected by the people. The power of the President to withdraw lands in the interest of conservation was made certain. An economy commission was created, and a children's bureau provided. An industrial commission was created, the eight-hour law extended, and the white slave act passed. A Department of Labor was organized; the Panama Canal act was passed exempting coastwise ships from tolls and extending the powers of the Interstate Commerce Commission over rail and water lines, and asserting our sovereignty over our own territory and property.

The physical valuation of railroads, telephone and telegraph lines was provided, a Territorial government given to Alaska, and a survey looking to a Government railroad there was provided for and made and construction urged by the President. This record shows what we can do when united and what the

people may expect when again they place us in control. In the State the party has been a remarkable instrument of progress. Woman suffrage, direct primaries, control and regulation of railroads and other public utilities, initiative, referendum, and recall, labor laws, laws for the welfare of women and children, the minimum wage, accident insurance, and a multitude of other laws for the social welfare demonstrate that the party locally is and has been progressive as any one might desire and that a new party is not only not needed but that it would stop progress rather than promote it.

In view of the conditions that seem to be upon us now it may not be amiss to contrast briefly the material conditions under Democratic policies from 1893 to 1897 and under Republican policies since that time. We can more nearly comprehend the wonderful influence and effect of Republican policies on the development of the Nation. The Democratic administration is a memory, as the present one will be, although it is now a stern reality. While figures are dry, they are sometimes more eloquent than any words spoken by the most gifted and eloquent orator, and I am going to dare, in this letter and being far away, to call to the attention of the convention, and through it to the people, what happens under Republican policies as contrasted with Democratic policies.

In 1890 the value of farm property was placed at $16,000,000,000. In 1900, with four years of Democracy included, it was $20,000,000,000, or an increase of $4,000,000,000 in 10 years. In 1910, with unbroken Republican policies, it was placed at $40,000,000,000, or an increase of $20,000,000,000. In 1893 the value of farm animals was placed at $2,433,000,000, while in 1897, at the close of the Democratic administration, it was placed at $1,655,000,000, or a decrease of $778,000,000. In 1912 it was $5,008,000,000, or an increase of $3,358,000,000 under continued Republican rule. This increase is eloquent with new houses built, mortgages paid off, farm homes happy and contended.

In 1893 the deposits in the savings banks of the country amounted to $1,808,000,000, and in 1897 they were $1,983,000,000, or an increase of $175,000,000 under the Democratic policies. In 1912 they amounted to $4,451,000,000, or an increase of over $2,468,000,000. In 1893 the wages paid in the manufacturing industries amounted to $1,891,000,000, and in 1900 they were $2,008,000,000, or an increase of $117,000,000, while in 1910 they were $3,427,000,000, or an increase of $1,319,000,000. In 1894 the wages paid railroad employees amounted to $447,000,000, and in 1896 they were $468,000,000, or an increase of $21,000,000, while in 1911 they had reached the enormous sum of $1,208,000,000, or an increase of $740,000,000, telling of well-fed, well-clad women and children and cheerful, joyful firesides. In 1893 the total expenditures for the public schools was $164,000,000, while in 1897 it was $187,000,000, or an increase of $28,000,000, while in 1911 it was $446,000,000, or an increase of $249,000,000, telling us of better schoolhouses built, better salaries paid teachers, and a broader enlightenment and a better citizenship. That means real uplift, real advancement.

What of our foreign trade? In 1893 our imports were $866,000,000, and in 1897, under a Democratic tariff, they were $764,000,000, or a decrease of $102,000,000, while in 1912, under a protective tariff, they were $1,653,000,000, notwithstanding it was contended that it was a wall to keep out foreign goods, or an increase of $889,000,000. In 1893 our exports were $847,000,000, while in 1897 they were $1,050,000,000, or an increase of $203,000,000, while in 1912 they were $2,204,000,000, or an increase of $1,154,000,000, telling of general prosperity and a wonderfully expanding foreign trade as a complement to a prosperous domestic commerce.

In 1893 the railroad mileage was 179,834, and in 1897 it was 188,844, or an increase of 9,000 miles, while in 1912 it was 254,732, or an increase of 66,000 miles, telling of a wonderful internal expansion and development. These are but examples to bring to our recollection the wonderful industrial contrast under Democratic and Republican policies and to show that the present general industrial depression and hesitation is not so much "a state of the mind" as it is the inevitable result of policies which bring doubt, distrust, and disaster. No political Christian science can make the laborer prosperous without work, the farmer prosperous without markets, the business man prosperous without customers, the railroads prosperous without freight, factories and mills prosperous without orders, Americans prosperous on foreign products and foreign labor. No psychological treatment can clothe the naked or feed the hungry. United action and united voting by the majority will inspire confidence, remove distrust, guarantee wise action, repeal destructive policies, and bring stability and activity to business and rest and peace to the mind.

Our duty is plain. Sink all minor and past differences. Let this convention declare clearly and definitely for the needs of the hour. Let us sink all personal ambitions and keep in view only the good of the people, which means the party's good. Do this and those of one faith and one belief will sink minor differences and go forth to a great victory preparatory to the contest of 1916, when the forces of good, wise, and patriotic policies and progressive accomplishment will unite under the leadership of that man, no matter who he may be, who will best represent and exemplify the hopes, aspirations, and ideals of the American people and be placed in control of the destinies of the Republic under the banner of Republicanism for another 20 years.

Earnestly, yours, for union and victory,

W. L. JONES.

LETTER OF CONGRESSMAN HUMPHREY.

JUNE 10, 1914.

Hon. W. A. RUPP,
Chairman Republican State Central Committee,
Aberdeen, Wash.

MY DEAR MR. RUPP: I believe in party and party responsibility. I believe in platforms and conventions. Under our form of Government these have been the most effective methods whereby the people have been enabled to enforce their wishes.

The Democratic Party came into power upon the broad issue that they would better the general conditions of the country. What patriotic citizen would not, if he could, change the present condition for the conditions such as were enjoyed for 16 years under Republican rule?

The Democratic Party promised to reduce the high cost of living. Does anyone believe that promise to-day? They have not reduced the cost of living, but they have reduced the opportunity to earn a living.

They declared that they would injure no legitimate industry; that they would enact a tariff law that would strike the shackles from trade, give us the markets of the world and bring unexampled prosperity. How have they kept that promise?

Six months the present Democratic tariff law has been upon our statute books, and every day business has decreased.

Every day we have bought more from the foreigner and sold him less.

Every day we are giving more work and more wages to the foreigner and less to our own.

Every day our imports increase and our exports decrease.

Every day mills and factories are closing.

Every day the number of the unemployed increases.

Every day this Nation is going in debt more than half a million dollars.

To-day 238,000 freight cars stand idle—the largest number ever known.

To-day 500,000 railroad employees are out of work.

To-day the business of the entire Nation is 40 per cent below normal.

To-day more than 3,000,000 men are idle asking for work—the greatest number in the life of this Nation.

To-day the balance of trade is against us—the first time it has been in favor of the foreigner since the Cleveland administration.

The business of this Nation has decreased a million dollars every hour that Woodrow Wilson has been in the White House.

History again repeats itself. Again the Democratic Party is in power.

Again we have a Democratic administration.

Again we have universal business depression, fear and uncertainty, closed mills, silent machinery, smokeless factories, idle men, poverty, want, idleness, and rags.

Our foreign policy has excited the derision and the contempt of the civilized world.

This Nation practically declared war against an individual to compel him, not to make reparation for Americans murdered, not to pay for millions of American property destroyed, but to fire a gun 21 times instead of 5.

To keep a consignment of the materials of war from reaching this individual one of the mightiest battleship squadrons of all the world was sent to blockade Mexican ports. Vera Cruz was seized, $7,000,000 in money was expended, and 17 young patriotic Americans yielded up their lives following their country's flag.

And then a few days ago this same cargo from the same ship, through the incomprehensible stupidity of the administration, was permitted to be landed without molestation, and these same guns shotted with that same ammunition are now ready to be turned upon and kill American soldiers. More incomprehensible still, we are now informed that, with the consent of the Secre-

tary of State, guns and ammunition are now being sent to the constitutionalists and that the American Government, if necessary, will enforce its delivery at Tampico, again furnishing the means of killing American soldiers to probable enemies.

The world furnishes no parallel to our blundering stupidity in our Mexican affairs, and it is charity not to designate it by stronger language.

It will be a gainful day to this Nation when that prince of peaceful blunders, that foremost of limelight lovers, once more takes up the poetic pursuit of filling his purse and feeding his longing soul on popular applause and again stands in Chautauqua's glad glare, in exciting contest with the yodeler, the acrobat, and the unadorned dancer, and leaves the affairs of state to subordinates or to happy chance.

The people of the United States have built the Panama Canal; they have paid for it; they own it; it is on American soil; the American flag floats over it; and, in spite of the Democratic Party, they are going to control it. Congress passed a law giving the United States the absolute control of this canal and permitting our vessels in the coastwise trade to pass through the canal free. The Democratic Party in its platform specifically indorsed this law. Woodrow Wilson, when a candidate for President, particularly commended it. The Democratic majority in Congress on roll call voted for it. The people on the Pacific coast believed that they could rely upon those Democratic promises and pledges. In that belief they spent millions of dollars and contracted to expend many million dollars more.

President Wilson just one year after he had been in office surrendered to the transcontinental railroads and the influence of British worshippers in this country, and he appeared before Congress and pleaded with them to repeal this law without raising the question "whether we were right or wrong." He gave no reason why we should do this, and has not yet given any except that the Nation was so involved in its foreign relations that he would not know what to do unless we yielded in "ungrudging measure" to his request. That was the most astonishing and humiliating message ever delivered by a President of the United States. The Democratic majority, coerced by fear of defeat and persuaded by patronage, did as they were told. This law will probably be repealed when this letter is read.

This repeal will increase the freight rate of every thousand feet of lumber from Puget Sound to the Atlantic coast, both by rail and water, $1.50. It will increase the rate more than $50 on every car load of freight hauled across the continent.

This repeal will take the great benefit of the canal from the State of Washington and give it to British Columbia.

No foreign nation has protested or is protesting against this law. The only protest comes from home. As the transcontinental railroads alone will benefit by this repeal, the people of this country will decide what influence changed the President's attitude.

The Democratic Party has deceived, betrayed, and robbed the people of the Pacific coast.

One of the first acts of the Republican Congress that will meet in special session on the 4th day of March, 1917, will be to reenact the American Panama Canal law that the Democratic Party so cowardly repealed.

The Republican Party has placed upon the statute books in the State of Washington more progressive legislation than is written upon the statute books of any other State in the Union. What it has done in the State of Washington it will do in the Nation, but it will not be done by a large element of our party becoming assistant Democrats. It will not be done by dividing among ourselves and keeping the Democratic Party in power.

The Progressives mostly left the Republican Party because of their admiration for Col. Roosevelt, but they are in all essential policies Republicans; they are protectionists; they believe in the honor and integrity of their own country; they are opposed to our cowardly and humiliating surrender of the Panama Canal; they are opposed to our discreditable and blundering Mexican policy; they are proud of the achievements, the traditions, the memories, and the great leaders of the Republican Party.

The great issues of the coming campaign will be protection and prosperity, a patriotic foreign policy, and opposition to the humiliating surrender of the Panama Canal. Upon these overshadowing issues Republicans of all beliefs and of all faiths can and will unite in behalf of our common country and will present a solid front to our common enemy.

What this Nation needs to-day is less law and more business. The only hope of the country is a Republican Congress, to stop further destructive legislation.

The greatest blessing this Congress could bestow upon the Nation would be to adjourn and never meet again.

Again, by bitter experience, the people have learned the meaning of Democratic success. The Democratic Party has learned nothing, it has forgotten nothing. It is the same old party of incompetency, free trade, and poverty.

The people are now engaged in "watchful waiting"—waiting for an opportunity to vote the Republican ticket.

Again will history repeat itself. Again the system of protection will be restored. Again the wheels of industry will be set in motion, idleness will disappear, there will be work and bread for all, the un-American policy of surrender will be repudiated, our flag will be once more honored and respected abroad, and the country will enter upon another 20-year period of matchless prosperity, when, as it certainly will at the next election, the Republican Party again comes into power.

Sincerely, yours,

W. E. HUMPHREY.

LETTER OF CONGRESSMAN LA FOLLETTE.

HOUSE OF REPRESENTATIVES,
Washington, D. C., June 10, 1916.

Mr. W. A. RUPP,
Chairman Republican State Committee,
Tacoma, Wash.

MY DEAR MR. RUPP: I duly received the invitation tendered me to be present at the Republican State convention at Tacoma June 18, and to address the delegates and other Republicans there assembled, and if unable to attend in person to make the address by letter.

I wish first to thank you for the invitation and to express deep regret that my compliance has necessarily to be by letter and not in person. I desire to extend heartiest greetings to the delegates and the members of the party assembled in convention. To them through you I say "All hail."

It is well that the representatives of the greatest party in advancement and progress that the world has ever known should meet together at this time to consult and to discuss ways and means whereby this country can be saved from the wave of disaster and commercial paralysis that began to envelop it as soon as the present administration was inaugurated, and has steadily incresed as the usual program of the Democratic party—that of merciless destruction to American industries and welfare—was applied.

Not that the intentions of the party were not good. Now, don't somebody get off that old saw about Tophet being paved with good intentions. I am proud to say that I think our Democratic friends are as well-meaning and desirous of the public good as are the members of any other party. Their patriotism is of high order, and their blunders have all emanated from mistaken policies and not from any desire that prosperity should wane or that the country should suffer depression. The members of that party in Congress have waited longingly and prayerfully for the triumphant wave of prosperity promised by Mr. Wilson in his first message to Congress, wherein he stated that his party expected to legislate to the end that the people would be able to enjoy and benefit from the "new freedom" promised by Democracy, and they no doubt expected by this time it would hover around and about us like a benign blessing; but alas and alack! while, as Representative ROBERTS, of Nevada, said on the floor of the House the other day—

> the opposition party may justly claim the honor of giving more men, women, and children perpetual holidays in the same length of time than any other party in our history—

it is regrettable that it is not a very good talisman of prosperity or of benign blessing.

I do not purpose in this letter to go into figures to any great extent, as I have no doubt that those present have kept close watch and well know that our Treasury balances have shrunk more than $70,000,000 since the Democratic Party came into power; that our trade balances are diminishing by leaps and bounds; and while our revenues are steadily decreasing our importations are just as steadily increasing, displacing American grown and American manufactured products, causing depression in our manufacturing districts, displacing American labor, and steadily putting the real application of Wilson's new freedom in force—freedom from work; unfortunately this does not carry with it freedom from hunger. In a great many districts in the East there is much suffering. I hope there is none of that yet in the West.

The last political campaign is too recent to have been forgotten. It is seldom that a campaign has had crowded into it so much bitterness, so much misrepresentation, so much recrimination, as had that one. It always takes time for the ill-feeling engendered in such a contest to die down and sober second thought to find place and give opportunity to analyze and digest

a lot of the claims that had been advanced and charges that had been made.

You all know that owing to a split in the Republican Party both it and the offshoot from it went down to defeat, and that the Democratic Party, after 16 years as the principal minority party of the Nation, was again restored to power, it having gone to defeat following the nightmare of misery and depression brought on largely by the ill-balanced trade-paralyzing Wilson tariff bill of 1894.

My friends, it is necessary that we have at least two political parties in a country governed like ours; the function of the party in power being to legislate and administer, of the other to criticize and condemn. One is just as necessary to our welfare and permanent well-being as is the other.

The Democratic Party has been an excellent minority party, but never has been—and history will bear out the assertion—a success as a majority party. During the debate on the late tariff bill in the House of Representatives the Democratic floor leader [Mr. UNDERWOOD] referred with some pride to the period of Democratic rule just prior to our Civil War. In answer to him in a speech made later, I read the following extract from the first annual message of President Buchanan to the Thirty-fifth Congress:

> We have possessed all the elements of material wealth in rich abundance, and yet, notwithstanding all these advantages, our country, in its monetary interests, is at the present time in a deplorable condition. In the midst of unsurpassed plenty, in all the productions of agriculture, and in all the elements of national wealth, we find our manufactures suspended, our public works retarded, our private enterprises of different kinds abandoned, and thousands of useful laborers thrown out of employment and reduced to want. The revenue of the Government, which is chiefly derived from duties on imports abroad, has been greatly reduced, whilst the appropriations made by Congress at its last session for the current fiscal year are very large in amount.
>
> Under the circumstances a loan may be required before the close of your present session; but this, although deeply to be regretted, would prove to be only a slight misfortune when compared with the suffering and distress prevailing among the people. With this the Government can not fail to sympathize, though it may be without the power to extend relief.

Then I said:

> Does this extract from the message of a Democratic President correspond with the claims of universal prosperity in ante bellum days?

This is not the only time that such claims could be easily refuted. There never was a time in our history when the Democratic Party was in power that depression, shrinkage of values, and general stagnation did not follow. Why is this? It surely is not because the party leaders have lacked patriotism, good will, or desire for the country's prosperity and welfare. No; they have not been deficient in any of these qualities; instead, they have not entertained the correct ideas on economic questions. Their guiding star, their sheet anchor, the lodestone which holds them steadfast to their Democracy, is the fallacious doctrine of free trade. It has pervaded the minds of Democratic leaders for a hundred years, and the present leaders still hold to those principles which have been their party's undoing so often in the past.

Free trade has been their Waterloo time and time again. But this they refuse to acknowledge. Each time they are returned to power they "bob up serenely" with the same old backfiring musket that soon kicks them again into a minority position—a position they have held with success and distinction in the past.

For a while the indications were that the present leaders of the party had seen the light of day and would profit by past experiences. In their platform enunciated at Baltimore they had this to say:

> We favor immediate revision of the tariff by the reduction of import duties. Articles entering into competition with trust-controlled products should be placed upon the free list; material reductions should be made in the tariff upon the necessaries of life, especially upon articles competing with such American manufactures as are sold abroad more cheaply than at home; and gradual reductions should be made in such other schedules as may be necessary to restore the tariff to a revenue basis.

You will note that articles entering into competition with trust-controlled products should be placed upon the free list. Material reductions should be made upon the necessaries of life, especially upon articles competing with such American manufactures as are sold abroad more cheaply than at home.

It sounds and reads well. But when they passed the recent tariff bill what did they do? If they carried out their platform, the only articles they found entering into competition with trust-controlled products were the products of the farm, 90 per cent of which they placed upon the free list; and they found no other to make free with which to punish the trusts.

Material reductions in tariff on necessaries of life was construed to mean total elimination, so they promptly placed the products of the American farmer on the free list in open competition with all the world. The only "malefactors" of great wealth to be placed upon the free list, other than the farmers, were the lumber and shingle manufacturers and the millers of various commodities who buy and grind the farmer's products. Practically all food products, both raw and manufactured, were placed upon the free list. Has the country become more prosperous since? Millions of dollars' worth of corn, oats, and barley have been shipped into our country—shipped in by men who contribute nothing to the support of this Government. Has the cost of living been reduced? Are the farmers of the North and West buying everything cheaper than they did—enough cheaper to make up for the lower prices which they have received for their produce? I think not.

The difference in the Treasury receipts and disbursements during the life of this administration and that of the Republican administration it succeeded is most marked and carries out graphically the general business conditions of the country and, to a large extent, the conditions of individuals and of firms doing business throughout the land.

I but now received a Treasury balance sheet for the close of business June 9, 1914, and I looked through my desk to see if I could find one of a somewhat corresponding date in 1911 for comparison. I did not find one for June 9, but did find one for July 7, 1911, and used it. I found that the Treasury balance in the general fund July 7, 1911, was $147,965,208.39. On June 9, 1914, it was $77,766,218.93, making a difference of $70,198,989.46 between the close of business July 7, 1911, and June 9, 1914, with Mr. Wilson as President.

There was a balance in the general fund at the close of the fiscal year 1911, when Mr. Taft was President, of $139,801,415.99. The balance in the general fund at the end of the fiscal year 1913, when Mr. Wilson was President, I have not available at present, but the balance June 9, 21 days previous to the end of the fiscal year 1914, was $77,198,989.46, showing a difference in favor of 1911 of more than $62,000,000.

These balances are, of course, subject to heavy fluctuations; but the steady trend has been downward ever since this administration wrote its tariff law, with the exception of the short time it was collecting the reduced revenue rate on the millions of dollars' worth of goods held here in bond awaiting the passage of the bill. For a short time so great was the volume of goods so held there was an increase of revenue, and some enthusiastic Democratic Members, who were not conversant with the goods-in-bond proposition, were wont to point with pride to the Treasury showing under their new law. Suffice to say, they have been eating crow for some time now, as the revenues grow steadily less and the free or insufficiently taxed foreign products pour in with increasing volume, displacing American products, putting our mills and producers and their laborers out of commission.

At the close of the fiscal year 1913 the excess of revenue receipts over Treasury disbursements under the general fund was $8,220,999.74. At the close of business June 9, 1914, 21 days before the close of the fiscal year 1914, disbursements were $34,462,318.08 in excess of receipts, or a difference of more than $42,000,000 on the wrong side of the ledger since the end of the fiscal year 1913, in the ordinary disbursements of the Government.

For the fiscal year 1913, up to and including June 9, 1913, the net excess of receipts of every description collected by the Government was $28,219,416.96 over and above disbursements; at the close of business June 9, 1914, the excess of expenditures above receipts was $66,101,959.86 for the fiscal year 1914 to that date, showing a difference for the two years contrasted of $94,321,376.92, and all on the wrong side of the ledger.

Against this amount, though, must be deducted a difference in excess disbursements for 1914 over 1913 up to June 9 of each year of $16,586,641.81, leaving a net decrease in Treasury assets of $77,734,735.11 for 11 months and 21 days of the fiscal year 1914. They—the Democrats—of course expect to make this up by means of the income tax, but it is generally conceded that it will fall some $20,000,000 short of doing it.

The theory of the Democratic Party leaders was that a decrease in tariff rates would allow additional imports to enter the country, causing closer competition and resulting in cheaper living to the consumer. They are strong on playing the consumer. You would imagine consumers are a distinct class to hear them play on the word. As for me, I have never been able to differentiate between producers and consumers, as we all are acting in these capacities, one for the other. And in addition to this those citizens who were recipients of incomes above a certain amount should contribute to the expenses of Government by paying a special tax to make up for decreased revenues—for the benefit of their not so fortunate fellow citizens. This was all right, and by a three-fourths majority vote of all the States we agreed to the levying of such a tax; but, alas,

where is the cheaper living promised us? The revenues have shrunken nearly $100,000,000. Part of this will be made up by the special income tax; but up to date where is the benefit to the people? Ninety per cent of the product of the State of Washington, both raw and manufactured, is placed on the free list. Is prosperity abounding in the State of Washington? If conditions continue as they are, will an increased or decreased proportion of our population pay an income tax? I very much fear the latter.

The net benefit, if any benefit is received from the legislation of the majority party in Congress up to date, that will accrue to the State of Washington is the Alaska railroad provision passed early in this session. That is constructive legislation. I very much fear, though, that it will be but poor compensation for the destructive legislation enacted, that will influence our lumber industry, our shingle manufacturers, our fisheries, our stock and agricultural interests. The products of these industries have all been placed on the free list in competition against the world.

I will wind up my tariff remarks with a poem by Mr. Jack Wiley, written during the time that the general public was exercised over the purchase of a large order of flag bunting by the Secretary of the Navy from an English firm. His poem is entitled "The Limit" and reads as follows:

THE LIMIT.

Shall the flag be made in England?
Kinder riles one up a bit;
Kinder starts the blood a bilin'
Just to merely think of it.
Shall the flag we call Old Glory
In a foreign land be made?
This is certainly the limit
Of the foul work of free trade.

Shall the flag be made in England?
Far away across the deep?
Down with sentiment and feeling,
Buy your bunting where it's cheap!
What care free-trade foes of country?
They've no patriotic pride.
What's the flag but so much dry goods?
Make it on the other side!

Shall the flag be made in England?
Kinder riles one up a bit;
Kinder starts the blood a bilin'
Just to merely think of it.
Work and wages they have taken,
And in idleness men lag;
Taken industry to England,
Now they want to take the flag.

This administration is strong for England. Walter Hines Page, our ambassador to that country, at a banquet in London, congratulated Great Britain on the near completion of the Panama Canal, and stated that it is a source of much satisfaction to this country that Great Britain would be the principal beneficiary thereof. Then, to lend emphasis to that assertion and to show that our ambassador's remarks were approved of, if not authorized, by the administration, we had President Wilson's remarkable message to Congress asking that we repeal the free-tolls clause of the Panama Canal act, wherein we had granted our coastwise shipping, where not controlled by railroad common carriers, free passage through the canal.

The last three months of the present session of Congress has been devoted principally to protests against and justification of repeal. While the President is responsible for the legislation, it is in no way confined to party lines; strong speeches have been made against repeal by prominent Democrats in both House and Senate. Speaker Clark wound up a strong speech with this graphic utterance as a climax:

Now, may the God of our fathers who nerved 3,000,000 of backwoods Americans to fling their gage of battle into the face of the mightiest monarch in the world, who guided the hand of Jefferson in writing the charter of liberty, who sustained Washington and his ragged and starving army at Valley Forge, and who gave them complete victory on the bloodstained heights of Yorktown, may he lead Members to vote so as to prevent this stupendous folly—this unspeakable humiliation of the American Republic.

Many of his Democratic colleagues, though, who had originally voted for free tolls and made speeches in its favor, as did President Wilson when he said that "Platforms were written to stand on and not simply to run on," and pointed with pride to the free-tolls plank in the Democratic platform, reversed themselves and prated of free tolls being a subsidy, oblivious of the fact that there is a law on the statute books of the United States to the effect that all canals then constructed, when the law was passed, and all canals constructed or owned by the United States in the future, should be free to our domestic traffic. Little things like that did not influence them when their President had ordered them to reverse themselves. The result will be that after spending some four hundred millions of dollars to build a canal, largely as a check against high freight rates by transcontinental railroads, we will by this act of the President nullify it all for the benefit of the Canadian Pacific and other transcontinental railroads at the behest of Great Britain.

This letter is becoming too long, so I shall but refer briefly to the Mexican situation—I came near saying "policy"; but if this administration has any foreign policy in general, or Mexican policy in particular, it has been very successful in disguising it from the public up to date.

The promiscuous flirting it has indulged in with Carranza, Zapata, and the murderous Villa has convinced the general public that the President's antipathy to Huerta must have other grounds for censure and complaint than the way Huerta acquired his present position. I do not care to criticize the President for not recognizing Huerta, but I do criticize his negotiating with and his toleration of Villa, Zapata, and Carranza. His open preference for these murderers has largely offset the effect of his virtuous refusal to recoguize Huerta.

The President of the United States, by a message delivered to Congress in person, advocated and advised that legislation be enacted to establish a system of rural credits, and a bill was introduced and extensive hearings held thereon; but later on the President, as on the free-tolls provision, suffered a change of heart, and when he and the House leaders met and agreed on legislation to be passed at this session this legislation for the benefit of our great rural population was not included.

Every indication and sign pointing to the general trend of public feeling and determination demonstrates that there is a realignment for the party that has for more than 50 years been the prop, mainstay, and insurer of general prosperity to the entire people of the United States.

The people are fully realizing the fact that "special interests" belong to no one political party; that the cry of "special interests" in the Chicago convention of 1912 was repeated at Baltimore, where the names of prominent Democrats were protested against, and when pandemonium raged in the convention.

The Progressive convention and Party were dominated and financed by members of the great Harvester Trust and the Steel Trust, and there is no reason for going back on the party of advancement and progress—the Republican Party—on account of "special interests," but rather to stay with, weed out, and purify it. All things now point to the full realization of this fact, not only by former members of the Republican Party, but also by thousands of those who have for years been aligned with the Democratic Party.

With best wishes and kindest regards to you all, I remain,

Sincerely, yours,

WM. L. LA FOLLETTE.

LETTER OF MR. JOHNSON OF WASHINGTON.

JUNE 9, 1914.

Hon. W. A. RUPP,
Chairman, Tacoma, Wash.:

I regret that I can not be present at the Republican State convention. Already it is becoming difficult to maintain a quorum in this Congress, which has been in longer continuous session than any Congress since the first one, which convened March 4, 1789, and held three sessions, covering 519 days. The Sixty-third Congress bids fair to exceed that first one in length of days, but not in importance.

Many of the laws of this Congress will have to be made over. Leading Democrats admit that the Underwood-Wilson Tariff Act is not a success. They admit that a deficit is inevitable and a bond issue almost a certainty. They admit that the income-tax law is practically unworkable, too complex to be of value, and that the cost of collection eats heavily into the profits.

They are beginning to express doubt as to the ultimate result of the banking and currency law, and are afraid that it will need double the machinery which has been given to it. They are unable to frame a farm-credits bill. They are unable to decipher the President's war policy, and they have no faith in the general foreign policy of the Secretary of State.

In this Congress the South is in the saddle as never before. The chairmanships of all the important committees, except two, are in the hands of Members from the far South. And rightfully so, for those Democrats who are now chairmen of the big committees have been in Congress for from 12 to 20 years, awaiting for just what happened when the Republican Party divided. The Congressmen from Mississippi, Alabama, Georgia, and Texas, who have been here year in and year out, went right to the top, outranking in committees the newer Democratic Congressmen from Ohio, Indiana, Iowa, and other States, who came in as a result of Republican insurgency. In every Democratic caucus the Southern Democratic Congressmen have outvoted the Northern Democratic Congressmen, and the result is a species of iron-clad rule, by which four Democrats, comprising a majority of the seven Democrats in the Committee on Rules, say what Congress shall and shall not do in its sessions. These

four Democrats take orders from the President of the United States, all of whose writings and speeches mark him a pronounced federalist. Thus the people who have been stoutly clamoring for more control in public affairs are daily finding themselves in possession of less control.

The result will soon be overmuch Government, and the West will be the first to feel its effect. We have great problems; we have a wide and scattered area, and while the East thinks we have no population, I find that we have a voting population far in excess of, for instance, Mississippi, which has, in fact, but little more population than Washington, and which sends eight men to the House of Representatives, while Washington sends but five. One Mississippi Congressman has but 12,000 voters in his District, while the District which I have the honor to represent cast in the last election about 80,000 ballots, representing an active, aggressive constituency of which the Mississippi man does not even dream.

With conditions so different in the West, I see more and more the necessity of cooperation among the Members from all the Western States. One is often reminded of many accomplishments resulting from the teamwork that prevailed when the State of Washington was represented by JONES, HUMPHREY, and Cushman.

As a Senator, WESLEY L. JONES has faithfully represented our State. Why any single voter in the State of Washington should seek to dislodge him is more than I can understand. With the West facing problems of the greatest moment, Senator JONES should not be asked to even think of making a campaign for reelection, which is his due. No Senator from any State has ever served the whole people with more fidelity.

Representative WILLIAM E. HUMPHREY is the ranking Republican member of the Rivers and Harbors Committee. It is believed by many leaders that the next Congress will be Republican. Leading Democrats here admit that their overwhelming majority in this House is likely to be not over 20 to 30 in the next Congress. Some think it will disappear. Let the House become Republican and Mr. HUMPHREY becomes chairman of the great Rivers and Harbors Committee. No citizen of Washington can fail to realize what this means to the State, with its great rivers and enormous shore line, with its harbors becoming yearly more important, and with the Panama Canal about to go into full operation. As a member of this committee all these years Mr. HUMPHREY has accomplished much. As chairman of the committee the State would receive without protest even more than now secured through the continued efforts of this entire delegation, backed by leading citizens of the various communities, who know the real worth and merit of all the projects presented and who believe that our rivers and harbors should at least have an equal share with the rivers and harbors of Texas and Florida.

This may look like a selfish view, but, in my opinion, the time has come for not only our State but for all of the Western States to be a little more selfish in these matters and a little less free in tendering to the United States advanced ideas in political economy.

Show me any New England or Southern State that would call upon men like JONES and HUMPHREY—both in the very prime of active life—to even think of having to fight to hold the advanced positions which they have earned among the lawmakers of the Nation.

What I have said of Representative HUMPHREY applies in a large measure to Representative LA FOLLETTE. He is the third man on the important Public Lands Committee. Ranking above him are Congressman LENROOT, of Wisconsin, and Congressman FRENCH, of Idaho, one of whom, I understand, has other political aspirations. Let Congress become Republican, and WILLIAM L. LA FOLLETTE rises to the position of ranking member of the House Committee on the Public Lands. Think what that means to our State and to all of the 11 Western States, one-fifth of whose Federal problems go through this committee.

As for myself, I am a member of the Committee on Immigration—which place I sought—and a member of the Committee on the Territories, where I hope I did my share in perfecting and helping to pass the Alaska railroad bill. I hope to continue on these committees. Both have important work ahead, and I am in hopes that the bill now under consideration in the Committee on the Territories, which provides for the cutting of the red tape around Federal affairs in Alaska, and which dispenses with the overlapping of departmental control, will point a way toward cutting similar red tape in the western part of the United States.

For instance, if it is agreed that in Alaska the national forests should be taken from the control of the Secretary of Agriculture and placed under the control of the Secretary of the Interior, who handles land matters, why would not the same plan be beneficial to our Western States? If we can cut out Government delay and Federal mismanagement in Alaska, why not in the State of Washington?

Western Members in Congress have to work hard, and will have to work harder as the Government goes more and more into Federal control. There are not likely to be many more short Congresses, and there will be, in my opinion, an increasing need for a united delegation, in harmony not only as to party but as to principles of government.

Yours, sincerely,

ALBERT JOHNSON.

PLATFORM ADOPTED BY THE REPUBLICAN STATE CONVENTION.

Following is the declaration of principles of the Republican Party of Washington, which was adopted yesterday at the State convention held at Tacoma:

Proud of the achievements of the Republican Party in the past, and confident of the future, the Republicans of the State of Washington, in convention assembled, hereby declare:

We congratulate the people of the State of Washington and of the United States upon the imminence of the return of the Republican Party to power. The unwisdom of party division has been emphasized by the disastrous results of Democratic misrule upon the industrial life of the State and Nation. In their manifest intention to unite in their allegiance to the principles of the Republican Party, the electors of this State show their keen realization of the causes which led to existing industrial distress and their determination upon a speedy restoration of Republican power and prosperity. The coming triumph of the party is clearly forecasted by the result of every election held since 1912, and the general outcry for relief from Democratic mistakes and misgovernment. The great mass of the people of this country believe in the capacity and ability of the Republican Party to govern and govern rightly—a capacity and ability that have been demonstrated through many years of prosperity under Republican rule. Republican rule and prosperity are inseparable in this country; Democracy and depression are synonymous now as they have always been.

We reaffirm our fealty to the long-established principles of the Republican Party, and we pledge our services to the maintenance and perpetuation of our country's republican and representative form of government and institutions.

We condemn the present Democratic national administration for its repeated violations of plighted faith with the people. It promised a revision of the tariff that would not disturb business. It has enacted a sectional tariff measure which has depressed and prostrated business to an extent unknown since the last Democratic tariff revision, 20 years ago. It has discriminated against every product of the Northwest and of the State of Washington in particular.

The Democratic Party promised a tariff that would reduce the cost of living and at the same time perform the magical feat of maintaining wages and upholding the price of farm products. It has given the people a tariff which has not reduced the cost of living, but which has reduced the wages of workingmen, closed factories, crippled every line of industry, and forced prosperity to give way to increasing poverty and distress. The Democratic tariff has turned the American markets over to foreign producers. Millions of Chinese eggs have been imported, and New Zealand butter and Australian beef are supplanting our home products without the slightest decrease in the cost to the consumer.

The Republican Party is now and has always been the consistent and steadfast advocate of protection to American labor and promotion of American industries. We hold that the tariff policy of the Republican Party is the only true policy of service to the best interests of all the American people.

Realizing that a tariff too low brings on destructive foreign competition and that a tariff too high may in certain instances afford a shelter for monopoly, we favor a nonpartisan tariff commission which shall be authorized to make tariffs, to the end that all duties shall be adjusted to the difference between the cost of production at home and abroad.

We condemn the present national administration for its direct violation of the Democratic national platform which declared for free tolls for American coastwise vessels through the Panama Canal. Under circumstances which betray subservience to the commands of Great Britain and the Canadian railways, the President has forced through the present Democratic Congress repeal of the act exempting coastwise shipping from the payment of tolls. This is another injury to the industries of the State of Washington, already crippled by the viciously sectional tariff act. The history of this country fails to disclose a more shameless betrayal. The Panama Canal was built with the money and by the brains, the energy, and the labor of the

American people, and our ownership of it and our right of sovereignty over it are not open to question.

We reiterate our belief in the wisdom and justice of the act exempting American coastwise ships from the payment of tolls in the use of the Panama Canal, and we condemn the Democratic surrender of American sovereignty over this great highway.

We believe that every American citizen should be protected in his life, liberty, and property wherever he may be, and we condemn the present national administration for a foreign policy that fails the American citizen abroad in his hour of need and makes the American Nation an object of ridicule. The Diplomatic Service of this country has been debauched to pay political debts, and antics of this administration in dealing with foreign nations have made us the laughing stock of the world. American history has not hitherto recorded such weak and spineless statesmanship.

We believe Colombia has no shadow of claim on this Nation for the acquisition by the United States of the Panama Canal Zone, and we condemn this administration for its proposal to yield to Colombia's unwarranted demand for the payment of $25,000,000, as set forth in the treaty now pending. If this treaty shall be consummated, it will say to the world that we have built the Panama Canal upon stolen land, and it will add another humiliating act to the record of the present administration.

We favor legislation for the opening of Alaska and the development of its resources along reasonable lines.

We favor such national legislation as will develop a modern system of rural credits.

We favor such adequate restrictions on the immigration of foreigners to this country as will effectually exclude all of the ignorant and anarchistic classes not capable of becoming loyal American citizens.

We commend the late Republican national administration for its extension of the civil service, and regret that the Democrats have not seen fit to adhere to this policy.

We give our emphatic approval to the course in Congress of Senator WESLEY L. JONES and Representatives HUMPHREY, JOHNSON, and LA FOLLETTE, and we commend them without stint for their fine and loyal stand for Republican principles, and here express our appreciation of the high public services of prominent members of our party who have passed to the great beyond since the last State convention—former United States Senator John L. Wilson, former Gov. Albert E. Meade, and former Congressman W. E. Doolittle.

The Republican Party in State and Nation has always been in the forefront in the advancing sentiment of the people upon the vital and pressing problems of social and economic justice. We point with pride to the long list of wise and beneficent laws enacted along these lines by Republican lawmakers. We mention the following national laws: The establishment of Departments of Commerce and Labor, an employers' liability act, safety appliance acts, pure food and drugs act, the institution of postal savings banks, the parcel post, the establishment of a Bureau of Mines to protect life in the operation of mines, and a Children's Bureau for the promotion of the health and welfare of children. We also call attention to the fact that the State of Washington leads practically every State in the Union in remedial and constructive legislation calculated to overcome the inequality of wealth, capacity, and opportunity, and that every statute of such character was enacted by a Republican legislature. These laws concretely illustrate that the people can safely leave further and needed legislation along these lines to the Republican Party, whose record is a pledge that it will ever keep step with public demands.

We demand a radical decrease in the burden of taxation to which the State of Washington is now subjected. The load must be lightened. We demand a pledge from all candidates for office on the Republican ticket throughout the State to a policy of strictest economy consistent with efficient public service.

We condemn the refusal of the present national administration to restore to the school children of this State the land locked within United States forest reserves, and declare our allegiance to all policies concerning State and National lands which will permit the utilization rather than the waste of our natural resources.

We favor the sale at the earliest practicable date of the lands granted by the Federal Government to the State of Washington for the purpose of the construction and maintenance of the State university, State agricultural college, normal schools, and State capitol buildings, thereby placing the same upon the tax rolls of the State of Washington, and the money derived therefrom upon interest, which shall be used for the maintenance of such institutions, which will greatly lessen the burden of the taxpayers of the State.

The administration of the affairs of the State of Washington by a Democratic governor has again demonstrated to the people of this State the complete inability of that party to govern. Good men, long and honorably employed in the service of the State, with a record of efficiency unsurpassed and unquestioned, have been displaced in too many cases by incompetents, whose only claim to recognition is political activity.

We commend the Republican State officers for their faithful attention to their duties.

We favor arbitration in industrial disputes where questions of wages or hours of service are involved. A State labor commission should have authority to act as arbiter in all controversies where the parties thereto are unable to agree.

The Republican Party reasserts its steadfast opposition to the child-labor evil, and pledges itself to remedy the same wherever found in the State.

We favor the enactment by the legislature of a complete and modern irrigation code.

We favor the enactment of a stringent practice act.

Under the present laws of this State, a political party must cast 10 per cent of the vote at a general election in order to maintain its statutory existence. It should be also required clearly to define its position on public questions. We therefore favor the passage by the legislature of a bill requiring political parties to hold State conventions every two years, in May or June, preceding a State primary, and that at such convention the party shall make a clear and concise statement of their principles and general legislative programs, if any, and we further favor a law which will prohibit any individual from entering a party primary as a candidate under its name unless he shall, as a part of his declaration of candidacy, indorse and agree to support, if elected, the platform and program announced by his party at its last convention.

We further believe the primary law should be strengthened and supplemented by a provision that all voters who expect to participate in a party primary shall at the time of registering declare their party preference, and further providing no voter shall participate in any party primary unless he has so declared his party and then only in the primary of the party for which he has declared his preference.

The Republican Party of the State of Washington hereby declares that it is opposed to the selection of delegates to any convention of the party held for any purpose, by any method which does not give to the full membership of the party a voice in such selection, and we do hereby instruct and direct the Republican organizations, State and county, to henceforth see to it that some method be adopted for the selection of delegates that will carry out the spirit and intent of this declaration.

Learning A B C's at 70.

EXTENSION OF REMARKS
OF
HON. SAMUEL J. TRIBBLE,
OF GEORGIA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, July 17, 1914.

Mr. TRIBBLE. Mr. Speaker, under authority granted by unanimous consent, I extend in the RECORD the following article by Hon. Franklin K. Lane, Secretary of the Interior:

LEARNING A B C'S AT 70.

[By Franklin K. Lane, Secretary of the Interior.]

Illiteracy is a direct menace to the progress of a nation. Its existence rebukes civilization and its extent measures the efficiency of the social system. If all classes of population are considered, no section of the United States can claim even approximate freedom from adult illiteracy. The number of illiterates now in this country exceeds the total population in 1800.

The Federal census for 1910 shows that there were then in the United States 5,516,163 persons over 10 years old who were unable to read and write. This was 7.7 per cent of the total population of corresponding age. The full meaning of these figures will be better understood when it is remembered that the aggregate total is less by only a few thousands than the total population over 10 years old in all the New England States, and more than the same population in Boston, Baltimore, Washington, Buffalo, Cleveland, Detroit, Cincinnati, Pittsburgh, Indianapolis, Louisville, New Orleans, St. Louis, Kansas City, Minneapolis, St. Paul, Seattle, Spokane, San Francisco, and Los Angeles. In double line of march, at intervals of 3 feet, these 5,516,163 illiterate persons would extend a distance of 1,567

miles. Marching at the rate of 25 miles a day, it would require more than two months for them to pass a given point.

A mighty army is this, with its banners of blackness and darkness inscribed with the legends of illiteracy, ignorance, helplessness, and hopelessness; too large for the safety of our democratic institutions, for the highest good of society, and for the greatest material prosperity.

The significance of illiteracy as a measure of popular enlightenment depends upon many conditions. Chief among these are its extent and racial character and the density of population, which are the things that in a great measure determine the success or failure of the endeavor to bring all children under instruction. As to adults, their ignorance is not wholly or chiefly their own fault. To a large degree it is due to lack of opportunity, because of their poverty or the negligence of the States and communities in which they spent their childhood. It has recently been learned that the country school attendance is lower where the roads are bad.

Of the total of illiterates, 3,184,633 were white persons (1,534,272 native and 1,650,361 foreign), 2,227,731 were negroes, and the remainder were Indians, Chinese, Japanese, and others. In the New England, Middle Atlantic, and East North Central States the percentage of illiteracy was greater in the urban than in the rural population. For the rest of the country illiteracy in the rural population was from two to five times greater than in the urban population. Boston had 24,468 illiterates over 10 years old, Washington 13,812, Fall River 12,276, Birmingham 11,026, Memphis 8,855, and Nashville 7,947. By States, Wyoming had the smallest total of illiterates, or 3,874; while New York had the highest, or 406,020. Yet it must not be forgotten that New York's foreign-born illiterates totaled 362,025.

There is every hope that illiteracy may eventually be stamped out in the United States, and soon. It was reduced 3 per cent between 1900 and 1910, or at the rate of 1 per cent every 40 months. At this rate illiteracy would be ended in about 25 years.

Eliminating illiteracy, however, is not a task that can be reckoned by time. Remedial legislation, tandem work by the Federal Government and the States, and persistent effort are the only means with which to combat conditions that perpetuate ignorance.

Bills now in Congress providing that the Commissioner of Education shall investigate illiteracy among the adult population and the means by which it may be eliminated or reduced, are a step in the right direction. It is believed that by cooperative effort, in which the Nation, the States, individuals, and associations shall join, and with such aid as Congress may give, the stain of illiteracy in this country can be almost, if not wholly, obliterated. By an effort of this kind France reduced the number of adult illiterates from forty-five in a hundred to five in a hundred. In one year 1,000,000 men, women, and children over school age were enrolled in French schools, learning to read and write. The schools were organized and supported by national and local cooperation.

Dr. P. P. Claxton, Commissioner of the Bureau of Education, recently approved a bill carrying an appropriation from Congress for a small group of men and women in the bureau to plan and direct the work of investigating "the methods that have been and are now used in any part of the United States and in foreign countries in teaching illiterate adult men and women to read and write and in inducing and assisting those of meager education to extend their knowledge of subjects pertaining to their individual welfare and to their duties and responsibilities as citizens and members of society."

An appropriation of $15,000 is urged; but Commissioner Claxton says that even with no appropriation it will be possible, because of the additional authority granted to him, to obtain the cooperation of the States, counties, districts, and municipalities, and of churches, Sunday schools, women's clubs, and other organizations interested in the public welfare, to such an extent that within the next 10 years the percentage of illiteracy in this country may be reduced to a fraction of 1 per cent. I hope the bill will become a law in the present session of Congress, so we may have plans ready for beginning this work next fall. Indeed, it is not too much to believe that with prompt action the result expected by the commissioner may be secured by the time the national census of 1920 is taken.

Experimental work already done along this line shows that rapid progress is possible. Rowen County, Ky., and Worth County, Ga., have specialized, with great success, in teaching mixed classes of adults and children in the rural districts. Buffalo, through the North American Civic League for Immigrants, has undertaken not only the education of immigrants, but also classes in citizenship instruction. By providing requisite appropriations, this is the first city in the country to take a forward step in minimizing foreign-born illiteracy by placing citizenship education on a clearly recognized and distinct basis.

JUDGE FRANK PARK, OF GEORGIA.

The Old Field School, of Worth County, has a picturesque history. It is, in reality, a homeless school, where Webster's blue-back speller is the principal textbook and where sex and age lose their perspective as they fuse into the desire and thirst for knowledge. Higher education there is an unknown quantity, because where an individual of 67 is busy mastering the intricacies of A B C side by side with a child of 10, higher education loses its importance in favor of elemental education. The school term is indefinite; it fluctuates with the crops. It begins as soon as the cotton is laid by and the corn attended to, and it ends when the students must return to the fields to harvest the crops. "Between roastin' ear and hard corn" is the way these people of the wire-grass country would describe it.

Its founder is FRANK PARK, now a Member of Congress from Georgia. In 1906, when he began the classes, he was a judge of the superior court of the State. Actuated by the realization that most of the individuals who came before him as jurors, witnesses, complainants, and defendants were mature and aged men who could neither read nor write, he decided to provide the means for giving them a limited education. Out of his salary he paid the expenses. He has bought the books and now pays the two teachers, although the first year he taught school himself.

The school has no fixed home. Last year it held its sessions in an unpainted frame country church, which was so small that fully half of the 125 pupils were obliged to study under the trees outside. The closing day of school is as big an event to the residents of Worth County as is the presentation of diplomas, accompanied by addresses in Latin, to the students of modern colleges. Side by side under the trees boys and girls, mothers and fathers, aunts, uncles, grandparents, and other relatives stand up for an old-fashioned spelling match.

Has it been worth while? John Denby, a veteran of Company D, Sixty-fourth Georgia, Confederate States Army, who learned to read and write in that school at the age of 67, is one of the most enthusiastic students. Another, a youth of 20, who, with his mother and sister and a little jack-rabbit mule, farmed a plot of poor land miles from the city, walked a long distance every day to study his A B C's with eagerness. At the end of the term he sold his crops, and with $60 went to Macon and put in three months at a business college. After he was graduated there he became assistant cashier of a bank, and is now earning a fine salary. There were two red-haired, bright, and plucky brothers who formed a partnership in order to obtain their education. One worked on the farm during the year that the other went to school; the next season they changed off, and eventually they started to prepare for college on the same plan. This year one of them will be graduated from Princeton. The other is teaching school in Oregon, and out of his salary has lived himself and kept his brother through the year. Next year the Princeton graduate will go to work and the other will enter college.

Three years after the Old Field School was founded the county school superintendent, Walter R. Summer, wrote that "the cross mark on promissory notes has been almost wiped out in Worth County. During the first year 21 adult men learned to read and write." And under the guidance of W. E. Grubbs, who volunteered his services as an expert bookkeeper, instruction in business arithmetic has been added. So men who had been depending upon others to write their letters and transact their business for them are taught to write their own business communications, how to make out, sign, and indorse checks and notes, execute mortgages, open bank accounts, compute the number of cords in a pile of wood, the quantity of timber in a tree, or the acreage of a piece of land.

No purer Anglo-Saxon blood runs in the veins of any American than in these people of the wire-grass country. Descendants of the early pioneers of the Virginias and Carolinas, they have kept their blood pure and their lives clean. The war beggared them, however. The veterans who came back had nothing and were forced to begin life over again. For their children there were no schools; and even if there had been, they could not have gone. Now there are some public schools, but not enough. Because of the method of apportioning the State's school money, the districts have to discount the payments, borrowing from the banks at 10 per cent interest. Pupils must buy their own books, and the schools are generally open at the time when children are needed on the farms.

Mrs. Cora Wilson Stewart's attempt to teach adults is one of the most notable, showing that grown-ups are a precocious lot of students.

As superintendent of schools in Rowan County, Ky., Mrs. Stewart had occasion to study the conditions of the neighborhood carefully, and as a result decided to open schools for adults on moonlight nights in the public schoolhouses. All the teachers of the county volunteered to help. On Labor Day, 1911, these teachers visited the homes of the people, explaining the plan, and the next evening more than 1,200 men and women from 18 to 86 years old were enrolled. They came trooping over the hills and out of the hollows, some to add to the meager education received in the inadequate schools of their childhood, some to receive their first lesson in reading and writing. Among these were not only illiterate farmers and their illiterate wives and children, but also illiterate merchants, ministers, and lumbermen. Mothers, bent with age, came that they might learn to read the letters from absent sons and daughters and to write to them.

In the words of Mrs. Stewart, "They had all the excuses and all the barriers which any people might offer—high hills, bridgeless streams, rugged roads, weariness from the day's hard toil, the shame of beginning study late in life, and all the others—but they were not seeking excuses; they were sincerely and earnestly seeking knowledge. Their interest, their zeal, and their enthusiasm were wonderful to witness. It was truly an inspiring sight to see these aged pupils bending over the desks which their children and grandchildren had occupied during the day. Their delight in learning and their pride in their achievements exceeded any joy that I have ever witnessed."

In the fall of 1912 the movement spread to other counties, the success of the schools showing that it is not so difficult for illiterate grownups to learn to read and write as is generally supposed. One man of 30, after four lessons in the evening school, wrote the county superintendent a legible letter. Another man, aged 50, wrote a legible letter after seven lessons. A woman of 80 wrote a legible letter after eight nights of study. Many succeeded in securing Bibles which had been offered as prizes by the superintendent to those who would learn to write a letter during the first two weeks of the moonlight school term.

In some of the districts the enrollment of adults exceeded that of children. In two districts the enrollment ran as high as 70, and in several as high as 65.

One teacher had only four adult pupils in her class; but one of these was a preacher who learned to read the Bible and a newspaper after a few weeks of earnest study. After four lessons he signed his name to a paper for the first time, and after seven lessons, to quote the county superintendent, "He wrote an enthusiastic letter, with a period as large as a bird's eye at the close of each sentence."

In another night school, of 65 enrolled 23 were illiterates, and there were three preachers in the class. Several octogenarians were enrolled in these schools; one a woman of 85, another a man of 87, and others past 80. Some entered a schoolroom for the first time in their lives when they enrolled as night pupils.

A significant fact brought out in this experiment is that adults of limited education have taken advantage of the opportunity to return to school and increase their knowledge. Of the 1,600 adult pupils attending night school during the second term, 300 were unable to read and write at all, 300 were from those who had learned in September, 1911, and 1,000 were men and women of meager education. In a number of instances adults from the night schools have enrolled as pupils in the day schools, and the superintendent says that the presence of a determined man or woman in the class has proved an inspiration to both pupils and teacher.

The change in attitude of the community toward the school, wherever the night classes have been undertaken, is in itself significant. A school trustee thus described the change:

"I have lived in this district for 55 years, and I never saw any such interest as we have here now. The school used just to drag along, and nobody seemed interested. We never had a gathering at the school, and nobody ever thought of visiting it. We had had night school but three weeks until we got together right. We papered the house, put in new windows, purchased new stovepipe, made new steps, contributed money, and bought the winter's fuel. Now we have a live Sunday school, a singing school, prayer meeting once each week, and preaching twice a month. People of all denominations in the district meet and worship together in perfect unity and harmony, aged people come regularly, and even people from the adjoining county are beginning to come over to our little schoolhouse."

The experiments in Rowan and Worth Counties show that it is possible to bring help to illiterate men and women even in the most difficult and adverse circumstances. They show that the schools can succeed, whether the pupils available be few or whether they run into the hundreds. They show that the spirit of seeking knowledge is paramount, regardless of age and sex, and that the classes, therefore, can be run upon a homogeneous basis.

By knowing just what must be done in the various localities in the United States, and doing away as much as possible with the present system of closing many schoolhouses on account of the impassable conditions of the roads, by adopting the system of central schoolhouses in vogue in Ohio and elsewhere, another attempt in the right direction will have been made.

The Department of the Interior, through the National Bureau of Education, can map out the dark territory and stimulate a greater desire for self-help, and the bills now before Congress will enable the authorities to do the work. It is my earnest conviction that rural schools demand our attention, and that until a satisfactory system has been devised to provide proper schooling in remote localities no steps ought to be taken toward the creation of a national university.

There are methods and plans to formulate for the campaign against illiteracy. It is important that the Bureau of Education be empowered to receive and distribute funds for the work, as it has received offers of contributions which without legislation it can not accept or distribute.

It will be a great accomplishment, entirely feasible, to inaugurate and superintend a movement concerted and nation wide in extent, which will place the United States where it belongs—at the head of the nations of the world in literacy.

To wait for the passing generation of illiterate men and women and the present generation of illiterate children to die, is a slow and painful process. There is a shorter and a surer way, and that is to teach them their A B C's.

The woman of 70 voices the feelings and sentiments of all adults who have learned to read and write in these mixed schools when, asked how she had liked going to school, she replied, "More than I can tell, because now I know what it means to know how to read the Bible, and I can write to my grandchildren."

Prosperity in the West.

EXTENSION OF REMARKS

OF

HON. MARTIN D. FOSTER,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 18, 1914.

Mr. FOSTER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include an article from the Chicago Tribune of July 17, 1914.

The article is as follows:

[From the Chicago Tribune, July 17, 1914.]

MANY GET JOBS AS GREAT CROPS ROUSE BUSINESS—INDUSTRIAL AND COMMERCIAL ENTERPRISES SHOW SIGNS OF REAL PROSPERITY—RAILROADS MAKE READY.

Big business and little business, industrial and commercial, already are beginning to feel in a moderate degree the effects of the record crops promised by the American farmer.

Jobs left vacant through the period of "watchful waiting" are beginning to be filled, and transactions involving millions of dollars, which have been permitted for months to hang fire, are being closed daily.

The biggest immediate reflection of the bumper crops is shown by the railroads. Car manufacturers and railway officials throughout the country are increasing their operating forces and the working time at their plants.

RAILROAD TONNAGE INCREASES.

A significant report came from the traffic department of the Santa Fe showing an increase over last year's business. This report gives the total number of cars of all kinds of revenue freight loaded on all Santa Fe system lines and received from foreign connections during the month as 106,627, compared with 102,799 for the same month last year, an increase of 3,828 cars, or 3.72 per cent.

Further evidence along this line came from a Burlington official. He stated that the volume of traffic is practically up to normal now, and the same as a year ago. As yet grain movements are comparatively light, as is to be expected at this time of the year. Preparations are complete for the handling of the new crop, and a very heavy tonnage is expected. General merchandise and miscellaneous freight show increases ranging from 4 to 5 per cent over a year ago.

NORMAL CONDITIONS FORESEEN.

Another thing, besides the crops, which is causing better spirits in the railroad world is the belief that with the settlement of the 5 per cent advance freight-rate case this week confidence will be restored to such a degree that transportation conditions will return to normal.

The Inland Steel Co., the Illinois Steel Co., the Pullman Co., and other great industrial corporations of Illinois have observed an improvement in their markets, but the concrete results have not, of course, reached them with full force.

Actual orders with these industrial companies have increased some, with greater promise held out for the near future, when it is expected thousands of more workers will be needed.

HUNDREDS GET JOBS.

The Pullman car plant at Pullman has added hundreds of men to its working force.

Three hundred men were put to work in the freight department of the Standard Steel Car Co.'s plant at Hammond, Ind., last week, raising the total number now employed to 1,000. Prospects are said to be good for the placing of another large shift in the passenger-car department within two weeks. The company is building a large addition to its present plant to handle the looked-for business increase.

Last month a total of 16,055 orders for new freight cars was placed by the roads with the various car factories of the country, as compared with 8,154 in May. The New York Central purchased over 9,000 freight cars in June, while the Illinois Central placed orders for 5,000 all-steel box cars.

ORDERS FOR EQUIPMENT.

Large orders for freight and passenger equipment and for locomotives are expected to be placed this month. It is reported the Union Pacific is figuring on a purchase of about 9,000 freight cars.

The Illinois Central expects to rebuild with steel underframes a total of 10,000 cars this year. The Chicago & North Western has undertaken exactly the same program. The Rock Island expects to have 8,000 cars rebuilt.

INCREASE WORKING TIME.

The Chicago, Milwaukee & St. Paul this week increased the working time of 2,000 men employed in the road's shops at Milwaukee from 8 to 8½ hours.

According to R. V. Taylor, president of the Mobile & Ohio, $5,000,000 has been set aside for the construction of a new bridge across the Ohio River at Cairo, Ill. He also announced the Mobile & Ohio would spend $1,122,000 for new equipment. The Monon is in the market for 250 box cars, and the Wabash for 7 postal cars.

National Banks and Farm Loans.

EXTENSION OF REMARKS
OF
HON. VICTOR MURDOCK,
OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 18, 1914.

Mr. MURDOCK. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing a short article from the National Field, which is the official organ of the National Farmers' Union. It seems recently John Skelton Williams, Comptroller of the Currency, said there were $500,000,000 now available under the new law for farm loans. The representative of this organization asked farm loans from national banks and failed to obtain them, and this is a recital of the attempt.

The SPEAKER. The gentleman from Kansas asks unanimous consent to extend his remarks in the RECORD in the manner indicated. Is there objection? [After a pause.] The Chair hears none.

The article is as follows:

JOHN SKELTON WILLIAMS, COMPTROLLER OF THE CURRENCY, SAID THAT THERE WAS $500,000,000 NOW AVAILABLE FOR FARM LOANS.

Here is a dispatch which appeared in all the dailies:

FIVE HUNDRED MILLION DOLLARS TO LOAN ON FARM MORTGAGES.

WASHINGTON, *June 18.*

Comptroller of the Currency Williams estimates that about $500,000,000 in national banks throughout the United States is available for farm-mortgage loans under the provision of the Federal reserve act making it possible for national banking associations to lend money on improved farm lands.

Scores of inquiries concerning this provision reach the Treasury Department daily, and there does not seem to be a general understanding that the farm-loan clause of the act is now in force, and makes it possible for national banks to make farm loans before the formal organization of the Federal Reserve Board.

The estimate of Comptroller Williams is based on reports showing the capital stock and surplus of national banks to be $1,777,000,000. Twenty-five per cent of this amount, or $444,250,000, is available for farm loans. Furthermore, the Federal reserve act provides that national banks may grant farm loans up to 33⅓ per cent of their time deposits. Banks with large deposits will be able to far exceed the sum they could lend on farms under the 25 per cent clause, and the estimate of Mr. Williams is believed to be conservative.

Farm loans under this act are not to be made for longer than five years, and the amount of each loan is not to exceed 50 per cent of the actual value of the farm offered as security.

FARMER C. S. BARRETT ASKED FOR A SMALL BIT OF THIS $500,000,000 THROUGH ATTORNEY S. G. M'LENDON.

Here are the replies:

THE THIRD NATIONAL BANK OF ATLANTA
(Capital and surplus $1,700,000),
Atlanta, Ga., June 26, 1914.

Mr. S. G. MCLENDON, *Atlanta, Ga.*

DEAR SIR: As we never lend money on real estate, I regret that we could not consider the proposition contained in your letter of June 25.

Ours is strictly a commercial bank, and our loans run from 30 days up to 6 months' time.

Yours, very truly,

T. C. ERWIN, *Cashier.*

NOTE.—"Ours is a strictly commercial bank." No farmers need apply.

THE ATLANTA NATIONAL BANK
(Capital and profits $2,000,000),
Atlanta, Ga., June 26, 1914.

Mr. S. G. MCLENDON, *Atlanta, Ga.*

DEAR SIR: We have your favor of the 25th instant, and in reply beg to state that under the national banking laws we are prohibited from making farm loans.

Yours, very truly,

GEO. R. DONOVAN, *Cashier.*

THE LOWRY NATIONAL BANK OF ATLANTA
(Capital $1,000,000, surplus $1,000,000),
Atlanta, Ga., June 26, 1914.

Mr. S. G. MCLENDON, *Atlanta, Ga.*

DEAR SIR: Your favor of the 25th noted. The loans mentioned by you, both being secured by real estate, makes it necessary for us to decline to make them, for the reason that a national bank can not accept such security.

Yours, very truly,

THOS. D. MEADOR, *Vice President.*

NOTE.—But John S. Williams says national banks are not prohibited from making real estate loans.

THE FULTON NATIONAL BANK OF ATLANTA
(Capital $500,000),
Atlanta, Ga., June 26, 1914.

Mr. S. G. MCLENDON, *City.*

DEAR SIR: Your letter of June 25 received, relative to farm loans.

Replying, will state that this bank is not in the market for farm loans. We thank you, however, for offering same to us.

Very truly, yours,

A. B. SIMMS, *Vice President.*

Note.—This last letter is the gem of the collection. No polite regret, no excuse about it being impossible under the law (the old law, abrogated when the letters were written), but simply, "We are not in the market for farm loans."

JUNE 30, 1914.

HON. CHAS. S. BARRETT, *Union City, Ga.*

MY DEAR SIR: Relying upon the published statement credited to the Comptroller of the Currency, John Skelton Williams, copy of which is attached, I made application for a loan for you and another client to national banks whose combined capital and surplus amounts to $6,200,000, of which Mr. Williams says 25 per cent, or $1,550,000, is now available for loans on improved farms.

I inclose copy of my letter making application for these loans of $2,750 and $3,000, respectively, and also original letters declining the loans.

No relief is coming to the farmer until you quicken the negotiability of his asset—land, and this can easily be done. There is, however, the very refinement of cruelty and political hypocrisy in pointing out to the farmer the tree of life glittering with the golden apples of Hesperides that turn to ashes upon his lips.

Your note secured two, three, or four to one is not in demand. There is some difference between your note and your vote. Perhaps if I had mentioned that you were the representative of 3,000,000 farmers your note might have been considered with more favor.

The only consolation that I can offer you is that your vote is right now in very active demand, and that the bank which replied "We are not in the market for farm loans," had on deposit March 4, 1914, $93,758.05 of United States funds, and on the same date deposits of United States disbursing officers amounted to $89,823.59.

Congress has done, and is going to do, nothing, though it could do much for the farmer.

Your friend,

S. G. MCLENDON.

Now, brethren, Farmer Barrett wanted to test out this thing beyond the question of a doubt.

Neither the question of title or security had anything to do with the matter. The banks simply refused to even consider the question of making a loan on any sort of farm property.

Those who indicated that they might, if they were allowed by the banking laws to do so, were strangely misinformed as to the laws governing their own business. The new law authorizing them to take real estate security as collateral for loans up to 25 per cent of the capital stock and surplus had been in force several months.

The two other national banks refused on their own motion, without beating around the bush at all.

These banks are under no compulsion. They have the right and the privilege of accepting or rejecting. Mr. Williams is right in his statements that the banks can make farm loans.

In other words, brethren, these banks have permission to do what not a blessed one of them ever wanted to do or ever proposes to do. Not on your life! "We are a strictly commercial bank." "We are not in the market for farm loans." And they might have added, with entire truth, "What are you rubes going to do about it?"

In order to satisfy us fool farmers that something has been done for our relief dispatches saying that there are millions of dollars at our disposal are broadcasted over this country.

Rural credit remains just where it was before the banking or the currency laws were changed. All this "hogwash and soul butter" about there being plenty of money available for the farmers is the cheapest, flimsiest, and most despicable political chicanery that was ever deliberately stewed up for the farmers' undoing. His vote is wanted, and mighty bad. His note and his real estate are N. G. as security for a loan on the same terms others get. The farmer must be gouged on interest and time prices. Likewise he must be put so near starvation that he must rush his crop to town and turn it over for whatever he can get.

Railway Mail Pay.

EXTENSION OF REMARKS
OF
HON. JAMES T. LLOYD,
OF MISSOURI,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 18, 1914.

Mr. LLOYD. Mr. Speaker, the story of railway mail transportation and its marvelous development is interesting in the extreme. It begins with the competition of the stage coach and ends without a rival. At the outset it afforded but little better accommodation than the stage coach, because of the rapid transit of the coach and the slow time then made by the trains.

The first railroad whose trains were propelled by locomotive engines began its service in 1829, but not until 1834 were the railroads utilized for the purpose of carrying the mails, excepting in an experimental way. In 1838 the first general statute providing for railway transportation of the mails and a regular system of pay was enacted. This was the first law which recognized the railroads as post routes.

The mayor of the city of Washington in 1835 expressed his delight that it was then possible to leave Washington in the morning and return in the evening, and visit Baltimore, 40 miles away, in the meantime; but at that time the mail was transported by coaches between these points. It was then contended that the railroads were not sufficiently reliable in making their schedule to depend upon them at the distributing centers, and the coach was insisted upon as the only system of prompt and speedy dispatch. This, in the light of modern railroad transit, is an interesting story. In all the early contracts with the railroads they were required to agree to deliver the mails with equal expedition to the stage coach. Some contracts fixed a speed limit and required the trains to make at least 10 miles per hour, and later on the trunk lines carrying through mail were required to make 16 miles per hour.

In the Postmaster General's report for the year 1835, in discussing the possibilities of railway mail service, the optimistic view was expressed that the railroad service would in a short time be so perfected that the mail would be carried from New York to Washington in 18 hours. This was recognized as a wonderful achievement and greatly to be sought. To-day the mail is transported between these points in less than six hours.

It is interesting to note the crudity of the system at that time and the peculiarities of the contracts that were required. For example, the Postmaster General then recommended that a strong fireproof box be purchased as receptacle for the mail; that it be placed in the train and that keys be held at both the initial and terminal points by the postmasters, so that the railroads would have no liability excepting for transportation. To-day railroads provide traveling post offices, and Government employees distribute the mail as the train passes, and the mail is received and distributed from town to town with the greatest accuracy and dispatch.

Another interesting situation arose in that early period. The Government seriously considered the question of purchasing its own trains and of requiring the railroad companies to permit their use upon their roadbeds. It was then insisted that the railroads were monopolies and that competition in bidding could not be secured. It was argued that to secure reasonable compensation and the most rapid transportation for the mail the Government would be compelled, in self-protection, to have its own trains. This is a forceful illustration of the fact that the question of monopoly is not a new one. At that time letters of inquiry were sent to all the railroads, and the matter was investigated by the Post Office Department and by Congress, but no definite action was agreed upon.

In 1839 the first law fixing specific pay for railway transportation of the mails was enacted. It provided that not more than $300 per mile per annum should be paid to the railroads for carrying the mails.

By comparison it may be of interest to know that if the rate then adopted had continued in existence until the present time the Government would pay 30 per cent more for railroad transportation than it pays under the existing law, and this notwithstanding the weight of mail carried on the railroads is many times greater per mile than it was at that time. It costs now about $205 per mile of road.

Congress in 1845 provided a definite system of compensation, based upon the weight of the mail, the speed of the trains, and the importance of the service; three classes were fixed, not more than $300 per mile per annum was allowed in the first class, $100 in the second class, and $50 in the third class. A curious feature of that law was that it provided 25 per cent additional compensation where the mails were carried at night. Under that system and rate of pay the compensation to the railroads was about the same per mile of railroad as is paid under existing law, but the weight of mail was nothing like so great as it is now.

This system of compensation remained without material change as the method of pay until 1873, when a system of payment based upon the weight of the mail was adopted by Congress.

In 1876 the rates of compensation fixed in 1873 were reduced 10 per cent and in 1878 the rates established in 1876 were reduced 5 per cent, so that the rates in 1878 were as follows:

On routes carrying their whole length an average weight per day of 200 pounds, $42.75.

500 pounds	$64.12
1,000 pounds	85.50
1,500 pounds	106.87
2,000 pounds	128.25
3,500 pounds	149.62
5,000 pounds	171.00
For every additional 2,000 over 5,000 pounds	21.37

In 1907 the law was changed so as to provide that on routes carrying their whole length an average weight of mail per day of more than 5,000 pounds and less than 48,000 pounds the rate shall be 5 per cent less than the then rates on all weight carried in excess of 5,000 pounds, and all routes carrying their whole length an average weight of mail per day of more than 48,000 pounds the rate shall be 5 per cent less than the then rates on all weight carried in excess of 5,000 pounds up to 48,000 pounds, and for each additional 2,000 pounds in excess of 48,000 pounds at the rate of $19.24 upon all roads other than land-grant roads, and upon all land-grant roads the rate shall be $17.10 for each 2,000 pounds carried in excess of said 48,000 pounds.

The general law provides that all land-grant roads shall receive 80 per cent of the allowance to other railroads.

In May, 1910, the law was changed so far as it affected land-grant roads, where the rate fixed was $17.10 for each 2,000 pounds carried in excess of 48,000 pounds, so as to make the rate $15.39 for each 2,000 pounds carried in excess of 48,000 pounds.

In addition to the charges fixed in the statute in 1873 for the weight of the mail carried, the law provides that additional pay may be allowed for every line comprising a daily trip each way of railway post-office cars of a rate not exceeding $25 per mile per annum for cars 40 feet in length, and $30 per annum for 45-foot cars, and $40 per mile per annum for 50-foot cars, and $50 per mile per annum for 55 to 60 foot cars.

This law was changed in July, 1907, so as to provide a rate not exceeding $25 per mile per annum for cars 40 feet in length; $27.50 per mile per annum for 45-foot cars, and $32.50 per mile per annum for 50-foot cars, and $40 per mile per annum for cars 55 feet or more in length.

The law of 1873 was the first statute that fully provided for the railway post-office car. The law of 1873 provided that the average weight of mail should be ascertained in every case by the actual weighing of the mails for such a number of successive working days, not less than 30, as might be designated by the Postmaster General, and not less frequently than once in every four years.

In March, 1905, the provision with reference to the weighing of the mail was changed so as to require the weighing to continue during a period of not less than 90 days.

One of the most difficult things to explain is how the average weight of mail is ascertained. The present system of pay is

based on the weight of the mail. The mail is weighed once in four years; the United States is divided into four sections; the mail is weighed in one of these sections each year, during the period of 90 days, and the average weight then ascertained serves as the basis of pay for the four years, beginning with the 1st day of July thereafter.

To ascertain the average weight of mail, the mail that is placed on the train at the initial point is weighed, that which is thrown off at the first station of the route is weighed; that which is taken on at each station is weighed. The weighings of that which is taken on and that which is thrown off are ascertained at each station along the route, and at the terminal stations, and then on the return trip the weight is ascertained at the terminal station, which now becomes the initial station, and the weights taken on and the weights of the mail thrown off are ascertained at each station back to the starting point. From these several data it is ascertained by proper computation what is the average amount of mail carried on the route, and this ascertainment is made on every train during the period of 90 days, and the general average carried on the road each day is obtained by proper computations, and the weight thus ascertained becomes the basis of pay for the succeeding four years.

This system is so complicated that it can hardly be explained except by actual demonstration and calculation.

The question has repeatedly been raised whether the present system can not be improved and a more equitable and scientific basis of pay ascertained. From time to time numerous persons advocated what is termed the space system as the basis of pay; that is, that the railroad companies shall receive compensation according to the amount of space used by the Government. Others have insisted that a combination scheme providing partly for weight and partly for space could be devised, which would be more nearly correct in measuring the proper compensation than either the weight basis or the space system.

There have been various efforts at different times to ascertain information upon which to base a satisfactory conclusion as to the advisability of changing the present system. There has been an almost constant agitation in favor of a changed rate in the payment to the railroads, and the public generally have been impressed with what was alleged to be the fact, that the railroad companies were receiving pay much beyond that which was a reasonable compensation for the services rendered.

Commissions have been appointed in the past to investigate the subject of railway mail pay and report their findings to Congress with such recommendations as to change in pay or in system of pay as in the judgment of the commission should be made.

These commissions have ascertained valuable data, have presented the hearings obtained, and reports of their ascertainment, which have been of great service in connection with the study of this intricate question, but up to the present time the question of railway mail pay has been unsettled, unsatisfactory, and many persons believe the system adopted unjust.

There are several objections that may be urged to the present system. It may be that the most serious criticism that can be offered is that the system is so complicated that no one but a close student of the law and an expert accountant can fully understand it. If the question were asked, "What is paid to the railroads for carrying the mails?" about the best answer one can make is "$55,000,000 per year"; but from such an answer the individual can form no conception as to whether the compensation is too much or too little. It may be stated in further explanation of the compensation that is paid the railroads that there is an average payment of $205 per mile of road per annum, but this does not give information to the individual as to whether such payment is reasonable compensation or not. One may go further and make the calculation, and show to such persons that the railroad company receives 2¾ cents per pound for every pound of mail handled on train, and yet one does not know whether the compensation is reasonable or not, for this is much more than is paid per pound for the transportation of other commodities; he must yet be in doubt as to the correctness of the charge. In transportation of any other commodities, distance in travel and the weight of the commodities are both considered in determining compensation. This latter deduction will more nearly satisfy the individual as to the reasonableness of present railway compensation than any other, but it is in no sense satisfactory.

In June, 1898, a commission was appointed by Congress to investigate the prices paid for the transportation of the mails, the sources of revenue, and the expenditure of the Postal Service, and the rates of postage. They were required also to ascertain whether or not excessive prices were paid to the railroad companies for the transportation of the mails and for compensation for postal-car service.

The commission consisted of Senators Edward Wolcott, W. B. Allison, and Thomas S. Martin, and the following House Members: E. F. Loud, W. H. Moody, T. C. Catchings, and William H. Fleming. This commission made a very thorough and exhaustive investigation of the subject of railway mail pay, and had the advantage of the best expert assistance they could secure; and as a result of that investigation the commission found, and so reported to Congress, that the prices then paid to the railroad companies for the transportation of the mails was not excessive, and recommended that no reduction thereof be made. This recommendation included not only the regular pay to the railroad companies but the expenditure on account of railway post-office cars as well. Mr. Fleming of the commission dissented and stated that in his judgment there might properly be made a reduction of 5 per cent on the then existing rates, but said also:

> I freely admit the perplexities of the problem. I agree in the opinion that the cost to the railroads of handling the mail can not be ascertained with entire accuracy. I am also fully convinced that those persons who have contended that under the law of 1873 and its amendments of 1876 and 1878 the railroads are being paid, as some have charged, from two to ten times what they should receive are in grave error. There is no such exorbitant overpayment for the total transportation of the mails as has been charged.

It will be remembered that mail pay was reduced in March, 1907, quite materially on roads which carried a large amount of mail. It will also be remembered that what is known as the change in divisor with reference to the construction of the law as to successive working days was made, which had the effect of making large reductions in the amount of pay which the railroad companies receive, so that under existing law the rate of pay is much less than that which was recommended by Mr. Fleming in his dissenting opinion.

The investigation made by what was known as the Loud Commission, above referred to, left the matter fully enshrouded in doubt as to what the real compensation to the railroad companies should be. The finding was, in effect, that the railroad companies were not receiving too much, but there was no specific finding, except by inference, as to what the pay should be. The views of Mr. Moody, now justice of the Supreme Court, expressed at length in a separate opinion, conveying, I have no doubt, the real situation as was then shown, that with the information which they had it was impossible to determine what was the proper compensation to be fixed in payment for carrying the mails. Perfectly naturally, since that time, as well as before, it has been a mooted question, and has been discussed at various times and under different conditions, and numerous opinions have been expressed.

The uncertainty with reference to this matter led Congress, on August 24, 1912, to take further action, and it then provided:

> That a joint committee shall be appointed, composed of three members of the Senate Committee on Post Offices and Post Roads and three members of the House Committee on the Post Office and Post Roads, to be designated by their respective chairmen, to make inquiry into the subject of postage on second-class mail matter and compensation for the transportation of mail.

There was appointed in obedience to that requirement, from the Senate, Jonathan Bourne, jr., Harry A. Richardson, and John H. Bankhead; from the House of Representatives, James T. Lloyd, William E. Tuttle, jr., and John W. Weeks. This commission shortly thereafter began the work of investigation of the subject of railway-mail pay, and their hearings have been the most exhaustive of any heretofore made, but their report, based upon the information received, has not yet been submitted.

In August, 1911, the Postmaster General transmitted a letter to the Speaker of the House of Representatives, submitting a report giving the results of the inquiry as to the operation, receipts and expenditures of railroad companies transporting the mails, and recommending legislation on the subject. This communication was printed as a House document and is known as No. 105, Sixty-second Congress, first session. The action of the Postal Commission was based upon this document and the recommendations therein, and the exhaustive investigation which followed was predicated upon the information obtained from said Document No. 105. The document has been repeatedly assailed by the representatives of the railroad companies, and they claim that the deductions found in Document No. 105 are not accurate and that they are unfair to the railroad companies. The Post Office Department, on the other hand, has insisted that the information found in Document No. 105 is reliable and furnishes accurate information on the subjects involved.

Under the authority granted the Postmaster General by act of March 3, 1879, he required all railroad companies transporting the mails to furnish such data relating to the operating receipts and expenditures of such railroads as, in his judgment,

was deemed necessary to enable him to ascertain the cost of mail transportation and the proper compensation to be paid for the same. The information called for by the Postmaster General was reported by the railroads in great detail, and the Post Office Department has carefully tabulated and analyzed the information thus obtained. The Postmaster General appointed a committee of department officers, consisting of the Second Assistant Postmaster General, the Chief Post Office Inspector, the General Superintendent of Railway Mail Service, the Assistant General Superintendent of Railway Mail Service, the post office inspector in charge of the Washington district, and the Superintendent of the Division of Railway Adjustments. This committee after careful investigation found as a result of their inquiry that the amount of mail service performed by railroad companies can be ascertained in comparison with the passenger and express service they performed, thus permitting an apportionment of the revenues and expenses among these three classes of service. This method had never before been employed. It is found possible for the first time to determine with some degree of accuracy the total expense chargeable to the performance of mail service in comparison with the revenues received by the railroad companies therefor, and to show the gain or loss in the aggregate of the service performed. It developed from the calculation made by this committee on the basis indicated, after what is thought to be a proper assignment of operating expenses and taxes, that the performance of the mail service at the present rate is profitable to certain railroad companies and unprofitable to others. Taken as a whole, it was claimed by that committee that the railroad companies are receiving from the Government for transporting mails payments considerably in excess of the cost of such service. The committee ascertains that through a readjustment of railway mail pay on the basis of cost, with 6 per cent profit, a saving to the Government could be made of about $9,000,000.

The desirability of a revision of the methods of ralway mail pay has long been suggested by the department, but it has heretofore failed to make specific recommendations to Congress; but the reason of this failure was due to the fact that the department did not have at hand the information which is necessary to make a satisfactory finding, and they could not suggest a definite plan without being left in the field of conjecture as to what would be the result of the adoption of such plan.

The report of this committee was accepted by the then Postmaster General, and as a result of their finding he submitted, on the 12th day of August, 1911, the tentative draft for the proposed law for the regulation of railway mail pay. This proposition authorized and directed the Postmaster General to require companies operating railroads by steam, electricity, or other motive power to furnish, under oath and seal, not less frequently than once in each fiscal year such information relating to the operation, receipts, and expenditures of such roads for a period of not less than 30 days, to be designated by him, as may in his judgment be deemed necessary to enable him to ascertain the cost to the companies for carryng the mails on their respective roads and the proposed compensation to be paid for that service.

After such information was furnished the Postmaster General, he was required under this proposed draft to determine the cost to each railroad company for carrying the mails on its respective road or roads, and then he was authorized to credit, assign, and apportion the revenues and expenses of the railroad companies in such manner as he deemed fair and equitable and as in his judgment was necessary to ascertain the cost, and he was authorized and directed, further, to readjust the pay to the companies operating railroads for the transportation and handling of the mails not less frequently than once in each fiscal year at a rate of compensation per annum not to exceed the cost to the railroad companies of carrying the mails, as ascertained by him, and 6 per cent of such cost. The proposed law had all the details necessary to provide for the proper execution of the law on that basis.

On the question of whether the existing law furnishes accurate compensation to the railroads from the data submitted by the railroads and compiled in Document No. 105, referred to, the railroad companies insisted that a proper ascertainment under a proper tabulation of the statistics obtained showed that the railroad companies did not receive sufficient compensation to meet the expenses of carrying the mails by at least $15,000,000.

At the outset of the work of the joint railway pay commission of Congress it was confounded by this variance in statement of fact. If the computation of the Government was accepted, it was the duty of the commission to find that the railroad companies were overpaid; if the contention of the railroads and its ascertainment under the facts submitted was accepted as correct, then the commission must necessarily find that the railroads are greatly underpaid. This difference between the Government and the railroads was based partly upon the proposed assignment of what is called "dead space" or space not used in a car, or "deadhead space," which is space not paid for in a car. For a number of days hearings were had largely upon this phase of the question, as to what in a passenger train should be the amount of space that is charged to the passenger service, what space should be charged to express service, and what space should be charged to mail service. All concede that the space in a passenger car and the space used for baggage in a baggage car should be charged to passenger service. All agree that whatever space was used in carrying express should be charged to express, and whatever space was used in carrying mail should be charged to the mail account, but the question of difference was, in fact, which one of these three classes of service shall be charged with any vacant space that may be found in a mail car or express car, or in a car which carried both mail and baggage. There is necessarily in every train which has cars only partly filled with mail or partly filled with baggage or partly filled with express vacant space which in the train must be charged to some service.

The railroad company insisted that this space, if in a mail car, should be charged to mail; if in a baggage car, should be charged to passenger service; if in an express car, should be charged to express service; or if there is vacant space in a car which is used for both baggage and mail that there should be an equitable division of that space, according to the amount of space actually used for carrying mail, and the actual space employed in carrying baggage. The Government, on the other hand, insisted that it shall only be charged with the space it actually uses and that any vacant space, even in a mail car, should be charged to the passenger service, at least it should not under the circumstances be charged to the Mail Service.

Now, the difference in computation between the railroad companies and the Post Office Department on that question of vacant space, denominated "dead-head space" and "dead space" leads to the wide diversion between the claim of $9,000,000 overpayment by the Government and $15,000,000 underpayment by the railroads.

The Railway Mail Pay Commission, appointed by Postmaster General Hitchcock November 4, 1910, made their report to the Postmaster General July 25, 1911, and in that report they say:

It is shown that upon this basis of calculation, the information furnished, and the assignment of operating expenses and taxes—the factors of expense considered—the performance of mail service at the present rates is profitable to many companies and unprofitable to others, but that the net result shows that the Government is paying more for this service than it costs the railroad companies to perform it; furthermore, that this excess over cost and 6 per cent profit is about $9,000,000 a year.

Postmaster General Hitchcock, in his letter to the Speaker of the House, transmitted the report of the Railway Commission, which he appointed to ascertain the cost of, and compensation for transportation of mail on railroads, in a letter dated August 12, 1911, amongst other things, stated:

It develops from the calculations made on this basis, after a proper assignment of operating expenses and taxes and a full consideration of all other factors of expense, that the performance of mail service at the present rates is profitable to certain railroad companies and unprofitable to others. Taken as a whole, it is shown that the railroad companies are receiving from the Government for transporting mails payments considerably in excess of the cost of such service.

The committee estimates that through a readjustment of railway mail pay, on the basis of cost with 6 per cent profit, a saving to the Government could be made of about $9,000,000.

It is but fair to the Second Assistant Postmaster General, who was chairman of that railway pay committee and is the authority of the Post Office Department on all matters affecting Railway Mail Service, that he did not mean to imply from that statement in the report that in his opinion, based upon the information received and deductions made in his study of the question, that the railroads have been overpaid $9,000,000 annually for the transportation of mail. His purpose was to convey the idea that, considering the data and the computations made by the department based upon that data, that the cost of the service on that basis would be $9,000,000 less than the amount which is now being paid to the railroad companies for the transportation.

It is also due to Postmaster General Hitchcock and his Second Assistant, Mr. Stewart, to say that their conclusion was that the railroad companies should properly receive reasonable compensation for their service and 6 per cent upon a fair valuation of the property employed in performing the mail service, in addition to the cost of that performance, and that if this allowance were made it would eliminate the $9,000,000 and cost the Government for the transportation of mails about the amount

that is now expended. In other words, Postmaster General Hitchcock and his Second Assistant, after careful investigation of the matter, reached the conclusion that the railroad companies were receiving in the aggregate about what ought to be paid them for the service rendered the Government by the railroads in the transportation of mails.

I think the railway pay commission, appointed by the Postmaster General, in their report, and the reiteration of their statement by the Postmaster General, was unfortunate, because it left the impression that they believed the railroad companies were overpaid $9,000,000 for their services, when their corrected statement, as shown in the hearings before the commission, is to the effect that the railroad companies are paid only a reasonable compensation for the service they render.

The present Postmaster General, Mr. Burleson, through his representative, Mr. Stewart, the Second Assistant Postmaster General, in his final computation on the subject of overpayment to the railroad companies, reduces the amount to $221,832, and expresses the belief that in taking every fair consideration into the account that on any reasonable theory the railroad companies can not claim underpayment, but that, in fact, there was an overpayment of at least the amount named. In his deductions, found in hearings, on pages 994, 995, and 996, he reaches the conclusion that there is an excess in payment of $1,616,532, but explains that in making this computation he has not made the reduction that should be made by reason of the increased mail that would be carried after the weighing in one of the contract sections.

So that, in fact, the record now shows that everyone who has made computations in the matter or who has made a careful estimate with reference to the question of overpayment has concluded that the railroad companies are not receiving more than they ought to receive for carrying the mails, and that if reasonable compensation is to be given in the future, with a fair estimate of cost on any changed basis, it ought to produce in revenue to the railroads as much as the railroad companies now receive for such service.

The railroad companies, through their respective representatives, have made various estimates, differing in amount from about four million to over twenty-five million as the amount of underpayment; but the railroad companies up to this time have not agreed upon the amount of underpayment, and have no definite statement upon which anyone could base a positive declaration with reference to the amount that the railroads claim in underpayment. The truth is that in many instances the railroad companies have not sufficient data on which to base an accurate opinion from their own statistical information as to whether the railroads are adequately paid or not; and while the railroad companies are bold in their declaration that the railroad companies are underpaid, they have no definite statement upon which anyone could rely in proving the amount of such underpayment.

The investigation before the Railway Mail Pay Commission of Congress has developed certain data from which it is now possible to reach a reasonably satisfactory conclusion, based upon relative pay to other branches of service, as to the payment which the railroad companies should receive for carrying the mails. If it is conceded that the railroad companies should pay on the same basis as is paid for passenger service or express service, valuable data has been obtained through the Post Office Department and the Interstate Commerce Commission which will enable the careful student to reach a definite conclusion as to the compensation which ought to be received by the railroad companies for their service in transporting the mails.

It has been definitely ascertained by the Interstate Commerce Commission that the railroad companies receive, on an average, 25.43 cents per mile for every mile a passenger train travels. A passenger train is composed of strictly passenger service, mail service, and express service. The service rendered in these three classes of transportation make up what is termed passenger service. Now, if the mail is to bear its proportionate part of the compensation received by the railroads for full passenger service, then the railroad companies should receive 25.43 cents per mile for every mile a full mail car is transported. If, however, such a rate were adopted as the basis of pay, then the railroad companies would receive considerably more for carrying the mails than they now receive for its transportation. There is some difference in the consideration that should be given for the carriage of mails, different from express service or purely passenger service, but it is difficult to tell how much weight should be given to these items of difference. The mail service should not, as most persons believe, be charged with the expense of passenger agents, ticket agents, and service that belongs exclusively to the transportation of passengers.

On the other hand, it is true that the Government requires that the mail shall be carried on the fastest trains with the greatest possible dispatch; they require the mail cars to be especially equipped for the distribution of mail en route and for the transportation of all postal employees. On every train carrying a post-office car there are from 2 to 10 persons on such train carried without fare to the railroad companies, excepting in the amount which it receives in general compensation. Many persons contend, however, that the railroad companies owe something to the General Government for the special protection extended them and the special privilege granted them, and that this should be taken into account in determining the transportation pay. Others think that the certainty of service, the consistency in service, and the certainty in pay entitles the Government to some consideration not enjoyed by individuals. In any event, however, it is generally conceded that these considerations should not materially reduce the amount of pay to the railroad companies, because nearly all these elements, except Government protection, enter in a more or less degree to every transaction, because railroad companies have no credit system and the compensation is a cash transaction.

In any event, the passenger seeking transportation must pay in advance, the express company must make frequent reports of its gross earnings, and make settlement with the railroads on a cash basis. If, therefore, the railroad companies are to receive about the same compensation for carrying the mail for the Government that an individual would pay for service which the railroad companies might render him, then the compensation should be practically the same. It is usually agreed that an ordinary passenger coach is of about the same size and something like the same cost as a railway post-office car, and the expense to the railroad company for transporting the mail car is understood to be about the same as the transportation of a passenger coach, and a necessary deduction would be that the railroad companies should receive about the same pay for carrying a mail car that it should receive for carrying a passenger coach.

It seems to me, however, that from any viewpoint the Government should bear its proportionate part by paying reasonable compensation to the railroad companies for carrying the mail. If the Government requires the railroads to make gratuity in carrying the mail, the amount of that gratuity will necessarily be added to the other passenger service, and individuals will have to pay that which might be saved to the Government by cutting down railway mail pay.

The most satisfactory basis on which payment can be made is to require the Government to pay for transporting its mails just as individuals are required by the regulations of the Interstate Commerce Commission to pay the rates imposed by the railroads for the service rendered the individual. In other words, there is no good reason why the Government should receive favors at the hands of the railroads which can not be enjoyed by individuals; there is no reason why the Government should not pay reasonable compensation for the service which the railroads render them, just as the individual is required to do for the service that the railroads render.

In determining the amount which the Government should pay for carrying the mails, we ought to fix a rate which is commensurate with the service rendered and somewhat similar to the rate which is required to be paid to the railroad companies for service rendered corporations and individuals.

If this theory is correct—and it seems to me there can be no doubt about it—then the rates to the railroads for carrying the mails should be similar to the rates that are given to the railroads for service rendered individuals; and since all parties agree that the railroad companies are not receiving any more for carrying the mails than they do for service rendered individuals, it is plain that the aggregate amount received by the railroad companies should not be materially reduced. This is an important factor in determining what should be the rate of compensation, because if the total amount of compensation is not to be reduced, then any system of pay should provide in the aggregate as much as is now paid to the railroad companies for the transportation of mails.

The question which has been agitating the public mind for years and those best posted on postal matters have been considering is a question as to whether the present system of railway mail pay is the simplest and best. One serious objection to the present weight system of payment is the difficulty in ascertaining the compensation under the law. If it is possible, a system ought to be devised that the people generally can with ease understand, a system such that every individual who desires may ascertain what is the payment, and the system

ought to be so simple that the individual may reach a reasonable conclusion as to whether the compensation paid is reasonable compensation or not.

One reason the people generally are impressed with the idea that the railroad companies are largely overpaid for carrying the mails is because they do not know and can not ascertain, and because the aggregate amount paid is such a large sum they naturally conclude it is too great. If it is possible to devise a simple system of payment so that the citizen of the Republic may know for himself the amount of charge and have an idea of the reasonableness of that charge, it would be far better, and if no other reason could be given for devising a different system this ought to be sufficient.

The question of mail pay will be a mooted one as long as the knowledge of what is paid, and the reasonableness of that pay can not be ascertained by the masses of the people. It is no reflection on any man to-day that he does not understand the present system of railway mail pay and does not know whether we are paying too much or too little, and it is no reflection on anyone who believes that the aggregate payment is greatly excessive because he is entitled to his opinion and does not know the fact.

A system ought to be devised so simple that all may know, and then if the rates suggested under that system are not high enough they may be increased. Or if a rate in the first instance is named which gives to the railroad companies a greater compensation than that to which they are reasonably entitled, then all that is necessary for a succeeding Congress is to change that rate.

The present system is objectionable because it has two rates of pay—one based upon the average daily weight of the mail, and the other in compensation for the use of full railway post office cars in which mail is distributed. There should be one system of pay for transportation instead of two, and parts of cars in which mail is distributed should have compensation as well as full cars.

The present system is objectionable because it in no way recognizes frequency of service in compensation for weight carried. There is the same payment whether the mail is carried on one train each day or whether it is distributed on several trains during the day. There should be some compensation for frequency of service. It is more trouble to the railroad companies to carry the mails on six trains a day than it is to carry it on one.

The present plan is wrong because payment is not made for the actual service rendered. The mails are weighed only once in four years, and unless the business is stationary, which is seldom the case, the weight is not the same each year and is therefore inaccurate. The railroad companies should receive pay for all the service they render and no more.

The present plan is faulty because of the great expense to the Government of the weighing of the mails, which amounts to more than $400,000 annually. This sum ought in some way be saved to the Government.

The present plan is wrong, because it does not compensate the railroad companies for the use of apartment cars in which mail is distributed. The apartment car is required to be fitted up the same as a full car, with all the equipments necessary for the distribution of mail, and if there should be pay for the use of the full car there should be compensation for a part of the car in which mail is distributed.

The present system is most unjust, because it does not produce equality of payment. From every source and through every individual who has made careful investigation conclusion is reached that some railroad companies receive too much compensation and others do not receive sufficient pay. As a rule, the main trunk line, long-distance roads are overpaid and the short line and poorly patronized roads receive too little in compensation.

The railroad companies complain of the present system and claim it is unjust, but they also insist that it is better than any suggested plan. Their principal reason for this contention, however, is that they fear there will be a reduction of pay in any other system that may be adopted. The big railroads which receive too much pay do not wish any change in the plan, because they do not wish the reduction which would follow such change. The small roads which receive too little pay are so dominated by the great trunk lines that they will not assert their own rights.

What can be done to remedy this? Can a better and more equitable system be devised? I feel sure that a simple, feasible, equitable plan can be adopted, and I am fully confident that the plan which has been worked out by the joint railway-mail pay commission of Congress meets all the conditions, and is an equitable system which will result in the payment to all railroads for the service they render in carrying the mails.

Numerous suggestions have been made, different plans have been devised, but none, in my judgment, compares with the system suggested by the joint commission. It is true that their plan has been evolved from the suggestions and schemes that have been proposed, and they are under obligations to those who have contributed these suggestions for much valuable information. The joint-commission plan proposes to change the basis of pay so that weight shall not be a factor and that the pay shall be determined solely by the space that may be used by the Government in the transportation of the mail. Under this plan no space can be used that is not authorized by the Postmaster General, and whatever space he authorizes must be paid for by the Government. A fixed rate per mile traveled is charged, so that the people, on the one hand, may know just what they are to pay for carrying the mails, and the railroad companies will know the amount they are to receive for their services.

It is interesting in this connection to note the progress of the Post Office Department in the investigation of this important subject. On July 26, 1912, Postmaster General Hitchcock had introduced in the Senate a bill embodying the views of the department as to the method that should be employed in the determination of the compensation the railroads should receive. This plan provided that the Postmaster General should ascertain the cost to the railroads for the service they should render, and in addition to that they were to be allowed 6 per cent of such cost, and this should be the basis of pay.

On January 9, 1913, after the investigation of this subject had begun and much valuable information had been secured, the Postmaster General, Mr. Hitchcock, submitted another bill which made the following modifications:

First. That the Interstate Commerce Commission, instead of the Postmaster General, be authorized to make the separation of operating expenses between passenger and freight service.

Second. That in computing the car-foot-miles the mail service shall be charged in both directions for a line of railway post-office cars with the maximum space authorized in either direction.

Third. That in addition to the operating expenses and taxes apportionable to the mail service, and 6 per cent thereof, companies may be apportioned such additional amounts, if any be necessary, as shall render the whole a proper portion of a fair and reasonable return on the value of the property necessarily employed in connection with the mail service.

The serious objection to this department plan and the modification of the same is that it leaves the whole question of the determination of pay to the Postmaster General. This is manifestly not fair either to the railroad companies or to the people. Some kind of system should be devised that would fix the rates so that the people would know the compensation to be paid and the railroad companies the amount which they are to receive for service rendered.

Postmaster General Burleson evidently saw the serious difficulty of the enforcement of such a plan and the many complications which would arise in the attempt to enforce it, and after there had been hearings before the congressional joint railway mail pay commission and a thorough investigation of the subject by it with which his representatives were entirely familiar and in which they participated his department, through the Second Assistant Postmaster General, presented an entirely different scheme embodying many of the features which had been evolved through the work of the postal commission.

This plan was sent to the commission in a communication from the Second Assistant Postmaster General February 12, 1914. This plan has been slightly modified in the department bill, which is now section 13 of the bill now pending before Congress, providing for changes in postal laws, which was introduced by Mr. MOON, of Tennessee.

We now come to consider the proposed plan so far as it affects railway mail pay, which provides that the Postmaster General may state the railroad mail routes and authorize mail service on railroads of five classes: First, the full railway post-office-car service; second, the apartment post-office-car service; third, the storage-car service; fourth, the closed-pouch service; and fifth, the side and transfer service. All these kinds of service are now performed by the railroad companies. There is no change in the power of the Postmaster General to state railroad mail routes and to authorize mail service, but it designates the kinds of service specifically which the Postmaster General may authorize. At present all the service here provided for is paid for by the Government, excepting the side and transfer service. This service has heretofore been borne by the railroad companies, and it is proposed that the side and transfer service shall hereafter be performed by the Government.

Under existing law and regulations, railroad companies are required to receive from the post offices that may be within 80

rods of the railway station and deliver to such post offices all mail of every character without additional compensation. It is the judgment of the Post Office Department, the Postal Commission, and everyone, so far as I know, who has carefully investigated the subject, that side service, such as this, should not be required of the railroads, because it is no part of their transportation.

The new scheme makes a different arrangement with reference to car service to that which has heretofore been adopted. Under the proposed plan a full railway post-office car and a storage car must be 60 feet in length, inside measurement, and pay for apartment cars is authorized of two sizes—30 feet in length, inside measurement, and 15 feet in length. In other words, apartments are to be in sizes one-half or one-fourth the size of the full car.

The three-unit system, namely, 60 feet, 30 feet, and 15 feet, is provided. In the judgment of the Post Office Department, the Postal Commission, and those who have investigated the subject there seems to be a unanimous opinion that the system proposed will provide an easier method of adjustment and a more satisfactory adjustment of space than the assignment of smaller units. The objection that may be urged to the three-unit plan is that in some instances for the time being the Post Office Department will need more space than is authorized by the smaller unit and less space than would be given by the larger unit. But this division of space, after careful consideration, is considered the best division that can be made.

Before the Postal Commission the question of the division of space was very thoroughly discussed, and I think there can be no valid objection urged to this plan of division. It is much easier to keep the accounts, fewer differences will arise between the railroad company and the Government, and it will be much easier of administration than a system that had a greater number of units.

Under the proposed system the smallest apartment car that can be used would be a 15-foot car. It is practically impossible to have the mail worked in less space than 15 feet. The apartment car will have mail distributed in it just as the mail is distributed in the full car. The railway mail clerk who distributes the mail will perform the work of distribution within this space, and from every standpoint it would seem that no smaller unit would be satisfactory. If a 15-foot car is not sufficiently large to carry the mail and give space for distribution, then a 30-foot car may be authorized; and if the mail is so heavy and the amount of work necessary to be done requires so many persons that a 30-foot space is not sufficient, then a 60-foot space may be authorized.

Under the proposed plan the Postmaster General completely controls the authorization of space. The railroad companies are required to furnish whatever unit of space the Postmaster General may direct and have nothing to do in determining the amount of space.

The railroad companies complain of this proposed scheme because they fear that the mail will be compressed into the smaller units of space, and thereby reduce the compensation which the railroads will receive; but if the railroad companies receive compensation for all the space that the Government uses, they certainly are not in a position to complain, providing the compensation given for space used is a reasonable payment for their services.

A full railway post-office car is one 60 feet in length, which is used as a traveling post office for the carriage and distribution of mail.

An apartment car is a portion of a railway car used as a traveling post office for like purpose.

A storage mail car is a full-size mail car used for the purpose of the storage of mail in transit, and is one not used primarily for distribution purposes en route. A much larger tonnage of mail is carried in a storage car than in a railway post-office car. The average weight of the mail in a storage car is from 7 to 10 tons, while the average weight of mail in a railway post-office car is from 2½ to 3 tons. The weight of mail in a 30-foot apartment car is a little over 1 ton, and the average weight of mail in a 15-foot apartment is from 1,000 to 1,500 pounds.

The next class of mail provided for in the pending bill is the closed-pouch mail.

It was a mooted question with the joint railway pay commission whether the space basis could be applied to this class of mail, which is the mail that is carried in sacks and bags in baggage and other cars and is not sufficient in amount to demand the use of a full car or an apartment car for its transportation. After much inquiry and discussion the joint postal commission reached the conclusion that it was entirely feasible and practicable to pay for the transportation of this class of mail on the space basis, and that it was not necessary to weigh the pouch mail in order to determine the pay that should be received for the service in carrying it, but that it could like the rest of the mail be paid for on the car-mile basis.

Two units have been made to apply to this service—one where the space authorized in a car is more than 3 feet and less than 7 feet; the other is where the space authorized is less than 3 feet. The Post Office Department estimates that 100 pounds of mail can be carried in 6 inches of space, so that 600 pounds of mail might be carried in the smallest division and 1,400 pounds in 7 feet of space.

This may be too large an estimate, but it is probably safe to say that 500 pounds might be carried in 3 feet of space and 1,000 pounds within the 7 feet of space. With this estimate it may be readily seen that the rate of pay is not excessive. In order to equalize pay and secure proper compensation to short-line roads the same rule is applied as to initial and terminal charges as to other cars, and charge is made for that service.

Another very troublesome question was to determine what should be done about the payment to the railroads for the side and transfer services. The side service is a delivery of mail from the train to the post office where the distance is less than 80 rods, and the transfer service is the delivery of mail from one railroad station to another station within the city or town where there are different railway terminals which are not the destination of the mail.

It is agreed, as I have heretofore explained, that it is not a legitimate part of railroad transportation and should be performed by the Government. It is no more the duty of a railroad to deliver mail 40 rods from a train than it is to deliver it 200 rods from a train; the regulation fixing a limit of 80 rods is purely arbitrary and is not based on any business principle. The actual amount paid in cash by the railroads for this side and terminal service, according to their several reports, is about $500,000 annually. It is estimated by the Post Office Department that it will cost the Government $2,118,000 annually to perform this side and terminal service. Now, if this burden is assumed by the Government, the railroads will profit to the extent of $500,000, but a burden will be added to the Government which will cost, according to the estimates, four times that amount. If the Government is now paying the proper aggregate amount for carrying the mails, it might properly reduce railway mail pay by $500,000 if this service is rendered by the Government, but $1,600,000 must be added to the expense of the Government for the performance of this service; and while it is right for the Government to perform this work at its own expense, it looks like a hardship that the Government should be required to pay so large a sum on account of it, and yet there seems to be no equitable way to relieve the Post Office Department of this added burden on account of this side and terminal service. To partially relieve this situation the railway pay commission and the department agree that the railroad companies should be permitted to bid for this service, and where they will perform the service cheaper than others the Postmaster General may employ the railroad companies to perform this service.

The most difficult thing in connection with the whole subject is to determine what is the compensatory and equitable rate, fair alike to the railroads and the Government, for the transportation of the mail on the space basis. The amount actually received per car for each mile traveled by a passenger train is estimated by the Interstate Commerce Commission to be about 25.43 cents. This includes three kinds of service—actual passenger service, express service, and mail service. The secretary of the Interstate Commerce Commission gives as the average revenue of a passenger train for one mile of travel for the year ending June 30, 1911, as 25.43 cents. This includes the mail revenue and is probably about the revenue received by the railroads at the present time, and this sum is recognized by the Interstate Commerce Commission as reasonable compensation to the railroad companies for the performance of passenger service, which includes both mail and express.

The next question to determine is what should be the revenue that should be paid for carrying the mail car which is a part of the passenger train. Is 25.43 cents per mile of travel too much or too little for this mail-car service? The Railway Pay Commission are of the opinion that the rate per mile might be slightly less, but not materially so. It has been attempted to segregate the service and make the ascertainment of present cost for mail, express, and passenger coaches, which make up a passenger train, but an exact agreement has not been reached as to what should be the proportion of each kind of service.

From reports to the Interstate Commerce Commission and deductions made therefrom it is shown that the railroad companies have been paid on average of 23.16 cents per car-mile

for the full car space used in transporting express. This is about 2.24 cents less than the full train passenger service.

It is claimed by some that this should be accepted as the basis of pay for mail transportation, and that whatever rate is fixed it should equal that sum, because this is the rate voluntarily fixed by the railroads by private contract and the Government ought not to be expected to pay more for service to the railroads than private corporations or individuals would pay.

It is insisted, on the other hand, that more should be paid per car for the transportation of the mail than for express, because more is required to be done by the railroad company in carrying the mail than for the carriage of express. The railroad companies are required to carry all postal officials, either in the mail car or in the passenger coach, free of charge when traveling on official business; they are required to especially equip the mail cars and construct them according to the requirements of the Post Office Department. The cars are required to be made of steel; the greatest possible expedition is required in transit, and transportation on the fastest trains is required under penalty. The railroad company is responsible in damages for death or injury that may occur to the postal employee on the train, while express companies assume their own liabilities. Fines and penalties are imposed for failure to meet the requirements of the Post Office Department.

The railroad companies are required to furnish frequent service on nearly all passenger trains, and in many respects require a service that is not given to the express companies.

The proposed scheme of pay on space basis does not change this extraordinary service. The kind of cars, the frequency or speed of transit—the only change is in the method of determining the amount of pay which the railroad companies shall receive.

With the requirements of the service, it is estimated by the Post Office Department that there will be 103,295,263 car miles used by full railway post-office cars, and this at the rate of 21 cents per car mile will make the annual pay for the mail carried on such cars $21,692,005.

The Post Office Department estimates that 30-foot apartment cars will cover 165,695,629 car miles annually, and this, at the rate of 11 cents per car mile, will cost the Government $18,226,519.

The department estimates that there will be 75,226,521 car miles employed in carrying 15-foot apartment cars, and this, at the rate of 6 cents per car mile, will produce an annual pay of $4,513,591.

It is claimed by the department that for this fiscal year the storage cars used will cover a mileage of 51,417,527, which, at the rate of 20 cents per car mile, will cost the Government $10,784,922.

So that the cost for the carriage of all mail other than that carried in pouches under the closed-pouch system will cost $55,217,037. This amount should be reduced by the 20 per cent reduction made on all land-grant railroads; that is, all railroads to which land grants were made to encourage or aid in their construction. This will amount to $1,199,667.

For the closed-pouch service, under the proposed space plan, there will be an estimated expenditure of $1,179,269 on space that may be used in cars greater than 3 feet and more than 7 feet, and for such service where the space used is less than 3 feet the estimated cost for such service is $1,882,627. Adding to the car service the closed-pouch expenditure and making land-grant deductions, there will be an estimated expenditure of $57,079,356 covering the full-line charge.

For the side and transfer service, which has heretofore been performed by the railroad companies, which it is proposed shall hereafter be performed by the Government, there will be an estimated expenditure of $2,118,820. This is an assumption of a new burden and adds the amount of its cost to the annual expenditure for railway-mail pay. If this is taken into the account and added to the expenditure for car service and pouch service, it will make a probable total of about $59,198,176 as the amount necessary in annual expenditure.

For many years there has been serious complaint that the short-line roads did not receive sufficient compensation, and this objection might be made to the proposed system if it rested simply on what may be termed the line or car-mile charge, but to remedy this inequality the railway mail pay commission have provided for what it terms initial and terminal charges. That is, compensation for preparing the car for receiving the mail and for loading it and for delivering the mail at the terminus and caring for the car there. This is compensation for switching, cleaning, lighting, loading, and unloading. This charge is the same on all lines, long and short, and gives the railroad compensation for every service it renders. The Railway Pay Commission have obtained from the Interstate Commerce Commission the amount paid for such service and the cost to the railroad for performing it, and have fixed what seems to them, after thorough investigation, a fair and equitable rate, as follows:

For full railway post office and storage cars for the round trip	$8.50
For 30-foot apartment cars for the round trip	5.50
For 15-foot apartment cars for the round trip	4.00
For 7-foot pouch-space cars for the round trip	1.00
For 3-foot pouch space cars for the round trip	.50

This is estimated by the Post Office Department to cost annually $5,848,956. This sum, added to the line or car-mile compensation, makes an estimated total annual charge for all service of $65,047,132.

This new system will at once give the railroads pay for all the service they render, and on that account may add slightly to the first year's expenditure, but it is evident that the increase in pay under this system will not be so rapid as heretofore, and railway mail pay will remain more nearly stationary.

Mr. Speaker, I am delighted with the proposed scheme. I believe a thorough, practical, scientific, and symmetrical system has been worked out, one that ought to settle the question of mail pay hereafter. The plan is so simple that anyone may understand its provisions, and yet so complete that every service rendered by the railroads is paid for. The Government directs the amount of space to be used and the railroads have a fixed compensation for whatever space is authorized. The wholesale and retail principle is recognized, so that for a part of the car there is slightly more paid proportionately than for a full car, a business principle universally recognized elsewhere. The rates are less than the passenger rates and practically the same as the express rates when those rates are reduced to a car-mile basis.

I hope this scheme may commend itself to every Member of Congress, and I feel sure that the enactment of this scheme will, when fully understood and tested, receive the hearty commendation of the people of the United States who are anxious to see the railway mail pay question satisfactorily settled upon terms that all may understand. I am hopeful that it shall have full opportunity to be tried, and then my judgment is the people will be as well pleased with the system as those who have worked it out.

Stock Raising Homesteads.

EXTENSION OF REMARKS
OF
HON. HARVEY B. FERGUSSON,
OF NEW MEXICO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, July 18, 1914.

Mr. FERGUSSON. Mr. Speaker, in some remarks I made to the House in support of H. R. 15799, to provide for stock-raising homesteads, I inadvertently stated that what is known as the Mimbres Valley, in which is situated the prosperous city of Deming, N. Mex., is underlain by an apparently exhaustless lake of pure water, and that the waters of this lake could be tapped by wells so near to the surface of the ground that farming by pumping for irrigation is highly successful and many farmers were making money on their lands.

One of my constituents, Mr. Willard E. Holt, secretary of the Chamber of Commerce of Deming, N. Mex., has reminded me that this is not a lake from which this water is so successfully pumped, but that it is an underground stream, which rises some distance from Deming in the mountains. When it reaches the plains, consisting of this deep, porous, and very rich soil, it spreads out under the soil to a width not yet ascertained and continues to flow to an outlet down in the Republic of Mexico known as Palomas Lakes.

I append hereto, as a part of my remarks, Mr. Holt's letter, received by me to-day, on this subject:

DEMING CHAMBER OF COMMERCE,
Deming, N. Mex., July 14, 1914.

Hon. H. B. FERGUSSON, *Washington, D. C.*

MY DEAR MR. FERGUSSON: I note that in the CONGRESSIONAL RECORD for 1914, page 12171, in an address before the House of Representatives, you used the following language concerning this region:

"The land is underlain with an immense underground lake of unknown extent as yet, and is so near the surface that irrigating the land by pumping is both possible and profitable."

While your statement was, of course, intended to say a very nice thing for the valley it would give a somewhat wrong impression, as the Mimbres Valley is not underlain by a lake. The water under the entire region is a running stream, flowing from the northwest to the

southeast, originating in something like 1,400 square miles of mountain drainage and being emptied into the Palomas Lakes, south of the Mexican border. There is a distinct motion in this direction of all underground water. You could easily understand that a lake might be pumped dry with 1,000 wells belching forth from 300 to 3,000 gallons per minute, but with a running stream this is different.

As a matter of fact, a number of wells in different parts of the valley are from 6 inches to 4 feet higher than they were at this time last year, and it doesn't matter how much is pumped from the well, the water plane is never lowered. I saw a well Saturday delivering 1,000 gallons per minute that had been pumped continuously night and day for 30 days, and the water level had not been affected an inch.

From our great volume of water one could readily imagine that this was a great underground lake, but the motion of the water and the outlet at Palomas Lakes establishes the theory beyond a doubt that it is a moving stream, fed by a mountain drainage that can never be lessened, unless the face of nature changes.

The chamber of commerce would appreciate the fact if, at your earliest convenience, you could go on record as correcting this statement. We would also appreciate the fact very much if you would ask the Geological Survey, Department of the Interior, to cease circulating the little pamphlet "Water Supply Paper 345 C," on the underground waters of Luna County, N. Mex., by N. H. Darton. While in a general way his paper is easily understood, it so happened that he was unfortunate in getting some of the very worst pumping plants and some of the most expensive installments by people who had no previous experience in the work.

In a general way, the pamphlet is harmful to the valley, although the intention is to treat us with the utmost fairness.

We are always willing to have every person understand the actual conditions here, both the good parts and the drawbacks, but we also desire that people shall be fully informed concerning the water conditions.

Hoping you will give this matter your personal attention, and that I may have the pleasure of hearing from you in the near future, I am,

Very sincerely, yours, WILLARD E. HOLT,
Secretary.

General Dam Act.

EXTENSION OF REMARKS
OF
HON. LATHROP BROWN,
OF NEW YORK,
IN THE HOUSE OF REPRESENTATIVES,

Monday, July 20, 1914.

Mr. BROWN of New York. Mr. Speaker, under permission to express myself on the general dam act, I desire to call attention to some of the vital defects in the bill as originally presented to the House.

The man who can bring a legitimate industry to his own country is deserving of his nation's thanks. The man who can bring a legitimate industry within the borders of his own State has earned the gratitude of that sovereign body. Therefore the consideration of this bill must resolve itself into an accurate balance between the inducements which must be offered capital on the one hand and the public interest on the other.

The proponents of this measure, realizing that under the present dam act, which reserves to Congress the right to amend, alter, or repeal, capital has failed to seek investment in building dams across the navigable waters of this country, have brought forward a proposition ostensibly giving to capital the assurance of a 50-year uninterrupted permit in which to do business, and provides a nominal consideration for the privilege. The effort obviously is to induce capital to build dams across navigable streams in aid of navigation for the sake of the profit to be earned in selling light and power generated from the surplus waters of the streams. While I am as anxious as any man to encourage the development of our water powers, yet I shall hope to be able to show that this bill, if enacted into law as it was reported to the House, would, in effect, be handing over all the water powers of the United States in perpetuity without adequate compensation. I trust and believe that this bill will be amended by the committee in some vital particulars. If it is, I shall be happy to support it; but if it is not, I can not conscientiously do so.

Before addressing myself briefly to the subject of the amendments which I should like to see incorporated in this bill I would urge upon the committee the thoughtful consideration of the brilliant speech made on this subject by the gentleman from Wisconsin [Mr. LENROOT]. While I can not compare with him in powers of description or clarity of statement, yet I will venture briefly to set forth my views. I shall proceed on the assumption that the Government, in granting a permit for a dam, can attach thereto any conditions consistent with the public interest which it may choose.

The hearings held by the present Committee on Interstate and Foreign Commerce consist of only 46 pages, and include the statements of two hydroelectric engineers, numerous letters from bankers with regard to the difficulty of financing water-power projects, and a letter from the Secretary of War. No doubt the older Members of this House are familiar with the subject of water powers, but there are upward of a hundred new Members on the Democratic side alone who would naturally refer to the hearings for authoritative information on both sides of this subject. As I read them, the hearings before the committee contain only one side. I have, fortunately, been able to secure some of the previous hearings before other committees, and perhaps for that reason am qualified in a measure to state my views with regard to this bill.

On page 2 of the bill, beginning with the word "then," in line 25, an amendment should be adopted requiring the grantee at any time to make such improvements in its dam as may be necessary in the interest of navigation. The primary purpose of this bill is to promote navigation. The manufacture and sale of electricity, as the distinguished gentleman from Georgia has said, is but the bait to attract capital to perform a public service. What is that public service but to promote navigation? Therefore I say that whenever the interest of navigation shall require, the company that controls the water levels shall, at its own cost, let commerce go past its dam. In all other respects I favor a flat 50-year permit, with conditions and charges stated in advance so far as possible; but as to the one condition of the free right of commerce to pass any dam, that should be at all times reserved to the people of the United States.

The next amendment is, on page 5, line 3, to strike out the maximum charge of 5 per cent of the value of the public lands used. There are about 20,000,000 horsepower on the public domain. Shall they be appropriated in perpetuity, except for one alternative, for a maximum consideration of 5 per cent of the then value of the lands used? I say that if a valuable power site should be granted for the establishment of a cyanamid plant, and that company will use every kilowatt of power developed, it is only reasonable that such a company should pay an adequate sum for the privilege. The gentleman from Wisconsin [Mr. LENROOT] has reviewed the legislation of Norway and Canada with regard to length of term of the grant and provisions of recapture. I would only add that in the unhappy Republic of Mexico, whenever the grant shall exceed 60 years in duration the entire property shall revert to the Government, without cost, at the termination of the period of the grant. Therefore I hold it to be absurd to limit the consideration to 5 per cent of the value of the few acres of public lands which might be used in connection with the dam site.

If the gentleman from Georgia is sincere in his statements, he can surely have no objection to the adoption of a proviso at the end of line 8, page 5, stating that the provisions of this act are not intended to apply to nonnavigable waters on the public domain. As I shall endeavor to show in a few minutes, this bill as drawn repeals every act now in force with regard to permits for irrigation purposes, for pumping purposes, and for municipal domestic purposes. Certainly the provisions of this act should not be so extended as to so apply to all future grants of water-power sites on the public domain.

The next amendment I hope to see adopted to section 9 would do two things. First, it would define definitely the date of the beginning of the grant. Under the loose language of the bill the "structure" might easily be the last unit of generating machinery, which might not be installed for 100 years, and what was intended to be a grant of 50 years might run on indefinitely before it even began.

But now comes the worst part of all. The bill as presented to the House prevents any change of terms and conditions of the grant forever and ever, amen, unless the United States Government shall buy out the company at the end of the indefinite 50-year grant, bag and baggage, unearned increment, and all. The presumption is that the United States Government will not want to go into the business of buying and operating these enterprises. Unless it does so, the original conditions named in the grant run on forever. The franchise may become worth $1,000,000 or $2,000,000 or $10,000,000, on which the consumers may be made to pay large returns; and yet this Government, under this bill, would be absolutely powerless to protect the public interest in any way whatever.

Section 10 omits from the conditions of recapture the very fundamental idea of the public interest in a grant of this sort. The franchise costs nothing in the beginning, and yet when the Government wants to get it back in the interest of the people it has to tax the people to pay for the values which they themselves have created. Could anything be more absurd? From the cost of recapture should be omitted any increase in value of water rights or rights of way after acquisition by the grantee.

Section 13 is probably the most monstrous section of the bill. I have endeavored to show that the bill as it stands is practically a free gift of all the water resources of the United

States, and to make sure that those who receive permits shall not be molested under it for a thousand years, section 13 provides that the right to alter, amend, or repeal the act as applied to grantees under the act shall be reserved only when the conditions of consent have been violated. The public is in great danger of being deprived of its right to use the navigable waters of the United States without paying enormously therefor, in the event of some junior engineer making a mistake in arithmetic. It is inconceivable that this should be so.

Section 14 is entirely in keeping with the rest of the bill. It permits the Secretary of War and the Chief of Engineers to lease the right to develop power from the surplus water flowing over any dam, present or future, for any length of time, with or without consideration. As far as my experience goes, Congress is not in the habit of delegating to others the disposition of the public's resources in this fashion, and, I hope, will not do so now.

Section 17, the repealing clause of the bill, is a fitting conclusion of a very remarkable measure. It revokes all previous permits of whatever kind—permits for the use of water for domestic and municipal purposes, for irrigation, for pumping, for mining, for lighting, for power, long or short, State or National—all are revoked. This is itself a somewhat serious matter. But, Mr. Chairman, this section goes further. It brings all previous grants, temporary permits, irrigation ditches and all, under the provisions of this act and puts them forever beyond the reach of the public interest.

In conclusion, I would again urge on the committee the urgent desirability of adopting amendments to this bill, which, briefly to recapitulate, will limit the scope of this bill to rivers which are navigable in fact, rivers whose primary use is for purposes of navigation as opposed to water power or other uses; amendments which will definitely fix the term of the grant to 50 years, with not only adequate provision for recapture at the end of that time, but, in case recapture should be undesirable, amendments which will permit of the making of new conditions upon the expiration of the term of the grant; amendments which will bring the action contemplated in section 14 under the provisions of the rest of the bill as amended; and, lastly, amendments which will prevent the revocation of permits for irrigation ditches, municipal water supplies, and other kindred purposes.

Business Prosperity.

EXTENSION OF REMARKS

OF

HON. FRANK T. O'HAIR,

OF ILLINOIS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, July 21, 1914.

Mr. O'HAIR. Mr. Speaker, in the very nature of things it is to be expected that a few people can be found who make the claim that the country is either suffering from a panic or a dreadful business depression. A few of those who make such absurd statements know better, but I am charitable enough to believe that most people who believe that such a condition now exists have been misled by those who are more cunning, and who are seeking political profit, even at the expense of destroying countless millions of dollars in value to the assets of our country if by so doing they and their party can be wafted into power.

I do not believe there are many people of this class but unquestionably there are a few. They are possessed of such an insatiable desire for political power, and seem to be backed by such big but dishonest interests that they attract attention, and therefore they command consideration.

If there is business stagnation or a financial panic in the country it ought not to take a lot of political speakers to convince us of that fact, and the true patriot would attempt to minify that condition instead of exaggerating it.

A man who will give a false fire alarm is a man who will commit arson for the insurance. A man who will attempt to depress business interests by making false statements is a public enemy, and the more I see and know of such men the higher regard I have for thieves and plunderers.

On the other hand, to be perfectly square, if there is business prosperity in the country it should not require any logician or spellbinding orator to prove that fact. "It is the mind that makes the body rich." It is also the mind of the people that has most to do with making panics or business depressions. I have no doubt that there are a few concerns which have been pampered and which have prospered by the protective tariff who would be perfectly willing to close down their plants for a time if by so doing they could lend effective assistance to the creation of a condition that would cause the people to put the high protective apostles back in power. Thereafter these same concerns might hope to recoup their temporary losses by unjustified and unwarranted profits.

The people of this country are ever open to conviction, and the time has arrived when the people can do their own reasoning and philosophizing. I intend to combat fancy and fiction by proposing facts and figures.

LEGISLATION NONPARTISAN.

As far as legislation is concerned, I suppose all well-informed and fair-minded people will agree that the only strictly partisan measure which has been passed under the present administration was the tariff bill, and upon this measure in the House of Representatives—which is, of course, an administration measure—four Progressives, two Republicans, and one independent voted with the administration, while five Democrats strayed from the party fold when the issue was finally joined.

In the Senate the only Progressive Senator and the great and distinguished progressive Republican Senator from Wisconsin voted for the measure.

The currency legislation of this administration is admittedly nonpartisan. Everybody seems to agree that the monetary legislation of the Republican Party for the last 50 years has been dangerous and in a large measure has been responsible for many of our business and financial disturbances. When that bill passed the House 35 Republicans and Progressives voted for it, and the balance of the stand-pat party would doubtless have voted for this measure except for the fact that they disliked to be found supporting any measure, however meritorious it might be, which was originated by a Democratic administration.

In the Senate six Republicans and Senator POINDEXTER, scattered from Massachusetts to California, voted for the measure.

The tolls repeal act, which is indorsed by most everyone who does not want to pay a subsidy to the Shipping Trust, was carried by an overwhelming nonpartisan majority. There were 52 Democrats against repeal and 23 Republicans for repeal.

In the United States Senate 13 Republicans joined with a majority of the Democrats in passing this repeal and 11 Democrats sided with the Republicans, so that the bill commonly known as the tolls repeal act is not a party measure, and could not have been passed through the United States Senate except with the support of Republican friends.

A good deal of dust was kicked up and a good deal of flubdub created at the time this bill was pending to the effect that Great Britain was forcing the United States to repeal this act. It never did seem to me reasonable that Great Britain should seriously care whether we charged our own boats for using our own canal or not. It would not cut much more figure with the ordinary Britisher whether we charged American citizens for using the canal than it would if we charged an American citizen for using a Government-owned railroad. If we have free tolls for boat owners who use our canal, then if I ever have the chance to go to Alaska and ride over the railroad that our Government is proposing to build and own, I want free transportation over that railroad, and not only myself but everybody else is entitled to free transportation over that railroad.

On July 4 last Mr. Bryce, who was for many years ambassador from Great Britain to this Government and who is one of the most honored and most respected Englishmen that has ever been in this country, made a speech in which he flatly denied that Great Britain had brought pressure on the United States in order to get a repeal of the Panama Canal tolls exemption. Mr. Bryce said that he had advised his Government that if the President of the United States thinks it is right to repeal he will do it.

Mr. Bryce further said that no country in the world has a stronger desire than the United States to do what is right and honorable. But the same class of men who get up false calamity howls also preach about English subjugation.

On the question of the President's Mexican policy and the use of the Army and Navy by the President in whatever way he thought proper in order to bring about peace, the vote in the House stood 337 for the President's policy and 37 against the President's policy. Of the 37 who were against the President's policy 29 were Republicans, 2 were Progressives, and 6 were Democrats, so that a great majority of the Republicans in the House, when they saw the country was in danger, were glad to give President Wilson the power which he deserved in order to handle the situation.

When the resolution came up in the Senate even a greater vote of confidence was given by all parties to the President in handling the situation. Only 13 standpatters withheld the au-

thority from the President of the United States, who is the Commander in Chief of our Army and Navy, to use all of our forces in whatever manner he deemed wisest in bringing about peace in distracted Mexico.

The antitrust bills passed the House by a vote of 275 to 54. Of those in favor of the antitrust bills 41 were Republicans and 15 were Progressives. These patriotic Republicans and Progressives joined with the Democrats in passing these salutary measures.

Those antitrust bills are now pending in the Senate and I have no doubt will soon be enacted into law. There were more than 1,300,000 aliens came to this country during the last year. It is to be expected that the labor market in spots may be overcrowded, but as a rule there is not enough in this country to do the work.

There are two classes of people whose interests have been specially well cared for by the present administration, namely, the farmer and the laboring man, while at the same time the manufacturer has demonstrated during the first eight months that the tariff has been in operation that he is able to hold his own in competition with all foreigners.

The amount of manufactured imports into this country during the last eight months has only increased 8.08 per cent over what it was a year ago. This much increase would be naturally expected, owing to the further expansion and growth of the country and the prosperous condition of our people.

Everything that the farmer has to sell has advanced in price during the present administration, and I offer in proof of that assertion the following table of prices taken from the Bureau of Labor Statistics.

PRICES OF FARM PRODUCTS.

Articles raised on the farm and the market prices on June 1, 1913, and June 1, 1914:

Wholesale prices.

Commodity.	June 1, 1913.	June 1, 1914.
GRAIN.		
Barley, choice, to fancy malting, by sample, price per bushel in Chicago	$0.68	$0.64
Corn, contract grades, cash	.59	.70⅞
Oats, contract grades, cash	.39⅛	.39½
Rye, No. 2, cash	.63	.65½
Wheat, No. 1 Northern spring, cash	.94	.97½
Wheat, No. 2 Red winter, cash	1.06½	.96
LIVE STOCK.		
Cattle, steers, good to choice corn feds, price per 100 pounds in Chicago	8.30	9.00
Cattle, steers, choice to prime corn feds	8.65	9.30
Hogs, heavy, shipping and packing	8.75	8.17½
Hogs, light bacon and selected butchers	8.80	8.20
Sheep, native wethers	6.15	6.50
Sheep, western wethers	6.15	6.50
Horses, choice to extra draft, price each in Chicago	170.00	175.00
Mules, 16 to 16½ hands, price each in St. Louis	175.00	150.00
MISCELLANEOUS.		
Cotton, upland middling, price per pound in New York	.1170	.1375
Flaxseed, No. 1, cash, price per bushel Minneapolis	1.30⅛	1.61½
Hay, timothy, No. 1, price per ton Chicago	14.50	17.50
Hides, packers' heavy native steers, price per pound Chicago	.17½	.18½
Hops, prime to choice New York, in New York	.22	.40
Poultry, live, choice	.18	.16
Tobacco, good dark-red Burley leaf, price per 100 pounds in Louisville	13.00	15.00
Wool, unwashed, ⅜ blood Missouri and Wisconsin, price per pound in Boston	.24	.25½
Wool, unwashed, ¼ blood Missouri and Wisconsin, price per pound in Boston	.24	.26
Eggs, freshfirsts, per dozen in Chicago	.18½	.18½
Butter, Elgin creamery, price per pound in Elgin	.28	.26½
Potatoes, white, fair to fancy	.40	.87

PRICES OF ARTICLES CONSUMED.

Practically everything that the farmer has to buy is either the same price that it was a year ago or else it is sold at the same price but better and more material put in the article.

On the 27th of June, 1914, I received a letter from the largest retail department store in Chicago. This letter was written in answer to an inquiry which I had addressed to the company a few days before, and reads as follows:

> In reply to your letter of June 23, making inquiry in regard to prices of wearing apparel for men, women, and children last year and at the present time, we have to say that the prices of similar articles show very little change during the year. In wool goods there is a tendency to place a little better grade of cloth in the article. In other words, the customer gets better value for the same amount of money.

I also received several communications from others engaged in the retail of farm machinery, and in every instance the reply was that there was an attempt to hold prices this year at what they were last year, but that in doing so it had become necessary to add all new improvements free of charge to the purchaser and in many instances to make the machines of a higher grade in order to command the price that was heretofore easily maintained, and that therefore the farmer was getting a better grade of farm machinery for the same price that he had heretofore paid which is in effect getting the same machinery for less money.

The secretary of the Federation of Labor in Chicago informed me personally a few days ago that he knew of no instance in which labor received less pay than it did a year ago and that in a few of the trades the price of labor had increased in the last 12 months.

In the matter of the products which people eat there has been very little change, although in a few instances where there was a great shortage last year in the crops there has been a slight increase in prices, and in a few instances there has been a slight decrease in retail prices.

The following is a list of prices taken from the statistical Department of Labor, which shows the selling price of food articles on the 15th day of May, 1913, and on the 15th day of May, 1914:

Selling price of food articles.

Commodity.	May 15, 1913.	May 15, 1914.
Sirloin steak, per pound	$0.22½	$0.24½
Round steak, per pound	.20	.20
Roast, bone in, per pound	.19½	.20½
Chuck roast, per pound	.15¼	.15¼
Pork chops, loin, per pound	.18	.20
Bacon, smoked, per pound	.29½	.28½
Ham, smoked, per pound	.26½	.25½
Lard, pure, tub, per pound	.14½	.14¼
Leg of lamb, yearling (2), per pound	.21	.19¼
Hens, year or more old, dressed, not drawn, per pound	.24½	.24½
Flour, wheat, per ¼-barrel bag	.70	.69½
Corn meal, per pound	.03	.03
Eggs, strictly fresh, near by, per dozen	.23½	.23½
Butter, creamery, per pound	.32½	.30
Potatoes, Irish, per 15 pounds	.20	.23½
Sugar, granulated, per pound	.042	.038
Milk, fresh, unskimmed, delivered bottled, pasteurized, per quart	.08	.08
Coffee, Rio No. 7	.11½	.9½
Rice	.04½	.04
Short ribs, per barrel, Chicago	11.50	11.20

IMPORTED BEEF.

There has been a great deal said by the "false alarmers" about the flooding of American markets with Argentine beef, so that the cattle raisers in America will be forced to take a very low price for their beef or go out of business.

The Chicago packers, all of whom are standpatters, on the 9th day of July issued a statement in which they say that meat prices will rise above the record figures of recent years, despite the huge grain crop. So that by criticizing this Democratic administration for permitting beef from Argentina and other countries to come in free the calamity howler is saddled with the responsibility of trying to starve the beef eater.

WHEAT IMPORTATIONS.

There has been an attempt to scare the wheat grower in this country because the tariff was taken off of wheat, yet the facts show that the United States not only supplies its own wheat, but sells millions of bushels abroad in the foreign markets of the world.

On the very day that the question of putting wheat on the free list was discussed in the House of Representatives it was shown that wheat sold in Winnipeg, Canada, for 3 cents per bushel more than it sold for in St. Paul. About the only purpose for which wheat is imported into this country from Canada is for seed.

In the month of April, 1913, six months before the tariff went into effect, there was imported into this country 36,000 bushels of wheat. In the month of April, 1914, six months after the wheat was put on the free list, there was imported into this country 13,000 bushels of wheat. I am told there are plenty of farmers in the far West who raise in one year more bushels of wheat than have been imported from Canada into the United States during the first six months that wheat has been on the free list, and although it is shown that the production of wheat for the year 1914 is something like 200,000,000 bushels more than the average annual production, yet the price of wheat is a very little lower than it was a year ago.

WOOL.

Another prophecy of these "wish-is-father-to-the-thought" gentlemen is with reference to free wool. How they would have

been delighted to have seen the price of wool go down! And now that wool has gone up since it has been put on the free list and the country has become so prosperous, instead of being ashamed of their attitude they ignore it.

On June 1, 1913, unwashed wool sold in Chicago at 23 cents and 24 cents per pound; on the same date in 1914 it sold for 26 cents per pound. Putting wool on the free list did not make it go up, neither did it make it go down; but enacting legislation that honestly distributes prosperity has raised the general level of all products not heretofore controlled by combines and trusts.

CORN FROM ARGENTINA.

Out in my part of the country there has been sporadic and futile effort to convince the farmers that putting corn on the free list will subject them to competition with the half-Spanish and half-Indian population of the Argentine Republic. The best argument on earth to convince any man who really wants to know the truth about it is simply to show him the Argentine corn. It is a disgrace to good healthy pop corn.

In the last 15 years there has been three times as many acres added to the corn-producing area in the United States as there is corn land to-day in Argentina under cultivation, and yet during all that time the price of corn has gradually gone up, and only about seven times in the history of this country has corn been as high or higher than it is to-day.

The Hon. HENRY T. RAINEY, of Illinois, on the 6th of June last, delivered a most exhaustive speech in the House on the question of Argentine corn. The facts compiled by Mr. RAINEY show that up to the time of making his speech, which was about six months after corn was put on the free list, there had only one carload of Argentine corn reached Chicago, and that was sent for experimental purposes in order to see whether or not it was good for chicken feed. Even though last year produced a very poor corn crop in the United States, yet we exported to foreign countries 45,000,000 bushels of corn.

In the first eight months after corn was put on the free list there was imported into this country from Argentina 9,000,000 bushels of corn, most of which was used in corn-producing plants by manufacturers of corn into products for exportation.

At the present rate of importation from the Argentine Republic we might expect about thirteen or fourteen million bushels of corn from there in one year.

McLean County, Ill., produces every year about 16,000,000 bushels of corn, and many other counties in the corn belt produce about the same amount.

I have heard that an elephant is afraid of a mouse; in about the same measure the American corn coward ought to be afraid of the Argentine corn raiser.

BUSINESS MEN'S OPINIONS.

Inasmuch as business conditions are of a psycological nature I also offer, not only cold facts in evidence, but I will offer opinion evidence based on facts from competent witnesses who are the leading business men in Danville, Ill., the largest city in the district which I have the honor of representing in this House.

These gentlemen are for the most part either Republicans or Progressives and therefore, according to the politician, might be said to be testifying against their interests, but these men whom I know personally are Americans and patriots and business men first, and partisans only as a secondary matter.

Below are their statements which have been published in the newspapers of their city within the last few months:

WHAT DANVILLE, ILL., MERCHANTS SAY OF CONDITIONS THERE.

[By L. C. Chaffee, president of the Peyton Palmer Co.]

I will say, from a personal knowledge, that to-day retailers are very hopeful concerning future prospects. They are enjoying excellent business and their patrons are optimistic. Illinois is about to experience one of her best trade years, simply because everybody is pulling for prosperity, thinking prosperity, and talking prosperity.

[By H. E. Espenschied, insurance broker.]

Fire insurance men throughout the State are unanimous in the opinion that Danville's fire protection is good; in fact, better than other towns in the State I am acquainted with. Their services in the past have been excellent, and with the addition of improvements and better fighting accessories which are being secured from time to time the future of the local department seems bright.

[By C. L. English, president First National Bank.]

I am an optimist. The outlook in Danville and Vermilion County from a banking and commercial standpoint is exceptionally bright. I expect the year 1914 to go down in history as a year of much prosperity and many successes in all lines of business. With a boomer crop, which will doubtless come as a matter of course, the farmer has every reason to see in 1914 a year of great possibilities.

[By I. H. Louis, of the Straus & Louis Co.]

There is strong competition among Danville merchants, but that competition seldom becomes bitter and acts only a spur for better business methods and advanced business ideas. Personally I am glad I have been in Danville as long as I have. I hope it may be my privilege to stay here long. The past, with its successes, is to me a harbinger of what is to come.

[By J. S. Emery, president of the Emery Dry Goods Co.]

There is not another class of Danville people to whom prosperity means more than to we merchants. Prosperity means to us good business, a return on our money invested, and the ultimate expansion of our establishments. I believe when I say that 1914 from a mercantile standpoint has more brilliant prospects in store than any other year since the dawn of the twentieth century, that I am echoing the belief of every other merchant in Danville.

[By George W. Telling, president of Commercial Trust & Savings Bank.]

The saving habit pays. People are learning, more and more, that it pays. Show me a man who is saving money and I will show you a man who is a booster for the town in which he is living. I believe every man connected with a local bank will agree with me when I say that more Danville toilers and wage earners—the city's backbone—are saving money now than ever before.

[By Harvey C. Adams, secretary Vermilion County Building Association.]

The outskirts of the city, which have hitherto presented a vacant and barren appearance, are filling up with handsome little homes—abodes for the toilers and wage earners—the men who form the backbone and foundation of every city in this country. This process of building, this filling up of what was once waste places, is the surest sign of prosperity visible in Danville to-day.

[By Charles U. Feldkamp, president Civic Federation.]

Cooperation has ever been the keynote in the advancement of all municipalities. Danville's present standing in the commercial life of Illinois has been attained by cooperation, and her future depends wholly upon cooperation. The city is prosperous to-day, and the present is the time to take advantage of this prosperity and lay plans for the future.

[By O. P. Haworth, county superintendent of schools.]

If the farmer did not believe that he is paying for something that will eventually prove a good investment in an educational way he would not vote for the schools. What is good for Vermilion County is good for Danville. With the county prosperous, Danville will be prosperous. Residents of the county outside of Danville have faith in the future; so has Danville, and I believe there is good cause for that belief.

[By H. C. Smith, president Allith-Prouty Co.]

Business conditions have settled from the somewhat spasmodic business outlook of a year ago. Factory prospects in Danville for the ensuing year are excellent, not only with us, but, I believe, every other concern in Danville that relies mainly upon the Nation at large for its profits.

[By A. L. Webster, president the Webster Grocer Co.]

The only method of making an intelligent prediction of future commercial activity is by comparison. Early in 1913, conditions prevailed which caused me to believe that a good business year was ahead. My opinion was later proven. Nineteen hundred and thirteen was productive of bigger business than any other year since I came to Danville, almost a half century ago.

[By M. J. Wolford, president the Palmer National Bank.]

The attitude of Danville people toward the banks and the building associations has been that of the prudent man toward institutions where he can secure a safe investment. Both institutions are friends, not only of the wage earner but of the business man as well. Both types of citizens are ever willing to cooperate with the building associations, because while they are saving money they are also making money.

A CONDITION OF PROSPERITY IN CHICAGO.

Chicago is probably as good a combination of all classes of people and all kinds of business interests as the United States or the world affords. Business stagnation as a national issue ought to be felt in Chicago. On the other hand, business prosperity as a proposition which would apply to the whole country would be evidence by conditions in Chicago.

Chicago has to-day the same board of assessors acting under the same law and the same conditions that prevailed in Chicago one year ago. so that it is fair to presume that any increase or decrease in the value of the personal property in Chicago ought to indicate, in some measure at least, the business conditions which are now prevalent there.

If values have greatly gone down, it would indicate that the great composite business interest shows an unhealthy condition due either to the crops, politics, legislation, or some other evil.

If the value of the personal property in Chicago should show an enormous increase within the last 12 months, we certainly have a right to consider that the business interests of Chicago are in flourishing condition.

The figures which show the value of the personal property in Chicago about July 1, 1914, made by the board of assessors give all the personal property in Chicago this year as fairly worth $853,325,670. A year ago the value of all the personal property as assessed by the same board was $675,546,861, a clear increase in the value of the personal property of Chicago of $177,778,809.

A stupendous prosperity, an increase upon the value of all of the personal property in Chicago one year ago of 26 per cent.

These are figures and facts, all of which are sworn to and which are matters of public record.

The "get-poor-quick" schemers can not explain such prosperity away any better than they can prove that 2 and 2 are 5. Some of the newspapers and political scarecrows have been telling around to anyone who would listen to them that business would not branch out and new industries are a thing of the past.

NEW AND EXTENDED BUSINESS ENTERPRISES.

There is a magazine printed in Chicago that is known as the Manufacturers' News, and it is so rabid against anything that relieves the people of paying tariff taxes that it is impossible for this publication to tell the truth, although they seem to make an honest effort in that direction. Out of the pages of their own publication the editorials of the Manufacturers' News stand convicted of treason to their country and falsehoods to their readers. I will quote a few of the paragraphic notations of new and extended business enterprises which are going up throughout the land and as set forth in the News on April 9.

In the week ending April 9, 1914, the Manufacturers' News, although claiming editorially that the business interests of the country was suffering because of the tariff legislation, yet they give us a list of enterprising business men who are going forward with the establishment of new factories and the extension of old ones:

[From the Manufacturers' News, April 9, 1914.]

NEW FACTORY BUILDINGS.

Albert Felscher will establish a branch mattress factory at Victoria, Tex.

The Mayfield (Ky.) Woolen Mills will double the size of their present factory.

The Federal Brass Manufacturing Co., of Cleveland, Ohio, plans a new plant.

Ground has been broken for the new plant of the Fremont Steam Boiler Co., at Fremont, Ohio.

A $20,000 factory building will be erected at Anderson, Md., by the Mid-West Paper Box Co.

Sites are being inspected and plans prepared for a large machine shop and foundry, to cost $150,000, at Akron, Ohio.

The National Fireproofing Co. will spend $300,000 for furthering the development of the Hayensville, Ohio, tract.

Plans are being made by the C. & E. Wolfe Shoe Co., of Columbus, Ohio, to rebuild the plant in Fulton Street recently destroyed by fire.

Connersville, Ind.: A big addition to the spring department of the Ansted Spring & Axle Factory, of Connersville, Ind., is to be built at once.

Permit has been issued to the Decatur Manufacturing Co., at Decatur, Ill., to erect a factory building at corner of North and Short Streets. Cost, $17,000.

Construction of the rope and twine factory for the Hooven & Allison Co., in north Kansas City, has been under way about a week. Cost, $100,000.

Rees & Strong will build a new foundry at the foot of Collins Avenue, in Columbus, Ohio. It will manufacture core supports for molds and will be 60 by 100 feet.

The contract for the construction of the factory buildings of the Griffin Car Wheel Co., in Vernon, Cal., has been awarded to Carl Leonardt, of Los Angeles.

The Gund Manufacturing Co. will erect a new factory building, to cost $12,000, at La Crosse, Wis. Its chief product will be drive twist anchors, used in fastening guy wires.

Plans are being drawn by Mortimer B. Cleveland, of Waterloo, Iowa, for a big factory building which will be erected by the Iowa Gate Co. the coming year. Cost, $50,000.

It is proposed to erect a factory for the manufacture of metallic fence posts, fences of wire, barb wire, gates, and nails at North Mankato, Minn. Carl Lippert, of that place, is the promoter.

The Altorfer Bros. Co., has purchased 21 acres of property just across the section bridge in East Peoria, and will soon begin the erection of their big washing-machine factory there.

The J. H. Weir Sign Co., of this city, has filed articles of incorporation. Capital, $20,000. The concern will erect a factory at Benton Harbor, Mich., and engage in the manufacture of electrical signs.

A building permit was issued to the Union Printing Co. at Akron, Ohio, for the erection of a $10,000 factory building at 1033–1035 South High Street. The building is to be of brick and 50 by 150 feet in size.

The Nebraska Blaugas Co. has announced a new plant to be built at Des Moines, Iowa, costing over $75,000, and the purchase of new equipment for the Omaha and Des Moines plants involving about $125,000 more.

A plant for the manufacture of a patented concrete railway crosstie, owned and operated by the Percival Concrete Tie & Socket Co., 201 Queen Street, and Crescent Building, will be started in New Orleans shortly.

Material is being contracted for the new $900,000 steel mill which will be erected by the Massillon, Ohio, Rolling Mill Co.

Nathan and Alexander Friend have acquired the vacant property at the northeast corner of West Twenty-third and South Robey Streets, Chicago, south front 22 by 124 feet, as the site of a two-story factory building to cover the entire lot and to cost approximately $70,000.

A large force of workmen are rushing the construction of the new $50,000 plant of the Western Paper Makers' Chemical Co., located near the Kalamazoo Vegetable Parchment Paper Co. building.

The Spengle Bros., manufacturers of specialties on the water power, expect to erect a modern two-story building, 50 to 150 feet, on their property on Kiswaukee Street, near Harrison Avenue, at Rockford, Ill.

The Clarke-Boothe Doyle Co., incorporated for $250,000, will build a plant for the manufacture of ice at Porterville, Cal., this summer.

Otis S. Cutler, president of the American Brake Shoe Co., has closed negotiations for the purchase of a site for a branch plant of his firm at Vernon, Cal. Contract will be let at once and work will be started May 1.

On April 16 the News gives to its readers and the public its list of a few of the most important enterprises established during the week, from which I select the following as typical of their list:

[From the Manufacturers' News, April 16, 1914.]

NEW FACTORY BUILDINGS.

Work has been started on the Cincinnati branch of the Paragon Refining Co.

Harrison, Ark.: New electric light and ice plants are to be constructed in Harrison at once.

The Illinois Central plans extensive improvements in its yards at Clinton, Ill. Cost, $100,000.

New buildings added to the plant of the Kissel Motor Car Co., at Hartford, Wis., have increased its floor space by 60,000 square feet.

Business men of Carthage, Mo., have given $30,000 bond to guarantee the erection of a shoe-factory building for the Kaut-Reith Shoe Co.

The Continental Line Co. has let the contract for the erection of four reinforced-concrete buildings at Dallas, Tex., to Buchanan & Gilder, of that city, for $164,000.

De Pere, Wis.: A proposition is to be put up to De Pere people that would lead to the establishment of an automobile factory here, if accepted. Citizens subscribe for $25,000 in stock.

The Concrete Steel Construction Co. has begun work upon a $100,000 factory building on Taylor Street, near Monument Avenue, at Dayton, Ohio, for the Doty Manufacturing Co.

La Salle, Ill.: Peru is to have a new factory, the shirt factory of the Icas Manufacturing Co., the machinery and equipment of which have been installed in a building secured for the purpose.

S. A. Maxwell & Co., wall-paper dealers and manufacturers, have purchased a tract of approximately 41,320 square feet fronting east on Iron Street extended, between West Thirty-sixth and West Thirty-seventh Streets, Chicago, for $27,861. It is the intention of the purchasers to improve the lots with a five-story and basement heavy mill construction factory and warehouse, to cost about $200,000.

Amite City, La.: Fruit and vegetable growers have been given assurance that before another shipping season the parish will have one of the most complete crate manufacturing plants in the South.

The International Roofing Manufacturing Co. will erect a $100,000 plant on 8 acres it has acquired in Chicago, in South Western Boulevard, between Fifty-second and Fifty-fourth Streets.

The Doty Manufacturing Co., of Dayton, Ohio, expects to erect a $100,000 plant on Taylor Street, near Monument Avenue. It will be 80 by 100 feet, of concrete. This company makes vacuum sweepers and other specialties.

To take care of its increasing business the Lagonda Manufacturing Co., of Springfield, Ohio, will erect an addition to its plant this spring. It will be an all-steel structure 65 feet wide and 125 feet long. It will be erected east of the main plant.

It has been definitely determined that the factory to utilize the great plant deposit 10 miles northeast of Attica, Ind., is to be located in Danville, and if present plans are carried out a large refractory brick plant will be built there during the coming summer.

The Turner Construction Co. has been awarded the general contract by C. F. Mueller & Co., manufacturers of macaroni, for the construction of their new factory at High Street and Baldwin Avenue, Jersey City, N. J. The building will be reinforced concrete throughout, four stories, and 160 by 160.

The Mutual Liquor Co., a cooperative combination of retail liquor interests, is being organized in New Orleans with a capital stock of $100,000. A plant will be erected that will require the employment of 100 men. Plans for the construction are being prepared. The promotors are in the market for a site.

The Pacific Power & Light Co., North Yakima, Wash., which is now completing cement work on an extension of the Wapatox Canal, in the Naches Valley, expects to push construction of the supplementary power plant, which is to furnish some 5,000 horsepower additional to the Naches power station.

About $50,000 is to be spent by the Ohio Veneer Co. in the construction of a plant at the northwest corner of Colerain Avenue and Brashears Street, Cincinnati, Camp Washington. President Ferdinand Bosken, of the company, yesterday closed a deal for the purchase of the manufacturing site, which is 180 by 400 feet.

Contracts have been awarded by Architect Herman J. Esser for an additional manufacturing building for the Harsh & Edmonds Shoe Co., to be erected on Reed Street south of Maple Street, adjoining the company's plant at Maple and Hanover Streets, Milwaukee, Wis. The building will have an 80-foot frontage on Reed Street and will be 160 feet deep and 7 stories high. The first floor will be of reinforced concrete construction, while the upper stories will have a steel skeleton, incased in concrete, with brick curtain walls. The cost will be about $80,000.

Lots have been purchased by the International Roofing Manufacturing Co. for the erection of a factory on the southwest side in Chicago. Eight acres on Southwestern Boulevard between Fifty-second and Fifty-fourth Streets are involved. A brick-and-stone building will be erected at once, and the deal when the building is completed will represent an investment of about $100,000.

On April 23 the News gives us a list of new enterprises, which indicate the confidence of the business men throughout the country in the stability of business matters:

[From the Manufacturers' News, April 23, 1914.]

NEW FACTORY BUILDINGS.

Girard, Ohio: The Girard Machine & Repair Co. has arranged for a factory site.

Manitowoc, Wis.: A factory to manufacture gum will be established in this city within a month.

Racine, Wis.: Racine is to have another $12,000 factory building. It will be erected by the Racine File Co.

Work has been started upon the new roundhouse and shops of the Illinois Central at Jackson, Miss. Cost, $300,000.

Dallas, Tex.: The Sherwin Williams Paint Co. will locate a branch plant here. It desires 10,000 feet of ground space and a three-story building.

Rocky Ford, Colo.: The largest silo in the county will be built the coming summer by the American Beet Sugar Co., near its factory in this city, for the storage of beet pulp.

Springfield, Ohio: To take care of its increasing business, the Kelly-Springfield Motor Truck Co. plans to begin the erection of an addition to its plant at Burt Street and Sheridan Avenue.

Oroville, Cal.: The California Ripe Olive Co. has purchased an acre and a half in the Gray tract for a building. The building will be erected during the coming summer at a cost of $10,000.

Whitesburg, Ky.: T. C. Seaman Stave Co., with headquarters at Winchester, has purchased a large boundary of Big Leatherwood Creek timber and will begin the installation of some stave mills.

Joliet, Ill.: The Joliet Wall Paper Co. has closed a contract with the Johnson Construction Co., of Chicago, for the building of the plant south of the water works at the foot of Logan Avenue.

The Chicago Car Roofing Co. is to erect a new plant at Warren, Ohio, which will employ 300 men. The plant and equipment will cost $100,000. The Trumbull Steel Co. has furnished steel for this plant.

Toledo, Ohio: One of the greatest printing and binding plants in the Middle West, in a building the exterior of which will reveal the highest ideals in modern architectural creation, will be established at Monroe Street and Sylvan Avenue by the Express Publishing & Printing Co.

Dallas, Tex.: Announcement is made that a brick manufactory owned by the Brown Brick Co. will be in operation in Dallas within the next 30 days. The plant will be located in the outskirts of the city, being near the foot of Lenway Street and the Missouri, Kansas & Texas Railroad.

Chattanooga, Tenn.: The Cincinnati, New Orleans & Texas Pacific Railroad Co. will begin the construction of its $100,000 car plant in Chattanooga within the next two weeks. Several hundred men will be given employment. The plant will have a capacity of from 25 to 30 passenger cars.

Cincinnati, Ohio: Between $75,000 and $100,000 is to be spent by the Andrew Jergens Co., spay manufacturers, in factory improvements at Camp Washington some time this summer, which will result in the plant being enlarged about one-third. Plans for the structure are now being prepared by Architect Harry Hake.

Youngstown, Ohio: Extensive improvements are being made by the Andrews Hitchcock Iron Co., of this city, at its Hubbard furnaces, an order for 800 tons of structural steel just being placed with the American Bridge Co. This material will go into the construction of a new power plant, boiler, and casting house.

The William P. Squibb Distilling & Cattle Feeding Co. has closed a contract for the construction of a new distilling plant in Lawrenceburg, Ind. The new building will be of reinforced concrete and brick, equipped with all of the latest improvements, and will have a capacity of 5,000 bushels of grain per day. The grain elevator will have a capacity of 50,000 bushels of grain. The new distillery will cost about $250,000.

Fremont, Ohio: Preparations for the opening of Fremont's newest factory are nearly completed and the Clauss Cutlery Co.'s plant on South Wood Street will soon be running full time. Henri Clauss, president and treasurer of the factory, announced Saturday that he expects machinery to be installed by May 1. Equipment will cost more than $15,000. Not less than $50,000 will be invested in the building and machinery, Mr. Clauss said.

Week ending April 30. The following are a few of the new enterprises that show prosperity in building and extending their business:

[From the Manufacturers' News, April 30, 1914.]

NEW FACTORY BUILDINGS.

Saginaw, Mich.: The Detroit Cycle Car Co. may move its plant to this city.

Akron, Ohio: Plans are being prepared for a 12-story building by the Northern Ohio Traction Co.

Charlotte, Mich.: The Hancock Manufacturing Co. is planning to enlarge the factory. It will be constructed of brick.

Hobart, Okla.: J. L. Kraft & Bros., cheese manufacturers of Elkhorn, Wis., are negotiating for the erection of a cheese factory here.

Grand Rapids, Mich.: The Grand Rapids Wood Furnishing Co. is making a second addition to its factory on Ellsworth Avenue.

Belleville, Tex.: This place has been chosen as the location for a factory for the manufacture of the Bucking Ram washing machine.

Duluth, Minn.: A $2,500 dry kiln and cooper shop will be erected by the Superior Manufacturing Co. at its present factory on the bay front.

Butte, Mont.: The Anaconda Co. has decided to build a sulphuric acid plan at the Washoe smelter, with a capacity of 100 tons of acid a day.

San Antonio, Tex.: A company to finance the erection in San Antonio to manufacture an automobile tire proclaimed as "puncture proof" is being organized.

La Salle, Ill.: The contract for the construction of an additional building for the Western Clock Co.'s factory has been left to the Peru Construction Co.

Saloas, Tex.: The chamber of commerce announces that the Oxygen Gas Co. of Texas has just closed all arrangements for the location in Dallas of a factory for the manufacture of oxygen gas.

Muscatine, Iowa: A $25,000 plant will be erected by the Zeidler Concrete Culvert Co. in South Muscatine.

Fremont, Ohio: Operations will be started in a few days on the erection of the new plant of the Fremont Steam Boiler Co., to be erected in Bidwell Avenue, adjoining the company's present plant.

Hillsdale, Mich.: Within a few months Hillsdale County will have a new industry—a peat factory. The Montgomery Peat & Fuel Co. is getting the material on the ground for the erection of a new factory at a cost of $20,000.

Cleveland, Ohio: The Cleveland Worsted Mills Co. obtained permits for two structures to be erected at its plant, 5932 Broadway. One will be a manufacturing building costing $8,000. George S. Rider & Co. are the architects.

Palestine, Tex.: T. E. Ritchey, of San Antonio, is in the city looking for a suitable location to establish a mattress factory. He was brought to Palestine by the Young Men's Businesses League. Mr. Ritchey proposes to build a plant with a capacity of 100 mattresses a day.

Joliet, Ill.: Officers of the De Launty Engine Co., of Chicago, were in the city looking for an eligible site for a factory to build a new type of gas engine for automobiles.

Milwaukee, Wis.: Plans for a $125,000 building to be erected by the Standard Paper Co. at Detroit Street and Broadway were filed yesterday with the building inspector. The ground dimensions will be 120 by 135 feet. It will be five stories high and of reinforced concrete construction.

Massillon, Ohio: The plant of the Massillon Electric & Gas Co. is to be enlarged immediately to three times its present size, at a cost of between $100,000 and $125,000, to supply current to new industries recently secured, according to an announcement made to-day by General Manager R. A. Brooks, who has just returned from New York, where the contracts were let.

A contract has just been awarded to the Westinghouse-Kerr Co., of New York, by the Taylor-Wharton Iron & Steel Co. for the erection of a 25-acre plant of the company in Easton, Pa., and for enlarging its present plant in High Bridge, N. J. The contract aggregates $2,000,000. More than $1,500,000 of that sum is to be used as the initial outlay for the new Easton works.

Spokane, Wash.: A factory for the manufacture of lumber into finished products on the mail-order basis and a distributing yard will be placed in Sumner, Wash., by the Hewitt-Lea-Funk Co., of Seattle. More than 50 men will be employed steadily before midsummer. The initial outlay for buildings will be $50,000.

Cincinnati, Ohio: The Andrew Nessner Co., brass founders, has commissioned Architect Anson Rieg to make plans for the rehabilitation of the factory on Patterson near Bank Street, which was partly destroyed by fire two weeks ago. The interior of the building is to be changed so as to make it comply with the new building regulations.

Charlotte, Mich.: The factory building furnished the Hancock Manufacturing Co. by the city of Charlotte automatically becomes the property of the company this month. They have faithfully carried out the obligations of their seven-year contract with the city to occupy the plant. The company is now planning to build a 72 by 100 foot addition to their factory.

On May 7 we select a few of the enterprises that are unable to see business depressions ahead of them.

[From the Manufacturers' News, May 7, 1914.]

NEW FACTORY BUILDINGS.

Bethlehem, Pa.: The Bettendorf Co. will erect a branch factory building here at a cost of $150,000.

Windsor, Canada: A branch of the Jagelmeyer Manufacturing Co., of Bay City, Mich., will be located here.

Robinson, Ill.: The Robinson Manufacturing Co., L. M. Smith, manager, has begun the erection of a plant.

Lockport, Ill.: Negotiations have been favorably progressing for the location in Lemont of a plant for the manufacture of piano plates.

Thomas, Okla.: J. L. Craft & Bros., of Chicago, have decided definitely to locate here and will soon begin shipping their machinery.

Chicago: The Watrous Acme Manufacturing Co. will erect a $300,000 factory on Western Avenue, south of Forty-third Street.

Cleveland, Ohio: The Owens Improvement Co. will erect a $75,000 building to be leased in units to small manufacturing concerns.

Detroit, Mich.: Foundations now are being laid for the new production plant of the Banner Cigar Manufacturing Co. at Warren and Mitchell Avenues.

Hibbing, Minn.: The water and light board of this village is considering the erection of a new power plant at a cost of $265,000.

San Angelo, Tex.: An interlocking concrete State factory for the making of silos is to be established here within the next two weeks by the West Texas Lumber Co.

Freeport, Ill.: The Perfection Manufacturing Co., of Cedar Rapids, will bring its plant here on condition that $12,500 more stock is sold by the Freeport Chamber of Commerce.

Duluth, Minn.: The Northern Cold Storage & Warehouse Co. has decided upon the erection of a seven-story reinforced concrete addition to its plant, to entail an outlay of $120,000.

Raleigh, N. C.: About 90,000 ordinary building bricks and 10,000 repressed bricks will be the daily capacity of the plant soon to be completed by the Johnson & Johnson Co. of Raleigh.

Cedar Falls, Iowa: Work has been started on an addition to the Cedar Falls Foundry Co.'s plant, which when completed will double the present capacity of the rapidly growing concern.

Detroit, Mich.: The Gordon-Chapman Co., of Chicago, one of the largest mattress-manufacturing firms in the country, will open a factory here, with the intention of making Detroit its headquarters.

Chicago: The Stanley Works, manufacturers of builders' hardware, located at New Britain, Conn., will have a western branch in this city and have acquired the site for a $500,000 factory in the central manufacturing district.

Chattanooga, Tenn.: Chief Engineer Wallie, of the Durham Coal & Iron Co., and other engineers of that concern will arrive in Chattanooga Tuesday evening for the purpose of locating a site for the new million-dollar coking and by-product plant to be established here.

Oakland, Cal.: The Westinghouse Electric & Manufacturing Co. will expend $1,500,000 on a big factory that will occupy 2 acres of the old Emeryville race track. It will employ 2,500 men. The H. J. Heintz Co., also of Pittsburgh, will build a plant occupying an entire block at the corner of Seventh and Cedar Streets.

Portland, Oreg.: O. E. Heintz, proprietor of the Pacific Iron Works, has appointed MacNaughton & Raymond, local architects, to draw up plans for the $90,000 building he proposes to erect on the north side of East Ankeny Street, between East Second and East Third Streets. The building will occupy a half block and be five stories high.

Canton, Ohio: Structural work on the new factory building being built along the Pennsylvania Railroad by the Monarch Metal Manufacturing Co. will be started within a few days. The excavation work is completed, and building material is being placed on the site. The plant expected to start operations about June 1, when plans were completed for their removal here.

Belleville, Ill.: Ground has been broken and work started on the erection of a new shoe factory in Belleville, Ill. The new shoe company is composed entirely of local men, and all the $35,000 capital of the concern has been subscribed and paid in by local people. The company will be known as the Hoerr-Adam Shoe Co., and a line of boys shoes will be the only thing manufactured.

On May 14 we call attention to some of the enterprising business men of the country, who are either extending their business or installing new business enterprises:

[From the Manufacturers' News, May 14, 1914.]

NEW FACTORY BUILDINGS.

Chicago: The Illinois Modern Machine Co. will erect a 4-story factory building at 2237–2245 Ogden Avenue. Cost, $35,000.

Evansville, Ind.: The Shimer Steel & Wire Co. plans to start the construction of a wire factory within 60 days, at a cost of $100,000.

Peoria, Ill.: Preparations are being made for the erection of a factory building by Altorfer Bros., manufacturers of washing machines.

Sterling, Ill.: The contract has been let to the Schmidt Bros. Construction Co. for the erection of the new factory building for the Frantz Manufacturing Co.

Tulsa, Okla.: The establishment of the largest broom factory of the Southwest in Tulsa is the ambition of Elworth J. Green, a veteran broom manufacturer of Enid.

Springfield, Ohio: It is reported that E. L. Shuey will soon be ready to accept proposals on the erection of the power plant to be built at Jefferson and Center Streets.

Tampa, Fla.: Architect John W. Biggar, of West Tampa, has begun work on plans for a $12,000 addition to the Jose Escalente cigar factory at Palmetto Beach.

Grand Rapids, Mich.: Machinery company has increased its capital stock from $15,000 to $30,000 for contemplated expansion and installation of additional equipment.

Raleigh, N. C.: The town of Rowland has let the contract for an $18,000 electric-light plant, and Winston-Salem is to vote in June on the issue of $250,000 of bonds for such plant.

Youngstown, Ohio: Contracts for extensions at the Trumbull Steel Co.'s plant in Warren have just been awarded, and the equipment and machinery will be installed as soon as delivery is made.

Carlvle, Ill.: A new shoe-manufacturing company, to be known as the Hoerr-Adams Shoe Co., has been organized in Belleville with a capital of $35,000, and a three-story factory is in course of construction.

Council Bluffs, Iowa: The local plant of the Soda Products Co., to manufacture Glauber's salt and sal soda, will soon be opened. The plant will begin operating at the capacity of 240 cars of sal soda and 350 of salt per year.

Delphos, Ohio: The Combination Portable Mantel Co., recently organized for the manufacture of portable mantels, have purchased the buildings of the Fortner foundry, and will install machinery and will be in operation about June 1. Capital, $50,000.

Milwaukee, Wis.: The site now occupied by the Milwaukee Wrecking Co. on Reed Street, between National Avenue and Walker Street, was sold to the Wisconsin Plumbing & Heating Supply Co. Plans are drawn for a factory building to be erected on this site.

Des Moines, Iowa: Two biscuit factories are preparing to open. One is a branch plant of the Manchester Biscuit Co., which expects to erect a $125,000 building. The other will be the Hen Biscuit Co., operating plants at Omaha, Clinton, and Oklahoma City.

Lima, Ohio: Lima is to have a new automobile-manufacturing concern. It will be backed by W. A. Williams, local automobile dealer and former secretary and vice president of the Lima Automobile Club, and will be the first concern in Lima to manufacture cars for pleasure purposes.

Milwaukee, Wis.: A permit was issued on Friday for a 3-story factory building to be erected on Prairie Street, between Fourth and Fifth Streets, by the Carbolenium Co., at a cost of $15,000. The building is to be of reinforced concrete construction, and will be fireproof throughout.

Toledo, Ohio: Construction of a large new factory building for the Urschel Bates Valve Bag Co., at Summit and Michigan Avenues, will be started in a few days. It will occupy ground 90 by 112 feet. It will be two stories high, and entirely concrete and steel, except the front, which will have a brick facing. The building will cost $47,500.

Cincinnati, Ohio: Work has started here on the new building which is to be constructed for the International Harvester Co., under a long-time lease arrangement by the trustees of the University of Cincinnati, on ground owned by them on Lock Street. It will cost in the neighborhood of $70,000, will contain five stories and a basement, and will be of reinforced concrete.

Toledo, Ohio: Extensive improvements, affecting the east side gardeners and farmers, are planned by the Harbauer Co., condiment manufacturers, this season. Four new tomato pulp mills will be erected this spring—one at Curtice; another at Walbridge; a third at Custer, Ohio; and a fourth at Wayne Street, Air Line Junction. Every one of these plants will have a capacity of 8,000 barrels of pulp for the season's run.

Staunton, Va.: The State lime-grinding commission has announced that the contract for machinery to equip the lime-grinding plant soon to be opened and operated by convict labor has been awarded to the firm of Smith-Courtney Co., of Richmond. The act creating the State lime-grinding commission carries an appropriation of $30,000 for the purchase of desirable rock deposits, the installation of machinery, and the operation of the plant until it becomes self-sustaining.

On May 21 quite a number of citizens reported to the News that they were ready to partake of the business prosperity of which the country was then in possession.

[From the Manufacturers' News, May 21, 1914.]

NEW FACTORY BUILDINGS.

Ottawa, Ill.: The Clinton Die & Tool Works, of Chicago, is considering locating its plant either here or in La Salle.

Harrisburg, Ark.: George I. Dill & Son are organizing a corporation to erect a factory here for the purpose of manufacturing machines.

Chicago, Ill.: The American Building Foundry Co. has begun the erection of a foundry and office building between Twenty-second Street and Burlington tracks.

Buchanan, Mich.: E. D. Clark, president of the Telfor Tool Co., has announced plans for the immediate construction of a $100,000 building to the present plant.

Elkhart, Ind.: The Elkhart Manufacturing Association contemplates building a $50,000 electric power plant on the site of the old mill near Beardsley Avenue and Riverside Drive.

Dallas, Tex.: The chamber of commerce announces the location of a branch house of one of the largest lithographing, engraving, printing, and bookbinding concerns in the United States within 60 days from date.

Warren, Ohio: The Warren Board of Trade has closed a deal with C. G. Clause and Frank and Ira Thomas, of Niles, whereby they will erect a six-mill sheet plant near this city. The board of trade purchased the William Van Wye farm east of the Trumbull Steel Co.'s plant on the Niles River road, adjoining the Pennsylvania lines, for a 50-acre site for the new plant. The plant will cost $500,000 and will employ from 450 to 500 men.

Toledo, Ohio: Construction has been started on the big new plant for the Toledo Pipe Threading Machine Co. at 1437 Summit Street. The buildings, of concrete, steel, and brick, will be 122 by 162 feet and will cost $30,000.

Newbern, N. C.: Andrews & Co., a Norfolk concern, are preparing to erect and operate near Newbern a plant to manufacture lime from the oyster-shell rocks which are to be found in abundance a few miles above the city.

Des Moines, Iowa: The Sac City Electric Co. has let the contract for the erection of a new generating plant to take the place of the smaller building erected 16 years ago. The new structure will be concrete blocks and will be 60 by 80 feet in size and 18 feet high.

Chicago, Ill.: The Illinois Modern Machine Co. has acquired from Isadore Bell the property at 2237–2345 Ogden Avenue, 100 feet square, as the site of a four-story factory building, which will contain 40,000 square feet of floor space and will cost about $35,000, to be used for the manufacture of button machines and button parts.

Columbus, Ohio: General offices of the National Paving Brick Co., just organized with $400,000 capital, are to be located in this city. The company's plants will be located at East Zanesville and South Zanesville. It is planned by the organizers of the new company to manufacture paving brick or blocks for streets and highways on a large scale.

Youngstown, Ohio: A new steel company, to be known as the Western Reserve Steel Co., has been organized by Niles and Warren capital and will start the building of a new plant at once. The capital stock is $600,000. The new plant will include six hot mills, a galvanizing department, sheet-metal department, and all other necessary departments for the operation of such a plant. The new company, of which C. G. Thomas, of Niles, is president, will absorb the Sykes Metal Lath Co. and the Niles Metal Roofing Co. and will be located on a site about 60 acres in extent in Warren.

On May 28 the News furnishes to their readers a copy of some of the more important enterprises that are extending their operations or establishing a new business.

[From the Manufacturers' News, May 28, 1914.]

NEW FACTORY BUILDINGS.

Media, Pa.: For George Allen & Sons; plans completed by Walter Smedley, architect. Ready for bids.

Waukegan, Ill.: Waukegan is to have another factory, as the plans are being drawn by Architect Weber.

Natchez, Miss.: The Wakeman Cement Stave Silo Co., of Portland, Ind., has decided to erect a plant here.

Stewart, Ohio: The Jackson Shear & Razor Co. is installing a drop forge plant for six hammers, ranging in capacity from 800 to 1,600 pounds.

Marshall, Tex.: A canning factory with a capitalization of $30,000 is to be built here by a corporation to be known as the Marshall Canning Co.

Belleville, Ill.: A building permit was issued to the Hoerr-Adams Shoe Co. for the erection of a $7,500 brick factory building on West Main Street.

Goshen, Ind.: The Elkhart Manufacturers' Association contemplate building a $50,000 electric power plant on the site of the old mill near Beardsley Street.

Clinton, Iowa: The Chicago & North Western Railway Co. has authorized an expenditure of $100,000 for a general freight-car repair yard at Clinton.

Grand Forks, N. Dak.: The Crookston Cordage Co. has been incorporated with a capital of $75,000 and will manufacture rope, twine, or cord from hemp, flax, straw, and the by-products.

Cincinnati, Ohio: Plans for the new Ford factory calls for a four-story concrete building to cost $300,000, to have 236 feet frontage and a depth of 167 feet. Five hundred people will be employed.

Philadelphia, Pa.: The Heilwig Silk Dyeing Co. was granted permits yesterday for the erection of a group of factory buildings on the tract at the southeast corner of Nilnor and Homestead Streets. The total cost will be $66,000.

Buffalo, N. Y.: For Buffalo Shirt Co., three-story reinforced concrete factory building, containing 48,000 square feet of floor surface; heating, electrical equipment, sprinkler system; plans ready for bids June 21; Day & Zimmerman, architects and engineers.

Nashwauk, Minn.: It is understood that the Wisconsin Steel Co. here has perfected plans for the erection of modern machine shops, to be constructed of concrete and equipped with the most modern machinery available. The appropriation made for these improvements is $50,000.

Cincinnati, Ohio: The Krippendorf-Dittman Co. yesterday was placed in a position whereby it can enlarge its shoe factory on Sycamore Street. It bought, through Broker C. C. Mund, 41.6 by 120.1 feet on the east side of that thoroughfare 50 feet south of Seventh Street, from the Gaff estate.

Massillon, Ohio: Work on the proposed plant of the Massillon Aluminum Co., in Canal Street, is to be started in the near future. One of the largest orders for lumber ever placed in Massillon, to be filled by the Massillon Lumber Co., for the erection of the main building. A total of 200,000 feet, to be shipped here in 10 cars, are required.

Kalamazoo, Mich.: A rejuvenation of the William E. Hill Co., with the habilitation of a new consolidated factory and a double output, is now under way, and within a short time the old plant of the concern, 312 North Park Street, will be abandoned for larger consolidated headquarters near the Standard paper mill. The company manufactures sawmill machinery and steam engines.

On the week ending June 4 the News furnishes a list of the new enterprises then being established throughout the land.

[From the Manufacturers' News, June 4, 1914.]

NEW FACTORY BUILDINGS.

Dayton, Ohio: The Air Friction Carburetor Co. contemplates enlarging its plant.

Muskegon, Mich.: The Walker Candy Co. will erect a two-story addition to its factory in Muskegon.

Columbus, Ohio: The E. R. Thomas Motor Co., of Buffalo, has decided to remove its plant to Columbus.

Chicago Heights, Ill.: B. J. Patrick, of Spokane, Wash., was in the city looking up a site for an automobile factory.

Sandusky, Ohio: The Hinde-Dauche Paper Co. contemplate the erection of a concrete dock and four-story building.

Cincinnati, Ohio: The Acme Machine Tool Co., of Buck Street, is planning to increase the size of its plant later in the year.

Jackson, Mich.: The Union Steel Screen Co. proposes to build a gray iron foundry just north of the plant on Huron Street.

Youngstown, Ohio: An addition to the Consolidated power house will be completed by July 1, increasing the plant's capacity by 10,000 horsepower.

Marshall, Tex.: A canning factory with a capital of $30,000 is to be built here by a corporation to be known as the Marshall Canning Co.

Grand Rapids, Mich.: Work has started on the new plant of the John R. Raab Chair Co., Ionia and Bartlett Streets. It will be four stories high with steel and brick construction.

Grand Rapids, Mich.: A building permit for an addition to the John Raab factory to the amount of $67,000 has been taken out. Besides enlarging the floor space additional stories will be built.

Cincinnati, Ohio: The Dalton Adding Machine Co., located in East St. Louis, employing more than 1,000 persons, will be removed to the plant of the Dana Manufacturing Co., Beech Avenue, Norwood.

Houston, Tex.: The International Union of Bricklayers will finance a new $100,000 brick plant in El Paso, which will undertake to furnish contractors with material at a price that will permit competition with Mexican labor.

McKenzie, Tenn.: Hendricks & Co. have machinery ordered for the erection of a broom factory in McKenzie. A campaign is being made among the farmers for a large acreage of broom corn. This will make the second factory for the city.

Findlay, Ohio: Former Mayor E. L. Groves has purchased the basket factory in this city from John T. Bryant, and will double the capacity at once by employing 25 men. New equipment will be installed. Mr. Bryant will establish a factory in Toledo.

Mobile, Ala.: For the Kahn Manufacturing Co. the Sullivan estate will erect a three-story brick building at the corner of Royal and St. Louis Streets, on the site occupied by Elmer Maddox. In this building the company will continue the manufacture of overalls and workingmen's pants.

Indianapolis, Ind.: Robert J. Spencer, jr., Orris E. Wiltsie, and High Cooney have organized a stock company for the manufacture of automobile tires. The capitalization of the company is $125,000. A factory will be built in Marion. Wiltsie and Cooney have been engaged in the work of making rubber tires at the Indian Rubber & Insulated Wire Factory at Jonesboro.

Hickman, Ky.: Hickman will have another industry added in the near future in the way of a shingle factory, which will be put in by the Townley Shingle Co., a big concern operating a number of mills in the South. They have bought timber on 2,800 acres of land from Hale & Ward and will buy other available timber and have their plant located here in the city, and work will start in the near future.

On June 11 we quote from the News a part of its list of enterprises established the week proceeding:

[From the Manufacturers' News, June 11, 1914.]

NEW FACTORY BUILDINGS.

Arqeta, Ark.: A canning factory is being erected here.

Harrisburg, Ark.: The G. I. Dill Tractor Co. has been organized to manufacture a tractor for cutting rice in the mud.

Cleveland, Ohio: The Firestone Tire & Rubber Co. is building additions to its plant on account of increasing business.

Mankato, Minn.: Steps were taken at a meeting of the North Mankato Commercial Club looking to the establishment of a canning factory in the village.

Rockford, Ill.: Another step toward the consolidation of the Emerson-Brantingham Co. interests have been decided upon with the removal of the company's seeder factory from Marion, Ind., to this city.

Kalamazoo, Mich.: The D'Arcy Spring Co. this morning secured a permit from Building Inspector John Gilman for the erection of an addition to the plant of the company at 223 East Patterson Street.

Kansas City, Mo.: The Marietta Chair Co., Marietta, Ohio, has purchased a triangular piece of ground with two-story warehouse on it, on which they will erect a two-story addition to the factory; cost $100,000.

Hibbing, Minn.: E. B. Jackson, the consulting engineer, was instructed by the water and light board last evening to prepare plans and specifications for the construction of a $10,000 heating plant, to be run in connection with the present power plant.

Dallas, Tex.: Announcement was made Saturday evening by E. F. Myers, local manager of the Sherwin-Williams Paint Co., of their new building and store purposes. It will be concrete structure, reinforced with steel, and is to cost in the neighborhood of $30,000.

Youngstown, Ohio.: The Youngstown Sheet & Tube Co. has selected a site adjoining the furnace of the Ohio Iron & Steel Co. in Lowellville as a location for the proposed open-hearth steel plant which will be erected to supply semifinished steel for its Haselton plant.

Joplin, Mo.: The McElhaney & Tatum Furnishing Goods Co., Fourth Street and Grand Avenue, has converted its entire second floor into an overall and work-shirt factory. Seventy-five machines, where 80 girls will be employed, have been installed, and the first lot of overalls will be completed Monday morning, when 25 girls will do the first work in the factory. The number of machines may be increased to 500 within two years, officers of the company believe.

Montreal: A million-dollar, 10-story factory is projected on the block to the rear of the company's store. The new structure will cost from $600,000 to $1,000,000, depending upon whether it will be 6 or 10 stories in height.

Savannah, Ga.: The Savannah Lighting Co. will install additional equipment, improve generating and substation, etc., at cost of $300,000; install 500-horsepower turbogenerator with condenser, exciters, boilers, and induced-draft apparatus, construct water canals and conduits, etc.

Columbus, Ohio: Work has started on the construction of the central electric power station to be established in the Hocking Valley coal fields at Floodwood. Contracts have been awarded for practically all of the equipment and machinery of the plant, and as rapidly as the building is completed they will be installed.

Minneapolis, Minn.: The Minneapolis General Electric Co. will spend $2,000,000 in the coming year in general improvement work and extension of service. The big new power plant at Coon Rapids is being pushed to completion, and machinery is going in at a rate to warrant expectation that current will be distributed on October 1.

Houston, Tex.: The most important step ever taken for encouraging the fruit-raising industry in Houston territory was inaugurated this week, when local capitalists organized the Houston Fruit & Preserving Association. The new enterprise will be capitalized at $200,000, and will build three preserving plants at Algoa, Crosby, and Pearland which will be put in operation about July 15 of this year.

Tampa, Fla.: The United Paper Co., a million-dollar corporation, and the largest manufacturers of citrus fruit and vegetable wrapper in the South, with headquarters in Atlanta, who opened a branch establishment at No. 104 Tampa Street last November, has found it necessary to double the capacity of the Tampa plant in order to handle the rapidly increasing business which comes through Tampa.

Big Pittsburgh contract: Steel mills in Pittsburgh are to start at once on supplying $5,000,000 worth of steel needed in the construction of the new tunnels under the East River from New York to Brooklyn as part of the extension of the subway system.

On June 18 the News furnished a very extensive list of new enterprises. We will quote therefrom the facts relating to but a few:

[From the Manufacturers' News, June 18, 1914.]

NEW FACTORY BUILDINGS.

Upper Sandusky, Ohio: The United States Cereal Co. has planned a new plant.

Lansing, Mich.: The Reo Motor Car Co. expects to erect several new buildings.

Rock Island, Ill.: The Illinois Oil Co. will erect a large factory here at a cost of $100,000.

Kansas City, Mo.: City commissioners are securing estimates on the cost of constructing an ice plant.

Jacksonville, Fla.: Stockholders of the Ocala Iron Works, recently destroyed by fire, plan to rebuild the plant.

South Bend, Ind.: A permit was issued for a $21,000 2-story brick factory building for the Williams Bros. Short Co.

Cairo, Ill.: A million dollar concern picks Cairo as the logical point for its location. The concern is Sambucetti & Co., wholesale liquor dealers.

Minneapolis, Minn.: Permit for the erection of a 7-story addition to the Bemis Bros. factory, 606 Fourth Street, to cost $65,000, has

Elgin, Ill.: Prospects are fair for Rock Island to secure the Jacob Haish Co., whose plant was destroyed by fire at DeKalb Monday night.

St. Louis, Mo.: A permit was issued to Daniel Catlin for a new factory building on the northwest corner of Second and Morgan Streets. Cost, $30,000.

Richmond, Va.: N. & G. Taylor Co., Cumberland, Md., at cost of $100,000, will enlarge tinplate factory, increasing capacity about 60 per cent.

Detroit, Mich.: The contract has been let for the Detroit Auto Specialty Co. on the addition to the factory building located at 309 Greenwood Avenue.

Columbia, Mo.: The Evans Construction Co., of Moberly, was awarded the contract for the hog-cholera serum plant to be built on the farm purchased for the purpose. Cost, $10,600.

Toledo, Ohio: J. B. Breyman has awarded to the Schmidt-Harwood Co. contract for a new factory building at 1025 Front Street, to cost $28,000. The building will be occupied by the Peerless Bedding Co., manufacturers of mattresses and other bed supplies, and the McCreery Co., manufacturers of mittens.

Atlanta, Ga.: In order to meet the rapidly increasing demand for their product, the Firestone Tire & Rubber Co. are again adding new additions to their plant.

Racine, Wis.: Guilbert & Funston, architects, are making plans and specifications for a new factory building to be erected by the Hamilton-Beach Manufacturing Co. Cost, $35,000.

Portsmouth, Va.: The Seaboard Air Line Railway, Portsmouth, Va., is reported to expend $100,000 to $200,000 to install additional machinery and improve car building and locomotive repair shop.

Houston, Tex.: The Houston Packing Co. obtained a building permit for a $50,000 cold-storage plant—three stories, concrete construction. The American Construction Co. has the contract.

Anderson, Ind.: The acquisition of the Plost Post Co., of Marion, as one of Anderson's new factories, was announced at the general mass meeting of the chamber of commerce held last evening in the Armory Building.

Hattiesburg, Miss.: The Hattiesburg Wood Reduction Co. has begun operation. T. S. Jackson is manager of the new enterprise, whose success will mean the clearing of thousands of acres of south Mississippi stump land.

Lemont, Ill.: Owing to the demand for aluminum cooking utensil line made by Aluminum Products Co. the company finds it necessary to extend their plant at Lemont, the contract for which has already been awarded.

Gadsden, Ala.: The Gulf States Steel Co. has awarded to one of the large manufacturing concerns a $35,000 contract for electrical machinery necessary to make the change to take power from the Alabama Power Co.

Cleveland, Ohio: A big addition to the large cold-storage facilities of the Sheriff Street Market & Storage Co. will be provided by erection of an eight-story structure to front on Bolivar Road SE., just east of the market house.

Shreveport, La.: That a manufacturing enterprise, to begin operation by September 1, has been obtained for Shreveport of the manufacturing committee of the Chamber of Commerce is an important announcement made in local industrial circles.

Los Angeles, Cal.: The $10,000,000 plan of E. H. Harrison to build near San Pedro a large steel mill for the manufacture of steel rails and structural steel may be realized through a favorable ruling of the land office on Riverside country claims.

Peoria, Ill.: Building permits of recent issue include the Nelson, Morris & Co. cattle barns, to replace those destroyed a few weeks ago when a thousand cattle were burned as the work of Fogelsong, the incendiary. The new barns, in the same location, at the foot of Cass Street, will be 355 by 366 feet, and the cost is to be $18,000.

Cincinnati, Ohio: The Victor Auto Parts Co. yesterday submitted preliminary plans to the commissioner of buildings for the construction of a four-story fireproof factory building at Spring Grove Avenue and Dunham Street. The building will be constructed of brick, and will be 60 by 165 feet. It will cost approximately $45,000.

Bay City, Mich.: Promoters from Ohio wish to enlist the support of residents in starting a fertilizer plant. The requirements are that the village provide a site and that $10,000 worth of stock in $50 shares be subscribed. It is asserted that $50,000 will be expended if the venture is started. Among other things the company plans on erecting a plant to cost $20,000.

Milwaukee, Wis.: The Standard Separator Co. has begun work at Forty-sixth Avenue and Burnham Street, where the company will erect this year a new factory of brick and steel construction. The first building erected will have a frontage of 250 feet on Burnham Street and 150 feet on Forty-sixth Avenue. The building will be two stories in height on Burnham Street, the upper floor being designed for offices.

Knoxville, Tenn.: N. & G. Taylor Co., Cumberland, Md., at a cost of $100,000, will enlarge tinplate factory, increasing capacity about 60 per cent; erect steel building 80 by 100 feet; install additional 25-ton open-hearth furnace with 40-ton overhead traveling crane and 5-ton charging machine in connection; also install 30-kilowatt generator connected to 500 horsepower engine in power house and locomotive to handle all open-hearth material from stock yards to furnace.

Charles H. Kellerman has contracted to erect for the Walter Baker Co. a four-story building at the southeast corner of Kingsbury and Erie Streets, Chicago. * * * The building will have 12,875 square feet to the floor, with a bearing capacity of at least 175 pounds to the foot. The land and building will, it is said, represent an investment of about $175,000.

On June 25, according to the News, the rush to establish and extend the factories and business enterprises of the country had not abated.

[From the Manufacturers' News, June 25, 1914.]

NEW FACTORY BUILDINGS.

Shreveport, La.: A creosote paving-block factory will be started here.

Duluth, Minn.: A large manufacturing plant will be erected here, at a cost of $50,000.

Lima, Ohio: The Gramm-Bernstein Co., manufacturers of motor trucks, will erect a brick plant and shop 62 by 48 feet.

Duluth, Minn.: The Zenith Box & Lumber Co. will enlarge its plant. It has made three extensions in the last three years.

New Orleans: The Philadelphia Quartz Co., manufacturers of silicate of soda, will erect a large plant at Lembou and Noel Streets.

Moline, Ill.: That Rock Island will get the proposed new $100,000 oil-can factory of the Illinois Oil Co. seems certain at this time.

Winnifield, La.: F. M. Boyer, of Danville, Ind., has been here two days looking over the ground with a view of locating a glass factory in Winnifield.

Bay City, Mich.: Stroud, Bridge & Connors have architects at work on plans for a two-story factory for the manufacture of automobiles.

Philadelphia: Grading has been commenced for the $2,000,000 plant to be established at Easton by the Taylor-Wharton Iron & Steel Co.

Cincinnati, Ohio: The Andrew Juergene Soap Co. filed plans for a four-story reinforced-concrete factory and office building, to cost $45,000.

Hico, Tex.: Central Texas Power & Transmission Co., Hico, Tex., was incorporated, with a capital stock of $100,000, to build electric plant, etc.

Cairo, Ill.: The McClure Co., manufacturers of silos, will double the capacity of its plants. It is the largest user of California redwood in the country.

Duluth, Minn.: A $2,000,000 freight-car manufacturing industry will be located in Douglas County near the new steel plant within a year, according to T. W. Wahl.

Wausau, Wis.: Work commenced this morning on a new factory for Wausau. The Badger Bag & Paper Co. will erect a building at First and De Kalb Streets.

Peoria, Ill.: Peoria's newest factory, the Progressive Engineering Co., will be opened within the next two weeks, according to a report issued by the officers of the company this morning. Articles of incorporation have been filed with the secretary of state, and license received. The entire stock of $150,000 has been pledged, and will be taken up immediately.

Paducah, Ky.: J. A. Cromby, of Brooklyn, N. Y., general manager of the Lancaster Parquet Flooring Co., expects to erect a factory building in Mechanicsburg.

St. Louis, Mo.: The seven-story and basement building at the southeast corner of Fourth and Vine Streets for the Skinner & Kennedy Stationery Co. will cost $75,000.

Marietta, Ga.: The Kennesaw Marble Co. will build addition to factory and crane runway, at cost of about $20,000, and install machinery to increase marble sawing capacity one-third.

Detroit, Mich.: Smith, Hinchman & Grylls let for the Larned Carter & Co. the masonry contract on a four-story brick addition to the factory building at Fourth Avenue and Howard Street to A. R. Yops.

Alexandria, La.: Through the efforts of the chamber of commerce the J. L. Jones Manufacturing Co., of Kansas City, will establish a silo manufacturing plant in this city to begin operations about July 1.

Youngstown, Ohio: Surveyors for the Youngstown Iron & Steel Co. have started to lay lines for the erection of the new open-hearth plant of four furnaces which the company will build at Lowellville. The construction work will be pushed to completion.

Cleveland, Ohio: Evidence of building activities on the West Side appears in the plans of Hustav Schaefer Wagon Works Co. to build a four-story factory at 4166–4200 Lorain Avenue. The building will cost $40,000 and will be 60 by 70 feet.

Matherville, Ill.: About 150 men who have been out of employment for some time, owing to lax business conditions here, will be given work after July 1, when Deere & Co. will open their foundry in the new modern building recently completed at East Moline.

Galveston, Tex.: News came to Galveston by cablegram Friday from G. W. McElhiney in Europe that the Southwestern Development Co., a $30,000,000 corporation, has been successfully financed by European capital. The news of the successful financing of the Southwestern Steel Development Co. means assurance of the construction of an immense steel plant just across the bay from Galveston, at Texas City.

Paducah, Ky.: Clearing of the site for the factory to be built by the Lancaster Parquet Flooring Co. in Mechanicsburg has begun, and the three buildings will be erected within a few weeks. If the company spends $75,000 for salaries in five years, it will become owner of the property.

Metropolis, Ill.: Work on a factory for the Metropolis Refining & Separating Co. will be commenced soon, a deal having been closed this morning between representatives of a flour spar syndicate and local business men. The factory will be located on the Burlington's property.

Denver: The Sunset Mining & Development Co., which acquired the old Tramps Consolidated Mine at Rhyolite, Nev., has now let a contract to the Colorado Iron Works for the building of a mill on the property at a cost of $30,000, the plant to have a capacity of 2,000 tons a month.

Charleston, W. Va.: Wheeling Ceiling & Roofing Co., Wheeling, W. Va., will establish plant to manufacture metal ceilings, shingles, roofing, conductor pipe, one-piece conductor elbows, eaves trough, stovepipes, etc.; building bids close June 6 on five buildings containing 35,000 square feet of floor space; install sheet-metal forming machinery, cost $65,000.

Memphis, Tenn.: N. & G. Taylor Co., of Cumberland, Md., at a cost of $100,000, will enlarge tinplate factory, increasing capacity about 60 per cent; erect steel building, 80 by 100 feet; install additional 25-ton open-hearth furnace with 40-ton overhead traveling crane, and 3-ton charging machine in connection; also install 30-kilowatt generator connected to 500-horsepower generator connected to 500-horsepower engine in power house, and locomotive to handle all open-hearth material from stockyards to furnace.

Cincinnati, Ohio: The Dalton Adding Machine Co.'s factory at Poplar Bluffs, Mo. * * * The company increased its capital stock from $1,500,000 to $2,750,000 at Columbus Monday as a preliminary to its location here, as its salary roll and output will be more than doubled. The company now employs 600 men in its Poplar Bluffs factory. There will be more than 1,200 employed here.

On July 2 the enormous increase in the manufacturing activity of the country compelled the News to set forth a few of the prosperous concerns scattered throughout the land which are now engaged or preparing to engage in extending the manufacturing power and thrift of the Nation:

[From the Manufacturers' News, July 2, 1914.]

NEW FACTORY BUILDINGS.

Elvira, Ohio: The Kleervue Film Co. will open a $30,000 picture plant here.

Sullivan, Ind.: Messrs. Gonter & Hoschstetler, of Center Point, Ind., will locate a canning factory in this city.

Canal Dover, Ohio: An additional mill, making six in all, is being installed at the plant of the Reeves Manufacturing Co.

Dallas, Tex.: The Egan Milling Co. will erect a $50,000 plant for mixed feed, the largest of its kind in this country.

Lemont, Ill.: Contracts have been awarded by the Aluminum Products Co. for the enlargement of their plant No. 2, located here.

New Orleans, La.: The Philadelphia Quartz Co., manufacturers of silicate of soda, will build a factory building, at a cost of $250,000.

New Orleans, La.: Inquiries were received last week by a local real estate man for a site for a large power-boat plant in this city.

Keokuk, Iowa: The Keokuk Wire Products Co. is the name of the new factory secured for Keokuk by the industrial association.

Fort Worth, Tex.: Fort Worth will have added to its industries a plant for the manufacture of puncture-proof inner tubes for automobile tires.

Portland, Oreg.: Two lots in block 1 of Southport addition have been sold by L. G. Wiedewitsch to the North Star Iron Works for $4,000 for a factory.

Saginaw, Mich.: Extension of the Federal Rubber Manufacturing Co.'s factories at Cudaby, Wis., just outside of Milwaukee, was resumed last week.

Albuquerque, N. Mex.: The Santa Fe Magazine, received here yesterday, brought the news that the Atchison, Topeka & Santa Fe Railway Co. has appropriated $100,000 for the new roundhouse.

Washington, Mo.: The International Shoe Co., of this city, has submitted a proposition to the Commercial Club to build a large two-story addition to their factory at this place.

Detroit, Mich.: The Ford Motor Co. will double its plant before fall, making it by far the largest manufacturing plant of any kind in the country. Seven new buildings and a power house will be erected, the total cost being about $5,000,000.

Shelbyville, Ind.: Shelbyville is to have a $12,000 enterprise. The Mirror Screen Co., manufacturing the Rembush patented mirror screen for motion-picture theaters, is making arrangements to produce its entire output in Shelbyville.

San Antonio, Tex.: Greenville, Tex., capitalists, owners of the Texas Refining Co., have purchased something more than 2 acres of land at the intersection of Frank and Dignowity Streets, and will erect a large cottonseed-oil mill, at a cost of about $125,000.

Salt Lake City: Plans for the big tin-can factory to be constructed at Ogden for the American Can Co. have been received in Salt Lake City. The work of construction will be pushed to completion as rapidly as possible, in order that the new plant may be in operation by next winter.

Grand Junction, Colo.: Stockholders of the Western Slope Fruit Growers' Association, at Palisade, have voted to install a mutual canning factory for handling small and overripe peaches, at Palisade, next August. The peaches will be canned in gallon jars and sold for pies. Work on the factory will start at once.

Findlay, Ohio: Work is under way on the three-story addition to the American Mask Manufacturing Co.'s plant on West Main Cross Street. The addition will be a duplicate of the present factory and will adjoin it on the rear, where a little frame building formerly stood. The addition will cost $25,000.

San Antonio, Tex.: San Antonio is to have another large factory in the near future. The Brown Cracker & Candy Co. will erect a large manufacturing plant. Property has been purchased, and the erection of the building will be started within the next few weeks. The new plant will supply all of south Texas and will employ 250 people.

Birmingham, Ala.: The first contract in the $1,500,000 construction by the Southern Railway shop and yards, to be called the Finley Shop and Yards, was given yesterday to the Consolidated Engineering Co., of New York.

De Queen, Ark.: A modern pine sawmill is to be started in this locality by the Dierks family and other interests. There are thousands of acres of virgin pine in this neighborhood.

Roanoke, Va.: The R. J. Reynolds Tobacco Co. has had prepared plans for another handsome new steel and concrete fireproof building to be erected at the corner of Second and Depot Streets.

Indianapolis, Ind.: Frank M. Talbott, president of the Indianapolis Basket Co., has purchased a factory site in Willard and Henry Streets. He will in the near future erect a two-story factory building.

Moline, Ill.: Manufacture of licorice will be started next week in the new plant of the National Licorice Co., recently completed on Fourth Avenue between Twenty-third and Twenty-fourth Streets.

Ogden, Utah: Joseph Geoghegan, representing the American Can Co., of New York, has received the plans and specifications for the can factory which will be erected on Lincoln Avenue during the summer.

Gainesville, Tex.: Work has just started on another large electric power plant in Gainesville which will cost when completed about $50,000. The new plant is being erected by the Texas Power & Light Co.
